C. The meaning and effect of the Statutory Compact between the United States and California, evidenced by the Boulder Canyon Project Act and the California Limitation Act, are in controversy in respects which specifically affect New Mexico and Utah as States which are in part within the Lower Basin.

(1) There is controversy as to whether California is excluded by the terms of the Statutory Compact from participation in the increase of use permitted to the Lower Basin by Article III(b) of the Compact. Arizona asserts the affirmative (Complaint, par. XXII, p. 25). The negative is asserted by California (Answer to Arizona's Complaint, par. 27, p. 27), and Nevada (Petition of Intervention, par. XVIII, p. 20).

(2) There is controversy as to whether the right of the Lower Basin to the increase of use permitted by Article III(b) relates to all water of the Colorado River System in the Lower Basin as is asserted by California (Answer to Arizona's Complaint, par. 9, p. 13; par. 63, p. 66) and Nevada (Petition of Intervention, par. XIV, p. 18; par. XVIII, p. 20), or whether this right is limited to the waters of the Gila River and is available only to Arizona and New Mexico, as Arizona contends, excluding not only California but Nevada and Utah. (Reply to California's Answer, par. 9, p. 17).

(3) There is controversy as to the availability of "surplus" waters for use in the Lower Basin under the Statutory Compact, and the rights of the five States to make use of it.

D. Arizona is not authorized to speak for or commit New Mexico or Utah.

Arizona's purported recognition of the rights of New Mexico and Utah (Complaint, Prayer, p. 30), based upon Arizona's interpretation of the Compact, does not bind those States, (see also Nevada's Petition of Intervention, par. XIII(b), p. 16). New Mexico and Utah may or may not agree with Arizona's interpreations of the Compact and of their rights thereunder, and in any event those rights must be determined either by decree of this Court or interstate compact. Arizona's asserted willingness to negotiate an agreement with these two States has not materialized in any compact with them in the past 32 years.

E. The controversy as to the rights and obligations of the Lower Basin cannot be effectively resolved in the presence of only three, and the absence of two, of the five States sharing those rights and obligations.

The States of New Mexico and Utah, as States lying in part within the Lower Basin, participate in undetermined amounts in the right to beneficial consumptive use of a "common fund" of water available for use in the Lower Basin under under the Colorado River Compact. As such their interests require their joinder as necessary parties for an effective settlement of the presnt controversy.

A case in point is *Williams* v. *Bankhead*, 19 Wall. 563 (U. S. 1874). There a specific fund of money was in dispute. An absent party who claimed an interest in the fund was held indispensable to the action by the court on the basis that any decree disposing of the fund would directly affect her interest therein. Similarly in *United States* v. *Bank of New York & Trust Company*, 296 U. S. 463 (1936), involving specific funds, the court stated:

> " . . . there are numerous persons whose claims in relation to these funds are in the course of adjudication. . . . they are entitled to be heard and they are indispensable parties to any proceeding for the disposition of the property involved." (p. 480)

The absent States of New Mexico and Utah are entitled to be heard on their undefined rights to the common fund of Lower Basin water, and conversely if they are not joined, a determination among the present parties of Lower Basin rights would be subject to later disruption in any subsequent litigation by them. As stated by the court in *Barney* v. *Baltimore,* 6 Wall. 280 (U. S. 1868) in holding absent co-heirs indispensable to an action for partition brought by one of the heirs:

> "If a decree is made, which is intended to bind them, it is manifestly unjust to do this when they are not parties to the suit, and have no opportunity to be heard. But as the decree cannot bind them, the court cannot for that very reason afford the relief asked, to the other parties." (p. 285)

See also *Russell* v. *Clark's Executors,* 7 Cranch 69 (U. S. 1812); *Franz* v. *Buder,* 11 F. 2d 854 (8th Cir. 1926), *cert. denied* 273 U. S. 756 (1927); *Young* v. *Powell,* 179 F. 2d 147 (5th Cir. 1950), *cert. denied* 339 U. S. 948.

Accordingly, the States of Utah and New Mexico must be joined as parties to the suit to give complete relief to the present parties with respect to the water available to the Lower Basin.

IV

THE FOUR ABSENT STATES ARE NECESSARY PARTIES TO THIS ACTION IN THEIR CAPACITY AS THIRD PARTY BENEFICIARIES OF THE STATUTORY COMPACT BETWEEN THE UNITED STATES AND CALIFORNIA EVIDENCED BY THE BOULDER CANYON PROJECT ACT AND THE CALIFORNIA LIMITATION ACT.

A. The continued existence of the Statutory Compact as a necessary accompaniment to a Six-State Colorado River Compact may not be determined in the absence of all parties to the contract.

The allegation by Arizona that she ratified the Colorado River Compact in 1944, thus creating a Seven-State Compact, is in issue. This raises the question of whether the

Statutory Compact between the United States and California, wherein California agreed to certain limitations upon her uses for the benefit of Colorado, New Mexico, Utah and Wyoming (as well as the present parties of Nevada and Arizona), remained in effect if Arizona should be held to have effectively ratified the Compact. This question can only be decided if all the parties to the Six-State Compact are joined to the suit. *Shields* v. *Barrow,* 17 How. 130 (U.S. 1855); *Northern Indiana R.R.* v. *Michigan Central R.R.,* 15 How. 233 (U.S. 1854); *Ward* v. *Deavers,* 203 F. 2d 72 (D.C. Cir. 1953); *Metropolis Theatre Co.* v. *Barkhausen,* 170 F. 2d 481 (7th Cir. 1948), *cert. denied,* 336 U.S. 945 (1949); *Lawrence* v. *Sun Oil Co.,* 166 F. 2d 466 (5th Cir. 1948); *Vincent Oil Co.* v. *Gulf Refining Co.,* 195 Fed. 434 (5th Cir. 1912); *Kleinschmidt* v. *Kleinschmidt Laboratories, Inc.,* 89 F. Supp. 869 (N.D. Ill. 1950); *see Roos* v. *Texas Co.,* 23 F. 2d 171, 172 (2d Cir. 1927), *cert. denied,* 277 U. S. 587 (1928). In *Shields* v. *Barrow,* the case in which this Court formulated the classic definitions of necessary and indispensable parties, it was held that all parties to a contract are indispensable in an action for the rescission of that contract.

B. The four absent States are necessary parties to Arizona's suit because all joint beneficiaries of a contract must be joined in an action by any one of them to determine the obligations of the promisor.

California made a single promise in the California Limitation Act, pursuant to the Boulder Canyon Project Act, for the joint benefit of all six of the other States in the Colorado River Basin. The United States is the other principal to that agreement. The present controversy among Arizona, California, Nevada and the United States raises issues of interpretation affecting the rights of the four absent beneficiaries—Colorado, New Mexico, Utah and Wyoming. All six joint beneficiaries must be parties to the action if these issues are to be resolved.

It is well established that in an action by a joint obligee against the obligor, all joint obligees are necessary parties and also are indispensable when indispensability is in issue. *Farni* v. *Tesson,* 1 Black 309 (U. S. 1862); *Fremon* v. *W. A. Sheaffer Pen Co.,* 209 F. 2d 627 (8th Cir. 1954); *National City Bank* v. *Harbin Electric Joint-Stock Co.,* 28 F. 2d 468 (9th Cir. 1928); *Roos* v. *Texas Co.,* 23 F. 2d 171 (2d Cir. 1927), *cert. denied,* 277 U. S. 587 (1928); *Himes* v. *Schmehl,* 257 Fed. 69 (3d Cir. 1919); *Edgell* v. *Felder,* 84 Fed. 69 (5th Cir. 1897); *McAulay* v. *Moody,* 185 Fed. 144 (C. C. Ore. 1911). The rule is designed to protect the obligor from possible harassment and multiplicity of suits upon his single promise or duty. Any determination of California's rights and obligations under the Statutory Compact in the present suit would be open to later disruption in a subsequent suit by any one of the absent beneficiaries — Colorado, New Mexico, Utah or Wyoming.

While third party beneficiaries technically are not promisees, where they hold joint rights they must be treated like joint obligees for the purpose of compulsory joinder. 4 CORBIN, CONTRACTS, Sec. 940 (1951); RESTATEMENT, CONTRACTS, Sec. 129, Comment *a* (1932).

The absent States of Colorado, New Mexico, Utah and Wyoming are necessary parties to any action to interpret or enforce the Statutory Compact between the United States and California.

V

THE FOUR ABSENT STATES ARE NECESSARY PARTIES TO THE ADJUDICATION OF THE CLAIMS OF THE UNITED STATES TO THE WATERS OF THE COLORADO RIVER SYSTEM.

A. The claims which the United States asserts "as against the parties to this cause, to the use of waters of the Colorado River and its tributaries" are equally claims as against all the States of the Colorado River Basin.

The following claims asserted by the United States "as against the parties to this cause" affect the four absent States:

(1) To supply all projects in the Lower Basin (Petition of Intervention of the United States, par. XXX, p. 25); but it is admitted that the requirements of these projects exceed the quantity of water available to that Basin under Articles III(a) and III(b) of the Compact (Petition, par. XXXIII, p. 33). This involves, therefore, an adjudication of the right of the United States in the Lower Basin, as against the Upper, to store and contract for the delivery of quantities of water surplus to the quantities specified in those articles. The Government's contracts require, for their performance, nearly 8,500,000 acre-feet per annum from the main stream alone (Petition, par. XV, p. 14; par. XVIII, p. 17; par. XIX, p. 17), beside the uses on the Gila (par. XXIV, p. 22) and the "diversion rights" of 1,747,250 acre-feet per annum for Indians (par. XXVII, Appendix IIA). The Government asserts that all its contracts are valid (Petition, par. XXXI(a), p. 27).

(2) To fulfill obligations arising from international treaties and conventions. (Petition of Intervention par. XXX, p. 25). This involves:

(a) The obligations of the States of the Upper Division under Article III(c) and III(d) of the Colorado River Compact, and

(b) The effect on Compact rights and obligations of the so-called "escape clause" of Article 10 of the Mexican Water Treaty, which allows reduction in the annual guaranteed delivery to Mexico, in the event of extraordinary drought, in the same proportion as consumptive uses in the United States are reduced, "consumptive uses" being defined in Article 1 of the Treaty.

(3) To fulfill the Government's obligations to Indians and Indian tribes (Petition, Par. XXX, p. 25). This involves:

(a) The magnitude and priority of these claims. The United States is understood to reserve the right under paragraphs XXVII (p. 23) and XXXVII (p. 39) of its Petition of Intervention to assert that Indian rights are prior and superior to those of all other claimants to the waters of the Colorado River System.

(b) The question of whether or not uses under Indian rights are chargeable to the Basin and the State in which they occur. The United States is understood to reserve the right, under the language of paragraphs XVII (p. 23) and XXXVII (p. 38) of its Petition of Intervention, to assert that Indian uses and rights are not covered at all by the Colorado River Compact, but constitute uses outside of (as well as superior to) the quantities of uses referred to in the Compact. Arizona's position upon this point is ambiguous (Reply to California's Answer, par. 14, p. 19). All other States in the Basin assert, in effect, that Indian uses and other federal uses are chargeable under the Compact to the Basin and State in which they occur. (California, Answer to Arizona's Complaint, par. 14, p. 16; Nevada, Petition of Intervention, par. XV, p. 18; Upper Colorado River Basin Compact (63 Stat. 31, Appendix 30, Art. VII.)

(c) What the obligation of the Upper Division States may be to release water for use by Indians in the Lower Basin, and

(d) What rights the United States may have to withhold water in reservoirs in the Upper Basin for use by Indians in both Basins.

(4) To protect its interests in fish and wildlife, flood control and navigation. (Petition, par. XXX, p. 25.) This involves:

(a) The impounding and release of water from reservoirs in both Basins, and not merely reservoirs bordering or within Arizona, Nevada and California, and

(b) The question of accounting under the Compact.

(5) For use of the National Park Service, Bureau of Land Management, and Forest Service; but if the United States has claims "as against the parties of this cause" for these functions, it has similar claims to all the waters of the Colorado River System.

B. The claims which the United States asserts involve questions of law common to all the States of the Colorado River Basin.

These include:

(1) The power of the United States to impound and dispose of water independently of rights derived from the States;

(2) The extent of its obligations under treaties and contracts, and the impact thereof upon rights of domestic water users;

(3) How its claims to the use of water shall be measured;

(4) The extent to which its rights and obligations are controlled by the Colorado River Compact;

(5) The extent to which its claims may be exercised *in futuro* in derogation of intervening rights and uses.

C. Certain of the claims of the United States, if sustained, and held to be outside of the Compact, may render the Colorado River Compact incapable of operation.

(1) If the uses of Indians throughout the Colorado River Basin are not chargeable against beneficial consumptive uses under the Colorado River Compact, and are held to be prior and superior in right to the uses which are chargeable, there may not be sufficient water in the entire Colorado River System to service those claims and the Mexican Water Treaty, and to sustain the uses contemplated by the Compact;

(2) So also with the undefined claims for use by the Bureau of Land Management and the Forest Service, which, together, administer substantially all of the public lands in the Colorado River Basin.

D. The claims of the United States to the waters of the Colorado River System cannot be effectively adjudicated in the absence of four States which have rights and obligations with respect to the waters of that System.

The claims of the United States are asserted independently of the Colorado River Compact. If they are sustained to the use of Colorado River System waters, the interests of the absent States in the System waters will be materially affected, for rights would be decreed not only to the Lower Basin's Compact share of water, but to the additional amounts requested by the Federal Government, which could come only from the whole River System. Under the doctrine of the *Shields* case (17 How. 130 (U. S. 1854)) the absent States would hence qualify as indispensable parties.

The fact that when claims to Colorado River System water are asserted independently of the Colorado River Compact, all parties having an interest in the System waters must be joined, was recognized by Arizona in the first three cases of *Arizona* v. *California* where the States of Colorado, New Mexico, Nevada, Utah and Wyoming were joined as defendants with California. 283 U. S. 423 (1931); 292 U. S. 341 (1934); 298 U. S. 558 (1936).

In *Nebraska* v. *Wyoming*, 295 U. S. 40 (1935), Wyoming moved to dismiss Nebraska's Bill of Complaint on the ground, among others, that the State of Colorado was an indispensable party to Nebraska's suit for an equitable apportionment against Wyoming of the North Platte River. No interstate compact or statutory compact existed on the North Platte River and the only allegation in the Bill of Complaint touching Colorado was that the river in question had its source in Colorado. The court, looking to the Bill of Complaint, held that Colorado was not an indispensable party merely because of the allegation that the North Platte River arises in that State and drains a considerable area therein; more than that allegation of fact would be necessary. The court said further, however:

> "We need not determine whether Colorado would be a proper party, or whether at a later stage of the cause pleadings or proofs may disclose a necessity to bring her into the suit."

A Master was appointed. 296 U. S. 542 (1935). Subsequently Wyoming filed an Amended and Supplemental Answer alleging the State of Colorado to be a necessary and indispensable party. The allegations were that thirty per cent of the waters in controversy originated in Colorado, that Colorado and its citizens threatened the diversion of a large quantity of water, that defendant would be subject to further litigation if Colorado were not made a party, and that a fair allocation of water could not be made upon any basis without at the same time determining the rights of Colorado. (Amended and Supplemental Answer, paragraph Twentieth, filed Nov. 30,

1935.) This Court, on the basis of these allegations, ordered that Colorado be made a party. 296 U.S. 553 (1935). The final decree adjudicated the rights of all three States and the United States, which had intervened, even though Colorado had taken the position she should be dismissed. *Nebraska* v. *Wyoming and Colorado,* 325 U. S. 589 (1945).

The claims of the United States in the present case, like the claims of *Nebraska* in *Nebraska* v. *Wyoming and Colorado,* asserted in both cases independently of any Compact, cannot be adjudicated piecemeal against the lower States in the absence of the upper States.

VI

CONCLUSION.

The States of Colorado, New Mexico, Utah and Wyoming are necessary parties in the pending case of *Arizona* v. *California et al.,* and must be joined as such for a full and effective settlement of the controversy in that case. They are necessary because they are parties to the Colorado River Compact, because they, together with Arizona and Nevada, are beneficiaries of the Statutory Compact between the United States and California evidenced by the Boulder Canyon Project Act and the California Limitation Act, and because the claims of the United States affect all of the waters of the Colorado River System. New Mexico and Utah are necessary parties for the additional reason that they have interests in the Lower Basin in common with Arizona, California and Nevada.

For all these reasons the motion to join these four States as parties should be granted.

BRIEF OF THE STATE OF UTAH OPPOSING THE MOTION OF THE CALIFORNIA DEFENDANTS TO JOIN THE STATE OF UTAH AS A PARTY TO THIS ACTION.

INTRODUCTORY STATEMENT

On July 15, 1954, the present motion was filed by the California defendants, asking the joinder of the States of

Utah, New Mexico, Colorado, and Wyoming. On October 26, 1954, this court granted those four states leave to file briefs responsive to that motion.

While the motion is unanimously opposed by those states respondent to it, their respective briefs must deal with slightly divergent considerations since their positions differ, to a limited extent, under the Colorado River Compact, (Exhibit A, Arizona's Bill of Complaint) hereinafter referred to as "Compact." While all four respondents are "States of the Upper Division" (Article II (c), Compact) the states of Utah and New Mexico lie partially within the Lower Basin (Article II (9) Compact) and are, to the extent that parts of those states lie in areas naturally draining into the main stream of the River below Lee Ferry[1], states of the Lower Basin.

Since Utah denies that they are either necessary or indispensable parties by virtue of interests either as a state of the Upper Division or as a state lying in part in the Lower Basin, it is her election to file a separate brief and to traverse, separately and affirmatively, the contentions that Utah is a necessary party under either characterization; however, Utah does join in and subscribe to all the factual statements and references, and all the legal arguments and conclusions contained in the briefs of the other respondent states, Colorado, New Mexico and Wyoming.

STATEMENT OF THE ISSUES RAISED

On January 19, 1953, the State of Arizona was granted her Motion for Leave to File a Bill of Complaint against the several California defendants. In the Bill filed pursuant

---

[1]Although Utah will show that this interest in terms of percentage of flow is infinitesimal, Infra page 16.

to that Order Arizona asked this court to determine three issues:

> (1) Is the State of California limited to the annual beneficial consumptive use of 4,400,000 acre feet of the waters of the Colorado River System *apportioned to the Lower Basin by the Compact?*
>
> (2) In what manner is "beneficial consumptive use" of the waters of the Colorado system *in the Lower Basin* to be measured?
>
> (3) How are evaporative reservoir losses from *Lower Basin* main stream impounding facilities to be charged?

(See Arizona's Motion for Leave to File Bill of Complaint and Bill of Complaint, Par. XXII, page 25.)

In response to this Motion and to the Bill of Complaint, California raised three additional questions:

> (a) Is Arizona a party to and bound by the Colorado River Compact?
>
> (b) May Arizona be a beneficiary under the California Limitation Act?
>
> (c) What are the priorities of contract between the United States and water users *in the Lower Basin?*

It may clearly be seen from the issues thus drawn that the only purpose of the action was the determination, as between the two states in the Lower Basin, Arizona and California, of the water use to which each respective state is entitled under the Colorado River Compact, the California Limitation Act, and the various other enactments constituting the Law of the River.

Pending before the 83rd Congress were two measures, S-1555 and HR-4449, which were companion bills to

authorize the Upper Basin Storage Project consisting of a reclamation program for storage of waters in the Upper Basin of the Colorado River. On January 26, 1954, in a hearing before the Irrigation Subcommittee of the House Committee on Interior and Insular Affairs, Mr. Northcutt Ely, counsel for the defendant State of California, appeared before the Subcommittee asking it to defer any action upon the bill then being considered until after a determination of the issues raised by the present controversy. (See Hearings on H.R. 4449, page 697, Serial No. 11 before Irrigation and Reclamation Subcommittee of the House Committee on Interior and Insular Affairs, 83rd Cong.) This Subcommittee rejected Mr. Ely's arguments favoring deferral of the measure and the bill came dangerously, insofar as defendants were concerned, close to passage but failed of enactment due to early adjournment of the Congress.

On April 5, 1954, in answer to a petition of the United States to intervene in the within action, the State of California had summarized the controversy (see Answer of California defendants to Petition in Intervention on behalf of the United States of America, page 67) which summary we paraphrase as follows:

> (I) The quantities of water in controversy; Arizona seeks to quiet title to the consumptive beneficial use of 3,800,000 acre feet per annum of the waters of the Colorado River System—California asserts a right to the beneficial consumptive use in California of 5,362,000 acre feet per annum; Nevada seeks to quiet title in herself to 539,100 acre feet per annum. The states differ in their definition of "beneficial consumptive use."
>
> (II) The ultimate issues; does the United States have rights "as against the parties to this cause," (meaning those parties at the time California re-

sponded to the United States' Petition). Is Arizona entitled to a decree quieting title to 3,800,000 acre feet per annum? Is California entitled to a decree permitting the beneficial consumptive use of 4,400,000 acre feet per annum plus one-half of the surplus waters unapportioned by the Compact and the rights awarded California by contracts between the United States and the defendant public agencies of and including California?

While California *now* contends, in her analysis of the issues raised, that these questions may not be effectively determined without concurrently determining the rights and obligations of the Upper Division states, nevertheless, the actual analysis by California of the issues in the lawsuit on April 5, 1954, in no way extended to any of those states not then parties to the action. California's only reservation on that question was a general statement that decisions on those points would affect absent states. (p. 75, California's Answer to United States' Petition).

On July 15, 1954, however, California filed the present motion to make the states of the Upper Basin and of the Upper Division parties to this action, attempting materially to broaden the scope of this suit beyond their previous analysis of the necessary issues.

SUMMARY OF ARGUMENT

The State of Utah is neither a necessary nor an indispensable party for the reason that they are a party to the Compact.

The State of Utah contends that this is not an action to determine any rights of Upper Basin States; that this is *not* an action in which the rule, requiring all parties to a litigated

contract to be present in the action, is applicable for the reasons that:

(1) That rule is not available against a sovereign state in the absence of present or imminently threatened injury, of which there is none alleged or in fact in existence; and

(2) This is not an action based primarily upon the Compact.

The State of Utah is neither a necessary nor an indispensable party by reason of its interest in the Lower Basin.

For their share of the waters of the Lower Basin the State of Utah looks to, and is satisfied with the recognition of their rights by, the State of Arizona, with whom they are presently negotiating for a compact. The inclusion of Utah as a party to this action would effectively and absolutely preclude consummation of any such apportionment by agreement, the medium through which *all* inter-state matters or disputes should be resolved.

The State of Utah is neither a necessary nor an indispensable party as a beneficiary of California's Self-Limitation Act.

The only dispute in this action is the question whether or not Arizona is a beneficiary, or entitled to rely upon, that Act.

Utah is neither a necessary nor an indispensable party by reason of the claims of the United States.

The State of Utah is a party to the Upper Colorado River Basin Compact by which it has been agreed that uses by the United States in the State of Utah — as in all other

Upper Basin states — will be charged as a use *by* the State of Utah.

The purpose and motive of the present motion by the California defendants are improper and ought not to be entertained.

ARGUMENT

The State of Utah will seek to answer the contentions of the State of California in the order of their appearance in California's Motion:

POINT 1

A DECREE DETERMINING THE PRESENT CONTROVERSY CAN BE EFFECTIVE IN THE ABSENCE OF THE STATE OF UTAH ALTHOUGH A PARTY TO THE COMPACT.

In California's brief supporting her motion to join, numerous decisions are collected which hold, admittedly, that in actions upon contracts, decrees construing the terms thereof cannot be entered unless all parties thereto are present in the action. These decisions are all applicable in their own peculiar set of facts but California cites no cases—and there are none—holding that the indispensable or even the necessary party rule is applicable with respect to compacts between states as quasi-sovereigns. It is respectfully submitted that in this case neither the issues nor the facts even closely approximate the burden required of the state which asks relief against another state. The extent of that burden is announced in *Colorado v. Kansas,* 320 U. S. 383, 88 L. Ed. 116 at p. 124:

"Not every matter which would warrant resort to equity by one citizen against another would just-

> ify our interference with the action of the state, for the burden on the complaining state is much greater than that generally required to be borne by private parties. Before the court will intervene the case must be of serious magnitude and fully and clearly proved. And in determining whether one state is using or threatening to use more than its equitable share of the benefits of a stream, all the facts which create equities in favor of one state or the other must be weighed as of the date when the controversy is mooted."

In that case an attempt was made by Kansas to show injury resulting from a material increase in the river depletion by Colorado of the Arkansas River since the adjudication of *Kansas* v. *Colorado* (206 U. S. 46, 51 L. Ed. 956, 27 S. Ct. 655) in which a bill brought by the state of Kansas was dismissed because Kansas was not entitled to "present relief;" it being expressly reserved, however, that the dismissal was without prejudice to the right of Kansas to initiate new proceedings "whenever it shall appear that through a material increase in the depletion of the waters of the Arkansas River by the defendants, the substantial interests of Kansas are being injured to the extent of destroying the equitable apportionment of benefits between the two states" (206 U. S. at page 117-118). That case was decided in 1907 and Kansas claimed in 1943 that the condition of the 1907 decree had been fulfilled, i.e., injury to the substantial interests of Kansas by Colorado uses in excess of those occurring in 1907.

It might be said that those two states, since the 1907 decision, were operating under a "decree of the court" subject to a reopening at a future time when present injury existed. An attempt to reopen that decree was denied Kansas upon the lack of sustaining the burden that Kansas was presently injured by Colorado depletion of the Arkansas

River. It might be contended that the two states, operating under a decree of the court which indicated a formula for equitably apportioning the benefits of the stream, were operating under a governing instrument similar to the Compact under which signatory states of the Colorado River Compact are presently operating, and that although injury was threatened the court would still refuse to make a definite apportionment of the river in either second feet or acre feet in the absence of a showing that a state was presently injured by excess depletion of the waters of the river.

California cites at the conclusion of her motion the case of *Nebraska* v. *Wyoming and Colorado,* 325 U. S. 589, 89 L. Ed. 1815. Colorado, in that case, made a motion that they be dismissed and California cites, as favorable to their position, the refusal of the court to grant that motion. However, the decision expressly says, 325 U. S. at 609:

> "Out-of-priority diversions by Colorado have had an adverse effect downstream. * * * *This alone negatives the absence of present injury*" (Emphasis added).

Further, on page 1827 (325 U. S. at 610):

> "Colorado v. Kansas, 30 U. S. 353, 88 L. Ed. 116, 64 S. Ct. 176, is not opposed to this view. That case turned on its special facts. It is true that an apportionment of the waters of an interstate river was denied in that case. But the downstream state (Kansas) did not sustain the burden of showing that since the earlier litigation between the states there had been a material increase in the depletion of the river by Colorado. * * * We held that in those circumstances a plain showing was necessary of increased depletion and substantial injury that would warrant a decree * * *."

California at page 51 of her brief further contends that "all parties having interests in the Colorado River System waters must be joined." This statement is not in accord with previous rulings of the United States Supreme Court. In *Nebraska* v. *Wyoming*, 295 U. S. 40, 55 S. Ct. 568, an action by Nebraska seeking equitable apportionment of the waters of the North Platte River, the defendant Wyoming moved to dismiss under her contention that the State of Colorado was an indispensable party having an interest in the North Platte River System, and in whose absence the controversy could not be effectively settled. This court at 295 U. S. page 43, stated:

> "The contention is without merit. Nebraska asserts no wrongful act of Colorado and prays no relief against her. We need not determine whether Colorado would be a proper party or whether at a later stage of the cause pleadings or proof may disclose a necessity to bring her into the suit."

By a subsequent amendment Nebraska alleged that Colorado "by diversions of water from the river for irrigation purposes * * * [are] depriving Nebraska of water to which she is equitably entitled" (*Nebraska* v. *Wyoming*, 325 U. S. 589, 591-2, 65 S. Ct. 1332, 1338). Upon the basis of the amended complaint the court joined Colorado as a party. *Nebraska* v. *Wyoming*, 296 U. S. 553, 56 S. Ct. 369.

A thorough analysis of the voluminous pleadings filed herein discloses absolutely no allegation that injury is threatened either by or to the State of Utah either as a state of the Upper Division or as a state of the Upper Basin entitled to limited participation in the "common-fund" of waters allocated by the Colorado River Compact to the Lower Basin. No such allegation—under the actual facts—could in good faith *be* made.

In numerous decisions this court has held that declaratory decrees, determining rights to interstate or local waters which have not yet been and which may never be appropriated, are not available to any state. *New Jersey* v. *Sargent*, 269 U. S. 328, 338, 46 S. Ct. 122, 70 L. Ed. 289; *Arizona* v. *California, et al.*, 283 U. S. 423, 463, 464, 51 S. Ct. 522, 529; *Colorado* v. *Kansas*, 320 U. S. 383, 393, 394, 64 S. Ct. 176, 181, 88 L. Ed. 116, 120; that adjudication of rights to interstate waters must be founded on an existing justiciable controversy. *Arizona* v. *California, et al.*, 283 U. S. 423, 463, 464, 51 S. Ct. 522, 529; that alleged injury must be presently threatened and of serious magnitude and not merely something feared to occur at some future time. *Missouri* v. *Illinois*, 200 U. S. 496, 521, 26 S. Ct. 268, 270; *New York* v. *New Jersey*, 256 U. S. 296, 309, 26 S. Ct. 268, 270; *North Dakota* v. *Minnesota*, 263 U. S. 365, 374, 44 S. Ct. 138, 139; *Connecticut* v. *Massachusetts*, 282 U. S. 660, 669, 51 S. Ct. 286, 289; *Alabama* v. *Arizona*, 291 U. S. 286, 291, 54 S. Ct. 399, 401; *Washington* v. *Oregon*, 297 U. S. 517, 522, 56 S. Ct. 540, 542; and that to pre-determine the rights of different sovereignties pregnant with future controversies is beyond the judicial function; that the court's jurisdiction is limited to concrete legal issues presented in actual cases and not abstractions. *U. S.* v. *Appalachian Power Company*, 311 U. S. 377, 423, 61 S. Ct. 299, 306.

It must be emphasized that the Colorado River Compact, the Compact now sought to be construed by the states of Arizona and California, and which Compact, it is alleged by California, cannot be effectively construed without the presence of all states signatory thereto, *was never intended to divide the water use among either the states of the Upper Basin, the states of the Lower Basin, the states of the Upper Division, or the states of the Lower Division.* It is, on the contrary, a compact *dividing only the water as between one*

entity, the Upper Basin, and a second entity, the Lower Basin.

The division of the waters apportioned to either basin as between the states of that basin is a matter entirely outside the scope of the Compact.

This litigation involves only the right to the use of the waters of the Colorado River System after the same have passed Lee Ferry, Arizona, or which originate on tributaries in the Lower Basin. (And Utah, as will be shown in the Argument under Point 2 herein, is not involved in *any* dispute—much less a justiciable controversy—over her share of those waters characterized as "Lower Basin" waters.) None of the parties to the action (Arizona the plaintiff, the California defendants, nor the intervenors Nevada and the United States) has questioned the right of the Upper Basin states to the beneficial consumptive use of 7,500,000 acre feet of the water of the Colorado River System.

An examination of the issues as analyzed by either the State of California or the State of Arizona and a study of the contentions of the State of Nevada and the United States fail to disclose any allegation or even any inference that the Upper Basin states separately or collectively threaten any injury to the Lower Basin states. None of the states presently parties to the action seeks the enforcement of the Compact against any states of the Upper Basin. There is no injury of which they could complain. As has been said heretofore, the Compact apportions 7,500,000 acre feet per annum to each Basin. The present beneficial consumptive use in the Upper Basin is but approximately one-third of that apportionment under Article III(a) or about 2,500,000 acre feet. It is not in keeping with the practice of this Court to entertain an action against a state even where a contract is involved when any breach can occur only in the remote

future, if at all. The time when the Lower Basin may have its day in Court will be the time when, if ever, the Upper Basin states' use exceeds that figure some three times greater than their present use. To determine those questions involving hypothetical situations which may arise in the future would be palpably unfair to the states of the Upper Basin who are entitled to a decision on none other than actual controversies in fact in existence.

On pages 31 to 53, inclusive, California's brief sets forth various questions of interpretation of the Compact which, it is contended, the respondent states ought now to be required to litigate. We concur with and join in the seriatim treatment of these points by the States of Colorado and Wyoming, who have ably disposed of each. We wish to add, however, that irrespective of the final determination by this Court of any of those interpretation questions, there still is no violation by the State of Utah or the Upper Basin of any of the terms of the Compact; no diversions in excess of those granted the respondents under the Compact; and therefore, no justiciable issue either upon the pleadings or upon the facts. *Nebraska* v. *Wyoming,* 295 U. S. 40, 55 S. Ct. 568, *Colorado* v. *Kansas,* 320 U. S. 383, 88 L. Ed. 116.

Since it was never intended that the Compact divide the waters of the Colorado River between states, but only between basins, this action can only be a Lower Basin dispute since they have failed to negotiate by Compact for a division of their apportionment. This the Upper Basin has done, and their apportionment among themselves of water use, and their resolution of many of the questions California now would require them to litigate, were approved by Congress (63 Stat. 31). The full text of this Compact appears as Appendix 30, Vol. II Appendixes to California's Answer.

In Summary under California's Paragraph I, the State of Utah denies that no decree determining the meaning and

effect of the Colorado River Compact can be effective in the absence of all parties to that Compact and contends that Utah is neither indispensable nor necessary; that Utah on the contrary cannot be made a party to this action for the reason that injury is neither threatened to nor by the State of Utah.

POINT 2

UTAH IS NEITHER A NECESSARY NOR AN INDISPENSABLE PARTY FOR THE REASON THAT THEY SHARE INTERESTS IN THE LOWER BASIN.

The State of Utah concurs in Arizona's Bill of Complaint, page 19, para. XIII, line 18, and page 21, para. XVII (a). Utah also expresses concurrence in the allegation of Arizona in response to California's motion to join the states of Colorado, New Mexico, Utah and Wyoming found on page 7, para. XII. These references to which Utah subscribes and by which Utah is satisfied that their interests in the Lower Basin are recognized, read as follows:

Arizona's bill of complaint:

Para. XIII, line 15 (page 19):

> "The United States also agrees to deliver to Arizona from Lake Mead storage one-half of the unappropriated surplus, subject to the availability thereof to Arizona under the Compact and *subject to whatever rights Nevada, New Mexico and Utah may be determined to have therein*" (Emphasis added).

Para. XVII (a) (page 21):

> "(a) Subject to the availability of water under the Compact and the project act and *subject to the rights of the states of New Mexico and Utah,*

> Arizona has the right to take and divert from the Colorado River System annually so much water as may be necessary for the beneficial consumptive use in Arizona of 3,800,000 acre feet * * *" (Emphasis added).

Response of Arizona to California's motion to join Colorado, New Mexico, Utah, and Wyoming:

Para. 8 (page 5):

> "Complainant alleges that the only uses of water from the Colorado River System by the State of Utah in the lower basin are on the Virgin River within that state and the *complainant is presently engaged in negotiating a Compact with that State respecting such uses, and that there is no dispute existing between complainant and the state of Utah*" (Emphasis added).

Certainly Arizona seeks no relief as against the Upper Basin generally or against the State of Utah specifically. California seeks no relief against the State of Utah either as a state of the Upper Basin having an interest in the "common fund" of water in the Lower Basin or as a state both of the Upper Division and of the Lower Basin. In neither California's affirmative defenses to Arizona's complaint nor in their traverse to the allegations of Arizona or to any other party may be found any contention seeking or demanding relief to the State of California against the State of Utah as either a state of the Upper Basin or as a state of the Lower Basin. Without such an allegation—and no such allegation could in good faith be made—there is nothing in the pleadings nor in the provable facts to be determined which can possibly disclose a necessity to bring Utah into the suit. *Nebraska* v. *Wyoming*, 295 U. S. 40, 55 S. Ct. 568.

The interests of the State of Utah in the waters of the Lower Basin are certainly *de minimus*. Their maximum

rights and claims to the waters of the Lower Basin do not equal in magnitude even 2½ percent of the water allocated by the Compact to the Lower Basin exclusive of surplus or unappropriated water. Clearly applicable here is the statement of this court in *Colorado* v. *Kansas*, 320 U. S. 383, 88 L. Ed. 116 at page 124:

> "Before the court will intervene the case must be of serious magnitude and fully and clearly proved."

Unquestionably there is no alleged wrongful act of the State of Utah and no prayer for relief against that state such as is required by the doctrine of *Nebraska* v. *Wyoming*, 295 U. S. 40, 55 S. Ct. 568. Certainly this is the precise situation of which this court was speaking in *Colorado* v. *Kansas* (320 U. S. 383, 88 L. Ed. 116), when it held that the Supreme Court would not intervene in actions between sovereign states in matters best settled by compact. Decisively should they refuse to intervene where it appeared that the matter might be amicably settled by mutual agreement or diplomatic relations between the states. (See also *Washington* v. *Oregon*, 214 U. S. 205, 218, 53 L. Ed. 969, 971, 29 S. Ct. 631.) To draw the State of Utah into this dispute upon the ground that they are presently interested but neither injured nor threatening injury in a controversy between the States of California and Arizona with respect to waters by the great preponderance in magnitude owned and vested in those other states would be absolutely to preclude the possibility of an amicable settlement of Utah's rights by compact and by negotiations. This contention fits squarely within the rule announced in *Colorado* v. *Kansas* (320 U. S. 383, 88 L. Ed. 116), where this court said, 320 U. S. at page 392:

> "The reason for judicial caution in adjudicating the relative rights of states in such cases is that, while we have jurisdiction of such disputes, they involve

the interests of quasi-sovereigns, present complicated and delicate questions, and, due to the possibility of future change of conditions, necessitate expert administration rather than judicial imposition of a hard and fast rule. Such controversies may appropriately be composed by negotiation and agreement, pursuant to the compact clause of the Federal constitution. We say of this case, as the court has said of interstate differences of like nature, *that such mutual accommodation and agreement should, if possible, be the medium of settlement, instead of invocation of our adjudicatory power*" (Emphasis added).

POINT 3

ABSENCE OF UTAH AND THE STATES OF THE UPPER DIVISION DOES NOT PRECLUDE AN EFFECTIVE INTERPRETATION OF THE ENACTMENTS AND COMPACTS KNOWN AS THE LAW OF THE RIVER UPON THE GROUND THAT THOSE ABSENT STATES ARE THIRD PARTY BENEFICIARIES TO THOSE STATUTORY ENACTMENTS OR STATUTORY COMPACTS.

The statutory compacts to which reference is made by California in their motion are the Boulder Canyon Project Act (45 Stat. 1057) and the California Self Limitation Act (Ch. 16, Calif. Statutes, 1929, p. 38). These acts are set out at length at pages 9 to 31 in Appendixes to California's Answer to Arizona's Bill of Complaint on file herein. The State of Utah adopts the argument of the States of Colorado and Wyoming in their brief concurrent hereto, without reiterating their arguments to this point.

It may be said, for purposes of continuity and integration of this brief, that the crux of this particular dispute is

whether or not Arizona is entitled to place reliance upon the California Self Limitation Act adopted as a condition to fulfillment of the Boulder Canyon Project Act (which authorized the construction of Hoover Dam,) for the reason that Arizona delayed ratification of the Colorado River Compact. This is purely an intra-basin problem between *California* and *Arizona* and does not involve either an obligation of the Upper Basin or of any other states. It does not involve Utah as a Lower Basin participant because the question is solely whether *Arizona* may place reliance on the Limitation Act.

California does not allege that the Upper Basin states or the State of Utah, New Mexico or Nevada are no longer beneficiaries to the Act or that any duties are imposed upon any of those states or that Basin by reason of their characterization as such beneficiaries.

POINT 4

THERE IS NO JUSTICIABLE CONTROVERSY EXISTING BETWEEN RESPONDENTS AND THE UNITED STATES REQUIRING THE PRESENCE OF RESPONDENTS AS PARTIES TO THIS ACTION.

The State of Utah concurs in the more amplified treatment given this point in Colorado's brief.

We only add that the United States intervened, as we comprehend their Motion and Petition in Intervention, to secure the water use rights of its agencies, instrumentalities, or wards; at least insofar as the Upper Basin States are concerned. To this point in California's Motion, the complete answer is that by Article VII of the Upper Colorado River Basin Compact, (63 Stat. 31, Vol. 2, Appendix 30, Cal. Appendixes to the Answer) it has been agreed that those uses

by the United States shall be, as to the Upper Basin, charged as a use by the state in which such use is made .

Here again, California is attempting to inspire determination by litigation of a problem already settled by negotiations and Compact. This again illustrates California's ostensible purpose to defeat the doctrine that this Court will not permit invocation of its jurisdiction over a state when the matter should and can be [and indeed this particular problem has been] settled through the medium of accommodation and agreement. *Colorado* v. *Kansas* (320 U. S. 383, 88 L. Ed. 116).

CONCLUSION

After Arizona had been granted leave to file a Bill of Complaint in this action, after the issues had been joined by an Answer, a Reply, and a Rejoinder, after two petitions to intervene had, after response by the parties, been granted, and after a Special Master had been appointed, this motion by the California defendants was filed.

It was also filed after counsel for the movant had urged deferral of Congressional authorization of the Upper Colorado Project until issues in the pending action between California and Arizona could be settled[2]. The body before whom this argument was developed apparently rejected the logic presented, by a recommendation approving the project. The granting of the present motion would be a tangible encouragement for the re-assertion of that same argument. We respectfully submit that this motion is calculated to delay both the pending litigation and the proposed project.

Whatever the movants' purpose might be, we further contend that they have not and cannot assert a ground upon which any relief against the State of Utah may be granted.

---

THE STATE OF UTAH AS AN UPPER BASIN STATE

As this and the concurrent briefs of respondents to this motion have demonstrated, this is a dispute involving waters apportioned to the Lower Basin. The Compact under which California seeks to join the absent states as "parties to a contract" never has had as any of its purposes, the distribution of waters between states within a Basin; therefore the numerous questions isolated by the California defendants which pertain to such a distribution between them and the other present parties cannot come under the aegis of the Compact. In other words, this is not a suit upon the Compact.

The only suit which could be brought under the Compact would be for the determination of inter-basin rights and obligations. No allegations charge any violation of the Compact by the Upper Basin. No such allegation could in good faith be made. Present injury must be alleged[3].

UTAH AS A STATE ENTITLED TO PARTICIPATE IN THE LOWER BASIN.

The State of Utah has a limited right of participation in the Lower Basin waters. They are now negotiating with Arizona for a distribution of their share by Compact. For this court to assume jurisdiction over Utah under that situation would be contrary to this court's holdings that matters between states should be settled by negotiation and Compact[4]; that a justiciable disputed issue must be in existence[5];

BRIEF OPPOSING MOTION OF CALIFORNIA

IN THE

Supreme Court of the United States

OCTOBER TERM, 1954

No. 10 Original

STATE OF ARIZONA, *Complainant,*

vs.

STATE OF CALIFORNIA, PALO VERDE IRRIGATION DISTRICT, IMPERIAL IRRIGATION DISTRICT, COACHELLA VALLEY COUNTY WATER DISTRICT, METROPOLITAN WATER DISTRICT OF SOUTHERN CALIFORNIA, CITY OF LOS ANGELES, CALIFORNIA, CITY OF SAN DIEGO, CALIFORNIA, AND COUNTY OF SAN DIEGO, CALIFORNIA, *Defendants.*

UNITED STATES OF AMERICA, *Intervener,*

STATE OF NEVADA, *Intervener.*

BRIEF OF NEW MEXICO OPPOSING MOTION OF CALIFORNIA TO JOIN AS PARTIES THE STATES OF COLORADO, NEW MEXICO, UTAH AND WYOMING.

PRELIMINARY STATEMENT

On the 26th day of October, 1954, the Court entered an Order in this case which reads as follows:

> "Motion of California in ten original to join Colorado, New Mexico, Utah and Wyoming will be held for sixty days to enable those states to file printed responses."

In response to the Order of the Court, Colorado and

Wyoming have filed herein their separate brief limited to the question of joinder from the standpoint of the four states, Colorado, Wyoming, New Mexico, and Utah, as States of the Upper Basin. The status of Colorado, Wyoming, New Mexico and Utah as Upper Basin states, or as States of the Upper Division, are all identical insofar as the question of joinder is concerned. However, as will be seen by examination of the language of the Colorado River Compact of 1922, New Mexico and Utah are also states of the Lower Basin. For this reason, New Mexico adopts the brief filed herein by the states of Colorado and Wyoming in opposition to joinder based upon the Motion of California. However, in view of the fact that the brief filed by Colorado and Wyoming does not deal with the status of New Mexico and Utah as states of the Lower Basin, we deem it appropriate for these two states to file separate briefs opposing the Motion to join based upon the status of New Mexico and Utah as states of the Lower Basin.

STATUS OF NEW MEXICO AS DEFINED IN COLORADO RIVER COMPACT OF 1922

Article II of the 1922 Compact reads in part as follows:

"As used in this compact: —

(c) The term "States of the Upper Division" means the States of Colorado, New Mexico, Utah and Wyoming.

(d) The term "States of the Lower Division" means the States of Arizona, California and Nevada.

(f) The term "Upper Basin" means those parts of the States of Arizona, Colorado, New Mexico, Utah and Wyoming within and from which waters naturally drain into the Colorado River System above Lee Ferry, and also

all parts of said States located without the drainage area of the Colorado River System which are now or shall hereafter be beneficially served by waters diverted from the System above Lee Ferry.

(g) The term "Lower Basin" means those parts of the States of Arizona, California, Nevada, New Mexico and Utah within and from which waters naturally drain into the Colorado River System below Lee Ferry, and also all parts of said States located without the drainage area of the Colorado River System which are now or shall hereafter be beneficially served by waters diverted from the System below Lee Ferry."

Article III reads in part as follows:

"(a) There is hereby apportioned from the Colorado River System in perpetuity to the Upper Basin and to the Lower Basin respectively the exclusive beneficial consumptive use of 7,500,000 acre feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist.

(b) In addition to the apportionment in paragraph (a), the Lower Basin is hereby given the right to increase its beneficial consumptive use of such waters by one million acre feet per annum."

Thus by Article II c and II f, New Mexico is one of the "States of the Upper Division" and of the "Upper Basin"; also by II g it is one of the States of the "Lower Basin". (Text of Colorado Compact, November 24, 1922, Page 1, Appendixes to the Answer of California).

It should be noted that the allocation of "exclusive beneficial consumptive use of 7,500,000 acre feet of water per annum," to both the Upper Basin and to the Lower

Basin, III a, includes "all water necessary for the supply of any rights which may *now* exist." The provisions of III b refers to the right of the Lower Basin to *increase* its beneficial consumptive use of such waters by one million acre feet per annum.

By Article VIII "Present perfected rights to the beneficial use of waters of the Colorado River System are unimpaired by this compact."

STATEMENT OF POSITION OF NEW MEXICO

New Mexico's principal interest in the consumptive use of water from the Colorado River System arises because of its status as one of the four states of the Upper Basin and of the Upper Division. Its interest as a State of the Lower Basin is dependent upon its ability to make consumptive use of a portion of the water of the Gila River and its tributaries which rise in the Western part of the State of New Mexico and flow across Arizona and into the Colorado River. It is physically impossible for New Mexico to divert for consumptive use in the State any waters from the main stream of the Colorado River, or from Lake Meade or any other reservoir on the main stream. Her water must come from the Gila or its tributaries in New Mexico, or possibly by exchange with Arizona, of main stream water for tributary water, which can be effected by negotiation —not by litigation.

The quantity of water which it may divert for beneficial consumptive use within the State is limited by physical and geographical factors. The acreage presently being irrigated is less than 10,000 acres, a figure which is infinitesimal compared to the claims of Arizona and California. Both states, however, recognize that New Mexico has the

right to an equitable share of the beneficial consumptive use of the waters of the Gila and its tributaries. (Answer of Defendants, page 66, paragraph 63—Bill of Complaint, page 30, Brief of Arizona.)

ARGUMENT

New Mexico objects to being joined as a party to this litigation because:

1. The pleadings do not show the existence of a justiciable controversy within the original jurisdiction of this court between New Mexico and any other party to the cause of action. This is true whether the status of New Mexico is considered as a "State of the Upper Division" or as a State of the Lower Basin.

2. The equitable share of New Mexico as a State of the Lower Basin, to the allocations made by Article III a and III b of the 1922 Colorado River Compact to the States of the Lower Basin, is admitted by both Arizona and California and disputed by no other party. It is not in the best interest of New Mexico at this time and in the present suit to be compelled to litigate and have determined the exact magnitude of this equitable share in terms of acre feet of water. Nor do the issues made by the pleadings between the real parties to this case make necessary the determination of the magnitude of such equitable interest of New Mexico at this time. Such a determination would depend upon facts that are hypothetical and highly speculative and under existing conditions would be premature.

3. Rule No. 19 of the Rules of Civil Procedure is not applicable or appropriate in this case.

4. It is not contended by California that the four

states of the Upper Division are "indispensable" parties in the sense that the case may not proceed without them.

5. Joinder of the four states at this time, under present status of pleadings, would be premature.

The following principles apply on the question of joinder of all four states, Colorado, Wyoming, Utah, and New Mexico, as well as to New Mexico and Utah as states of the Lower Basin:

> It will not grant relief against a state unless the complaining state shows an existing or presently threatened injury of serious magnitude. *Missouri vs. Illinois,* 200 U.S. 496, 521; *New York vs. New Jersey,* 256 U.S. 296, 309; *North Dakota vs. Minnesota,* 263 U.S. 365, 374; *Connecticut vs. Massachusetts,* 282 U.S. 660, 669; *Alabama vs. Arizona,* 291 U.S. 286, 291; *Washington vs. Oregon,* 297 U.S. 517, 528.
>
> A potential threat of injury is insufficient to justify an affirmative decree against a state. The court will not grant relief against something feared to occur at some future time. *Alabama vs. Arizona,* supra. The judicial power does not extend to the determination of abstract questions. *New York vs. Illinois,* 274 U.S. 288; *United States vs. West Virginia,* 295 U.S. 463.
>
> The court will not give advisory opinions or pronounce declaratory judgments. Its jurisdiction will not be exerted in the absence of absolute necessity. *Alabama vs. Arizona,* supra., *Arizona vs. California,* 283 U.S. 423; *U. S. vs. West Virginia; Massachusetts vs. Missouri.*
>
> To predetermine, even in the limited field of water power, the rights of different sovereignties pregnant with future controversies, is beyond the judicial function. *U.S. vs. Appalachian Power Company,* 311 U.S. 377, 432.
>
> The exercise of original jurisdiction in an inter-state

case is not mandatory. (Georgia vs. Pennsylvania Railroad Company, 324 U.S. 439, 464; North Dakota vs. Chicago and Northwestern Railroad Company 257 U.S. 485.) The mere fact that a state is plaintiff is not enough (Wisconsin vs. Pelican Insurance Co., 127 U.S. 265; Oklahoma vs. A.T. & S.F. Ry., 220 U.S. 277).

Rule 19 of the Federal Rules of Civil Procedure is not necessarily controlling in this case. Rule 9 of the Supreme Court rules governing procedure in original actions, sub-paragraph 2 reads as follows: "The form of Pleadings and Motions in original actions shall be governed, so far as may be, by the Federal Rules of Civil Procedure, and in other respects those rules, where their application is appropriate, may be taken as a *guide* to procedure in original actions in this court." Sub-paragraph 3 of the rule governs the filing of the initial Pleading in an original action, and the procedure followed by the court in either granting or refusing a Motion for leave to file the initial petition. Sub-paragraph 6 of the rule states "additional Pleadings may be filed and subsequent proceedings had as the court shall direct."

In this case, the State of Arizona filed its Motion for leave to file its initial pleading and leave was granted by the court. The court no doubt determined that the petition stated a justiciable controversy between the State of Arizona and State of California and the nine additional defendants. California answered the petition of Arizona and joined issue on the allegations of Arizona's petition and asserted four affirmative defenses. Subsequently, the United States and the State of Nevada sought and were granted leave to intervene. We submit that the initial petition of the State of Arizona did not state a justiciable controversy with the states of Colorado, Wyoming, Utah and New Mexico. We submit further that neither the State of

Nevada nor the United States has alleged any fact creating a justiciable controversy with either of the four absent states.

In the case of *Nebraska vs. Wyoming,* 295 U.S. at page 43, the Court said:

> "Nebraska asserts no wrongful act of Colorado and prays no relief against her. We need not determine whether Colorado would be a proper party or whether at a later stage of the cause pleadings or proof may disclose a necessity to bring her into the suit."

We believe the above language is applicable to the pleadings in this case and that the motion of California should be denied.

BRIEF OF THE STATE OF COLORADO AND THE STATE OF WYOMING OPPOSING THE MOTION OF THE STATE OF CALIFORNIA TO JOIN THE STATES OF COLORADO AND WYOMING AS PARTIES TO THIS ACTION

Because their interests in this matter are identical, the States of Colorado and Wyoming join in this brief. For convenience of reference, they will be referred to herein as "Respondents."

STATEMENT OF THE QUESTIONS PRESENTED

California, by her motion, seeks to make respondents parties to this action. The motion presents four questions for determination, only three of which are applicable to

respondents. The remaining question is directed to the interests of the States of Utah and New Mexico as Lower Basin States, and is applicable only to the States of Utah and New Mexico. The three questions presented and applicable to respondents are:

1. Are the rights and obligations of respondents under the Colorado River Compact in issue in this action, and if so, is there a justiciable controversy existing upon which respondents' rights and obligations thereunder can be adjudicated?
(See paragraph I, page 2, California's motion).

2. Are the respondents parties in interest in the Boulder Canyon Project Act and the California Self-Limitation Act, and if so, is there a justiciable controversy existing upon which respondents' interests therein may be adjudicated?
(See paragraph III, pages 3 and 4, California's motion).

3. Is there a justiciable controversy existing between the respondents and the United States, requiring determination in this action?
(See paragraph IV, page 4, California's motion).

STATEMENT OF THE CASE

I. PURPOSE OF PRESENT ACTION.

The present action was brought to divide, between the States in the Lower Basin, the water use to which the Lower Basin of the River is entitled under the Colorado River Compact.

THE COLORADO RIVER COMPACT DOES NOT AND WAS NOT INTENDED TO DIVIDE THE WATER USE OF EITHER THE UPPER BASIN OR THE LOWER BASIN BETWEEN THE STATES WITHIN EITHER BASIN.

The division of water use between the States of a basin is a matter outside the scope of the compact. This

principle has been recognized by all seven of the Colorado River States and the United States.

The Colorado River Compact divides water use only between two areas, designated as the Upper Basin and Lower Basin.

Respondents are located in the Upper Basin.

California and Nevada are located solely in the Lower Basin, and Arizona, although having a small area located in the Upper Basin, is located principally in the Lower Basin.

Respondents have no rights in the water use allotted to the Lower Basin by the Compact.

The States in the Upper Basin, including respondents, by agreement, have divided the water use allotted to the Upper Basin between the States in the Upper Basin.

Unlike the Upper Basin, the Lower Basin States have been unable to agree upon a division of the water use allotted to the Lower Basin by the Compact.

Consequently, this action was commenced by Arizona against California to accomplish a division of the water use in the Lower Basin by judicial decision. Nevada intervened to have adjudcated her rights to the use of water allotted to the Lower Basin by the Compact. The United States intervened to protect its rights and those of its instrumentalities and wards to the use of waters in the Lower Basin.

Arizona seeks no relief as against the Upper Basin or respondents.

Nevada seeks no relief as against the Upper Basin or respondents.

The United States seeks no relief as against the Upper Basin or respondents.

Neither Arizona, Nevada, nor the United States has asserted that the respondents are necessary or indispens-

able parties to a determination of this action.

Of the present parties to this action, California, and California alone, asserts that respondents are necessary or indispensable parties to this action.

II. PURPOSE OF CALIFORNIA'S MOTION

California, by her motion to make respondents parties, seeks to expand the action beyond its original purpose of dividing water use in the Lower Basin, to one including the adjudication of interbasin rights and obligations, including the rights and obligations of the respondents and the other Upper Basin States under the Compact; and also to adjudicate the respective rights of respondents and the United States to the use of waters of the Colorado River.

III. MOTION DOES NOT ALLEGE EXISTENCE OF JUSTICIABLE CONTROVERSY

California, by her motion, alleges three reasons why respondents are necessary or indispensable parties.

1. That there are in controversy in the present action many issues or interpretation of the Compact, and that these issues of interpretation affect the rights and obligations of respondents.
   (See paragraph I, page 2, California's motion).

2. That the meaning and effect of the Boulder Canyon Project Act and the California Self-Limitation Act are in controversy in this action, and that the issues of interpretation affect the rights and obligations of respondents.
   (See paragraph III, pages 3 and 4, California's motion).

3. That the claims of the United States in this action affect the rights and obligations of respondents.
   (See paragraph IV, page 4, California's motion).

There is no allegation in the motion that respondents, by any acts or ommissions, are depriving California or any other party to this action, of any rights claimed under the Compact or otherwise; there is no allegation that respondents are violating the Colorado River Compact, the Boulder Canyon Project Act, or the California Self-Limitation Act.

California's motion, and brief in support thereof, are premised on the assumption that at some time in the future a fact situation *may* arise, which *may* create a controversy, which *may* require the interpretation of interbasin rights and the rights and obligations of respondents.

IV. PURPOSE AND BACKGROUND OF COLORADO RIVER COMPACT

To understand the position of respondents, a brief resume of the background and purposes of the Colorado River Compact is necessary.

The Colorado River rises in the State of Colorado and flows through western Colorado and thence into Utah and enters Arizona near its northeast corner. For approximately 145 miles it forms the boundary between Arizona and Nevada, for 235 miles it forms the boundary between Arizona and California, and for 16 miles the boundary between Arizona and Mexico. Its drainage basin encompasses portions of the seven States of Colorado, Wyoming, Utah, New Mexico, Nevada, Arizona and California.

The source of most of the waters of the river is in the Upper Basin of the River, located principally in Colorado, Wyoming, Utah and New Mexico.

The river, in its natural state, has great fluctations in flow, not only in the same year, varying with the seasons, but from year to year.

Before construction of Hoover Dam, which impounds water in Lake Mead, floods caused great damage, particularly in the Lower Basin of the river. Prior to the negotia-

tion of the Colorado River Compact in 1922, there was a demand in the Lower Basin of the river, and particularly in Southern California, for the construction of a large storage reservoir in the Lower Basin of the river, for flood control and to accumulate waters during high flows of the river for use during low flows, to provide a firm water supply for power production, irrigation and other uses.

At the same time, Southern California desired the construction of an All-American Canal to serve the Imperial Valley, to replace the canal then serving the Valley, which was located in part in Mexico.

To accomplish these purposes, California urged Congress to construct a large storage reservoir on the river in the Lower Basin and to build the All-American Canal.

The States in the Upper Basin of the river, realizing that with the construction of these projects, development of the use of waters of the river in the Lower Basin would increase more rapidly than in the Upper Basin, insisted that the Upper States be given some protection. The Upper States feared that prior large scale development of the use of the waters in the Lower Basin, would give rise to a claim that later use in the Upper Basin could not interfere with an existing economic development in the Lower Basin, based on the prior use in that Basin.

As a result of this situation, the Colorado River Compact was negotiated (H. Doc. 717, 80th Congress, 2d Sess., p. A17, 1948). The full text of the Compact is set forth at pages 1-8 of the Appendixes filed herein by California in connection with her answer. Its fundamental underlying premise is to protect the Upper States in their future development and use of the waters of the river, while at the same time permitting the Lower States to proceed with immediate development and use. Thus, the first major purpose of the Compact, as stated in Article I of the Compact, is "to provide for the equitable division and apportionment of the use of the waters of the Colorado River system."

By the Compact, the river basin was divided into two basins, denominated the Upper Basin and the Lower Basin, with the division point at Lee Ferry, a point on the river just South of the Utah-Arizona border. The principal protection to the Upper Basin is found in Article III(a), which provides:

> "There is hereby apportioned from the Colorado River system *in perpetuity* to the Upper Basin and to the Lower Basin respectively, the exlusive beneficial consumptive use of 7,500,000 acre feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist." (Emphasis ours).

We call the Court's attention to the fact that the foregoing apportionment *does not apportion or divide the water use between the individual states* of either basin, but only as between the Upper and Lower Basins of the river.

The Upper Basin contains those areas from which waters naturally drain into the Colorado River system above Lee Ferry, plus areas of the Upper Basin States located without the drainage area but which shall be served by waters diverted above Lee Ferry. The Lower Basin is the area from which waters naturally drain into the Colorado River system below Lee Ferry, plus the parts of the Lower Basin States without the drainage area which shall be served by waters diverted below Lee Ferry. (Article II(f) and (g) Compact).

Colorado and Wyoming are located solely within the Upper Basin. California and Nevada are located solely within the Lower Basin. New Mexico and Utah are located in part in the Upper Basin and in part in the Lower Basin, but their prinicipal interests are in the Upper Basin. Arizona is located in part within the Upper Basin and in part within the Lower Basin, but her principal interests are in the Lower Basin. (Articles II (f) and (g) Compact).

Recognizing these interests, the Compact divides the States into two political groups, termed States of the Upper Division, which includes Colorado, New Mexico, Utah and Wyoming, and States of the Lower Division, which includes Arizona, California and Nevada. (Article II (c) and (d) Compact).

After the Compact was negotiated and it became effective, Hoover Dam was authorized and constructed. The All-American Canal was authorized and constructed. The Lower Basin obtained the facilities of flood control, storage and the All-American Canal which it desired, and did proceed with its immediate development and use of the waters in the Lower Basin. In addition, to aid water use and development in the Lower Basin, Parker Dam, Davis Dam and other water storage and use facilities have been constructed in the Lower Basin.

As was anticipated, the development and use of the waters of the river in the Upper Basin has been far less rapid than in the Lower Basin.

The present beneficial consumptive use in the Upper Basin is but about one-third of its apportionment under Article III (a) of the Compact, being approximately 2,500,000 acre feet of the 7,500,000 acre feet apportioned (see Hearings before the Subcommittee on Irrigation and Reclamation of the Committee on Interior and Insular Affairs, United States Senate, 83rd Congress, Second Session, on S. 1555, page 286). The unused portion of the Upper Basin apportionment is flowing into the Lower Basin and will continue so to flow until Upper Basin use increases to the amount of its apportioned share.

SUMMARY OF ARGUMENT

I. As to the questions of interpretation of the Compact raised by the motion, respondents contend:

A. The present action is one to divide water use in the Lower Basin. The Compact does not and was not intended to divide water use within a basin. The division of water use within a basin is outside the scope of the Compact. Consequently, this is not an action on or to enforce the Compact, but rather to determine an issue outside the scope of the Compact. The fact that respondents are parties to the Compact does not require their presence to determine the present issue, which is not within the scope of the Compact.

B. There is no justiciable controversy existing between respondents and California, or any other party to this action, requiring or permitting the interpretation of or adjudication of respondents' rights and obligations under the Compact. Respondents' rights and obligations under the Compact cannot be interpreted or adjudicated in the absence of an existing justiciable controversy. There is no allegation or assertion that respondents are violating the Compact or depriving California, or the Lower Basin, or any of the parties to this action, of any rights which they claim under the Compact. Respondents are not required to submit to an adjudication of their rights and obligations under the Compact in the absence of an existing justiciable controversy, and upon assumed or hypothetical facts.

II. As to the questions of interpretation of the Boulder Canyon Project Act and the California Self-Limitation Act, respondents contend:

A. The present controversy involving the Boulder Canyon Project Act and the California Self-Limitation Act relates solely to a dispute between Arizona and California, over the division of water use in the Lower Basin. Respondents have no rights in the water use to which the

Lower Basin is entitled under the Compact. Respondents have no rights or obligations involved in this controversy, and are not necessary parties to any controversy concerning these Acts.

B. The rights and obligations of respondents, if any, under the Boulder Canyon Project Act and the California Self-Limitation Act cannot be adjudicated until such time as there is a justiciable controversy existing between the respondents and some Lower Basin State, requiring such adjudication. There is no allegation in the motion that respondents are depriving California, or any other party to this action, of any rights which they claim under these Acts. There being no allegation of the existence of a justiciable controversy, respondents cannot be required to submit to an adjudication of their rights or obligations.

III. As to the claims of the United States in this action, respondents contend:

A. The United States has made no claims against and seeks no relief in this action against respondents. In the absence of such claims by the United States against respondents, there is no issue between the United States and the respondents to be determined in this action, and to which the respondents are necessary parties.

B. There is no allegation of the existence of any justiciable controversy between the respondents and the United States. Neither California nor the United States allege that the respondents are depriving the United States of any rights which it claims. The fact, if it be a fact, that at some time in the future, under some circumstances, a justiciable controversy may arise between the respondents and the United States, is not a valid ground for the requirement of the presence of respondents to the present action.

ARGUMENT

I. THE ISSUE IN CONTROVERSY IN THE PRESENT ACTION IS THE DIVISION OF WATER USE IN THE LOWER BASIN, TO WHICH RESPONDENTS ARE NOT NECESSARY OR INDISPENSABLE PARTIES.

That the issue in this action is the division of water use in the Lower Basin is clearly apparent.

Arizona, by her complaint, prays for a share of the water use "apportioned to the Lower Basin by the Colorado River Compact," subject to "the availability of such water under the Colorado River Compact." (See page 30, Arizona's complaint).

Nevada, in her petition for intervention, prays for an adjudication of her share of the water use apportioned to the Lower Basin by the Compact. (See page 25 of Nevada's petition for intervention).

California, in her answer to Arizon's complaint, asks for no affirmative relief, but alleges by way of affirmative defenses that her claims to the beneficial consumptive use of water in the Lower Basin are superior to those of Arizona, and at page 2 of her answer states:

> "This controversy centers on the desire of Arizona to secure a right to the use of water for the Central Arizona Project, which has not been authorized by the Congress. She seeks to obtain water for that project by taking it from the existing and operating California projects."

It is equally clear that the Colorado River Compact does not, and was not intended to divide the water use of either the Upper or Lower Basins.

The Colorado River Compact Commission, which negotiated the Compact, deliberately avoided any attempt to allocate waters between the States.

"During the public hearings and business meetings of the Commission, it became apparent that any attempt to allocate waters individually to the several states would be a protracting and probably unsuccessful undertaking. Participants have stated that the negotiations would have broken up but for Mr. Hoover's proposal: that the Commission limit its efforts to a division of water between the Upper Basin and the Lower Basin, leaving to each basin the future internal allocation of its share."

(The Hoover Dam Documents, Second Edition, 1948, published under H. R. 391 of December 4, 1947, page 22).

"The Colorado River Compact does not attempt to divide the water of the river between individual states."

(The Hoover Dam Documents, supra, page A50).

The Upper Basin States have, by Compact, agreed upon a division between themselves of the water use allotted to the Upper Basin by the Colorado River Compact. This agreement is the Upper Colorado River Basin Compact, which was negotiated by the Upper Basin States with the consent of Congress. (See 63 Stat. 31, Appendix 30, Article VII).

Since the Lower Basin States have been unable to agree upon a division of the water uses in the Lower Basin, several attempts have been made to determine the division by litigation. (See *Arizona vs. California*, 283 U. S. 423, 51 S. Ct. 522; *Arizona vs. California*, 292 U. S. 341, 54 S. Ct. 735; *Arizona vs. California*, 298 U. S. 558, 56 S. Ct. 848; Hearings before a Subcommittee of the Committee on Interior and Insular Affairs, United States Senate, Eightieth Congress, Second Session, on Senate Joint Resolution 145, being a resolution authorizing commencement of an action by the United States to determine interstate water rights in the Lower Colorado River Basin).

The latest of these attempts is the present action in-

stituted by the State of Arizona gainst the State of California, and in which the State of Nevada and the United States have intervened.

The principle that the division of water use within a basin is solely an issue between the States of the basin, and not requiring the acquiescence or participation of the States of the other basin, was first recognized by the participants in the negotiation of the Compact, as we have shown above.

The same principle was later recognized by the United States Congress in the Boulder Canyon Project Act of December 21, 1928, (45 Stat. 1057), wherein, in the second paragraph of Section 4 (a) of that Act, the States of Arizona, California and Nevada were authorized to enter into an agreement for the division of the Lower Basin water use, and with no requirement that the Upper Division States acquiesce in or be parties thereto.

This same principle was also recognized by the Upper Basin States and the United States in the negotiation of the Upper Colorado River Compact, which divided the water use of the Upper Basin, and which Compact was consented to by the United States Congress. Congress and the Upper Division States did not consider that the Lower Basin States were necessary parties to that Compact, and so far as we are informed, the Lower Basin States have not contended that the Upper Basin Compact is invalid because the Lower Basin States are not parties thereto.

This same principle was recognized by the State of California in 1948. At that time, the State of California was urging the passage by Congress of the so-called McCarran Resolution, which would have required the Attorney General of the United States to institute litigation for the purpose of determining the division of the water uses in the Lower Basin. At the hearings on the McCarran Resolution in the Senate, the Assistant Attorney General of the State of California stated as follows:

"Thus, the focal point of the proposed suit is the determination of the rights of the Lower Basin States among themselves, under, and not in derogation of, the disputed documents which constitute the law of the river. There is no need to go further. NO DISPUTES OR PROBLEMS REQUIRING PRESENT DISPOSITION ARE BELIEVED TO EXIST BETWEEN THE UPPER BASIN AND THE LOWER BASIN. There is no need to determine the division of water among the Upper Basin States. They have for nearly two years been engaged in negotiation of a compact for that purpose, and it is believed that this effort will be effectual." (Emphasis ours).

"The three major issues discussed by Mr. Ely and Mr. Howard directly relate to the division of the Lower Basin water. HENCE THE UPPER BASIN STATES ARE NOT DIRECTLY CONCERNED AND NEED NOT BE MADE PARTIES." (Emphasis ours). (Hearings before the Senate Subcommittee of the Committee on Interior and Insular Affairs, United States Senate, Eightieth Congress, Second Session, on S. J. Res. 145, at page 129).

The same statement was made at the House hearings. (See Hearings before Subcommittee No. 4 of the Committee on the Judiciary, House of Representatives, Eightieth Congress, Second Session, on H. J. Res. 225, H. J. Res. 226, H. J. Res. 227, H. J. Res. 236, and H. R. 4097, at page 214).

The three major issues referred to by the Assistant Attorney General of the State of California in these hearings are briefly:

1. By what method shall the beneficial consumptive use of water in the Lower Basin be measured?

2. Are the waters referred to in Article III(b) of the Compact apportioned water or "excess or surplus" water and unapportioned?

3. How are evaporation losses from the Lower Basin mainstream storage reservoirs to be charged in the Lower Basin?
   (See pages 19 and 20 of Hearings before a Subcommittee of the Committee on Interior and Insular Affairs, United States Senate, Eightieth Congress, Second Session, on S.J. Res. 145).

These are the same three issues presented by Arizona's complaint in the present action, which are found in paragraph XXII, at pages 25 and 26 of Arizona's complaint, which are:

1. Is the water referred to and affected by Article III(b) of the Colorado River Compact apportioned or unapportioned water?
2. How is beneficial consumptive use to be measured?
3. How are evaporation losses from Lower Basin mainstream reservoirs to be charged?

Respondents respectfully submit that the purpose of and the issue in this action is the division of water use in the Lower Basin; that this is an issue solely between the States of the Lower Basin, and does not require the presence of respondents for its determination.

II. THERE IS NO JUSTICIABLE CONTROVERSY REQUIRING OR JUSTIFYING THE INTERPRETATION OF THE COMPACT AS TO ANY RIGHTS OR OBLIGATIONS OF RESPONDENTS.

California raises many questions of interpretation of the Compact which she says should be determined in this action.

Before proceeding to discuss these questions in detail, we point out:

A. BY ARTICLE III(a) OF THE COMPACT, THE UPPER BASIN IS APPORTIONED "THE EXCLUSIVE BENEFICIAL CONSUMPTIVE USE OF 7,500,000 ACRE FEET OF WATER PER ANNUM."

THE UPPER BASIN'S PRESENT CONSUMPTIVE USE IS ABOUT 2,500,000 ACRE FEET, OR ABOUT ONE-THIRD OF THE APPORTIONMENT. THERE IS NO ASSERTION THAT THE UPPER BASIN IS EXCEEDING ITS RIGHTFUL USE UNDER THE COMPACT.

B. THE COMPACT, BY ARTICLE III(c), III(d) AND III(e), IMPOSES CERTAIN OBLIGATIONS UPON THE UPPER BASIN AND THE UPPER DIVISION STATES. BUT CALIFORNIA DOES NOT ASSERT ANY VIOLATIONS OF THESE OBLIGATIONS.

C. NOR DOES CALIFORNIA ASSERT THAT THE UPPER BASIN OR THE UPPER DIVISION STATES ARE VIOLATING THE COMPACT IN ANY RESPECTS.

D. THERE IS NO CONTROVERSY EXISTING BETWEEN THE UPPER BASIN AND LOWER BASIN.

GENERALLY, THE QUESTIONS OF INTERPRETATION RAISED BY CALIFORNIA ARE BASED ON THE PREMISE THAT AT SOME TIME IN THE FUTURE, A FACT SITUATION *MAY* ARISE WHICH *MAY* CAUSE A CONTROVERSY TO EXIST, THE DETERMINATION OF WHICH *MAY* REQUIRE AN INTERPRETATION OF THE COMPACT.

Respondents strenuously object to any attempt to determine their rights under the Colorado River Compact,

until such time as they are accused of a violation of the Compact, or until such time as they are accused of some act which deprives some Lower Basin State of some right which that State claims that it has by virtue of the Compact.

Here the Upper Division States have been accused of no violation of the Compact whatsoever.

The respondents also strenuously object to being made parties to this litigation for the purpose of interpreting the rights of the respondent States under the Compact on some theoretical or imagined fact situation, which could only occur many years in the future, and with no assurance that the suppositious controversy would ever exist.

Respondents further urge that they are entitled to have their rights under the Compact determined at the time that an actual justiciable controversy exists, and to have the interpretation of the Compact made with relation to an existing controversy and an actual fact situation. The position of the respondents in this respect is not without support by decisions of this Court. This Court has said:

> "Not every matter which would warrant resort to equity by one citizen against another would justify our interference with the action of the state, for the burden on the complaining state is much greater than that generally required to be borne by private parties. Before the court will intervene the case must be of serious magnitude and fully and clearly proved. And in determining whether one state is using or threatening to use more than its equitable share of the benefits of a stream, all the factors which create equities in favor of one state or the other must be weighed as of the date when the controversy is mooted."
>
> *Colorado vs. Kansas,* 320 U.S. 383, 393, 394, 64 S. Ct. 176, 181.

The Court will not grant relief against a state unless the complaining state shows an existing or presently threatened injury of serious magnitude.

Missouri vs. Illinois, 200 U.S. 496, 521, 26 S. Ct. 268, 270; *New York vs. New Jersey,* 256 U.S. 296, 309, 26 S. Ct. 268, 270; *North Dakota vs. Minnesota,* 263 U.S. 365, 374, 44 S. Ct. 138, 139; *Connecticut vs. Massachusetts,* 282 U.S. 660, 669, 51 S. Ct. 286, 289; *Alabama vs. Arizona,* 291 U.S. 286, 291, 54 S. Ct. 399, 401; *Washington vs. Oregon,* 297 U.S. 517, 522, 56 S. Ct. 540, 542.

A potential threat of injury is insufficient to justify an affirmative decree against a state. The Court will not grant relief against something feared to occur at some future time.

Alabama vs. Arizona, supra.

The judicial power does not extend to the determination of abstract questions.

New York vs. Illinois, 274 U.S. 488, 47 S. Ct. 661; *United States vs. West Virginia,* 295 U.S. 463, 474, 55 S. Ct. 789, 793.

The Court will not give advisory opinions or pronounce declaratory judgments. Its jurisdiction will not be exerted in the absence of absolute necessity.

Alabama vs. Arizona, supra; Arizona vs. California, 283 U.S. 423, 464, 51 S. Ct. 522, 529; *U. S. vs. West Virginia, supra; Massachusetts vs. Missouri,* 308 U. S. 1, 60 S. Ct. 39.

To predetermine, even in the limited field of water power, the rights of different sovereignties pregnant with future controversies, is beyond the judicial function. The courts deal with concrete legal issues, presented in actual cases, not abstractions.

U. S. vs. Appalachian Power Company, 311 U. S. 377, 423, 61 S. Ct. 291, 306.

California does not attempt to allege any facts constituting the existence of a justiciable controversy with respondents, nor would any such attempt be justified. California does not and cannot contend that the uses in the Upper Basin are in excess of its rights under the Compact. California does not and cannot contend that respondents, or the Upper Division States, are evading their obligations to the Lower Basin under the Compact.

As we shall presently show, each and every interpretation of the Compact sought by California, involving the rights and obligations of respondents, is based upon the assumption that at some time in the future, a situation or condition may arise which may require adjudication.

Under paragraph II of her brief, pages 31 to 53, California sets forth the various questions of interpretation of the Compact which she desires that respondents be required to litigate in this action. We will proceed to discuss these questions and show in each instance that there is no justiciable controversy upon which respondents can be required to litigate these questions.

DISCUSSION OF THE PARTICULAR QUESTIONS OF INTERPRETATION RAISED BY CALIFORNIA UNDER ARGUMENT II, PAGE 31 OF HER BRIEF.

California states, "THE FOUR STATES OF COLORADO, NEW MEXICO, UTAH AND WYOMING ARE NECESSARY PARTIES TO THIS ACTION BECAUSE THEY ARE PARTIES TO THE COLORADO RIVER COMPACT, THE MEANING AND EFFECT OF WHICH ARE IN CONTROVERSY IN THIS CASE, AND NO DECREE CONSTRUING THAT AGREEMENT CAN BE FULLY EFFECTIVE WHICH DOES NOT DETERMINE THEIR RIGHTS AND OBLIGATIONS AS WELL AS THOSE OF THE PRESENT PARTIES."

Under "A", page 31 of her brief, California states that respondents have certain obligations under Articles

III(c), III (d) and III(e) of the Compact, and certain rights under Articles III(a), III(e), III(f) and III(g) of the Compact, and that respondents have rights and obligations under Articles VII and VIII of the Compact.

There is, however, no allegation by California that respondents, or the Upper Division States, are exceeding their rights or evading their obligations under these various articles of the Compact, to the injury of California or the Lower Basin.

In the absence of such an allegation, there is no justiciable controversy upon which respondents' rights and obligations under these articles of the Compact can be adjudiciated.

Under Argument II "B", pages 32 to 35 of brief, California discusses her controversy with Arizona over the waters of the Gila River, which is purely a lower basin dispute. As to respondents' interest therein, California states at page 34 of the brief, "The States of the Upper Division, in the calculation of their obligation under Article III(c), are thus directly affected by the question of whether or not the uses on the Gila River and other Lower Basin tributaries are accountable under Article III(a)."

Article III(c) has to do with the obligation of the Upper Division States in case there is a shortage of water to supply Mexico under the Mexican Treaty.

In other words, California says that should the time come that the Upper Division States are required to furnish water at Lee Ferry to supply a deficiency to Mexico under Article III(c), that it may then be to the advantage of the Upper Division States if California is right in her interpretation of the Gila River controversy.

California does not allege that there now exists a shortage in the supply to Mexico under the treaty ,and that the Upper Division States are refusing to recognize their obligation under Article III(c).

What California says in effect is that at some time in the future there *may* be a shortage of water to Mexico, and that at that time the Upper Division States *may* refuse to recognize their obligation under Article III(c), because they *may* not agree with California on the Gila River dispute.

The facts are that the Upper Division States are now consumptively using but approximately 2,500,000 acre feet of their apportioned 7,500,000 acre feet; and that under the present uses there is more than sufficient water to satisfy the Mexican needs from the unused portion of the Upper Basin's share alone.

Under Argument "C", (page 35 of brief, California raises the question that Article VIII of the Compact, providing "present perfected rights to beneficial use of waters of the Colorado River system are unimpaired by this Compact", means unimpaired as to quality as well as quantity. At the bottom of page 35 of her brief, California says, "It is a question of fact, to be developed at the trial, what effect the increased utilization of water in the Upper Basin will have upon the concentration of salts in the residue reaching Lee Ferry."

This, we believe, is typical of California's entire position of attempting in this case to determine not only all possible questions of interpretation that may arise in the future, but also to attempt to try in advance questions of fact which may hereafter arise.

We may reasonably assume from California's statement which we have just quoted, that if the Upper Division States are made parties, California will produce testimony at the trial that increased use of water, in the Upper Basin, may affect the quality of the water reaching Lee Ferry, and therefore, this Court should then determine that there can be no future development in the Upper Basin because the quality of the water *might be affected*.

There is no present allegation that the present uses

in the Upper Basin are depriving California of a quality of water to which she claims she is entitled under her interpretation of the Colorado River Compact. Nevertheless, because the Upper Basin *may,* at some time in the future, make such increases in its use in some manner which might affect the quality of the water, the Upper Division States are now to be brought into Court to try this issue upon conjecture and opinion. We submit that states should not have their rights to water, which are their very life blood, determined on any such hypothetical and conjectural assumptions. Should the time come that water uses in the Upper Basin *do* affect rights which California claims to have under the Compact, then and only then should such issues be determined.

Under Argument "D", (page 36 of brief), California discusses the manner of measurement of beneficial consumptive use. California contends that it should be measured by one method, and Arizona contends it should be measured by another.

The respondents are not concerned at this time with what particular method is used to divide the water use in the Lower Basin. As to the division of the waters within a particular basin, the particular method of measurement is a matter for those states themselves to determine.

If and when a controversy arises between the two basins as to what method of measurement shall be used to determine inter-basin rights and obligations, that question can then be determined. The question will not arise in the foreseeable future.

California states, at the top of page 38 of her brief, that if her method of measurement is used for inter-basin purposes, the Upper Basin will have between 300,000 and 500,000 acre feet less of consumptive use than if the Arizont method is used.

Yet, as we have pointed out heretofore, the Upper Basin consumptive use is only about 2,500,000 acre feet,

and its apportionment is 7,500,000 acre feet. Under either method of measurement contended for, the Upper Basin use is well within the apportionment.

When Upper Basin consumptive use approaches the Upper Basin apportionment of 7,500,000 acre feet, then and not before, there may exist a justiciable controversy upon which to litigate the question of what method of measurement of consumptive use shall be used in determining interbasin obligations. At this time, there is no such controversy. Admittedly the Upper Basin is well within its apportioned use, whichever method of measurement is used.

Argument "E" (page 39, California's brief). Under this argument, California discusses the matter of how salvage water is to be charged. What we have said with regard to Argument "D" likewise applies to this argument. At some time in the future, an interbasin controversy may arise over the question of how salvage waters are to be charged. At the present time, this is an intrabasin controversy between Arizona and California. It only becomes important to the Upper Basin when the Upper Basin uses or the Lower Basin demands raise the question.

There is not now any controversy between the two basins over this question, for irrespective of how salvaged waters are to be charged, the Upper Basin use is well within its apportionment under the Compact.

Argument "F" (page 41 Brief). California contends that the Upper Basin uses are limited to a maximum of 7,500,000 acre feet in a given year under Article III(a) of the Compact.

California does not allege that the Upper Basin uses have in any year exceeded 7,500,000 acre feet. California, in effect, contends that at some time in the future, the Upper Basin *may* so develop its use, that it *might* seek to beneficially consume more than 7,500,000 acre feet of water in one year, and that *if* this did happen, it would be contrary to California's interpretation of the Compact, and therefore, this Court should now determine this question.

Until the time arrives that the Upper Basin use exceeds 7,500,000 acre feet in any one year, there is no justiciable controversy upon which the Court should make an interpretation.

Argument "G" (page 43, California brief). Under Argument "G", California states that the Upper Basin States are interested in the question of how rights may be acquired in waters surplus to those specified in Article III(a) and Article III(b). California says rights may be obtained by her in such surplus by appropriation. California does not assert that the Upper Basin is depriving her of any such waters she claims by her appropriation theory. What California does say is that the Upper Basin, at some time in the future, *may* attempt to use more than its apportioned 7,500,000 acre feet, and that *if* and when that time arrives, the Upper Basin use of the excess over 7,500,000 acre feet is subject to California's prior uses. It is again necessary to point out that the Upper Basin uses are but approximately one-third of its apportionment. Yet, California would have the Upper Basin States litigate an issue now which, if it ever arises, can only arise many years in the future and after the Upper Basin has increased its use to an excess of 7,500,000 acre feet.

Argument "H" (page 45, California brief). Under this argument, California discusses the question of whether the waters mentioned in Article III(b) are apportioned or unapportioned waters.

In the first place, III(b) water is water allocated solely to the Lower Basin, and respondents have no rights therein. In the second place, in 1948, California represented to the United States Congress, in the McCarran hearings heretofore mentioned, that this issue is a controversy between Arizona, California and Nevada, and that the respondents were not necessary parties to its determination. (See Hearings before a Subcommittee of the Committee on Interior and Insular Affairs, United States Senate, Eightieth Congress, on S. J. 145, page 129, supra).

With this we agree.

However, California, in her argument, in effect says that *if* her contention is correct, that the waters are unapportioned, and *if* III(b) waters are surplus waters, and *if* after October 1, 1963, either basin shall have reached its total beneficial consumptive use, and *if* at that time a further apportionment is thereafter made under Article III(g), and *if* the Upper Basin receives an additional apportionment, that then it may be to the advantage of the Upper Basin *if* III(b) water is construed as unapportioned water, and therefore the Upper Basin has an interest in this controversy.

Upon such a speculative and conjectural statement, California is seeking to make the Upper Division States litigate their rights.

There is no controversy existing at this time between the Upper and Lower Basins on this point. No controversy, in any event, could exist prior to October 1, 1963, which by Article III(f) is the earliest date when the matter of further apportionment can be considered.

No justiciable controversy exists between respondents and California on this question.

Argument "I" (page 46 of brief). California says that the Upper Division States are affected by the controversy between California, Arizona and Nevada over the charging of reservoir evaporation losses on Lower Basin reservoirs.

This obviously is a Lower Basin controversy. The respondents are not interested in how California, Nevada and Arizona charge the reservoir losses in the Lower Basin.

The Upper Basin States, by the Upper Colorado River Compact, charge the reservoir losses in the Upper Basin among the Upper Basin States as a consumptive use under the Colorado River Compact. (Article V, Upper Colorado River Compact).

The apportioning of the reservoir losses in the Lower Basin is purely a Lower Basin problem. The respondents are not necessary parties to a determination of this issue, and the State of California, in the McCarran hearings, represented to the United States Congress that the Upper Basin States are not directly concerned and need not be made parties to the litigation to determine this issue. With this we agree. (See Hearings before a Subcommittee of the Committee on Interior and Insular Affairs, United States Senate, Eightieth Congress, Second Session, on S. J. 145, page 129, supra).

Certainly, there is no allegation of any justiciable controversy existing between California and respondents over this question.

Argument "J" (page 48 of brief). The claims of the United States mentioned in Argument "J" of California's brief will be hereinafter discussed.

Argument "K" (pages 48 to 53 of brief). California argues that because the respondents are signatories to the compact, they must be joined in this action . That is exactly contrary to the position taken by the State of California in the McCarran hearings heretofore cited.

We repeat that California, and California alone, takes the position that the respondents and the Upper Division States are necessary parties.

This action to divide the water use in the Lower Basin is not an action to enforce the Colorado River Compact. This is an action to determine a question which was purposely eliminated from the Compact. The Compact does not and did not intend to divide the water use between the individual states within a basin. This action to divide the water use in the Lower Basin is not an action to enforce the Compact, but an action to determine rights which exist outside of the scope of the Compact.

It is also contended by California, at page 51 of her brief, that irrespective of the Compact, "All parties hav-

ing interests in Colorado River system waters must be joined." This Court has held otherwise. In the case of *Nebraska vs. Wyoming,* 295 U. S. 40, 55 S. Ct. 568, Nebraska instituted an original proceeding in this Court against Wyoming, seeking an equitable apportionment of the waters of the North Platte River. Wyoming filed a motion to dismiss, one of the grounds of which was that the State of Colorado was an indispensable party because the North Platte rises in Colorado and drains a considerable area therein. In other words, Wyoming contended that Colorado, having an interest in the North Platte River System, was an indispensable party to the controversy between Nebraska and Wyoming. This Court said, at page 43, of the U. S. Report:

> "The contention is without merit. Nebraska asserts no wrongful act of Colorado and prays no relief against her. We need not determine whether Colorado would be a proper party, or whether at a later stage of the cause pleadings or proof may disclose a necessity to bring her into the suit. It suffices to say that upon the face of the bill she is not a necessary party to the dispute between Nebraska and Wyoming concerning the respective priorities and rights of their citizens in the waters of the North Platte River."

Later Nebraska amended her complaint, alleging that Colorado,

> "By diversions of water from the river for irrigation purposes were violating the rule of priority of appropriation in force in the three states and depriving Nebraska of water to which she was equitably entitled." *Nebraska vs. Wyoming,* 325 U. S. 589, 591, 592, 65 S. Ct. 1332, 1338.

Upon these allegations the Court joined Colorado as a party. *Nebraska vs. Wyoming,* 296 U. S. 553, 56 S. Ct. 369.

Following the rule laid down in the Nebraska vs. Wyo-

ming cases, respondents state that California asserts no wrongful act of Colorado or Wyoming in the present case, nor does California allege that respondents are depriving California of any waters of the river to which she is entitled. In the absence of such allegations, respondents are not necessary parties to this action to divide water use in the Lower Basin.

Nor did this Court alter t. is rule in the three Arizona vs. California cases cited at page 51 of California's brief.

However, this Court, in one of these cases, *Arizona vs. California et al.*, 283 U. S. 423, 463, 464, 51 S. Ct. 522, 529, re-affirmed the rule that adjudication of rights to interstate waters must be founded on an existing justiciable controversy. This Court said:

> "There is no occasion for determining now Arizona's rights to interstate or local waters which have not yet been, and which may never be appropriated. *New Jersey vs. Sargent,* 269 U. S. 328, 338, 46 S. Ct. 122, 70 L. Ed. 289. This Court cannot issue declaratory decrees."

III. THE RESPONDENTS ARE NOT NECESSARY PARTIES TO A DETERMINATION OF THE CONTROVERSY BETWEEN ARIZONA AND CALIFORNIA UNDER THE BOULDER CANYON PROJECT ACT AND THE CALIFORNIA SELF-LIMITATION ACT.

At page 58 of her brief, California states "THE FOUR ABSENT STATES ARE NECESSARY PARTIES TO THIS ACTION IN THEIR CAPACITY AS THIRD PARTIY BENEFICIARIES OF THE STATUTORY COMPACT BETWEEN THE UNITED STATES AND CALIFORNIA EVIDENCED BY THE BOULDER CANYON PROJECT ACT AND THE CALIFORNIA LIMITATION ACT."

The Boulder Canyon Project Act (45 Stat. 1057) and the California Self-Limitation Act (Chapter 16 Calif. Stats. 1929, p. 38), relate to the division of water use in the Lower Basin. These Acts are set forth at pages 9 to 31 in Appendixes to California's answer filed herein.

The Boulder Canyon Project Act, which authorized the construction of Hoover Dam, provided in Section 4(a) that no construction should be commenced until one of two conditions had been performed:

1. That all seven Colorado River Basin States ratify the Colorado River Compact; or
2. If all seven States fail to ratify the Compact in six months, then it must be ratified by six of the seven Basin States, including California, and California, by legislative act, agree "for the benefit of the States of Arizona, Colorado, Nevada, New Mexico, Utah and Wyoming" to limit her beneficial consumptive use of water from the Colorado River, for use in California, to 4,400,000 acre feet of the water apportioned to the Lower Basin by Article III(a) of the Compact, plus not more than one-half of the excess or surplus waters unapportioned by the Compact, and such uses to be subject to the Compact.

Arizona did not ratify the Compact in the six months period. The other six States, including California, did ratify the Compact, and California did pass the legislative act limiting her uses as provided for in the Boulder Canyon Project Act. This legislative act of California is commonly referred to as the California Self-Limitation Act.

California contends that Arizona is not entitled to any benefits under the California Self-Limitation Act. Her position is set forth at pages 60 and 61 of California's answer to Arizona's complaint as follows:

"Arizona, in this action, seeks to establish alleged rights dependent upon that State's participation as a party to the Colorado River Compact as a Seven-State Compact, and also seeks to establish alleged rights as a third party beneficiary of the said Statutory Compact. Arizona has not herein, or otherwise, offered to do equity and to waive any rights as such third party beneficiary, or by such waiver, or otherwise, to place California in the same position in its relation to Arizona as that which California would have occupied with respect to contractual or other rights to the use of waters of the Colorado River system, had the Legislature of the State of Arizona approved and ratified the proposed Colorado River Compact as a Seven-State Compact prior to June 25, 1929. Arizona cannot, as of February 24, 1944, and thereafter, be permitted to assert, to her advantage, and to California's detriment, rights allegedly derived from, and dependent upon, both the Colorado River Compact and the Statutory Compact." (See pages 60 and 61 of California's answer to complaint).

This is purely a dispute between Arizona and California, and the controversy relates solely to the division of the water use in the Lower Basin. This dispute has no application to inter-basin rights and obligations, nor does California allege that respondents have committed any act or omission which deprives California of any rights which she claims under these two Acts. Neither does California point out in what respect the Acts create any rights in or imposes any obligations upon respondents.

California argues that merely because respondents are named as beneficiaries in the Acts, they are necessary parties to this dispute.

This respondents deny.

Whether Arizona is or is not entitled to the benefits of this Act is a matter of no moment to respondents.

The question of whether the division of the use of the waters to which the Lower Basin is entitled under the Compact is affected by the Limitation Act, affects no rights or obligations of respondents. Respondents' rights and obligations remain the same no matter what the division of water use may be in the Lower Basin.

The mere fact that respondents are named as beneficiaries in the Acts does not create in respondents any interest in how those Acts may affect the division of water use in the lower Basin.

The mere fact that respondents are named in these Acts is not and should not be sufficient to involve respondents in this litigation, in the absence of any allegation that a justiciable controversy exists between respondents and California, involving the interpretation of respondents' rights and obligations thereunder. There is no such allegation. The respondents have been accused of no wrongful act or omission which deprives California of any right she claims.

Also, Arizona's claims under said Acts, do not affect respondents, for Arizona admits by her complaint that her claims to water use are subject to the Colorado River Compact and the availability of water under said Compact. (See prayer, p. 30 Arizona complaint).

> "Not every matter which would warrant resort to equity by one citizen against another would justify our interference with the action of the state, for the burden on the complaining state is much greater than generally required to be borne by private parties. Before the court wll intervene the case must be of serious magnitude and fully and clearly proved."
>
> *Colorado vs. Kansas,* 320 U. S. 383, 64 S. Ct. 176, 181.

> "The governing rule is that this Court will not assert its extraordinary power to control the conduct of one state at the suit of another unless the threatened

invasion of rights is of serious magnitude and established by clear and convincing evidence."

Connecticut vs. Massachusetts, 282 U. S. 660, 669, 51 S. Ct. 286, 289.

The Supreme Court's jurisdiction "in respect of controversies between states will not be asserted in the absence of absolute necessity."

Alabama vs. Arizona, 291 U. S. 286, 291, 54 S. Ct. 399, 401.

It is respectfully submitted that respondents have no interests in issue in this dispute, and its determination does not require the presence of respondents as parties thereto.

IV. THERE IS NO JUSTICIABLE CONTROVERSY EXISTING BETWEEN RESPONDENTS AND THE UNITED STATES REQUIRING THE PRESENCE OF RESPONDENTS AS PARTIES TO THIS ACTION.

At page 61 of her brief, California states: "THE FOUR ABSENT STATES ARE NECESSARY PARTIES TO THE ADJUDICATION OF THE CLAIMS OF THE UNITED STATES TO THE WATERS OF THE COLORADO RIVER SYSTEM."

We have carefully read the petition in intervention filed herein by the United States of America. Nowhere in the petition do we find any claim of the United States against the Upper Division States or the Upper Basin or the respondents.

The United States makes certain affirmative claims to water use *in the Lower Basin,* and asks the Court to quiet the title of the United States of America in its right as asserted in the petition against the adverse claims of the State of Arizona and the California defendants. (Page 42, United States Petition of Intervention).

The United States has not requested that the Upper

Division States be made parties to this proceeding on the ground that they are necessary parties to the determination of the rights of the United States in the waters in the Lower Basin.

The United States has treated this action as one to determine the rights to the use of water in the Lower Basin of the river.

There is no allegation in the petition for intervention of the United States or California's motion, that the Upper Division States are now impairing, or are presently threatening to impair, or interfere with any rights which the United States claims in the waters of the river.

There is no justiciable controversy existing at this time between the Upper Division States and the United States of America.

So far as any claims of the United States to the waters of the river in the Upper Basin, the Upper Basin has made provision in the Upper Colorado River Compact as follows:

> "The consumptive use of water by the United States of America or any of its agencies, instrumentalities or wards shall be charged as a use by the State in which the use is made; provided, that such consumptive use incident to the diversion, impounding, or conveyance of water in one State for use in another shall be charged to such latter State."
>
> (Article VII, Upper Colorado River Compact, supra).

California again enters the realm of speculation and conjecture. At page 64 of her brief, she in effect says that *at some time in the future,* the United States *may* make some claim for Indian or other uses, which *may* be so large that there *may* not be sufficient water in the river to supply those claims and the uses contemplated by the Compact, including the use apportioned to the Upper Basin.

If and when that time arrives, we assume these questions may be the subject of litigation to which all the States may be parties. At the present time no such situation evists. Consequently, there is no present justiciable controversy between the Upper Basin and the United States.

The present action is directed to a division of the water use in the Lower Basin under present conditions, and not on some condition or situation which may exist at some time in the future.

In an action brought by the United States against the State of West Virginia, to determine differences of opinion over the waters of a river, this Court said:

> "But there is presented here, as respects the State, no case of an actual or threatened interference with the authority of the United States. At most, the bill states a difference of opinion between the officials of the two governments . . . . . There is no support for the contention that the judicial power extends to the adjudication of such differences of opinion. Only when they become the subject of controversy in the constitutional sense are they susceptible of judicial determination. See *Nashville, Chattanooga and St. Louis R. Co. vs. Wallace,* 288 U. S. 249, 259, 53 S. Ct. 345, 77 L. Ed. 730, 87 A.L.R. 1191. Until the right asserted is threatened with invasion by the act of the State, which served both to define the controversy and establish its existence in the judicial sense, there is no question presented which is justiciable by a Federal Court. See *Fairchild vs. Hughes,* 258 U. S. 126, 129, 130, 42 S. Ct. 274, 66 L. Ed. 499; *State ex rel Texas vs Interstate Commerce Commission,* 258 U. S. 158, 162, 42 S. Ct. 261, 66 L. Ed. 531; *Commonwealth of Massachusetts vs. Mellon, supra,* 262 U. S. 477, 483-485, 43 S. Ct. 597, 67 L. Ed. 1078; *State of New Jersey vs.*

Sargent, supra, 269 U. S. 328, 339, 340, 46 S. Ct. 122, 70 L. Ed. 289." *United States vs. West Virginia,* 295 U. S. 463, 473, 474, 55 S. Ct. 789, 793.

Respondents respectfully submit there is no justiciable controversy existing between the United States and respondents requiring respondents' presence as parties to this action.

V. CONCLUSION

The opposition of the respondents to being parties to this action is more than mere reluctance to engage in expensive and prolonged litigation. Water is the lifeblood of the Upper Basin. Without it, growth and development ceases. The last major source of water available for the growth and development of the Upper Basin is the water use apportioned to the Upper Basin from the Colorado River by the Colorado River Compact.

It is of paramount importance, therefore, that the states in the Upper Basin be not required to adjudicate the Upper Basin's rights under this Compact upon speculative, assumed and imagined statements of fact, which, if they ever arise, can only arise in the distant future.

These States are entitled to have their rights under the Compact interpreted in the light of an existing set of facts, creating at the time of the interpretation a justiciable controversy, so that the interpretation of the rights of these States can be made in the light of the facts then existing.

The Upper Division States are now attempting to obtain from the United States Congress an authorization for a basin-wide development to utilize a modest portion of the 7,500,000 acre feet of consumptive use apportioned to the Upper Basin. This proposed project would utilize the beneficial consumptive use of an estimated 1,700,000 acre feet per annum, which added to the present beneficial consumptive use of 2,500,000 acre feet, would make a total of but 4,200,000 acre feet of the 7,500,000 acre feet apportioned to the Upper Basin. (See Hearings Before the Subcommitteee on Irrigation and Reclamation of the Committee on Interior and Insular Affairs, House of Representatives, 83rd Congress, Second Session, on H. R. 4449, H. R. 4443, and H. R. 4463, page 697).

Moreover, the period of construction of the works to bring this development to fruition will take an estimated thirty-three years. (See Table following page 192 of the

Hearings in the House of Representatives referred to above).

In the meantime, the growth and development in the Upper Basin is outrunning the waters now available. Any delay in the development of water use in the Upper Basin is a matter of very great moment to the Upper Division States. The inclusion of the Upper Division States as parties to this litigation will be urged by opponents of development in the Upper Basin, as a reason why Congress should delay the authorization of development until the conclusion of the litigation. In fact, such argument has already been made before the Eighty-third Congress of the United States by a representative of the State of California. The Assistant Attorney General of the State of California, Mr. Ely, in testifying before the United States Senate on the proposed plan for development in the Upper Basin said:

> "The meaning of the Document (Colorado River Compact) is now in controversy in the Supreme Court, in respects which affect the measure now before you."
>
> (See Hearings Before the Subcommittee on Irrigation and Reclamation of the Committee on Interior and Insular Affairs, United State Senate, 83rd Congress, Second Session, on S. 1555, page 587).

As we have shown, there is no justiciable controversy in issue in the present action involving the rights and obligations of the respondents under the Compact.

The division of the waters to which the Lower Basin is entitled under the Colorado River Compact can be made in this litigation without the appearance of the respondents herein. California, and California alone, urges the necessity of the Upper Division States as necessary parties, and yet California, in 1948, represented to the Legislative branch of the United States Government that there

was no dispute or problem requiring present disposition between the Upper Basin and the Lower Basin. California admitted at that time that the same issues which Arizona has raised by her complaint, were the only issues requiring adjudication to determine the rights of the Lower Basin States among themselves; and that the Upper Basin States were not directly concerned and need not be made parties to the litigation.

We respectfully submit that the motion of California should be denied.

BRIEF OF THE STATE OF NEVADA, INTERVENER, IN RE MOTION OF CALIFORNIA TO JOIN AS PARTIES THE STATES OF COLORADO, NEW MEXICO, UTAH AND WYOMING

STATEMENT

Heretofore and after the United States and the State of Nevada were permitted to intervene in the original case, and after the cross-pleadings of the complainant, the defendants and the interveners had been filed, whereby the issues were drawn between said parties, the California defendants interposed their motion to join as additional parties the States of Colorado, New Mexico, Utah and Wyoming, each said State being a signatory to the Colorado River Compact. The main ground upon which said motion was and is predicated being that "The meaning and effect of the Colorado

River Compact are in controversy in the present case" and that "No decree determining the meaning and effect of that Compact, considered as a contract, can be fully effective in the absence of the other four parties to it." Defendants' Motion to Join, page 2, par. I.

The States of Colorado, New Mexico, Utah and Wyoming, having filed herein their respective briefs opposing the granting of the motion to join them as parties in the case, notwithstanding the fact that each of them is a party to the Colorado River Compact, wherein most valuable rights to the beneficial consumptive use of the waters of an interstate stream were and are apportioned to the respective upper and lower basins, which said rights are interrelated and subject to be drawn in question by the issues developed by the pleadings filed herein by the original parties and the interveners.

A substantially correct summary of the issues so developed by the pleadings is contained in Exhibit A, pages 7–22, California's Motion to Join, as Parties, the States of Colorado, New Mexico, Utah and Wyoming. Nevada submits that the issues as stated in the summary thereof demonstrates that the States of New Mexico and Utah are indispensable parties, and that Colorado and Wyoming are, at least, necessary parties.

The States of New Mexico and Utah are Indispensable Parties

New Mexico and Utah, in addition to being classed as States of the Upper Basin of the Colorado River Stream System, are States of the Lower Basin, with the right accorded each of them to the beneficial consumptive use of its equitable share of the water apportioned to the Lower Basin by the Colorado River Compact. Art. II(g), Art. III(a), (b), (g), Compact: Pages 2–3, Brief, New Mexico. Utah, in its brief in opposition to California's motion, admits it has a limited right of participation in the Lower Basin waters, and attempts to avoid participation in the instant case by stating they are now negotiating with Arizona for distribution of Utah's share in such waters by Compact. Page 20, Utah's Brief.

In this connection, it is interesting to note that Article XVIII, Paragraph b, of the Upper Colorado River Basin Compact to which New Mexico and Utah are signatories, provides: "The State of New Mexico and the State of Utah reserve their respective rights and interest under the Colorado River Compact as States of the Lower Basin." Vol. II, page 75, California's Appendixes to Answer.

Nevada was given leave to intervene herein by Order of this Court entered June 1, 1954, pursuant to its motion and petition therefor, filed December 21, 1953. Upon the filing of said motion and petition, service of copies thereof was made upon the respective Attorneys General of Colorado, New Mexico, Utah and Wyoming, even though they were not parties in the case.

Nevada specifically alleged in its petition the necessity of the increasing of the beneficial consumptive use of water in the Lower Basin by one million acre-feet of water as provided and authorized in and by Article III(b) of the said Compact, and that said increase must be had by authoritative concerted action of the five Lower Basin States. See pars. Nos. VIII, X, XI, XIII, XX, XXIV. Further, in the prayer of its petition, Nevada prayed that the rights of the States of Arizona, California, Nevada, New Mexico, Utah and the United States in and to the use of the waters of the Colorado Stream System be adjudicated and forever set at rest, and also that the additional one million acre-feet of water as provided in Article III(b) of the Compact, is water apportioned to the Lower Basin, subject to use only when all of the Lower Basin States shall have by authoritative compact or agreement increased the beneficial consumptive use in said Basin.

During the month of May, 1954, the United States, as intervener in the case, filed and submitted its Memorandum Requesting Pre-Trial Conference, based upon the ground that the basic issues in the case were far-reaching fundamental questions relating to the respective rights of the parties litigant in the Colorado River System; that from the pleadings the broad scope of the long-standing controversy was manifest. Page 2, Memorandum.

Nevada interposed its Memorandum in Reply to the Memorandum of the United States, and therein specifically pointed out the necessity of the joinder of New Mexico and Utah, as follows:

> Notwithstanding the fact that New Mexico and Utah unquestionably possess rights to the use of the waters of the Colorado River Stream System apportioned to the Lower Basin States and by reason thereof each said State is an indispensable party to this cause, neither of them has been made a party thereto nor has either petitioned the Court for leave to intervene. Nevada most respectfully suggests that unless and until New Mexico and Utah are made or become parties herein, vital issues pertaining to the apportionment of the waters to which all of the Lower Basin States are entitled under the Compact cannot be judicially fixed and determined. And Nevada has so alleged in Paragraphs XIII, XIV of the Petition of Intervention on Behalf of the State of Nevada filed herein December 21, 1953. Nevada suggests that all of the vitally necessary issues are not now sufficient, or at all, joined to warrant a pre-trial conference.

and,

> Answering Paragraph IV of the Request for Pre-Trial Conference of the United States, the State of Nevada denies that the reasons mentioned by the United States justify a pre-trial conference at this juncture of the proceeding and in this connection alleges that all the Lower Basin States are indispensable parties to this cause and until all such States are parties hereto and the issues fully joined between them and the United States, a pre-trial conference is premature. Nevada Memorandum, Pars. I, IV.

Copies of the Nevada Memorandum were served on the Attorneys General of New Mexico and Utah, notwithstanding the fact that neither of said States were parties in the case. Notice that

beyond question Nevada considered them indispensable parties with valuable rights in and to the waters apportioned to the Lower Basin States by the Colorado River Compact; rights that of necessity must be fixed and determined in order that each of the Lower Basin States would in time to come receive its equitable share of such water, without further prolonged litigation.

Neither the State of New Mexico nor Utah has answered Nevada's contention that Article III(b) water to the extent of one million acre-feet, can only be brought into the beneficial consumptive use increase in the apportionment of water to the Lower Basin so agreed to in the Colorado River Compact, unless and until all the States in the Lower Basin by compact or agreement, so determine. Certainly New Mexico and Utah are vitally interested in securing for their people every acre-foot of water possible, and having reserved their respective rights to the use of water apportioned the Lower Basin when becoming signatories to the Upper Basin Compact, they reserved valuable rights to participate in the apportionment between the Lower Basin States, not only of III(b) water, but also III(a) water.

To now object to becoming parties in the case, and pleading their rights to the beneficial consumptive use of the waters in question, can have but one ultimate result, i.e., that whatever final judgment and decree may be entered by this Court herein, without the determination of the rights of New Mexico and Utah, the door will remain open for them or either of them in years to come, to seriously question the rights of California and Nevada and even those of Arizona.

The Status of New Mexico and Utah With Respect to Waters Apportioned the Lower Basin States by the Colorado River Compact

As stated hereinbefore, the States of New Mexico and Utah in Article XVIII(c) of the Upper Colorado River Basin Compact, therein reserved their respective rights and interest under the Colorado River Compact as States of the Lower Basin. Most certainly

those rights extend to the beneficial consumptive use of a portion of the waters of the Colorado River Stream System apportioned to the Lower Basin States in and by Article III(a) and (b) of the Colorado River Compact. Arizona, the complainant herein, alleges in its Complaint that "Arizona expects to negotiate with New Mexico and Utah a compact which will define the respective rights of those States to participate as Lower Basin States in the use of Colorado River water apportioned now or hereafter to such Lower Basin." Par. XV, Arizona's Complaint. In the prayer of such Complaint Arizona prays, first, that its title to the annual beneficial consumptive use to 3,800,000 acre-feet of water apportioned to the Lower Basin by the Colorado River Compact be forever confirmed and quieted, subject only to the rights of the States of New Mexico and Utah; second, that California be forever limited to 4,400,000 acre-feet of such apportioned water; third, that the defendants be forever enjoined from asserting against plaintiff in any manner, any claim to the waters of said River System which interferes with plaintiff's rights to the use of 3,800,000 acre-feet of water so apportioned, subject only to the right of New Mexico and Utah; fourth, that as to surplus waters, California be entitled to one-half thereof, and Arizona to the remainder, less a quantity of not to exceed one twenty-fifth of the total to the State of Nevada, less whatever rights New Mexico and Utah may have in such surplus.

It is apparent from the briefs of New Mexico and Utah, notwithstanding their express reservations in the Upper Colorado River Compact as to their rights as Lower Basin States under the Colorado River Compact, that they and each of them rely upon the alleged expectations of an Arizona Compact to satisfy their respective rights as Lower Basin States, to the beneficial consumptive use of the waters in question. In brief, relying upon a compact entered into with one Lower Basin State concerning Lower Basin water, to the exclusion of the rights of two other Lower Basin States, California and Nevada.

The aspects of the case have been most materially changed since

the intervention of the State of Nevada, so ordered June 1, 1954. Most certainly now Nevada's right to the beneficial consumptive use of Lower Basin water must be adjudicated. Nevada, as well as California, has the right to insist that the rights of New Mexico and Utah to the use of Lower Basin water, whether it be apportioned III(a), or III(b), or unapportioned surplus water, be stated, and claims therefor submitted to the Court in proper pleadings therefor.

New Mexico and Utah each have a vital interest in the subject matter in this case; an interest that cannot be settled, determined and adjudicated by a compact or agreement with one particular State; an interest that is not severable from the interest of each and all of the Lower Basin States.

The Rule With Respect to the Joinder of Necessary and Indispensable Parties

With all due respect to the authorities for and against the joinder of the States of Colorado, New Mexico, Utah and Wyoming, cited and relied upon by the respective parties for and against the motion to so join them, Nevada submits that the leading case indicating the criteria by which to determine whether or not a party is indispensable is *State of Washington vs. United States, C.C.A.9, 87 F. (2d) 421*, decided December 18, 1936, and followed with approval in *Pioche Mines Consol. Inc. vs. Fidelity-Philadelphia Trust Co., C.C.A.9, 202 F.(2d) 944*, decided March 23, 1953. The State of Washington vs. United States case concerned a suit by the United States against the Columbia River Packers Association, et al., in which the States of Washington and Oregon filed motions for leave to intervene. From a decree for plaintiff (U. S. v. Columbia River Packers Ass'n., 11 F. Supp. 675), the defendants appeal, and, from orders denying their respective motions for leave to intervene, the States of Washington and Oregon separately appeal. In course of the opinion the Court said at page 427:

> In cases where there is error in non-joinder of parties, either necessary or indispensable, the Courts have fallen

into common error by designating the error as "jurisdictional." The defect is not, properly speaking, a jurisdictional one as shown by the following quotation from Shields v. Barrow, supra 17 How.130, 141, 15 L.Ed. 158: "As is observed by this court, in Mallow v. Hinde, 12 Wheat.(193) 198 (6 L.Ed. 599), when speaking of a case where an indispensable party was not before the court, 'we do not put this case upon the ground of jurisdiction, but upon a much broader ground, which must equally apply to all courts of equity, whatever may be their structure as to jurisdiction; we put it on the ground that no court can adjudicate directly upon a person's right, without the party being either actually or constructively before the court.'" Citing cases.

There are many adjudicated cases in which expressions are made with respect to the tests used to determine whether an absent party is a necessary party or an indispensable party. From these authorities it appears that the absent party must be interested in the controversy. After first determining that such party is interested in the controversy, the court must make a determination of the following questions applied to the particular case: (1) Is the interest of the absent party distinct and severable? (2) In the absence of such party, can the court render justice between the parties before it? (3) Will the decree made, in the absence of such party, have no injurious effect on the interest of such absent party? (4) Will the final determination, in the absence of such party, be consistent with equity and good conscience?

If, after the court determines that an absent party is interested in the controversy, it finds that all of the four questions outlined above are answered in the affirmative with respect to the absent party's interest, then such absent

party is a necessary party. However, if any one of the four questions is answered in the negative, then the absent party is indispensable.

Applying the rule to the instant case, by answering the four several questions therein:

(1) Is the interest of New Mexico and Utah distinct and severable with respect to the waters apportioned to the Lower Basin?

Answer: No. The Colorado River Compact apportions no water to any individual State. Each State is entitled to its equitable share thereof upon proof of the necessity for beneficial consumptive use.

(2) In the absence of such party, can the Court render justice between the parties before it?

Answer: No. The rights to the beneficial consumptive use of the waters in question are interrelated and the final determination of any one right detracts from every other right therein to the extent determined for the one right so adjudicated.

(3) Will the decree made, in the absence of such party, have no injurious effect on the interest of such absent party?

Answer: The right and interest of a party in and to the beneficial consumptive use of the waters in question are interrelated to the rights and interest of all other parties to the same waters. Any adjudication and determination of those rights and interest will injuriously affect the right and interest of the absent party.

(4) Will the final determination, in the absence of such party, be consistent with equity and good conscience?

Answer: No. Litigation must come to an end. Courts certainly do not approve or sanction interminable litigation where most material issues with respect to valuable and vital rights and interests are the subject matter of the case and where an indispensable party in interest is available, any final determination of the like interest of the parties presently before the Court having an interest in a common fund, i.e., the waters the subject of the instant case,

leaving the interest of the absent party undetermined, would not be consistent at all with equity and good conscience.

Nevada respectfully submits that New Mexico and Utah are indispensable parties.

The States of Colorado and Wyoming are Necessary, If Not Indispensable, Parties

Aside from the grounds set forth in California's motion to make Colorado and Wyoming parties in the instant case, and aside from California's reasons that such States are necessary parties, Nevada submits that such States are necessary, if not, in fact, indispensable parties for the following reasons.

Notwithstanding the provisions of Section 4 (a), Boulder Canyon Project Act, pursuant to which the California Limitation Act was enacted whereby it is claimed the signatory States to the Colorado River Compact became third party beneficiaries, the Boulder Canyon Project Act in Section 4(a) provides that uses of the waters of the Colorado River for the purposes in said section set forth shall always be subject to the terms of the Colorado River Compact.

Neither Sections 4(a) of the Project Act nor the California Limitation Act contains any reference whatever to Article III(b) of the Compact. Nevada reiterates that Article III(a) of the Compact apportions to the Upper and Lower Basins respectively, in perpetuity 7,500,000 acre-feet of water per annum; that in addition to such apportionment in Paragraph (a), the Lower Basin was given the right to increase its beneficial consumptive use of such water by 1,000,000 acre-feet per annum, in Paragraph (b) of said Article.

Long ago in 1934, this Court had before it the case of *Arizona vs. California, Colorado, Nevada, New Mexico, Utah, Wyoming, the Secretary of the Interior, et al. 292 U.S.341*, where Arizona sought to enjoin the defendants from carrying out the provisions of the Colorado River Compact and/or the Boulder Canyon Project Act. Justice Brandeis delivered the opinion of the Court. With

respect to Article III(b) of the Compact, it is most apropos that the language of the Court be here quoted:

> Nor does Arizona show that article III(b) of the compact is relevant to an interpretation of section 4(a) of the Boulder Canyon Project Act upon which she bases her claim of right. It may be true that the Boulder Canyon Project Act leaves in doubt the apportionment among the states of the lower basin of the waters to which the lower basin is entitled under article III(b). But the act does not purport to apportion among the states of the lower basin the waters to which the lower basin is entitled under the compact. The act merely places limits on California's use of waters under article III(a) and of surplus waters; and it is "such" uses which are "subject to the terms of said compact."
>
> There can be no claim that article III (b) is relevant in defining surplus waters under section 4 (a) of the act; for both Arizona and California apparently consider the waters under article III (b) as apportioned. It is true that Arizona alleges (not in the bill however but in her brief) that she "hopes to be able to show in the case hereafter to be brought" by evidence of Congressional Committee hearings and other legislative history that the failure in the statute to apportion the 1,000,000 acre-feet of waters was due to an understanding by Congress that article III (b) of the compact had already assigned these waters to Arizona, and that the limitation on California was passed in the light of this understanding. This hope, if fulfilled, would not make article III (b) relevant. The allegation is, not that Congress incorporated article III (b) into the act; it is that Congress understood that article III (b) had allotted all the waters therein to Arizona.
>
> The considerations to which Arizona calls attention do not show that there is any ambiguity in article III (b)

of the compact. Doubtless the anticipated physical sources of the waters which combine to make the total of 8,500,000 acre-feet are as Arizona contends, but neither article III (a) nor (b) deal with the waters on the basis of their source. Paragraph (a) apportions waters "from the Colorado River system," i.e., the Colorado and its tributaries, and (b) permits an additional use "of such waters." The compact makes an apportionment only between the upper and lower basin; the apportionment among the states in each basin being left to later agreement. Arizona is one of the states of the lower basin, and any waters useful to her are by that fact useful to the lower basin. But the fact that they are solely useful to Arizona, or the fact that they have been appropriated by her, does not contradict the intent clearly expressed in paragraph (b) (nor the rational character thereof) to apportion the 1,000,000 acre-feet to the states of the lower basin and not specifically to Arizona alone. It may be that, in apportioning among the states the 8,500,000 acre-feet allotted to the lower basin, Arizona's share of waters from the main stream will be affected by the fact that certain of the waters assigned to the lower basin can be used only by her; but that is a matter entirely outside the scope of the compact.

The provision of article III (b), like that of article III (a), is entirely referrable to the main intent of the compact, which was to apportion the waters as between the upper and lower basins. The effect of article III (b) (at least in the event that the lower basin puts the 8,500,000 acre-feet of water to beneficial uses) is to preclude any claim by the upper basin that any part of the 7,500,000 acre-feet released at Lee Ferry to the lower basin may be considered as "surplus" because of Arizona waters which are available to the lower basin alone.

It is submitted that there can be no question but that Article III (b) constitutes an apportionment of the waters of the Colorado Stream System to the beneficial consumptive use in and by the Lower Basin States of an additional 1,000,000 acre-feet of water per annum, and that this additional amount of water comes from the stream system as a whole, with the major portion thereof provided in and by the flow of the river in and from the Upper Basin States. Certainly it cannot be gainsaid that the Upper Basin States are not interested in whether the Lower Basin has perfected its right to have the additional 1,000,000 acre-feet of water applied to beneficial consumptive use. Such use will of necessity affect the beneficial use of waters apportioned the Upper Basin when called upon to deliver at Lee Ferry all or the major portion thereof. The III (b) water, it is submitted, cannot be deemed surplus water by any Upper or Lower Basin State. It is apportioned water, dedicated to the beneficial consumptive use in the Lower Basin States, and by reason thereof, is of such character as to be interrelated with the rights and interest of the Upper Basin States in the common fund, the waters of the Colorado River Stream System, which said interest cannot on the part of any State signatory to the Colorado River Compact, be deemed severable.

Nevada respectfully submits that Colorado and Wyoming at the very least, are necessary parties herein.

Dated: February 1, 1955.

Respectfully submitted,

HARVEY DICKERSON,
Attorney General of Nevada,
Carson City, Nevada.

H. W. EDWARDS,

STATUS OF MOTION TO JOIN COLORADO, NEW MEXICO, UTAH, AND WYOMING	1
1. Grounds for the Motion	2
2. Briefs Opposing the Motion	5
ARGUMENT	7
I. THE FACT THAT THIS SUIT IS BETWEEN STATES OR THAT THE SUIT IS WITHIN THE ORIGINAL JURISDICTION OF THE SUPREME COURT IS NO REASON FOR DISREGARDING THE USUAL AND PRESCRIBED RULES FOR DETERMINING NECESSARY PARTIES	7
II. AN INDEPENDENTLY JUSTICIABLE CONTROVERSY BETWEEN PRESENT PARTIES TO THE SUIT AND THE FOUR ABSENT STATES IS NOT REQUIRED FOR THEIR JOINDER	19
III. THE CONTROVERSY PRESENTED BY THE PLEADINGS IS JUSTICIABLE AS TO THE FOUR ABSENT STATES	28
A. The Controversy is not Solely a Lower Basin Dispute	28
1. Arizona's prayer to quiet title to 2,800,000 acre-feet of III(a) water from the main stream presupposes a determination that the Lower Basin has title, as against the Upper Basin, to 7,500,000 acre-feet of main stream water under Article III(a) of the Colorado River Compact	28
2. Arizona's contention that the six-state Colorado River Compact, to which she was not a party, has been superseded by a seven-state Compact, to which she is a party, raises a justiciable issue with all parties to the six-state Compact	32

Page

3. Arizona's allegations that California has breached the Statutory Compact raise a justiciable controversy with all six co-beneficiaries 34

B. The Assumption as to Water Availability Relied on by the Absent States is Incorrect. In any Event, the Facts are not Properly the Subject of Judicial Notice and Should be Determined Only After Hearing 35

C. Present Use of Water in Dispute is not Necessary to Constitute a Justiciable Controversy 37

D. The Requirements for a Justiciable Controversy Do Not Change When States Are Parties 38

IV. Claims of the United States Materially Affect the Four Absent States and are Not Disposed of by the Upper Colorado River Basin Compact 45

V. Lower Basin Rights of New Mexico and Utah are Not De Minimis 47

Conclusion 50

Reply Brief of the California Defendants in Support of Their Motion to Join, as Parties, the States of Colorado, New Mexico, Utah, and Wyoming

STATUS OF MOTION TO JOIN COLORADO, NEW MEXICO, UTAH, AND WYOMING

On July 15, 1954, the State of California and the other California defendants filed in this Court a motion to join, as parties to this action, the States of Colorado, New Mexico, Utah, and Wyoming. On August 13, 1954, Arizona filed a response in

opposition. On October 7, 1954, the California defendants filed a brief in support of their motion. That brief includes a detailed statement of the case. On December 27, 1954, briefs opposing the motion were filed individually by New Mexico and Utah and jointly by Colorado and Wyoming. Both New Mexico and Utah expressly adopt the joint brief of Colorado and Wyoming. On February 7, 1955, Nevada filed a brief in support of the Motion.

1. Grounds for the Motion

This suit was initiated on the complaint of Arizona. Arizona seeks a decree quieting her claimed title and establishing her alleged rights to the annual beneficial consumptive use of specified quantities of the water of the Colorado River System. The California defendants have traversed the complaint and, in affirmative defenses, have set up claims to the annual beneficial consumptive use of water which are inconsistent with the claims of Arizona. Nevada and the United States, both interveners, have asserted claims inconsistent with those of both plaintiff and defendants.

Issues which must be determined in resolving the controversy between the present parties fall into three closely related categories:

(1) The meaning and effect of the Colorado River Compact to which States opposing this motion are parties.

(2) The meaning and effect of a Statutory Compact between the United States and California of which the States opposing this motion are, like

Arizona and Nevada, third party beneficiaries. The Statutory Compact (evidenced by the Boulder Canyon Project Act and the California Limitation Act) incorporates by reference terms and provisions of the Colorado River Compact, involves interpretations of the Boulder Canyon Project Act, and must be construed *in pari materia* with the Colorado River Compact and the Project Act.

(3) The quantity of water legally and physically available for beneficial consumptive use in the Lower Basin of the Colorado River from the Colorado River System. This involves questions of fact and questions of law, including the meaning and effect of the Colorado River Compact, the Statutory Compact, the Boulder Canyon Project Act, the Mexican Water Treaty, water delivery contracts, statutes, and laws upon which the present parties predicate their claims.

The determination of these claims requires a determination of the amount of the water that is available to the Lower Basin. Most of this water comes from the Upper Basin. Arizona's quiet title action thus operates against the rights of the absent States as well as against the rights of the present parties.

A decree in Arizona's favor would presuppose the following determinations of the rights and obligations of the absent States:

1. That the apportionment of the use of 7,500,000 acre-feet per annum made by Article III(a) of the Colorado River Compact to the Lower Basin is not to be charged with the uses made from Lower Basin tributaries, but may be claimed in its

entirety from the main stream, *i.e.*, from the waters flowing from the four absent States. (Initial California Brief on pending motion, pp. 32-35)

2. That this apportionment by Article III(a) to the Lower Basin is identical with the 75,000,000 acre-feet which the four States are required by Article III(d) of the Compact to let pass Lee Ferry in each ten-year period. The absent States, accordingly, are entitled to no credit against the Mexican Treaty burden with respect to any of that 75,000,000 acre-feet, but are obliged, under Article III(c), to let down additional water to meet one-half of the Treaty burden. (*Ibid.*)

3. That the 1,000,000 acre-feet of "increase of use" permitted to the Lower Basin by Article III(b) of the Compact is apportioned in perpetuity to the Lower Basin, and the right thereto, as against the Upper Basin, is not dependent upon any actual increase in use. (*Id.* at 45-46)

4. That no State may acquire any right in unallocated waters by contract, appropriation or use, but only by virtue of some possible later compact among the seven States under Articles III(f) and III(g) of the Colorado River Compact. This would require Arizona's consent. (*Id.* at 43-45)

5. That the 3,800,000 acre-feet claimed by Arizona is net of all "salvaged" waters; she may use another 1,000,000 or more acre-feet of salvaged water without any charge at all, either to the Lower Basin's allocation under the Colorado River Compact, or to surplus water available for the Mexican Treaty. (*Id.* at 39-41)

6. That consumptive use of water is to be measured, not in terms of the quantities in fact consumed in growing crops or by domestic uses, but in terms of the resulting depletion of the virgin flow of the main stream. (*Id.* at 36-39)

7. That reservoir losses are to be charged against the apportionments made by Article III(a) of the Colorado River Compact. (*Id.* at 46-47)

8. That Arizona effectively ratified the Colorado River Compact, converting it to a seven-state Compact. (*Id.* at 58-59)

9. That the Statutory Compact, although in terms enacted as an accompaniment only to a six-state Compact, continues as an accompaniment of the seven-state Colorado River Compact. (*Ibid.*)

One or more of the present parties—California, Nevada and the United States—disagrees with Arizona on each of these points. Each of these issues involves rights and obligations of the absent States.

2. Briefs Opposing the Motion

The briefs of the absent States opposing the pending motion are notable because in almost no particular do they deny facts or contentions relied on by California in the pending motion and supporting brief. None of the four absent States denies that the controversy turns on disputes, which California's previous brief lists, over construction of the Compacts and Statutes. None of the four absent States denies that its rights

and obligations would necessarily be affected by a resolution of these disputes. None of the four States denies that it is a party to the Colorado River Compact and a joint obligee of the Statutory Compact. None of the four States offers any authority to controvert the universally accepted proposition that joint obligees are indispensable, and, *a fortiori,* necessary parties.

Neither New Mexico nor Utah denies that she has rights in an undetermined share of a "common fund" of water available to the States with territory in the Lower Basin of the Colorado River System. Neither New Mexico nor Utah cites any authority to controvert the universally accepted proposition that claimants to a share in a common fund are indispensable and, *a fortiori,* necessary parties to a suit to determine rights in the fund.

Principal reliance of the four States in opposing the motion rests on two contentions, neither of which is supported by reason or authority. The first contention is that the usual rules for determining necessary parties do not apply to actions between States. The second contention is that because, or so the absent States claim, there is no present use of water in the Upper Basin which conflicts with uses in the Lower Basin, the controversy between present parties and the absent States is not presently justiciable. This brief will show that both contentions are unsound. The rules of compulsory joinder apply with equal force to States and to private litigants. An independently justiciable controversy between present parties and absent parties is not a requirement for compulsory joinder of the absent

parties. Even if an independently justiciable controversy were required, the motion should nevertheless be granted because Arizona's complaint states a controversy which, if justiciable as to present parties, is no less justiciable against the absent States.

ARGUMENT

I.

THE FACT THAT THIS SUIT IS BETWEEN STATES OR THAT THE SUIT IS WITHIN THE ORIGINAL JURISDICTION OF THE SUPREME COURT IS NO REASON FOR DISREGARDING THE USUAL AND PRESCRIBED RULES FOR DETERMINING NECESSARY PARTIES

Rule 9(2) of the ~~Revised~~ Rules of the Supreme Court, effective July 1, 1954, provides that the Federal Rules of Civil Procedure, "where their application is appropriate, may be taken as a guide to procedure in original actions in this court." Rule 19(b) of the Federal Rules provides that necessary parties are those "who ought to be parties if complete relief is to be accorded between those already parties."

New Mexico says that Rule 19 "is not applicable or appropriate in this case." (New Mexico Brief, p. 5.) The brief of Colorado and Wyoming and the brief of Utah are less explicit, but in their insistence that different criteria apply because states are to be made parties, their arguments take a similar position. Succinctly stated, the New Mexico position is: That in original actions in the

Supreme Court, *additional parties* will not be joined even though they "ought to be parties if complete relief is to be accorded between those already parties." The position of the other three States is similar: That *states* will not be joined even though they "ought to be parties if complete relief is to be accorded between those already parties."

Of course there is no authority for such propositions. The law of necessary parties has been shaped by considerations that apply irrespective of the forum for trial or the nature of the parties. Rule 19 merely recognizes and codifies a rule of federal practice which had previously existed. (See authorities cited in the initial California brief on this motion, page 28.) This Court, in the exercise of its original jurisdiction, has consistently cited and applied the rules of necessary and indispensable parties first developed in cases heard on appeal from lower federal courts. See *California* v. *Southern Pacific Co.*, 157 U.S. 229 (1895); *Minnesota* v. *Northern Securities Co.*, 184 U.S. 199 (1902); *New Mexico* v. *Lane*, 243 U.S. 52 (1917); *Arizona* v. *California*, 298 U.S. 558 (1936). A leading and frequently quoted decision in which a judgment was reversed for failure to join a necessary party is *State of Washington* v. *United States*, 87 F.2d 421 (9th Cir. 1936). In that case the absent necessary party was a state. In none of these cases has there been the slightest suggestion that different rules or different considerations apply because the case is within the original jurisdiction of this Court or because the party sought to be joined is a State.

Recently, in the pending case of *Texas* v. *New Mexico,* this Court ordered the Special Master to hear evidence on the indispensability of the United States, and to report to the Court on the issue. 344 U.S. 906 (1952). Since no special instructions were given to the Master, it is apparent that the Court expected him to apply the traditional rules of compulsory joinder. The report of the Special Master does not suggest that he departed from the classic formula in considering the question. (Report of Special Master, *Texas* v. *New Mexico,* No. 9 Original, October Term, 1953.)

Utah concedes that the numerous decisions cited in California's initial brief hold "that in actions upon contracts, decrees construing the terms thereof cannot be entered unless all parties thereto are present in the action." She cites no decision to the contrary, but would limit the effect of the decisions to "their own peculiar set of facts." (Utah Brief, p. 7.) No decision, she says, has applied the rule with respect to compacts in litigation between states. On this view, apparently, all cases between states are unique. The fact is that if Rule 19 and the principle it adopts are inapplicable to this case, the motion must be decided in a legal vacuum, because no other body of precedents or principles exists.

Of the reasons for the rules of necessary parties, the States opposing the pending motion say nothing.

So firmly established is the rule where rights of joint obligees are involved that the rule has become recognized as not only a rule of procedure,

but a part of the substantive law of contracts. The Restatement of Contracts, Section 129 (1932) states it thus:

> An action to enforce a joint right under a contract must be brought by or in the name of all surviving obligees.
>
> *Comment: a.* The persons having a joint right will generally be promisees, but where third party beneficiaries are allowed to enforce a promise, the joint right may be that of such beneficiaries.

For this rule there are at least three reasons. These reasons are: (1) to avoid multiplicity of suits and the unjustified harassment of an obligor; (2) to avoid inconsistent judgments in successive actions involving the same promise; and (3) to avoid a hollow or unenforceable judgment.

All three considerations apply to the present suit. In the first place, a decree based upon the two Compacts which are in dispute—the Colorado River Compact and the Statutory Compact—will be only a prelude to further controversy and litigation if the decree does not bind all the parties with rights under both Compacts.

In the second place, a decree quieting title in present parties without binding the absent States would be a precarious basis for future expansion and development; there would be continuing concern that a later suit might determine that the decree was based on an overly generous assumption about the amount of water available to the Lower Basin as against the Upper Basin.

Thirdly, a decree construing the Compacts and statutes constituting the "Law of the River," and which binds only three of the seven Colorado River Basin States, simply will not work. It will create the possibility of two Colorado River Compacts, each purporting to apply to the whole River.

This, however, is the result for which the absent States argue. They do not and cannot deny that their rights and obligations are controlled by the Compacts in dispute. They do not deny that the effect of these Compacts must be determined —as to the present parties—in this suit. They say only that the effect of the Compacts, as to them, must be left to future litigation.

Denial of the motion on this basis would be unfair to the defendants because it might involve them in later litigation over the same rights and obligations now in dispute. Denial of the motion on this basis would harm interests within the entire Colorado River Basin because it would prevent an early determination of issues which must be decided before the resources of the Basin can be developed. Denial of the motion on this basis would result in abuse of the processes of this Court, because any decree would be empty and ineffectual if but three of seven affected States were bound.

Only two decisions cited in the briefs opposing the pending motion concern the problem of necessary parties. *Nebraska* v. *Wyoming,* 295 U.S. 40 (1935), and 296 U.S. 553 (1935). The opposing briefs draw an erroneous conclusion

from the first; they are inaccurate with respect to the second.

Both decisions were in the early stages of *Nebraska* v. *Wyoming,* 325 U.S. 589 (1945), which started as a suit by Nebraska against Wyoming over rights to the use of the water of the North Platte River. Wyoming first moved to dismiss Nebraska's Bill of Complaint on the ground that Colorado was a necessary and indispensable party. The Court denied the motion on the ground that the complaint showed no claim by Colorado to rights to the diversion and use of the North Platte. The complaint said only that the North Platte originates in Colorado. 295 U.S. 40 (1935).

Some eight months later, the Court unanimously and without opinion ordered that Colorado be made a party "in accordance with the prayer of the amended and supplemental answer of the State of Wyoming." 296 U.S. 553 (1935). Colorado and Wyoming (page 27) and Utah (page 10) state in their briefs opposing the pending motion that this action was on the basis of an amended complaint by Nebraska alleging out-of-priority diversions depriving Nebraska of water to which she was equitably entitled.

These statements are incorrect. At the time of the decision making Colorado a party, entered December 23, 1935, Nebraska had not amended her complaint and did not do so until, in effect, by replication filed June 12, 1936. As the Court's order clearly indicates, its basis was Wyoming's Amended and Supplemental Answer. That Supplemental Answer, so far as it dealt with Colorado's actions, alleged no present injury by Colorado but recited only contemplated

and threatened diversions by Colorado of waters which were the subject matter of the dispute between Nebraska and Wyoming.[1]

"TWENTIETH

[1] "Defendant says that a portion of the head-waters of the North Platte River are located in the State of Colorado and that approximately thirty per cent of the waters of said river available for use in Nebraska and Wyoming originates in Colorado. Complainant, in this suit, seeks a decree determining the rights of Nebraska and Wyoming to the use of the waters of said river. And defendant says that the waters to be apportioned in this action must, of necessity, involve the waters, extensive in amount, rising in the State of Colorado. Defendant says that the respective rights of Colorado and Wyoming to the use of the waters of the North Platte River have never been determined as between said states, and that the State of Colorado and its citizens now contemplate and for a long time have contemplated and threatened and now threaten the diversion and use in Colorado of waters of the North Platte River, which diversion and use would have the effect of taking from the North Platte River a large quantity of water, to-wit, upwards of 250,000 acre feet per annum, all which water now flows in the channel of the North Platte River into the State of Wyoming, and will of necessity be the subject matter pro tanto of the determination of the rights in this action of the present parties.

"Defendant says that if the present suit is permitted to proceed without making the State of Colorado a party, defendant will be subjected to further litigation with the State of Colorado and its appropriators, involving the waters of the North Platte River which constitute the subject matter of this suit. And defendant says that a proper and equitable allocation of the waters of the North Platte River, as complainant well knows, cannot be made between the present parties upon any equitable basis without at the same time determining the rights, whatever they may be, of the State of Colorado and of its appropriators in said waters. And

(*Footnote Continued on Next Page*)

defendant says that the State of Colorado is a necessary and indispensable party to this action.

• • •

"TWENTY-SECOND

"Defendant says that in 1923 the States of Nebraska and Colorado negotiated and executed what is called the 'South Platte River Compact' between said states, which Compact was later duly approved by the legislatures of said respective states and by the Congress of the United States; that the South Platte and the North Platte Rivers, by their junction at or near the City of North Platte, Nebraska, form the Platte River; and that said Compact distributes and apportions between Colorado and Nebraska the waters of the South Platte River without regard to and without providing for the supply of any waters from the South Platte River for the use of prior appropriators on the Platte River. Defendant says that the effect of said Compact was to relieve the waters of the South Platte River from any and all obligation to contribute to the supply of the waters of the Platte River required for the satisfaction of rights out of the Platte River. And defendant says that in the division of the waters to which the parties hereto may be found by the court to be equitably entitled due regard should be had to the burden which, but for the said South Platte River Compact, would exist and rest upon the South Platte River to contribute its just proportion to the waters required to satisfy appropriators from the Platte River.

"And defendant says that because of the matters in this article alleged the State of Colorado is a necessary party to this action and to a final determination of the rights of the parties herein.

"WHEREFORE, defendant prays that this court issue its subpoena to the State of Colorado and its Governor and Attorney General, directing that appearance be made by said state before this court at a time to be fixed in said subpoena, and requiring it by an appropriate pleading to show its and its appropriators' interests in the water of the North Platte and South Platte Rivers; that upon final hearing this court find and determine the equitable share of the water of the North Platte River to which the State of Colorado, this defendant and the complainant are respectively en-

(Footnote Continued on Next Page)

The opinion on the merits in *Nebraska* v. *Wyoming,* 325 U.S. 589 (1945), is quoted in both the Colorado and Wyoming Brief (page 27) and in the Utah Brief (page 9) for the apparent pur-

---

titled; and that the prayer of complainant's Bill of Complaint be denied except to the extent that this defendant has joined therein. And defendant prays for such further, other and different relief as to the court may seem just and equitable."

From Wyoming's Amended and Supplemental Answer filed December 12, 1935.

Nebraska's objections to filing Wyoming's Amended and Supplemental Answer unless Article Twentieth and the Prayer as it related to Colorado were stricken are also instructive. These objections, filed December 13, 1935, may be summarized as follows:

1. The Court had decided on April 1, 1935, that Colorado was not a proper party because Nebraska had asserted no wrongful act of nor asked any relief against Colorado.

2. "Said allegations [Article twentieth] seek to import into this controversy an issue which is extraneous thereto, and foreign to any issue between the State of Nebraska and the State of Wyoming . . . ." (p. 2.)

3. Neither legal nor equitable relief was asked against Colorado.

4. Wyoming's pleading was not a Cross-Bill.

5. The attempt at joinder was made too late.

6. No change had occurred in the subject matter of the controversy.

7. The addition of another party would delay the proceedings.

8. The matter had already been referred to a Special Master and no application was made to enlarge the scope of his reference.

The substance of many of these objections has been raised by the Upper Basin States against the present motion.

pose of showing that allegations of present damage by Colorado uses were the basis of the Court's order making Colorado a party. The implication is that without such allegations a state is not a necessary party. The fact is, however, that *such allegations had not been made when Colorado was ordered into the suit.* The quotations in the opposing briefs from the 1945 opinion are responsive to *Colorado's* motion to dismiss, a motion which was first made after the Master had proceeded on the merits and had heard Nebraska's case. *Nebraska* v. *Wyoming,* 325 U.S. at 592. Colorado was not seeking dismissal on the ground that she was not a necessary or proper party, but on the ground that a case for a decree against Colorado had not been established. The joinder issue, raised by the defendant Wyoming, and which had resulted in impleading Colorado as a party defendant, had been disposed of a decade earlier.

The two 1935 decisions in *Nebraska* v. *Wyoming* are pertinent for three reasons: (1) They are the only instances where this Court has had occasion to rule, in the exercise of its original jurisdiction, on the question of compulsory joinder of States. (2) Wyoming's allegation of threatened harm, quoted in the footnote on page 13, was sufficient basis to require compulsory joinder. (3) This Court gave no indication in deciding the issue of necessary parties that the usual rules do not apply.

The case now before the Court is much stronger than the second *Nebraska* v. *Wyoming* decision for the joinder of absent States. In addition to factors almost identical, the present litigation embraces the determination of rights and liabilities under

the Colorado River Compact, to which all the absent States are parties, and the Statutory Compact of which they are all third party beneficiaries. The Court must decide issues under these Compacts which vitally affect the absent States.

Two other points raised by the absent States in opposition to joinder may be disposed of briefly.

New Mexico states as one reason for her objection to being joined as a party that "It is not contended by California that the four states of the Upper Division are 'indispensable' parties in the sense that the case may not proceed without them." (Pages 5-6) The issue of indispensability of parties arises only when parties sought to be joined are without the jurisdiction of the Court, or when joinder would deprive the Court of jurisdiction. Neither condition prevails here. Any determination that the absent States are indispensable would be outside the issues presented by the motion. However, the absent States would be indispensable if indispensability were in issue. (Initial California Brief, p. 30.) *A fortiori,* they are necessary parties.

The other contention, as stated in the Utah Brief, is that "This is not an action based primarily upon the [Colorado River] Compact." (Page 6.) Similarly, the Colorado and Wyoming brief develops the contention that, because the Colorado River Compact divides the use of water between the Upper and Lower Basins, and not among States, the Upper Basin States are not necessary parties to a suit over the use of Lower Basin water. To this there are three answers:

(1) The issues raised in the Arizona Complaint necessarily involve construction of provisions of the Colorado River Compact, the resolution of which necessarily will affect the rights and obligations of the Upper Basin States under the Compact. The Court must determine the respective rights in water available for use in the Lower Basin. But to do so it must first determine how much water is available to the Lower Basin under the terms of the Colorado River Compact. The size of the pie must be determined before deciding how the pie will be cut. This cannot be done without adjudicating the corresponding rights and obligations of the Upper Basin States.

(2) Arizona's complaint, as her complaint shows, alleges a breach by California of its obligation under the Statutory Compact. The States opposing this motion are third-party beneficiaries of that Compact and must be joined in the action brought by Arizona as joint obligee.

(3) Because claims of the United States are asserted independently of the Colorado River Compact, they are necessarily claims against the Colorado River System as a whole.

The States opposing the pending motion do not deny that the questions of interpretation of the Colorado River Compact, analyzed in detail in California's initial brief on the motion, are involved in the present controversy. They do not deny that they are joint obligees, with Arizona and Nevada, of the Statutory Compact. They do not deny that a determination of issues which must be decided in the suit among the present parties

necessarily affects their rights and obligations. Were private individuals or corporations situated as the absent States are with reference to the present litigation, their joinder would clearly be necessary. That the absent parties are States provides no reason for changing the rules.

II.

AN INDEPENDENTLY JUSTICIABLE CONTROVERSY BETWEEN PRESENT PARTIES TO THE SUIT AND THE FOUR ABSENT STATES IS NOT REQUIRED FOR THEIR JOINDER

The four absent States argue that they cannot be joined as parties unless an independently justiciable controversy exists between them and the present parties. This the California defendants deny. If there is a justiciable controversy among the parties now before the Court, the absent States must be joined because, in the language of Rule 19(b) of the Federal Rules of Civil Procedure, they "ought to be parties if complete relief is to be accorded between those already parties."

The tests of compulsory joinder have been developed by the federal courts without any suggestion that a separately justiciable controversy is required as to parties sought to be joined.[1] Federal

[1] Only one case has been discovered which expressly discusses a concept of "justiciable controversy" in the context of compulsory joinder: *Samuel Goldwyn, Inc.* v. *United Artists Corp.*, 113 F.2d 703 (3d Cir. 1940). In that case, the court said that the parties sought to be joined were neither necessary nor indispensable because their legal inter-

Rule 19 makes no such requirement. To superimpose a requirement of an independently justiciable controversy as to parties sought to be joined would undermine the strength of those rules and the sound judicial policy on which they are based—to fully and effectively dispose of a case or controversy before the court.

The only requirement for justiciability which the absent States argue is lacking is that which may best be described as "ripeness for judicial determination." The requirement is based on a number of considerations: avoiding decision of a feigned controversy, avoiding decision where only abstract questions are presented, avoiding

---

ests would not be affected. Hence, reasoned the court, issues as to the third parties were not "cognizable" or "justiciable." The court was unquestionably correct in its view that parties whose legal interests could not be affected by any possible judgment or decree should not be joined. In the present case, however, legal interests of the absent States clearly would be affected by any decree that is entered. This the absent States do not deny. Their only contention is that issues as to them are not yet ripe for judicial determination, and hence do not now constitute a "justiciable controversy." This is completely different from the concept of "justiciable controversy" in the *Goldwyn* case where the term was used to mean "affecting legal interests." The sense in which the court in the *Goldwyn* case used "justiciable controversy" is made clear by the manner in which it distinguished three leading Supreme Court decisions on compulsory joinder, all three of which are cited in the initial California brief: *Niles-Bement-Pond Co.* v. *Iron Moulders Union*, 254 U.S. 77 (1920); *Minnesota* v. *Northern Securities Co.*, 184 U.S. 199 (1902); *Northern Indiana R.R.* v. *Michigan Central R.R.*, 15 How. 233 (U.S. 1854). The court in the *Goldwyn* case distinguished each of these three cases on the ground that the legal interests of the absent parties (as in present case) would have been materially affected.

decision of a controversy that may never require determination. See *Public Service Comm'n of Utah* v. *Wycoff Co.*, 344 U.S. 237 (1952). Where issues not ripe for decision in a separate and independent suit against absent parties must in any event be determined in a controversy between other parties which is justiciable, the reasons behind the "ripeness" rule do not militate against compulsory joinder. The controversy between those already parties insures the necessary "concrete" and "immediate" clash of interests, and avoids all of the hazards which courts have tried to avoid in delimiting the "ripeness" requirement for a justiciable controversy.

The point could be illustrated by many examples from the present suit. One of the issues between present parties is the definition of "beneficial consumptive use" in the Colorado River Compact. If the absent States are right, a separate suit by or against them would not now be sufficiently concrete for adjudication. However, because the beneficial consumptive use issue will be determined in the present suit in any event, all the reasons for the ripeness requirement are satisfied. To say that parties who cannot sue or be sued cannot be joined to another suit is to say, in effect, that the Colorado River Compact must be construed, not by one decree, but by two, separated in time by thirty years or so. If ever there were a situation which demanded the opposite result, this is it.

Many federal cases indicate, without expressly discussing the problem, that a separately justiciable controversy is unnecessary to a determination that absent parties are necessary or indispensable:

Minnesota v. *Northern Securities Company,* 184 U.S. 199 (1902). The State of Minnesota brought an original action to enjoin the Northern Securities Company from acquiring the stock of and exercising control over two parallel and competing railroads in Minnesota. There was no cause of action against the railroads and no relief against them was sought. Moreover, there was no controversy between the railroads and the Northern Securities Company. Nevertheless, they were held to be indispensable parties because their rights necessarily would have been affected by the litigation.

Northern Indiana Railroad v. *Michigan Central Railroad,* 15 How. 233 (U.S. 1854). The complainant sought to enjoin the defendant from infringing plaintiff's franchise by constructing and operating a certain railroad line. Defendant claimed a right to construct the road by reason of its contract with a third railroad, New Albany. Although there was no cause of action apparent between the New Albany railroad and the original parties to the action, the Court held that New Albany was indispensable because the validity of its franchise and its contract with the defendant Michigan Central necessarily would be determined.

Mallow v. *Hinde,* 12 Wheat. 193 (U.S. 1827). The action involved a dispute over the ownership of real property. The plaintiff's title was based on a contract executed by the beneficiary of a trust, and the defendant claimed a title based on a contract executed by the trustee. Because the validity of these contracts necessarily would have to be determined, both the beneficiary and the trustee were held to be indispensable. There was no indi-

cation of a presently justiciable controversy between them and the original parties.

Keegan v. *Humble Oil & Refining Company,* 155 F.2d 971 (5th Cir. 1946). The validity of an oil lease was in issue. Owners of royalty interests under the lease were held to be indispensable even though no present cause of action existed between them and the original parties. They were indispensable because their legal interests necessarily would have been affected by the litigation. Cancellation of the lease would have destroyed their royalty interests in the lease.

That an independently justiciable controversy is not required as to all parties is even more clearly demonstrated in a series of cases involving declaratory judgment actions on liability insurance policies. There is abundant authority that insurance companies in suing the insured for a declaratory determination of non-liability must join the injured party even though the liability of the insured to the injured party has not been established, and will not be established in the declaratory judgment action. *Maryland Casualty Co.* v. *Pacific Coal & Oil Co.,* 312 U.S. 270 (1941); *Central Surety & Ins. Corp.* v. *Norris,* 103 F.2d 116 (5th Cir. 1939);[1] *Central Surety & Ins. Corp.* v. *Caswell,*

[1] The court in reversing the judgment which dismissed third party tort claimants said: "The interest of Ruddell and Rosser [the tort claimants] in the question the Insurance Corporation is trying to get adjudicated by a declaratory judgment is real and substantial though not immediate. They ought to be retained as parties to be heard on it and to be bound by the result." 103 F. 2d at 117.

91 F.2d 607 (5th Cir. 1937).[1] This is so even though the injured party has no action against the insurance company until the insured's liability is established.[2]

The principle that an independently justiciable case or controversy is unnecessary as to all parties is firmly established in cases involving intervention. In *Securities and Exchange Commission* v. *United States Realty & Improvement Company,* 310 U.S. 434 (1940), the Court permitted the SEC to intervene to contest the propriety of a Chapter XI bankruptcy proceeding even though there was no basis for any independent action involving the SEC. There was a dissenting opinion which was confined to issues of statutory construction; the Court's constitutional power was not even discussed. See CLARK, CODE PLEADING, Sec. 65 (2d ed. 1947); Berger, *Intervention by Public Agencies in Private Litigation in the Federal Courts,* 50 YALE L. J. 65 (1940).[3]

---

[1] "[W]e assume the District Court reached the conclusion that a case of actual controversy between the insurer and the passengers was not presented and therefore as to them the court was without jurisdiction . . . . The injured passengers have a material interest in the outcome of the suit. Appellant has the right to have its obligations to them as well as the insured determined. The passengers are necessary and proper parties. The judgment dismissing the suit as to them was wrong." 91 F.2d at 608-09.

[2] In a few states direct action statutes permit injured parties to sue insurance companies directly. See *Watson* v. *Employers Liability Assurance Corp.,* 348 U.S. 66 (1954). Comment, *Consent and the Constitution,* 5 STAN. L. REV. 514 (1953).

[3] Compare 28 U.S.C. § 2403 (1952) which requires the court to allow the United States to intervene in any action

Although the tests of permissive intervention and compulsory joinder differ, any constitutional requirement of an independently justiciable controversy would necessarily apply with equal force to both situations. If the absence of an independently justiciable controversy is no bar to intervention, it is no bar to compulsory joinder. That there is any constitutional barrier to intervention by the absent States in the present litigation is inconceivable. Nevada, a Lower Basin State, has already been granted permission to intervene in the present action. *Arizona* v. *California,* 347 U.S. 985 (1954). This leaves no doubt that New Mexico and Utah, also Lower Basin States, could intervene. The present suit is the fourth interstate suit involving the Colorado River, and it is the first in which all seven States of the River Basin were not initially named as parties. *Arizona* v. *California,* 283 U.S. 423 (1931); 292 U.S. 341 (1934); 298 U.S. 558 (1936).

The foregoing authorities demonstrate that a separately justiciable case or controversy is not necessary between all parties before a federal court. Once a court has a justiciable case or controversy before it, the judicial power granted by Article III of the Constitution of the United States includes the power to deal with all issues and parties necessary to an effective disposition of the case. Chief Justice Marshall said in *Osborn* v. *Bank of the United States,* 9 Wheat. 738, 823 (U.S. 1824):

---

involving the constitutionality of a statute of the United States affecting the public interest. See *United States* v. *Johnson,* 319 U.S. 302 (1943).

> We think, then, that when a question to which the judicial power of the Union is extended by the constitution, forms an ingredient of the original cause, it is in the power of congress to give the circuit courts jurisdiction of that cause, although other questions of fact or of law may be involved in it.

The principle is at the basis of the familiar doctrine of ancillary jurisdiction. Merely to catalogue instances in which the principle has been applied would require a treatise on the jurisdiction of federal courts. See 3 MOORE, FEDERAL PRACTICE, Pars. 13.15, 14.26 (2d ed. 1948); HART & WECHSLER, THE FEDERAL COURTS AND THE FEDERAL SYSTEM (1953): *Note on Pendent Jurisdiction,* pp. 802-809; *Note on Class Actions and Intervention,* pp. 929-937; *Note on Third-Party Practice,* pp. 942-943; *Note on Separate and Independent Claims or Causes of Action,* pp. 1044-1048.[1]

---

[1] A few illustrative cases are *Brooks* v. *United States,* 119 F.2d 636 (9th Cir.), *cert. denied,* 313 U.S. 594 (1941) (federal district court in Arizona may decide rights in waters of Gila River in New Mexico incidental to a determination of water rights in Gila River in Arizona, although there is no independent jurisdictional basis for a determination of the rights in New Mexico); *Phelps* v. *Oaks,* 117 U.S. 236 (1886) (jurisdiction based on diversity of citizenship retained after the intervention of a party who destroyed complete diversity); *Stewart* v. *Dunham,* 115 U.S. 61 (1885) (class action removed to federal court because of diversity; jurisdiction retained after intervention of a member of the class of same citizenship as defendant); *Hurn* v. *Oursler,* 289 U.S. 238 (1933) (federal claim for copyright infringement joined with state claim for unfair competition; jurisdiction over the federal claim held to include the power to decide the state claim); *Siler*

If this Court were to decide that an independently justiciable controversy were required in order to join additional parties, it would add a new and uncertain qualification to present rules of joinder. Such a qualification resting on constitutional grounds would import uncertainty as to jurisdiction into all multi-party situations. Denial of the motion on this ground would undermine the salutary principle that the power to decide a case is the power to decide it completely.

---

v. *Louisville & Nashville R.R.*, 213 U.S. 175 (1909) (jurisdiction based on federal question, but case disposed of on issue of state law); *Moore* v. *New York Cotton Exchange*, 270 U.S. 593 (1926) (federal court has ancillary power to decide compulsory counterclaim for which there is no independent ground for federal jurisdiction); *Kelly* v. *Pennsylvania R.R.*, 7 F.R.D. 524 (E.D. Pa. 1948) (federal court has ancillary jurisdiction over third party complaint for which there is no independent ground for federal jurisdiction).

In *Oklahoma* v. *Texas*, 258 U.S. 574, 581 (1922), an original action, the Supreme Court reflected this basic principle of ancillary jurisdiction in the following statement:

> It long has been settled that claims of property or funds of which a court has taken possession and control through a receiver or like officer may be dealt with as ancillary to the suit wherein the possession is taken and the control exercised,—and *this although independent suits to enforce the claims could not be entertained in that court.* (Emphasis added.)

III.

THE CONTROVERSY PRESENTED BY THE PLEADINGS IS JUSTICIABLE AS TO THE FOUR ABSENT STATES

The dominant argument of the absent States opposing this motion is that there is no justiciable controversy between them and the present parties. Two reasons are given: That the controversy is solely a Lower Basin dispute, and that because there is no physical shortage of water now, the issues are not now justiciable. Both these reasons are unsound.

A. The Controversy Is Not Solely a Lower Basin Dispute

1. Arizona's prayer to quiet title to 2,800,000 acre-feet of III(a) water from the main stream presupposes a determination that the Lower Basin has title, as against the Upper Basin, to 7,500,000 acre-feet of main stream water under Article III(a) of the Colorado River Compact.

Arizona derives her claim on the main stream to 2,800,000 acre-feet per annum of the 7,500,000 acre-feet of uses apportioned by Article III(a) to the Lower Basin by a process of subtraction:

(1) Arizona first asserts that the 7,500,000 acre-feet is all physically present in the main stream, flowing at Lee Ferry,[1] and identified with the 75,000,000 acre-feet which Article III(d) requires the four States of the Upper Division to let pass Lee Ferry in each ten-year period.[2] This is the

---

[1] Reply to California's Answer, par. 8, p. 16.

[2] *Id.* at par. 11, p. 18.

hinge of her whole case. She denies that the uses on the Gila are chargeable under Article III(a), and identifies them with the increase of use permitted to the Lower Basin by Article III(b).[1]

(2) Arizona concedes to California 4,400,000 acre-feet per annum, and to Nevada 300,000 acre-feet per annum, of the 7,500,000 acre-feet apportioned to the Lower Basin by Article III(a) and which she says is to be found flowing at Lee Ferry.[2]

(3) On this argument, there is left a residue of 2,800,000 acre-feet of III(a) water, in the main stream, to which Arizona seeks to quiet title.[3]

Putting aside for the moment all other questions —such as whether California and Nevada are in fact limited to the quantities Arizona concedes, or whether uses shall be measured in one way or another—it is clear that Arizona cannot quiet title to a residue of 2,800,000 acre-feet of III(a) water on the main stream unless, in fact, the initial figure of 7,500,000 acre-feet of III(a) water at Lee Ferry is correct.

If it is, then, by hypothesis, the absent States of the Upper Division are at once confronted by the obligation in Article III(c), which states that the Mexican burden shall be "supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b)," but if such surplus shall prove insufficient, "the States of the Upper

---

[1] *Id.* at par. 8, p. 17.

[2] *Id.* at par. 37(b), p. 28.

[3] *Id.* at par. 41, p. 33.

Division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d)." Since, on Arizona's hypothesis, the 75,000,000 acre-feet delivered under Article III(d) contains no surplus, but is identified with the Lower Basin's apportionment under Article III(a), the four absent States of the Upper Division must add enough water to meet the deficiency in the Mexican burden. As this burden is fixed by treaty at a minimum of 1,500,000 acre-feet per annum, measured at the Mexican boundary, the effect of Arizona's prayer is to add at least 750,000 acre-feet per year, or 7,500,000 acre-feet in ten years, or ten per cent, to the burden on the States of the Upper Division imposed by Article III(d).

In short, Arizona's suit is necessarily an action to quiet title in the Lower Basin to 7,500,000 acre-feet per annum of III(a) water at Lee Ferry, as against the four absent States of the Upper Division. That step must be accomplished before she can find title to herself in 2,800,000 acre-feet of III(a) water in the main stream, even if she wins every point against California and Nevada.

On the interpretation of California and Nevada, however, the uses on the Gila River System are chargeable to the Lower Basin's apportionment under Article III(a), which provides that the water apportioned to each Basin "shall include all water necessary for the supply of any rights which may now exist," which, of course, includes the very old rights on the Gila. That being so, the California defendants say there is no relationship whatever between the obligation of the States of

the Upper Division under Article III(d) to deliver 75,000,000 acre-feet during each ten-year period at Lee Ferry, and the apportionment of uses made by Article III(a) to the Lower Basin. If this is true, then, to the extent that the apportionment of 7,500,000 acre-feet per annum is represented by uses of the waters of the Gila River System or other tributaries in the Lower Basin, the 75,000,000 acre-feet delivered under Article III(d) includes an equivalent quantity of waters of some category other than those apportioned by Article III(a). On any theory of measurement, this equivalent quantity amounts to several million acre-feet in each ten-year period. The California defendants say that this component of the waters passing Lee Ferry is excess or surplus waters unapportioned by the Colorado River Compact, covered in part by the Lower Basin's right to increase its use under Article III(b), and available for use by California under the terms of the Statutory Compact as well as available for satisfaction of the Treaty burden.

In any event, it is quite apparent that the status of the 75,000,000 acre-feet minimum guaranteed at Lee Ferry affects the rights not only of the Lower Basin States under Articles III(a) and III(b) of the Colorado River Compact and the right of the State of California under the Statutory Compact to the use of excess or surplus waters, but also the correlative obligation of the Upper Division States under Article III(c) to bear one-half the deficiency of the Mexican burden. It is impossible to determine that deficiency without first determining whether the 75,000,000 acre-feet includes any excess or surplus waters available in part for discharge of that

burden, as California says, or whether the 75,000,000 acre-feet is all apportioned to the Lower Basin under Article III(a), as Arizona says.

The net effect of the decree which Arizona seeks would be to quiet title in the Lower Basin to 75,000,000 acre-feet at Lee Ferry per ten-year period as water apportioned to the Lower Basin under Article III(a). If this suit is justiciable against California, it is manifestly justiciable against the absent States of the Upper Division—the four obligors under Articles III(c) and III(d). It is against them that Arizona must quiet that title.

Other issues of interpretation of the Colorado River Compact which require a determination affecting the four absent States are catalogued in the "Summary of the Controversy" (Exhibit A to the pending motion), *e.g.*, "whether, if excess or surplus waters are appropriated (or contracted for) in the Lower Basin, their release from storage in the Upper Basin may be required" (*Id.* at p. 19) under Article III(e), as the California defendants contend, or whether such waters may be retained in the Upper Basin for power generation. Compare the discussion of this point by Governor Ed Johnson of Colorado, p. 54 *et seq.* of the present brief.

2. *Arizona's contention that the six-state Colorado River Compact, to which she was not a party, has been superseded by a seven-state Compact, to which she is a party, raises a justiciable issue with all parties to the six-state Compact.*

Another critical and clearly justiciable issue in the pending suit is whether Arizona is a party to the Colorado River Compact. The Compact is a

contract which became effective by Presidential proclamation in 1929. Arizona was not a party. This situation continued for at least 15 years. Arizona asserts that in 1944 she ratified what thereby became a seven-state Compact. A new party cannot be imported into a contract without the consent of all of the existing parties. "In making a contract, parties are as important an element as the terms with reference to the subject-matter. . . . A new party could no more be imported into the contract and imposed upon [an existing party] without its consent, than a change could be made in like manner in the other pre-existing stipulations." *First National Bank of Quincy* v. *Hall,* 101 U.S. 43, 50 (1880). Whether Arizona, by her unilateral action in 1944, could become a party to a contract concluded and effective in 1929 cannot be determined in this suit without the presence of all of the original parties.

California contends that her obligation under the Statutory Compact, evidenced by the California Limitation Act, is conditioned upon existence of a six-state Colorado River Compact and the absence of a seven-state Colorado River Compact. She was required by the Boulder Canyon Project Act to assume the burdens of the Limitation Act because, and only because, Arizona refused to ratify the Colorado River Compact and the four absent States refused to acquiesce in a six-state Compact unless it should be accompanied by a limitation upon California's rights. The federal statute, the state statute, and the Presidential proclamation are explicit as to the mutually exclusive character of the six-state and seven-state settlements, as to the fact that the Limitation Act should become operative only in the

absence of a seven-state agreement, and as to the six-months time limit for the crystallization of one result or the other. This issue—whether the tardy ratification of a seven-state agreement by Arizona, fifteen years after expiration of the time stipulated in the Project Act, was unilaterally effective, and whether, if so, the Statutory Compact continues effective—is equally justiciable as to all six States which are beneficiaries of the Statutory Compact. It cannot be litigated without the presence of all six of those States.

3. Arizona's allegations that California has breached the Statutory Compact raise a justiciable controversy with all six co-beneficiaries.

Arizona alleges that California has breached its obligations under the Statutory Compact. (Arizona Complaint, pars. XXVI, XXVII.) California's obligation under that Compact is a single and indivisible promise to the United States for the express benefit of the six other States of the Colorado River Basin, of which Arizona is but one. If California has broken that promise, a justiciable controversy necessarily is raised between her and all six co-beneficiaries.

California by that Compact agrees to limit her consumptive uses so that they

> shall not exceed four million four hundred thousand acre-feet of the waters apportioned to the lower basin states by paragraph "a" of article three of the said Colorado river compact, plus not more than one-half of any excess or surplus waters unapportioned by

said compact, such uses always to be subject to the terms of said compact. (Chap. 16, Calif. Stats. 1929, p. 38.)

The breach alleged is that California claims rights in "excess or surplus waters unapportioned by said Compact," has made contracts with the United States for the storage and delivery of such excess or surplus waters, and has built works to use them, whereas (says Arizona) no state can acquire any rights in excess or surplus waters unless and until a new compact, to be made after October 1, 1963, apportions them. The questions of whether excess or surplus waters are open to appropriation, or may be salvaged and stored by the United States and disposed of by Government contract, or are withheld from all states until all (including Arizona) agree on a new compact, are manifestly questions equally affecting all seven States. If California has breached the Statutory Compact in asserting and using the rights to excess or surplus waters given her on the face of the Statutory Compact (and California denies that she has), the breach is against all beneficiaries of that Compact, not Arizona alone.

B. The Assumption as to Water Availability Relied on by the Absent States Is Incorrect. In Any Event, the Facts Are Not Properly the Subject of Judicial Notice and Should Be Determined Only After Hearing

The absent States argue that the present controversy is not justiciable as to them because there is no imminent shortage of water which will affect them. They declare that 7,500,000 acre-feet of

water is apportioned for annual beneficial consumptive use in the Upper Basin of the Colorado River, and that after presently contemplated projects are in operation beneficial consumptive use in the Upper Basin will be an estimated 4,200,000 acre-feet per annum. (Colorado and Wyoming Brief, p. 36.) "The unused portion of the Upper Basin apportionment," say the absent States, "is flowing into the Lower Basin and will continue so to flow until Upper Basin use increases to the amount of its apportioned share." (*Id.* at p. 8.)

The statement that present and immediately contemplated beneficial consumptive uses will total only 4,200,000 acre-feet per annum is not meaningful because "beneficial consumptive use" is in controversy in the present litigation as to its definition, its method of measurement, its relation to reservoir evaporation losses, as well as a number of other aspects. The controversies over "beneficial consumptive use" involve approximately two million acre-feet of water per annum throughout the entire Colorado River Basin. (See initial California Brief, p. 38.)

The argument of the absent States assumes that whatever water is apportioned by the Colorado River Compact is at all times physically available. The assumption is, unfortunately, incorrect. How much water is physically available is a difficult and complex problem to which answers vary, but in any case it is not a subject for judicial notice. A view contrary to the assumption by the absent States in their briefs, was recently expressed by Governor Ed C. Johnson of Colorado:

> Under the Seven State Compact the Upper States must deliver at Lee Ferry in each ten year period 75 million acre-feet to the Lower States and 7½ million acre-feet to Mexico before they can use one drop of water themselves beyond what they used before the Seven State Compact was ratified. In the current ten year period that will leave only 3,250,000 acre-feet per year for their total use. In the previous ten year period they would have had 4,150,000 acre-feet a year. In 1902 the Upper Basin States under this formula would have had no water at all.[1]

C. Present Use of Water in Dispute Is Not Necessary to Constitute a Justiciable Controversy

In *Nebraska* v. *Wyoming,* 325 U.S. 589 (1945), Colorado argued that because water was passing unused down the North Platte River during the irrigating season, there was no justiciable controversy. Colorado's demands related at least in part to future rather than to present uses. The Court said, at page 609:

> The claim of Colorado to additional demands may not be disregarded. The fact that Colorado's proposed projects are not planned for the immediate future is not conclusive in view of the present over-appropriation of natural flow. The additional demands on the river which those projects involve constitute a threat of further depletion.

In the instant case, as in *Nebraska* v. *Wyoming,* natural flow is overappropriated. (Answer of

---

[1] The full text of Governor Johnson's statement, made on December 20, 1954, is annexed as an appendix to this brief.

Defendants to Arizona Complaint, par. 3; *Problems of Imperial Valley and Vicinity,* SEN. DOC. No. 142, 67th Cong., 2d Sess. (1922), p. 5.)

At page 610 in the same opinion the Court explained the basis for the doctrine that claims to water in excess of supply create a justiciable interstate controversy:

> But where there is not enough water in the river to satisfy the claims asserted against it, the situation is not basically different from that where two or more persons claim the right to the same parcel of land. The present claimants being States we think the clash of interests to be of that character and dignity which makes the controversy a justiciable one under our original jurisdiction.

The principle is clearly applicable to the instant case. That the States opposing the present motion have claims to the use of water which conflict with claims of present parties to this suit, they do not deny. The only matter in doubt is not whether but when the actual shortage will take place. If the figures of Governor Johnson, quoted on page 37, *supra,* are correct, the shortage may take place very soon.

D. The Requirements for a Justiciable Controversy Do Not Change When States Are Parties

The absent States argue that usual requirements for a justiciable controversy are inapplicable to litigation between states. The cases cited in their briefs, however, contribute nothing toward proving such an exception. The reason for doubt-

ing the existence of an exception applicable to states is compelling.

If the issues between the absent States and the present parties are nonjusticiable, the reason can only be that they do not present a case or controversy within the meaning of Article III, Section 2 of the United States Constitution. What the argument necessarily means, if valid, is that the words "case" and "controversy" in the Constitution have one meaning as to private persons, another meaning as to states. The distinction would import endless and unnecessary confusion, and is without any support in the decisions.

So far as they are pertinent in this connection at all, the cases cited by the States opposing the motion stand for the propositions that between states more material injury must be shown to justify relief than in cases between other types of litigants and that a case against a state must rest on clearer proof. Both of these are considerations relevant to the decree or final disposition of litigation. They have nothing to do with jurisdiction or joinder of parties.

Colorado v. *Kansas,* 320 U.S. 383 (1943), is a clear example. This case is cited or quoted in the Colorado and Wyoming Brief at pages 17 and 31, in the Utah Brief at pages 7-8, 9, 11, 13, 16, 19, and 21. The fact that the quoted language from this case has nothing to do with the jurisdictional issue of justiciable controversy is clearly shown by the history of the litigation. Jurisdiction to determine this dispute over the right to use waters of the Arkansas River was determined in *Kansas* v. *Colorado,* 185 U.S. 125 (1902), when the Court

overruled Colorado's demurrer to Kansas' complaint. After hearing, this Court determined that the plaintiff had not established a basis for relief. 206 U.S. 46 (1907). This was an adjudication on the merits and constituted an exercise of jurisdiction. So likewise did the decision in 1943, when the roles as plaintiff and defendant were reversed and a Kansas water users' association was an added party defendant. The Utah Brief recognizes this situation when it describes the two States, after 1907, as "operating under a 'decree of the court' subject to a reopening at a future time when present injury existed." (Page 8.) The exercise of jurisdiction presupposes that the controversy was justiciable. Peculiarities based on the nature of states as parties go to the decision on the merits, and not to justiciability and jurisdiction.

What is true of *Colorado* v. *Kansas* is also true of a number of other cases cited by the absent States; they have nothing to do with jurisdiction or joinder of parties.[1]

---

[1] *Missouri* v. *Illinois*, 200 U.S. 496 (1906), Colorado and Wyoming Brief page 18, Utah Brief pages 11, 20, New Mexico Brief page 6. The jurisdictional matters had been disposed of in *Missouri* v. *Illinois*, 180 U.S. 208 (1901), when demurrer to the complaint had been overruled. Dismissal of the bill without prejudice in 1906 was clearly an adjudication on the merits after a careful review of complex evidence and a weighing of equities. What is said about judicial restraint in matters between states has nothing to do with the test of a justiciable controversy.

Connecticut v. *Massachusetts*, 282 U.S. 660 (1931), Colorado and Wyoming Brief pages 18, 32, Utah Brief pages 11, 21, New Mexico Brief page 6. The decision was a denial of an

In *Arizona* v. *California*, 283 U.S. 423 (1931), the first decision by this Court in the Colorado River litigation, the Court did refuse to take jurisdiction. Arizona's bill against California,

---

injunction sought by Connecticut to prevent Massachusetts from diverting water from the watershed of the Connecticut River for storage and use in the Boston metropolitan area. The decision after careful review of the evidence was an exercise of jurisdiction, and necessarily a determination that there was a justiciable controversy.

New York v. *New Jersey*, 256 U.S. 296 (1921), Colorado and Wyoming Brief page 18, Utah Brief page 11, New Mexico Brief page 6. This was a suit to prevent New Jersey from discharging sewage into the New York harbor. Again, the dismissal after a careful review of the evidence constituted an exercise of jurisdiction and a necessary determination that there was a justiciable controversy. The decree was without prejudice to renewal of an application for an injunction.

North Dakota v. *Minnesota*, 263 U.S. 365 (1923), Colorado and Wyoming Brief page 18, Utah Brief page 11, New Mexico Brief page 6. North Dakota sought to enjoin activities in Minnesota which allegedly caused flooding and destruction in the plaintiff state, and also to recover money damages on behalf of North Dakota citizens. The bill was dismissed without prejudice because proof of the causal connection between the works in Minnesota and floods in North Dakota was lacking. Money damages for North Dakota citizens were held forbidden by the Eleventh Amendment. Again, the case shows an exercise of jurisdiction and the presence of a justiciable controversy.

Washington v. *Oregon*, 297 U.S. 517 (1936), Colorado and Wyoming Brief page 18, Utah Brief page 11, New Mexico Brief page 6. Washington's bill for an equitable apportionment and injunctive relief against Oregon, relating to the waters of the Walla Walla River, was dismissed on the merits after a careful review of the evidence. Again, there was an exercise of jurisdiction connoting the presence of a justiciable controversy.

Colorado, Nevada, New Mexico, Utah, Wyoming, and the Secretary of the Interior seeking to restrain the building of Hoover Dam was dismissed. The Court pointed out that Arizona's complaint showed 9,000,000 acre-feet of unappropriated water available and no prospect of interference with Arizona's right to appropriate it. Since 1931 there have been a number of significant changes in circumstances: a protracted dry period since that date; increased uses throughout the Basin; execution of a Treaty guaranteeing Mexico 1,500,000 acre-feet per annum; purported ratification of the Colorado River Compact by Arizona and the negotiation of purported water delivery agreements by the Secretary of the Interior with Arizona. In the 1931 case all the parties but Arizona agreed there was no justiciable controversy[1]; today everyone agrees that a justiciable controversy among present parties to the suit exists.[2]

In other cases cited in one or more of the briefs of the absent States, in which no justiciable controversy was found, the reasons for finding

---

[1] Motion of Ray Lyman Wilbur, Secretary of the Interior, to Dismiss the Bill of Complaint, p. 2; Motion to Dismiss filed by California, Colorado, Nevada, New Mexico, Utah, and Wyoming, p. 1.

[2] Arizona Motion for Leave to File Bill of Complaint and Bill of Complaint, p. 5; California Answer to Bill of Complaint, par. 74; Nevada Answer to United States Petition of Intervention, par. XVIII; United States Brief in Support of Motion for Leave to Intervene, p. 29 *et seq.*

absence of a justiciable controversy are clearly inapplicable to the present case.[1]

Only one other group of cases cited by the absent States requires notice. New Mexico cites two decisions on pages 6 and 7 of its brief for the proposition that "The exercise of original jurisdiction in an interstate case is not man-

---

[1] In *Alabama* v. *Arizona*, 291 U.S. 286 (1934), the plaintiff State was denied leave to file its bill of complaint to restrain the operation of the prison-made-goods statutes of five States. A number of grounds are given in the opinion, among them the fact that the bill on its face did not show an injury justifying relief.

In *Massachusetts* v. *Missouri*, 308 U.S. 1 (1939), Massachusetts was denied leave to file a complaint against Missouri to prevent application of Missouri taxes with respect to property left by a Massachusetts domiciliary and held by Missouri trustees. No justiciable controversy in such a case is presented when a state is the party litigant, at least where the property is adequate to meet all taxes assessed by the states in question.

In *New York* v. *Illinois*, 274 U.S. 488 (1927), the Court granted a motion to strike one paragraph from the complaint of New York in an action against Illinois to prevent lowering the level of the Great Lakes. The paragraph concerned New York's right to use the waters of the Niagara and St. Lawrence Rivers for power, but alleged no plans to do so.

In *United States* v. *West Virginia*, 295 U.S. 463 (1935), the Court dismissed an action to restrain the building of a dam in the New and Kanawha Rivers, and to declare the rivers navigable. No controversy was stated with West Virginia which purported to be merely the licensor of the corporate defendants who were building the dam. Dismissal of the State deprived the Court of original jurisdiction over the corporate defendants.

United States v. *Appalachian Electric Power Co.*, 311 U.S. 377 (1940), is cited merely for its dictum, at page 423, that the Court will not decide abstract propositions.

datory." *Georgia* v. *Pennsylvania R.R.*, 324 U.S. 439 (1945); *North Dakota* v. *Chicago & Northwestern R.R.*, 257 U.S. 485 (1922). Neither of the two cases was an interstate case, although a state was plaintiff in both. Neither case stands for this proposition, even by way of dictum. The proposition for which the two cases actually stand is stated in *Georgia* v. *Pennsylvania Railroad, supra,* at 464-65:

> The Court in its discretion has withheld the exercise of its jurisdiction where there has been no want of another suitable forum to which the cause may be remitted in the interests of convenience, efficiency and justice.

This principle has no application to suits between two or more states. In such cases the United States Supreme Court is the only forum available.

In sum, what the cases cited by the opposing briefs show is that different criteria control the granting of relief against states, but not the exercise of jurisdiction. The California defendants believe that not only should the Court take jurisdiction but should grant a decree settling the controversy.

IV.

CLAIMS OF THE UNITED STATES MATERIALLY AFFECT THE FOUR ABSENT STATES AND ARE NOT DISPOSED OF BY THE UPPER COLORADO RIVER BASIN COMPACT

The United States in its petition of intervention has asserted a number of different claims to the use of water of the Colorado River System. These claims include rights:

(1) To store water for the servicing of water delivery contracts which aggregate nearly 8,500,000 acre-feet per annum of the water stored in Lake Mead;

(2) To comply with international obligations arising from the Mexican Treaty of 1944;

(3) To fulfill the Government's obligations to Indians and Indian tribes;

(4) To protect the interest of the United States in fish and wildlife, flood control and navigation;

(5) To meet the needs of the National Park Service, the Bureau of Land Management, and the Forest Service;

(6) To service contracts for generation and delivery of electric power.

The issues these claims present are as justiciable against States of the Upper Basin as against States of the Lower Basin. As the initial California brief on the pending motion developed in some detail, these claims involve the States opposing the pending motion in several ways:

(1) Their disposition will affect obligations of those States to make water available to the Lower Basin;

(2) Each category of claims involves questions of law in common to all of the States of the Colorado River Basin;

(3) A determination that Indian rights are outside and superior to rights under the Colorado River Compact would render the Compact unworkable.

Utah replies that the "complete answer" is Article VII of the *Upper* Colorado River Basin Compact of 1948. (Utah Brief, pp. 18-19.) The same position is taken by Colorado and Wyoming. (Colorado and Wyoming Brief, p. 33.) Article VII provides that water uses by the United States are charged to the State in which such uses occur.

Although California agrees that the principle in Article VII of the Upper Colorado River Basin Compact is sound, that principle is not accepted by the United States in this suit. (See par. XXVII and par. XXXVII of the United States Petition of Intervention, relating to Indian rights.) The *Upper* Colorado River Basin Compact, although consented to by Congress, does not bind the United States. Congress can subject the United States to an interstate compact, and did so in the Boulder Canyon Project Act, which approved the Colorado River Compact. (See Boulder Canyon Project Act, Secs. 8, 13, 18, Appendix No. 2 to the California Answer, Appendix Vol. I, p. 9.) It did not do so in approving the *Upper* Colorado

River Basin Compact. 63 STAT. 31 (1949). The Report of the House Committee on Public Lands on the Resolution which granted consent to the Upper Basin Compact explicitly recognized that "the Upper Colorado River Basin Compact is binding only upon the States which are signatory thereto . . . ." (See Extract from Report, Appendix No. 32 to California Answer, Appendix Vol. II, p. 89.)

Even without the declaration in the legislative history Article VII of the Upper Basin Compact would not bind the United States. An interstate compact is not a statute of the United States. *Hinderlider* v. *La Plata River & Cherry Creek Ditch Co.*, 304 U.S. 92 (1938). The function of an interstate compact is to establish rights between States, not between States and the United States.

Furthermore, the Upper Basin Compact does not even purport to apply to the Lower Basin rights and obligations of New Mexico and Utah with respect to the United States.

V.

LOWER BASIN RIGHTS OF NEW MEXICO AND UTAH ARE NOT DE MINIMIS

Utah in her brief, at pages 15-16, says:

> The interests of the State of Utah in the waters of the Lower Basin are certainly *de minimus* [*sic*]. Their maximum rights and claims to the waters of the Lower Basin do not equal in magnitude even 2½ percent of the water allocated by the Compact to the

> Lower Basin exclusive of surplus or unappropriated water. Clearly applicable here is the statement of this court in *Colorado* v. *Kansas,* 320 U.S. 383, 88 L. Ed. 116 at page 124: "Before the court will intervene the case must be of serious magnitude and fully and clearly proved."

Of the authority cited, it is necessary to say again what was said under point III of this brief. Magnitude of the injury and clarity of proof are matters that become pertinent after the Court has assumed jurisdiction. In any case, Utah's *de minimis* is hard to reconcile with the facts.

It is not clear whether Utah refers to 2½ per cent of 7,500,000 acre-feet of water or to 2½ per cent of 8,500,000 acre-feet. In the first case, the quantity is 187,500 acre-feet. In the second instance it is 212,500 acre-feet. One acre-foot of water is 43,560 cubic feet, or 325,850 gallons. 187,500 acre-feet is about 61 billion gallons. One acre-foot will supply the domestic needs of five or six persons for one year. The quantity that Utah says is "certainly *de minimis*" would supply the yearly needs of a city of 1,000,000 persons, or five cities with the population of Salt Lake City. The beneficial consumptive use of water for irrigation prevailing in southern Utah averages around two acre-feet per acre per year. (United States Bureau of Reclamation, Region 3, *Water Supply of the Lower Colorado River Basin* [1952], p. 105). Thus, the quantity of water claimed by Utah is enough to irrigate approximately 100,000 acres.

In *Wyoming* v. *Colorado,* 259 U.S. 419 (1922), the Court's decree (259 U.S. at 496) had been entered only a few months when it had to be modified to recognize the right of Colorado to a "relatively small amount of water" appropriated before 1902 from Deadman Creek. 260 U.S. 1 (1922). This relatively small amount continued to be a problem and fourteen years later was determined to be 2,000 acre-feet per year. 298 U.S. 573 (1936). The entire water supply in controversy in *Wyoming* v. *Colorado* was determined to be 288,000 acre-feet per annum. 259 U.S. at 496. In *Nebraska* v. *Wyoming,* 296 U.S. 553 (1935), Colorado was joined as a party on the basis of Wyoming's allegation that Colorado's claims were "upwards of 250,000 acre feet per annum." (See footnote 1, p. 13 *supra.*)

Recent legislation authorized the so-called "second barrel" of an aqueduct to furnish an additional eighty cubic feet per second of capacity for San Diego, California. 65 STAT. 404 (1951). This capacity amounts to a maximum, at full utilization, of some 58,000 acre-feet per annum. This brief statute is laced, in five separate places, with disclaimers that the facility in any way increases the rights of San Diego to the use of Colorado River water, all at the insistence of counsel for the Upper Basin States. *Hearing No. 44 before Committee on Armed Services on H.R. 5102,* 82d Cong., 1st Sess. (1951), p. 1889. This 58,000 acre-feet for San Diego is less than one-third of what Utah now calls *de minimis.*

Utah also says that she is now negotiating with Arizona for a distribution by compact of her share of Lower Basin water. (Utah Brief, p. 20.) She also says that her presence in this suit would

be "absolutely to preclude the possibility of an amicable settlement of Utah's rights by compact and by negotiations." *Id.* at p. 16. New Mexico says, without further explanation, that "[I]t is not in the best interest of New Mexico at this time and in the present suit to be compelled to litigate and have determined the exact magnitude of this equitable share in terms of acre feet of [Lower Basin] water." (New Mexico Brief, p. 5.)

Why Utah is negotiating a compact to settle interests she regards as *de minimis* is not explained. Nor does she explain how, in a compact with Arizona, she can establish her share in water to which five States and the United States assert claims. Utah does not explain why her joinder would foreclose any possibilities for negotiation that now exist. No reason is apparent why pendency of litigation should interfere with any negotiations.

CONCLUSION

The Upper Basin States in their briefs impugn the motives of the California defendants in filing the pending motion.[1] California's sole purpose in

[1] The Upper Basin States quote statements by California representatives before Congressional Committees that the problems of the Lower Basin could be litigated without affecting the legal rights of the Upper Basin States. For Upper Basin response at that time see *Hearings before a Subcommittee of the Senate Committee on Interior and Insular Affairs on S. J. Res. 145,* 80th Cong., 2d Sess. (1948) p. 198: "We feel that any matter which involves the interpretation or application of the Colorado River compact necessarily involves every State which is signatory to that compact. In fact, we feel that in any litigation each of the signatory States would be an indispensable party to the litigation." To the same effect see pp. 183, 184-85, 187, 189, 302.

seeking to join the absent States is to assure a decree that will settle with finality the vital issues affecting the waters of the Colorado River System. California too dislikes litigation, but prefers a single case to a series of cases. Especially does she wish to avoid future litigation in which a decree in this case would be *res judicata* as to three States and the United States, but not as to the four absent States.

The absent States must be made parties because Arizona, California, Nevada, and the United States have joined in asking this Court to resolve a controversy which deeply affects the welfare and future of the entire Colorado River Basin. The compacts and laws which this Court must construe and apply if it is to resolve that controversy constitute the Law of the River. All of the States of the Colorado River Basin have participated in making that law, all are deeply affected by it. To avoid uncertainty, confusion, and endless controversy there must be but one Law of the River. To that end, it is necessary that Colorado, New Mexico, Utah, and Wyoming be made parties to this suit.

Colorado, New Mexico, Utah and Wyoming urge they should not be joined in this suit because there is water in the Upper Basin not yet being used. If the Upper States are not joined for the reason that the water in the Upper Basin is not yet being used, a judicial decision will be impossible until water in dispute is actually unavailable to communities that have become dependent upon it. Decisions could be made only when costly projects would be rendered useless for lack of water.

To so hold, for whatever reason, would be to decide that waste, privation, and human suffering are requisites to judicial decision. The California defendants do not believe that this is or ever will be the law. The issues which must be decided are as sharply delineated today as they will be in either the near or the distant future. The controversy is actual and real; the need for decision is pressing.

For the reasons stated in this brief and the initial brief, the defendants respectfully urge that the motion be granted.

APPENDIX

STORAGE BELOW THE STATE OF COLORADO IS NOT THE ANSWER[1]

By Ed C. Johnson
United States Senator, Colorado

Interested persons on the Eastern and Western Slopes of Colorado have expressed confidence in me, as Governor, to resolve the very controversial water problem that plagues both slopes. This is a tremendous responsibility and challenge but its vital nature demands my acceptance. Accordingly, I shall do my utmost to work out something which will benefit both slopes and injure neither.

However, before we begin the task of allocating Colorado's share of the water of the Colorado River System, we first must take stock of the quantity and the location of the water that is available to us. There are very serious misconceptions, widely held, in regard to the burdens placed on this state by the specific provisions of the Seven State Compact and the official interpretations with respect to them. These limitations should be understood clearly by all parties concerned, since they are basic to any plan to develop the Upper Colorado River Basin. It is with that purpose in mind that I have prepared this document. If my conclusions are in error I want to be show wherein the error lies.

---

[1] This statement was issued on December 20, 1954, while Governor Johnson was United States Senator and Governor-elect of Colorado. It is reproduced as an extension of remarks of Representative John P. Saylor, of Pennsylvania. 101 Cong. Rec. A168-A171 (January 13, 1955).

Either the Seven State Compact specifically denies to the Upper Basin the right to withhold water which it cannot use for agricultural and domestic purposes or it does not deny us such a right. Either it denies to the Upper Basin the right to withhold water to develop power or it does not deny us that right. Let us look at the document which has been ratified by the Legislatures of seven states for the correct answers to these pertinent questions.

Here is that irrevocable record:

Article II

> (h) The term "domestic use" shall include the use of water for household, stock, municipal, mining, milling, industrial, and other like purposes, but shall exclude the generation of electrical power.

Article III

> (e) The States of the Upper Division shall not withhold water, and the States of the Lower Division shall not require the delivery of water, which cannot reasonably be applied to domestic and agricultural uses.

The Honorable Herbert Hoover, Secretary of Commerce of the United States, was appointed by the President to serve as Chairman of the Seven State Compact Commission as the Official Representative of the Government of the United States, pursuant to an Act of Congress. He was the Chairman of the Colorado River Commission that drafted and signed the Seven State Colorado River Compact. In answer to the question propounded by Congressman Hayden these points in

the compact were interpreted officially by him on January 27, 1923, before any state had ratified the Compact, as follows:

Question 14. Can paragraph (d) of Article III be construed to mean that the States of the upper division may withhold all except 75,000,000 acre-feet of water within any period of 10 years and thus not only secure the amount to which they are entitled under the apportionment made in paragraph (a) but also the entire unapportioned surplus waters of the Colorado River?

Answer. No. Paragraph (a) of Article III apportions to the upper basin 7,500,000 acre-feet per annum. Paragraph (e) of Article III provides that the States of the upper division shall not withhold water that cannot be beneficially used. Paragraph (f) and (g) of this article specifically leave to further apportionment water now unapportioned. There is, therefore, no possibility of construing paragraph (d) of this article as suggested.

Question 19. Why is the impounding of water for power purposes made subservient to its use and consumption for agricultural and domestic purposes, as provided in paragraph (b) of Article IV?

Answer.

(a) Because such subordination conforms to established law, either by constitution or statute, in most of the semiarid States. This provision frees the farmer from the danger of damage suits by power companies in the event of conflict between them.

(b) Because the cultivation of land naturally outranks in importance the generation of power, since it is the most important of human activities, the foundation upon which all other industries finally rest.

(c) Because there was a general agreement by all parties appearing before the commission, including those representing power interests, that such preference was proper.

Question 20. Will this subordination of the development of hydroelectric power to domestic and agricultural uses, combined with the apportionment of 7,500,000 acre-feet of water to the upper basin, utterly destroy an asset of the State of Arizona consisting of 3,000,000 horsepower, which it is said could otherwise be developed within that State if the Colorado River continues to flow, undiminished in volume, across its northern boundary line and through the Grand Canyon?

Answer.

(d) The compact provides that no water is to be withheld above, that cannot be used for purposes of agriculture. The lower basin will therefore receive the entire flow of the river, less only the amount consumptively used in the upper States for agricultural purposes.

On December 15, 1922, Honorable Delph E. Carpenter, Commissioner for Colorado, reported to Governor Oliver H. Shoup his analysis of this compact which he helped to formulate. His comments and observations are especially pertinent. In this official report he said:

"Power claims will always be limited by the quantity of water necessary for domestic and agricultural purposes. The generation of power is made subservient to the preferred and dominant uses and shall not interfere with junior preferred uses in either basin."

On March 20, 1923, Delph E. Carpenter in a joint letter to Colorado Senator M. E. Bashor and Colorado Representative Royal W. Calkins said among other things:

> All power uses in both basins are made subservient to the use and consumption of such water for agricultural and domestic purposes and shall not interfere with or prevent use for such dominant purposes.

The interpretation of Honorable W. S. Norviel, Commissioner for Arizona, published January 15, 1923, contains this language:

> "The third principle established by the compact was to fix a time when the remainder of the water unallotted and unused might be apportioned.
>
> The fourth principle fixes a preference in agricultural uses over power.
>
> The fifth principle, that the upper states shall not withhold water that cannot be reasonably applied for agricultural uses."

Senator Hayden, Arizona, propounded 19 questions to Honorable A. P. Davis, Director United States Reclamation Service, to which the Director made the following replies on January 30, 1923:

> *Question 10.* Is it true that, if the Colorado River compact is adopted, all of the water that Arizona will ever get out of the main river will be enough to irrigate only 280,000 acres of land, of which 130,000 acres are now embraced in the Yuma project and 110,000 acres in the Parker project?
>
> *Answer.* The Colorado River compact does not attempt to divide the water of the river

between individual States. Except for rights already initiated by California and Nevada, there is nothing in the compact that will prevent the State of Arizona from taking from the river all the water that it can put to beneficial use.

Question 19. Any further comment that you may care to make relative to the approval of the Colorado River compact by the Arizona State Legislature will be appreciated.

Answer. The Colorado River compact provides that the lower basin shall be guaranteed an average of 7,500,000 acre-feet of water annually from the upper basin and all of the yield of the lower basin, and that any water not beneficially used for agricultural and domestic uses shall likewise be allowed to run down for use below.

It should be noted that these official interpretations were made before the compact was ratified by any State except Nevada and were not disputed by Colorado or any other State at the time it ratified the compact. Most certainly we are bound hand and foot by them.

At the time the Seven State Compact was adopted and ratified, it was contemplated that a treaty would be negotiated later between the United States and Mexico which would allocate to Mexico certain quantities of water defined in acre-feet, out of the Colorado River System. Furthermore, it spelled out just how that burden should fall upon the Lower Basin and the Upper Basin. The compact specified that to the extent there is surplus water in the Colorado River System, such surplus water would be utilized and

the balance of the burden would be shared equally by the Upper and Lower Basins.

Article III

(c) If, as a matter of international comity, the United States of America shall hereafter recognize in the United States of Mexico any right to the use of any waters of the Colorado River System, such waters shall be supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b); and if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the Upper Basin and the Lower Basin, and whenever necessary the States of the Upper Division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d).

(d) The States of the Upper Division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of this compact.

If the Upper Basin States build Storage Reservoirs at the Glen Canyon and Echo Park sites as is now contemplated, the water withheld thereby will of necessity, be surplus water since the Upper States cannot use it for agricultural or domestic purposes, and the Upper States, therefore, must deliver such water to Mexico as is

allocated to her under the provision of the Seven State Compact.

Senator Hayden asked Chairman of the Commission, Herbert Hoover, about this and was answered as follows:

> *Question 15.* Does paragraph (d) of Article III in any way modify the obligation of the States of the upper division, as expressed in paragraph (c), to permit the surplus and unapportioned water to flow down in satisfaction of any right to water which may hereafter be accorded by treaty to Mexico? Within any year of a 10-year period, could the States of the upper division shift to the States of the lower division the entire burden of supplying such water to Mexico.
>
> *Answer.*
>
> (a) No. It is provided in the compact that the upper States shall add their share of any Mexican burden to the delivery to be made at Lee Ferry, whenever any Mexican rights shall be established by treaty. By paragraph (c) of Article III, such an amount of water is to be delivered in addition to the 75,000,000 acre-feet otherwise provided for.
>
> (b) In the face of the specific provision of Article III (c) that the burden of any deficiency must be "equally borne," I can see no possibility of placing upon the lower division the entire burden. If the surplus is sufficient, there is no burden on anyone. If it is insufficient the plain language is that it must be equally shared, with the equally plain provision that the upper division must furnish its half.

Delph Carpenter in his official report to Governor Shoup said:

> "Any waters necessary to supply lands in the Republic of Mexico (hereafter to be determined by international treaty) shall be supplied from the surplus flow of the river. If the surplus is not sufficient, any deficiency shall be borne equally by the upper basin and the lower basin. * * *"

I am certain that Mr. Carpenter would have added, had he thought such a doubt were to be raised, "Water held in the Upper Basin to generate power and which for physical reasons could not be used by the Upper Basin for agricultural or domestic purposes is surplus water to the Upper Basin." Such an interpretation must be crystal clear to any student of the Seven State Compact and the official interpretations of its provisions.

The Upper and Lower Basins were each apportioned from the Colorado River System the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum, and in addition the Lower Basin was given the permission to increase its beneficial consumptive use of an extra million acre-feet per annum of surplus water. However, the 7,500,000 acre-feet awarded to the Lower States had a very clear priority over the 7,500,000 acre-feet awarded to the Upper States. In reality, the compact gave the Lower States 7,500,000 acre-feet of water per annum and the Upper States that much water if there should be any water left in the River, provided the Upper States used that water only for domestic or agricultural purposes.

Article III

(a) There is hereby apportioned from the Colorado River System in perpetuity to the Upper Basin and to the Lower Basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist.

(b) In addition to the apportionment in paragraph (a) the Lower Basin is hereby given the right to increase its beneficial consumptive use of such waters by one million acre-feet per annum.

But here is the catch in this award:

(d) The States of the Upper Division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of this compact.

The following quotes from the questions by Senator Hayden and answered on January 27, 1923, by Chairman of the Commission Herbert Hoover leave nothing to the imagination with respect to the extra one million acre-feet of surplus water awarded the Lower Basin. The extra million acre-feet is to be met out of surplus waters over and above the 7,500,000 acre-feet allocated annually to each of the two basins and it does not take priority over the Upper States award of 7,500,000 feet provided they use all of their

7,500,000 for agricultural and domestic purposes. If the Upper Basin stores water for power purposes at least a million acre-feet per annum must go to satisfy this demand.

Question 6. Are the 1,000,000 additional acre-feet of water apportioned to the lower basin in paragraph (b) of Article III supposed to be obtained from the Colorado River or solely from the tributaries of that stream within the State of Arizona?

Answer. The use of the words "such waters" in this paragraph clearly refers to waters from the Colorado River system, and the extra 1,000,000 acre-feet provided for can therefore be taken from the main river or from any of its tributaries.

Question 22. Does the Colorado River Compact apportion any water to the State of Arizona?

Answer. No, nor to any other State individually. The apportionment is to the groups.

It should be noted, and I repeat, that Secretary Hoover's official interpretations were made before the compact was ratified by any state; furthermore it was not disputed by any of them when they did ratify it.

On December 15, 1922, Colorado Commissioner Delph E. Carpenter in his official report to the Governor of Colorado, the Honorable Oliver H. Shoup, submitted several tables explaining the allocation of the water of the Colorado River System.

Table 4 reads as follows:

Table 4

	Acre-feet
"Upper Division Allocation, includes present consumption	7,500,000
Lower Division Allocation, includes present consumption	7,500,000
Lower Division permissible increase in water consumption	1,000,000
Total allocated or permitted	16,000,000
Unallocated surplus (estimated)	4,500,000
Estimated average annual water supply	20,500,000"

Mr. Carpenter also said in this report:

> "At any time after 40 years, if the development in the Upper Basin has reached 7,500,000 acre-feet annual beneficial consumptive use or that of the Lower Basin has reached 8,500,000 acre-feet, any two States may call for a further apportionment of any surplus waters of the river, * * *."

On March 20, 1923, Colorado Commissioner Delph E. Carpenter in a joint letter to Colorado Senator M. E. Bashor and Colorado Representative Royal W. Calkins said, among other things:

> Paragraph (b), Article III permits the lower basin to increase its annual beneficial consumptive use of water 1,000,000 acre-feet. The two paragraphs permit an aggregate annual beneficial consumptive use of 8,500,000 acre-feet, and no more. The words "per annum", as used in paragraph (b) are not synonymous with the word "annually." No cumulative increase is intended by that paragraph.

On February 10, 1923, Colorado Commissioner Delph E. Carpenter addressed a telegram to the Honorable Herbert Hoover, Chairman, Colorado River Commission and received a prompt reply. On February 13, 1923, he addressed a telegram to the Honorable R. T. McKisick, Deputy Attorney General, Sacramento, California, and that same day received a reply.

These exchanges of telegrams are pertinent to an understanding of this phase of the compact and are inserted here.

Telegram

CAPITOL BUILDING
Denver, Colo., February 10, 1923

HON. HERBERT HOOVER,
Chairman, Colorado River Commission,
Washington, D. C.:

Do you concur with me that the intent of the commission in framing the Colorado River Compact was as follows:

That paragraph (b) of Article III means that the lower basin may increase its annual beneficial consumptive use of water 1,000,000 acre-feet and no more?

DELPH E. CARPENTER

Washington, D. C., February 12, 1923

DELPH E. CARPENTER,
State Capitol, Denver, Colo.:

I concur with you, and shall so advise Congress in my report, that the intent of the Commission in framing the Colorado River Compact was as follows:

Paragraph (b) of Article III means that lower basin may acquire rights under the compact to annual beneficial consumptive use of water in excess of the apportionment in paragraph (a) of that article by 1,000,000 acre-feet and no more. There is nothing in the compact to prevent the States of either Basin using more water than the amount apportioned under paragraphs (a) and (b) of Article III, but such use would be subject to the further apportionment provided for in paragraph (f) of Article III and would vest no rights under the present compact.

HERBERT HOOVER

Denver, Colo., February 13, 1923.

R. T. MCKISICK,
Deputy Attorney General,
Sacramento, Calif.:

Do you concur with me that intent of Commission in framing Colorado River Compact was as follows:

That paragraph (b) of Article III means that the lower basin may increase its annual beneficial consumptive use of water 1,000,000 acre-feet and no more?

DELPH E. CARPENTER

Sacramento, Calif., February 13, 1923

HON. DELPH E. CARPENTER,
State Capitol, Denver, Colo.:

Am of opinion that paragraph (b) of Article III permits increase of annual beneficial consumption use of water by lower basin to 8,500,000 acre-feet total or 1,000,000 in excess quantity apportioned each basin in perpetuity

by paragraph (a), Article III, and no more. When both paragraphs are read together no other construction tenable. "Per annum" not synonymous with "annually."

R. T. McKisick

Sacramento, Calif., February 15, 1923

Delph E. Carpenter
Denver, Colo.:

My interpretation of Article III and VIII well expressed in McKisick's wire of the thirteenth.

W. F. McClure
Seven State Compact Commissioner
for California

Utah Commissioner, R. E. Caldwell in his report to the Utah Senate, among other things said:

> The Lower Basin States, for the most part, when they divert their water, wholly consume it and they get no credit for use of return flow for it does not exist, and they are, therefore, limited to the diversion of 8,500,000 acre-feet and are held strictly to the requirement of "consumptive beneficial use" of such as they do divert.

In the report to the Governor of California by Honorable W. F. McClure, Commissioner for California, made January 8, 1923, appears this statement:

> In conclusion permit me to add that the terms of the compact do full justice to the

states in interest, and the equitable division and apportionment of the use of the waters of the Colorado River System whereby the Lower Basin is allocated 7,500,000 acre-feet per annum, with an allowable increase of 1,000,000 acre-feet per annum by reason of the probably rapid development upon the lower river, and fully guarantees to California an ample water supply to adequately care for the enormous future growth of the Imperial Valley and adjacent territory.

The Honorable Herbert Hoover, who, as I have said, was the chairman of the commission that drafted and approved by its unanimous vote the Seven State Compact, said:

> "The Lower Basin will, therefore, receive the entire flow of the river, less only the amount consumptively used in the Upper States for agricultural purposes."

The Honorable A. P. Davis, Director of the Reclamation Bureau, on January 30, 1923, announced that:

> "The Colorado River Compact provides that the Lower Basin shall be guaranteed an average of 7,500,000 acre-feet of water annually from the Upper Basin and all of the yield of the Lower Basin, and that any water not beneficially used for agricultural and domestic uses (in the Upper Basin) shall likewise be allowed to run down for use below."

This data proves conclusively that the extra 1,000,000 acre-feet of water per annum allocated to the Lower Basin is to be acquired from the

surplus and otherwise unallocated water of the Colorado River System. The same is true of the 1,500,000 allocated annually by treaty to the United States of Mexico..

I am compelled to keep emphasizing that whatever water is stored in the Glen Canyon and Echo Park reservoirs will be surplus to the agricultural and domestic needs of the Upper Basin, and must be delivered to the Lower Basin to satisfy the award of 1,500,000 acre-feet to Mexico and 1,000,000 acre-feet to the Lower Basin. Furthermore, should the Lower Basin require an additional supply of water for agricultural and domestic purposes the water stored in these reservoirs must be released.

Under the Seven State Compact the Upper States must deliver at Lee Ferry in each ten year period 75 million acre-feet to the Lower States and 7½ million acre-feet to Mexico before they can use one drop of water themselves beyond what they used before the Seven State Compact was ratified. In the current ten year period that will leave only 3,250,000 acre-feet per year for their total use. In the previous ten year period they would have had 4,150,000 acre-feet a year. In 1902 the Upper Basin States under this formula would have had no water at all.

The Reclamation Bureau estimates that the proposed Storage Reservoirs in the Upper Colorado Basin will cost the Upper Basin 880,000 acre-feet annually in evaporation. It will be charged to the Upper Basin as consumptive use. Colorado's portion of that loss would be 400,000 acre-feet.

Water still does not run up hill, and storage down the river from Colorado to generate electric energy, frowned upon by the Seven State Compact, cannot secure for us one drop of water, but to the contrary, will cost us 400,000 acre-feet annually in evaporation, which under the Upper Colorado Basin Compact will be charged to Colorado as consumptive use.

Colorado is close to the bottom of the barrel insofar as Colorado River water is concerned. Colorado has a record of lavish generosity to all of her neighbor States. Now at this late date it will be state suicide unless she looks after her own interests with courage and wisdom. She positively cannot afford the loss of 400,000 additional acre-feet. She cannot afford to agree to a storage plan whose certain effect will be to create additional surplus water out of the Upper Basin's meager supply, which under the Seven State Compact must go to the Lower Basin. Colorado must insist that the 42 reservoirs surveyed in the high country of Colorado be authorized simultaneously with the authorization of the Storage Plan and which will give Colorado an absolute right to the water which is developed.

The Hill report prepared pursuant to a contract with the Colorado Legislature indicates there is something over a million acre-feet of unappropriated water in the Colorado River System in Colorado. However, the Hill report did not charge Colorado with the burden of Colorado's portion of the priority commitment to Mexico, which under the Seven State Compact cannot be less than 375,000 acre-feet. And, another thing,

if Glen Canyon and the Echo Park reservoirs are built, Colorado's portion of the Mexican burden becomes not less than 750,000 acre-feet annually. Had Mr. Hill recognized these binding and irrevocable priorities and the evaporation of the down-river storage plans, which is to be charged to Colorado as "consumptive use" of 400,000 acre-feet, he could not have shown any unappropriated water whatsoever in Colorado for Colorado.

Colorado has entered into irrevocable compacts with all of the States to the East, West, North, and South. In each of these compacts Colorado has been generous to a fault. Now most of her water is lost forever, and yet her neighbors are asking her to surrender more and more of this most precious resource. The time has come when Colorado's dwindling supply must be guarded jealously and protected fully. That is a responsibility which I, as Governor of Colorado, must assume.

Who will say that the Glen Canyon Dam in the State of Arizona and the Echo Park Dam on the Colorado-Utah border are not extraordinary dams from an engineering point of view. Glen Canyon is the sort of project that makes an engineer's mouth water, and the Reclamation Bureau is a Bureau of engineers. Who will say that these projects will not be of incalculable value to the Lower Basin. Glen Canyon, which will collect 100,000 acre-feet of silt a year, will extend the life of the Hoover Project 500 years, but what I want someone to tell me is, "Why should they

be built with Upper Colorado Basin Funds at the water expense of the State of Colorado?"

There is only one route remaining for us to take. We must put our water to beneficial use in our own state if we are to gain any right to it. That is the plain language of the Seven State Compact. It states that condition without equivocation. The Reclamation Bureau has explored 42 reservoir sites high up on the Colorado River System in Colorado. We cannot, we dare not settle for less than their authorization now. Congressional authorization does not mean immediate construction, but it will give to these proposed reservoir sites an official priority. Colorado contributes 72 per cent of the water of the Upper Colorado River Basin. Is it asking too much that we be allowed to use less than one-fourth of what we produce? If that is wrong, then I am wrong.

Motion on Behalf of the California Defendants for Leave to File an Amended Answer to the Bill of Complaint of Arizona.

To the Honorable, the Chief Justice, and the Associate Justices of the Supreme Court of the United States:

Defendants, State of California, Palo Verde Irrigation District, Imperial Irrigation District, Coachella Valley County Water District, The Metropolitan Water District of Southern California, The City of Los Angeles, The

City of San Diego and County of San Diego, hereinafter called the California Defendants, by their duly authorized attorneys respectfully move the Court for leave to file this amendment to Paragraph 68 of their Answer to Arizona's Bill of Complaint, all other provisions of that said Answer remaining unchanged.

Statement.

Paragraph XXII of Arizona's Bill of Complaint alleged that the controversy between plaintiff and defendants relates to three legal questions there summarized. The Answer of the California Defendants to Arizona's Bill of Complaint, paragraph 68, denied that the subject of the controversies is fully or accurately set out in the Bill of Complaint, and alleged that there are additional subjects of controversy between complainant and defendants.

After the filing of the Answer of Defendants to Arizona's Bill of Complaint, the United States of America and the State of Nevada filed Petitions of Intervention. These Petitions broadened the scope of the litigation, adding additional subjects of controversy. The California Defendants, in their Answers to those Petitions, summarized the issues in the controversy as disclosed by the pleadings up to that time. That summary of the issues is appended as Exhibit A to the Answer of California Defendants to Petition of Intervention on Behalf of the United State of America and is incorporated by reference in their Answer to Nevada's Petition.

To bring the defendants' pleadings in answer to Arizona into conformity with those subsequently filed in an-

swer to the United States and Nevada, the California Defendants ask that leave be granted to file this amendatory answer to Arizona's Bill of Complaint, amending paragraph 68 of their original answer to Arizona so as to state the subject matter of the controversy in the same terms as in their answers to the United States and Nevada.

Amendatory Answer.

Paragraph 68 of the Answer of the California Defendants to Arizona's Bill of Complaint is amended to read as follows:

Answering Paragraph XXII of the said Bill of Complaint, admit that controversies exist between the plaintiff and the defendants as to the interpretation, construction and application of the Colorado River Compact, the Boulder Canyon Project Act and the California Limitation Act, but deny that the subject of such controversies is fully or accurately set out in the said Paragraph XXII, and allege that there are additional subjects of controversy disclosed by Affirmative Defenses and denials contained in this Answer. Deny the accuracy or validity of the alleged solutions to the controversies suggested by Arizona in said Paragraph XXII, and deny that Arizona's position is sustained by this Court's decision in *Arizona v. California,* 292 U. S. 341, or in any other decision. Allege that the controversy, as disclosed by the pleadings filed to date, is summarized in Exhibit "A" annexed to Defendants' Answer to the Petition of Intervention on Behalf of the United States, and herein incorporated by reference as though fully stated.

SPECIAL MASTER'S REPORT ON THE MOTION OF THE CALIFORNIA DEFENDANTS TO JOIN AS PARTIES THE STATES OF NEW MEXICO, UTAH, COLORADO AND WYOMING.

I. STATEMENT.

1.

Under leave granted by this Court, the State of Arizona filed its Bill of Complaint on January 19, 1953.

The California defendants named therein, to-wit, the State of California, Palo Verde Irrigation District, Im-

perial Irrigation District, Coachella Valley County Water District, Metropolitan Water District of Southern California, City of Los Angeles, California, City of San Diego, California, and County of San Diego, California, filed their joint Answer on May 19, 1953.

On August 8, 1953, the complainant, State of Arizona, filed its Reply to said Answer.

On July 15, 1954, said California defendants filed an Amendment to their Answer.

Therewith, the California defendants filed a Motion and Supporting Brief to join as necessary parties the States of Colorado, New Mexico, Utah and Wyoming. These four States are *within the Colorado River System,* as that term is defined by Article II(a) of the Colorado River Compact, hereinafter identified and described, and are States of the Colorado River Basin, as that term is defined by Article II(b) of the Colorado River Compact. These States are also signatories to the Colorado River Compact and are defined as States of the Upper Division by Article II(c) of the Colorado River Compact. (The Colorado River Compact is attached hereto as Appendix A.)

The United States of America was granted leave to intervene in this cause on December 31, 1952 (344 U.S. 919).

The State of Nevada, by order of the Court on June 1, 1954, was also granted leave to intervene.

By further order of the Court on June 1, 1954, I, George I. Haight, was appointed Special Master in this case and "directed to find the facts specially and state separately his conclusions of law thereon, and to submit

the same to this Court with all convenient speed, together with a draft of the decree recommended by him."

An organization meeting was held at Phoenix, Arizona on August 5, 1954, which was attended by the respective counsel for the several parties and by the Special Master. At this meeting, a discussion was had as to means for expediting the hearings in this cause, but it was then thought that hearings on the merits should be delayed until the question as to parties should be determined.

In response to the said Motion made by the California defendants, the following briefs were filed by the parties and by the States sought to be joined:

Briefs opposing the Motion were filed by Arizona on August 13, 1954; by the State of New Mexico on December 27, 1954; by the State of Utah on December 27, 1954; and a joint brief by the States of Colorado and Wyoming on December 27, 1954.

On February 7, 1955, the State of Nevada, intervener, filed its brief supporting the California defendants' Motion.

On February 9, 1955, the California defendants filed a reply brief.

The United States of America, intervener, filed no brief with respect to this Motion.

An order of the Supreme Court, entered on February 28, 1955, referred the joinder Motion of the California defendants to the Special Master, with instructions "to hear the parties and report with all convenient speed his opinion and recommendation as to whether the motion should be granted." Such hearings were held in the Statehouse, Phoenix, Arizona, on April 12-15, 1955. In attend-

ance at these hearings were the several attorneys representing all the present parties to this cause and the attorneys for those States sought to be joined.

Oral arguments were presented by all parties, except the United States of America. Through counsel the desire was expressed to remain silent on this subject (Tr., p. 356).

The arguments made at these hearings were based upon the pleadings and relevant official public documents. Beyond this, no evidence was taken by the Special Master, as it was his opinion that this was unnecessary and also that it would entail a consideration substantially as extensive as that required for a final hearing on the merits.

The Colorado River is a navigable stream, having a total length of 1293 miles. Its head waters are in Colorado and Wyoming. It flows through Western Colorado and Southeastern Utah, enters Arizona on its northern border, flows through the upper part of that state for 292 miles, then along the southeastern corner of Nevada for 145 miles where it is the boundary between Nevada and Arizona, then in a southerly direction forming for 235 miles the boundary between Arizona and California, and then for 16 miles it marks a boundary between Arizona and Mexico. Its delta is in Mexico at the upper end of the Gulf of California. It may be noted that "Lee Ferry" is on the main stream, located in Arizona near its northern border and above the upper end of the Grand Canyon. (See Arizona's Reply to Defendants' Answer, Appendix No. 1.)

The issues presented by the joinder Motion call for the consideration of the various pleadings of Arizona, of the California parties, of Nevada, and of the United States.

Also, attention needs to be given to the Colorado River Compact (H. Doc. 717, 80th Cong., 2d Sess., p. A17 (1948)), the Boulder Canyon Project Act, Act of December 21, 1928, (45 Stat. 1057), the California Limitation Act, (Calif. Stats. 1929, Ch. 16, p. 38), the Mexican Water Treaty, (U. S. Treaty, Ser. No. 994, 59 Stat. 1219 (1945)), and the Upper Colorado River Basin Compact, (Act of April 6, 1949, 63 Stat. 31); also, the briefs and oral arguments of the parties to the cause; and likewise the briefs and oral arguments of the Upper Basin States: Colorado, Wyoming, New Mexico and Utah.

The Colorado River Compact divides the Colorado River Basin into an Upper and a Lower Basin. As will be explained, the States of Colorado and Wyoming are wholly in the Upper Basin. Nearly all of the parts of New Mexico and of Utah are in the Upper Basin. To a slight extent, these two States are in the Lower Basin. In the Special Master's view, with this respect, separate consideration should be given them. In this report we shall first treat the States of Colorado, Wyoming, New Mexico and Utah as of the Upper Basin. Beginning on page 60 of this Report, we shall consider the status of the two latter States to the extent that they are of the Lower Basin.

The Motion is grounded upon the assertion that each of the four States is a necessary and indispensable party (Motion p. 2).

Reason 1, summarized, is that the four States are parties to the Colorado River Compact and the Compact's meaning is in issue in this cause. (A summary of that controversy is presented in Exhibit A of the Motion.)

Reason II is that New Mexico and Utah are States of the Upper and Lower Basin and are interested in Lower Basin water.

Reason III is that the absent States are interested in the Boulder Canyon Project Act and the California Limitation Act and that the meanings of these are in controversy between the present parties. This is further treated in the summary of said Exhibit A accompanying the Motion.

Reason IV is the contention that the assertion of claims by the United States "as against the parties to this cause" is adverse to rights derived from or controlled by the Colorado River Compact. It is asserted that these claims of the United States affect all the States of the Colorado River Basin. (This is further treated in the summary attached to the joinder Motion of the California parties.)

We shall first consider the joinder Motion in relation to the Colorado River Compact.

2. The Colorado River Compact.

One of the documents of primary importance with respect to the use of waters of the "Colorado River System" is the "Colorado River Compact" (Appendix No. 1 filed May 19, 1953 with the Answer of the California parties; also Appendix A with this Report). It was approved under the Act of Congress of the United States of America August 19, 1921 (42 Statutes at Large, p. 171). It was negotiated by seven Commissioners, each appointed by the Governor of his State, representing, respectively, the States of Arizona, California, Colorado, Nevada, New Mexico, Utah and Wyoming. In the negotiations, under presidential appointment, the United States was represented by Herbert Hoover.

This Compact followed years of controversy between the States involved. It was an act seemingly based upon thorough knowledge by the negotiators. It must have been difficult of accomplishment. It was the product of real statesmanship. Its importance and its effect was widely recognized at the time. It became effective seven years later—in 1929. Of this we shall treat in connection with the Boulder Canyon Project Act (see footnote 1).

---

[1] The report by Herbert Hoover, who was Chairman of the Colorado River Commission, was addressed to the Speaker of the House of Representatives (H. Doc. 605, 67th Cong., 4th Sess.) and states the following respecting the Colorado River Compact:

"Frequently in the past just such very serious conflicts have arisen on interstate streams resulting in prolonged and expensive litigation and causing long delays in development. This compact, when approved, will be a settlement of impending interstate controversies and an adjudication of rights to the use of the water in advance of construction, thus eliminating litigation and laying the groundwork for the orderly development of a vast area of desert land, estimated at some 4,000,000 acres; the utilization of river flow now unused in the generation of hydroelectric energy, the possibilities of which are estimated at 6,000,000 horsepower; the construction of dams for the control of floods which annually threaten communities in which over 75,000 American citizens now reside, with property worth more than $100,000,000; the establishment of new homes and new communities, and the creation of a vast amount of new wealth.

The primary purpose of the compact is to make an equitable division and apportionment of the waters of the river. For this purpose the river system is divided into an upper and lower basi[illegible] following:

(1) A natural division- [illegible] two basins varying in topography, and being [illegible] by a thousand miles of deep canyon; and

(2) Economic lines— [illegible]ate, crops, and use of water being different. The lower river has immediate need of works for the control of floods, the development of power, and expansion of irrigation. It has concentrated blocks of irrigable land, while the upper basin,

The Colorado River Compact evidences far seeing practical statesmanship. The division of the Colorado River System waters into Upper and Lower Basins was, and is, one of its most important features. It left to each Basin the solution of the problems of that Basin and did not tie to either Basin the intra-basin problems of the other. The Congressional Record contains many discussions over several years illustrating the importance of the Colorado River Compact. We refer to a part of one of the many, to-wit, the report of the Honorable Carl Hayden, Representative from Arizona, made January 30, 1923, Congressional

---

[1] (Continued)
which is the source of water supply, will, because of its colder climate and more scattered acreage, probably be slower of development.

"Due consideration is given to the needs of each basin, and there is apportioned to each seven and one-half million acre-feet annually from the flow of the river in perpetuity, and to the lower basin an additional million feet of annual flow, giving it a total of eight and one-half million acre-feet annually in perpetuity. There is thus allocated about 80 percent of the total natural flow of the river, leaving some 4,000,000 acre-feet unapportioned. While no other waters are definitely allotted by the compact, there is nothing which prevents the States of either basin from using more water than the amount apportioned, any rights to such use being subject to the further apportionment at a later date. This feature is covered by a provision for the creation of a new commission at the end of 40 years, which will have power to make a further apportionment of the water not now dealt with. The compact provides machinery for the settlement, without litigation, of disputes which may arise between the States; it gives agriculture preference over power in the use of the water; it makes navigation subservient to other uses; and it leaves open for international settlement any claims to the use of water in the Republic of Mexico.

Record pages 2710-2713 (see footnote 2), not for the purpose of in any wise construing the terms of that Compact but only to show its importance as of that time. That importance seems to have increased rather than decreased over the years.

Perhaps a precedent for referring to this is found in *Muller* v. *Oregon,* 208 U.S. 412, 419-420, (1908) where, in

---

[2] "(a) The commission, upon analysis, found that the causes of present friction and of major future disputes lay between the lower basin States and the upper basin States, and that very little likelihood of friction lay between the States within each basin; that the delays to development at the present time are wholly interbasinal disputes; and that major development is not likely to be impeded by disputes between the States within each basin. And in any event, the compact provides machinery for such settlements."

"(b) The drainage area falls into two basins naturally, from a geographical, hydrographical, and an economic point of view. They are separated by over 500 miles of barren canyon which serves as the neck of the funnel, into which the drainage area comprised in the upper basin pours its waters, and these waters again spread over the lands of the lower basin."

"(c) The climate of the two basins is different: that of the upper basin being, generally speaking, temperate, while that of the lower basin ranges from semitropical to tropical. The growing seasons, the crops, and the quantity of water consumed per acre are therefore different."

"(d) The economic conditions in the two basins are entirely different. The upper basin will be slower of development than the lower basin. The upper basin will secure its waters more by diversion than by storage, whereas the development of the lower basin is practically altogether a storage problem."

"(e) The major friction at the present moment is over the water rights which might be established by the erection of adequate storage in the lower basin, as prejudicing the situation in the upper basin, and regardless of legal rights in either case."

* * *

"The use of the group method of division was therefore adopted both from necessity, as being the only practical one, and from advisability, being dictated by the conditions existing in the entire basin."

analogy to the discussion of the state of the art in a patent case, reference was made to opinions other than judicial sources.

The major purposes of the Compact are recited in Article I thereof, as follows:

> "The major purposes of this compact are to provide for the equitable division and apportionment of the use of the waters of the Colorado River System; to establish the relative importance of different beneficial uses of water; to promote interstate comity; to remove causes of present and future controversies; and to secure the expeditious agricultural and industrial development of the Colorado River Basin, the storage of its waters and the protection of life and property from floods."

Then follows a highly significant provision—one that provides a guide to the conclusions that must be reached with respect to principal questions involved in the joinder Motion under consideration. It reads:

> "To these ends the Colorado River Basin is divided into two Basins, and an apportionment of the use of part of the water of the Colorado River System is made to each of them with the provision that further equitable apportionments may be made."

We consider this preamble important, as to major purposes. The use of waters is to be equitably divided, as we shall see, between the two basins. This, among other results, is to promote comity and to remove causes of controversy.

The two basins are defined in Article II of the Colorado River Compact, paragraphs (f) and (g). For convenience, we quote Article II in its entirety:

> "As used in this compact:
>
> (a) The term 'Colorado River System' means that portion of the Colorado River and its tributaries within the United States of America.

(b) The term 'Colorado River Basin' means all of the drainage area of the Colorado River System and all other territory within the United States of America to which the waters of the Colorado River System shall be beneficially applied.

(c) The term 'States of the Upper Division' means the States of Colorado, New Mexico, Utah and Wyoming.

(d) The term 'States of the Lower Division' means the States of Arizona, California and Nevada.

(e) The term 'Lee Ferry' means a point in the main stream of the Colorado River one mile below the mouth of the Paria River.

(f) The term 'Upper Basin' means those parts of the States of Arizona, Colorado, New Mexico, Utah and Wyoming within and from which waters naturally drain into the Colorado River System above Lee Ferry, and also all parts of said States located without the drainage area of the Colorado River System which are now or shall hereafter be beneficially served by waters diverted from the System above Lee Ferry.

(g) The term 'Lower Basin' means those parts of the States of Arizona, California, Nevada, New Mexico and Utah within and from which waters naturally drain into the Colorado River System below Lee Ferry, and also all parts of said States located without the drainage area of the Colorado River System which are now or shall hereafter be beneficially served by waters diverted from the System below Lee Ferry.

(h) The term 'domestic use' shall include the use of water for household, stock, municipal, mining, milling, industrial and other like purposes, but shall exclude the generation of electrical power."

The States of the Upper Division, Colorado, Utah, Wyoming and New Mexico, is a designation not wholly identical with the "Upper Basin". All of the "Colorado Sys-

tem" and of the "Colorado River Basin" which is within the State of Wyoming is in the "Upper Basin". With respect to the State of Colorado, all of the "Colorado River System" and all of the "Colorado River Basin" within the state are in the "Upper Basin". The principal parts of Utah and of Wyoming which are in the "Colorado River System" and the "Colorado River Basin" are in the "Upper Basin". A relatively small part in area and of water flowing into the main stream of the Colorado River below "Lee Ferry" of the State of Utah and of the State of New Mexico are in the "Lower Basin". With respect to the State of Arizona, a small part in area and of water therein are in the "Upper Basin". These facts will be considered later herein.

California and Nevada, and nearly all of Arizona, are in the "Lower Basin".

Article III of the Colorado River Compact apportions water from the Colorado River System not between States within a Basin, and not between users in a State, but between the Upper Basin and the Lower Basin. This of itself was a great forward step—perhaps the greatest single one in progressing toward a solution of the many problems of water allocation in the Colorado River Basin.

Article III apportions in perpetuity the exclusive beneficial consumptive use of 7,500,000 acre-feet per annum to the Upper Basin and the same to the Lower Basin (paragraph (a)). In addition, the Lower Basin may increase its beneficial consumptive use one million acre-feet per annum (paragraph (b)).

In addition to these apportionments Article III also

1. provides that the Basins deliver water to Mexico in consequence of international treaties;

2. requires the Upper Basin to deliver a minimum of 75,000,000 acre-feet to Lee Ferry over every ten year period;

3. provides that the Basins shall not withhold water which cannot be used;

4. provides for apportionment of surplus water after October 1, 1963; and

5. provides that two or more signatory States may call a meeting to consider apportioning the surplus waters.

Article IV provides:

1. that water used for navigation is to be subservient to others uses of water; and

2. that water in the Colorado River System may be impounded for the purpose of generating hydro-electric power but that such use shall be subservient to domestic uses.

The provisions of Article IV shall not interfere with State control over any waters within its boundary.

Article V provides for the administration of the provisions of the Compact, with the duty of seeing to it that rights are observed and obligations met, as per the Compact.

Article VI provides that in the case of disputes between signatories to this Compact over the use of waters sought to be regulated by the Compact, two or more States may call a meeting of all the signatories. However, this provision is not to limit the States' right to resort to all other legal means.

Article VII provides that the United States' obligations to Indian tribes are unaffected by this Compact.

Article VIII provides that this Compact shall not impair present perfected rights to water in the Colorado River System.

Article IX reserves the right in the signatory States to use any legal method to enforce the terms of this Compact.

Article X provides that upon unanimous agreement of the signatories, this Compact may be dissolved.

Article XI sets out the conditions precedent to the Compact coming into effect, *i.e.* the approval by the legislatures of each of the seven States.

The Compact did not become effective immediately, because the condition set forth in Article XI was not met. In 1928 the Federal Government provided the stimulus needed to activate the Compact.

3. The Boulder Canyon Project Act.

On December 21, 1928, the Congress of the United States (45 Stat. 1057) enacted the Boulder Canyon Project Act providing for the development of Boulder Canyon in the Colorado River Basin. (Page 9, Appendix to the California parties' Answer, vol. 1.)

The Boulder Canyon Project Act provides for

1. the construction of a reservoir dam in Boulder Canyon with a 20,000,000 acre-feet storage capacity and incidental works; and

2. the construction of the All-American Canal in Southern California if either of the following conditions were met:

   a. that all seven States who were signatories to the Colorado Compact approve said Compact;

b. or that the State of California and any five other signatory States approve the Compact, and California pass a law limiting its use to 4,400,000 acre-feet per annum of Colorado River System water; and also that arrangements be made whereby the cost to the government for constructing these works would be repaid.

The Colorado River Compact, by reference, was made a part of the Boulder Canyon Project Act, by Section 8(b) of the Boulder Canyon Project Act, which section is as follows:

"Also the United States, in constructing, managing, and operating the dam, reservoir, canals, and other works herein authorized, including the appropriation, delivery, and use of water for the generation of power, irrigation, or other uses, and all users of water thus delivered and all users and appropriators of waters stored by said reservoir and/or carried by said canal, including all permittees and licensees of the United States or any of its agencies, shall observe and be subject to and controlled, anything to the contrary herein notwithstanding, by the terms of such compact, if any, between the States of Arizona, California, and Nevada, or any two thereof, for the equitable division of the benefits, including power, arising from the use of water accruing to said States, subsidiary to and consistent with said Colorado River compact, which may be negotiated and approved by said States and to which Congress shall give its consent and approval on or before January 1, 1929; and the terms of any such compact concluded between said States and approved and consented to by Congress after said date: *Provided,* That in the latter case such compact shall be subject to all contracts, if any, made by the Secretary of the Interior under section 5 hereof to the date of such approval and consent by Congress."

4. The California Limitation Act.

On March 4, 1929, California passed the California Limitation Act to become effective on August 14, 1929 if some State, a signatory to the Colorado River Compact, should fail to approve said Compact. The Act provided that California limit its use of Colorado River System waters to 4,400,000 acre-feet per annum of the water apportioned the Lower Basin by Article III(A) of the Colorado River Compact, "plus not more than one-half of any excess or surplus waters unapportioned by said Compact". (Page 30, Appendix to the California parties' Answer, vol. 1.) Within the Act, it was stated that the reason for passing it was to make it possible to construct the works authorized by the Boulder Canyon Project Act. The United States of America and the States of Arizona, Nevada, Utah, New Mexico, Wyoming and Colorado were named in the Act as beneficiaries thereof.

The State of Arizona failed to approve the Colorado River Compact within t'.e time limit set out in the Boulder Canyon Project Act. Thus the California Limitation Act, and the Colorado River Compact became effective when on June 25, 1929 Herbert Hoover, President of the United States, by Presidential Proclamation declared it so (46 Stat. 3000).

5. The Upper Colorado River Basin Compact.

On October 11, 1948, the States of Arizona, Colorado, New Mexico, Utah and Wyoming entered into the "Upper Colorado River Basin Compact". It received the approval of the Congress of the United States on April 7, 1949 (63 Stat. 31). (Page 52, Appendix to the California parties' Answer, vol. 2.)

The Upper Colorado River Basin Compact incorporates the provisions of the Colorado River Compact. Article I provides:

> "(a) The major purposes of this Compact are to provide for the equitable division and apportionment of the use of the waters of the Colorado River System, the use of which was apportioned in perpetuity to the Upper Basin by the Colorado River Compact; to establish the obligations of each State of the Upper Division with respect to the deliveries of water required to be made at Lee Ferry by the Colorado River Compact; to promote interstate comity; to remove causes of present and future controversies; to secure the expeditious agricultural and industrial development of the Upper Basin, the storage of water and to protect life and property from floods.
>
> "(b) It is recognized that the Colorado River Compact is in full force and effect and all of the provisions hereof are subject thereto."

6. The Treaty Between The United States And Mexico.

In 1945, the government of the United States entered into a treaty with the government of Mexico governing the international uses of the Rio Grande and the Colorado Rivers (U. S. Treaty Ser. No. 994, 59 Stat. 1219 (1945)). By virtue of this treaty, the United States is obliged to deliver 1,500,000 acre-feet of Colorado River water per annum to Mexico (Article 10(a)).

II. THE PLEADINGS.*

1. Arizona.

Allegations made by the State of Arizona in its Bill of Complaint and supplemental pleadings are:

1. The California defendants are limited in their use of water from the Colorado River System by virtue of the Colorado River Compact, the Boulder Canyon Project Act, and the California Limitation Act, to 4,400,000 acre-feet per annum (Bill of Complaint, pp. 28-29).

2. Presently, the California defendants are using 5,430,000 acre-feet per annum of water from the Colorado River System (Bill of Complaint, pp. 28-29).

3. The State of Arizona is entitled to use 3,800,000 acre-feet of water from the Colorado River System (Bill of Complaint, p. 26).

4. Due to the California defendants' excessive use of Colorado River System water, the State of Arizona's right to use water of the Colorado River System is being injured (Bill of Complaint, p. 27).

5. That the State of Arizona is a party to the Colorado River Compact and a beneficiary of the California Limitation Act, and may therefore enforce the terms of these and related documents on the California defendants (Bill of Complaint, p. 19).

6. That this case is one in which the United States Supreme Court should recognize the original jurisdiction vested therein (Bill of Complaint, p. 6).

The prayer of Arizona's Complaint seeks the following relief:

1. That the State of Arizona's title to the use of 3,800,000 acre-feet per annum of Colorado River Sys-

---

* Under this heading the complete Pleadings are not given. However, the parts to which reference is made are thought sufficient to permit the development of the subject matters involved on the joinder Motion.
The Special Master has carefully studied the pleadings in their entirety.

tem water to be forever quieted (Bill of Complaint, p. 21).

2. That the California defendants' title to Colorado River System waters be declared not to exceed 4,400,000 acre-feet per annum (Bill of Complaint, p. 18).

3. That the California defendants be enjoined from asserting any claims to Colorado River System water which will conflict with the State of Arizona's right to 3,800,000 acre-feet of said water per annum (Bill of Complaint, p. 30).

4. That the respective rights to excess water in the Lower Basin to be declared, and each State within the Lower Basin be decreed entitled to a certain percentage thereof (Bill of Complaint, p. 30).

5. That beneficial consumptive use be measured in terms of main stream depletion (Bill of Complaint, pp. 30-31).

6. That evaporation losses in main stream reservoir to be charged against the apportionment of each State in the same proportion that the State uses water in the Lower Basin (Bill of Complaint, p. 31).

7. Any further relief which may be proper (Bill of Complaint, p. 31).

2. California Parties.

In its answer to the Bill of Complaint filed by the State of Arizona, the California defendants present four affirmative defenses. They are as follows:

The first affirmative defense is:

"Defendants Have the Right to the Beneficial Consumptive Use of 5,362,000 Acre-feet per Annum of Waters of the Colorado River System Under the Colorado River Compact, the Boulder Canyon Project Act, the Statutory Compact Between the United States and

California, and the Contracts of the Secretary of the Interior Executed Pursuant Thereto." (California parties' Answer, p. 1)

The second affirmative defense is as follows:

"Arizona Is Estopped and Precluded From Asserting the Interpretations of the Colorado River Compact, the Statutory Compact, and the Defendants' Contracts Alleged in the Bill of Complaint." (California parties' Answer, p. 39)

The third affirmative defense is:

"Defendants Have Appropriative Rights to the Beneficial Consumptive Use of Not Less Than 5,362,000 Acre-feet of Colorado River System Water per Annum, Senior to the Claims Made by Arizona in the Bill of Complaint." (California parties' Answer, p. 46)

The fourth affirmative defense is:

"The United States Is an Indispensable Party." (California parties' Answer, p. 54).

This fourth defense is now withdrawn since the United States was given leave to intervene and will be bound by any decree or judgment which the Court renders herein.

A traverse is made admitting, denying and alleging, as set forth on pages 55 to 70 of the Answer.

The prayer is found on page 80 of the Answer. The California parties filed no cross bill.

3. The United States.

The United States of America, in its Petition for Intervention, made the following allegations:

1. The United States of America has a right to the use of an undetermined amount of Colorado River System water by virtue of:

a. Its guardianship over Indian tribes entitled to waters (Petition for Intervention, p. 23).

b. Its interest in fish, wildlife, flood control and navigation in the Colorado River (Petition for Intervention, p. 24).

c. The need of National Parks and other governmental departments (Petition for Intervention, p. 11).

d. The duties it has under international treaties to deliver Colorado River System waters (Petition for Intervention, p. 12).

2. That the United States of America's right to the use of Colorado River System waters may be impaired by rights asserted by the parties to this cause.

The United States prays that its interests and rights be declared, and that the parties to this cause have their rights declared so that the conflicting rights do not impair one another.

It should be noted at this juncture that it is the opinion of the Master that the claims made by the United States should be concisely developed and for this reason it will be necessary for the Master to conduct a pre-trial conference, at which time this and other helpful specificities may be set forth for the purpose of expediting the consideration on the merits.

4. Nevada.

The State of Nevada, in its Petition for Intervention, made the following allegations:

1. That at the present time, the States of the Lower Basin, as defined by the Colorado River Compact, are entitled to use only the 7,500,000 acre-feet per annum apportioned to the Lower Basin by Article III(a) of the Colorado River Compact (Petition for Intervention, pp. 13-14).

2. The State of Nevada is presently entitled to use 539,000 acre-feet per annum of the waters allocated

the Lower Basin by Article III(a) of the Colorado River Compact (Petition for Intervention, p. 10).

3. In 1963, when the Lower Basin shall become entitled to use the 1,000,000 acre-feet per annum apportioned to the Lower Basin by Article III(a) of the Colorado River Compact, Nevada will have the right to use 900,000 acre-feet per annum of Colorado River System water (Petition for Intervention, p. 13).

III. THE LAW APPLICABLE.

The resolution of this question of whether or not the absent States should be joined to this cause depends upon whether or not they are "necessary parties".

By virtue of the pleadings on the merits of this cause, the areas of controversy have been drawn. The Special Master, it should be noted, makes no determination of facts. Such determinations are unnecessary on this joinder Motion. To undertake them on the Motion would be time consuming for all. Some of the principal matters to be considered on this joinder motion include:

1. The Colorado River Compact.
   (a) Is Arizona a party thereto?
   (b) The interpretation of certain terms, and provisions of said Compact.
2. The Boulder Canyon Project Act.
3. The claims of the United States of America, Intervener.
4. The status of the States of New Mexico and Utah as States of the Lower Basin as well as of the Upper Basin.
5. The California Limitation Act.

1. The General Rules Regarding Necessary Parties.

The California defendants, to support their contention that the Upper Basin States are necessary parties, say that the case of *Shields* v. *Barrow,* 17 How. 130 (U.S. 1855) is applicable. In that case, the court, at page 139, set forth this definition of parties:

> "The court here points out three classes of parties to a bill in equity. They are: 1. Formal parties. 2. *Persons having an interest in the controversy,* and who ought to be made parties, in order that the court may act on that rule which requires it to decide on, and finally determine the entire controversy, and do complete justice, by adjusting all the rights involved in it. These persons are commonly termed necessary parties; but if their interests are separable from those of the parties before the court so that the court can proceed to a decree, and do complete and final justice, without affecting other persons not before the court, the latter are not indispensable parties. 3. Persons who not only have an interest in the controversy, but an interest of such a nature that a final decree cannot be made without either affecting that interest, or leaving the controversy in such a condition that its final termination may be wholly inconsistent with equity and good conscience." (Emphasis added)

The reasons urged by the proponents of the Motion to find the absent States necessary or indispensable parties under these definitions in test are:

1. Rule 9(2) of the Revised Rules of the Supreme Court makes the Federal Rules of Civil Procedure applicable to cases of original jurisdiction of this Court. Rule 9(2) says:

> "The form of pleadings and motions in original actions shall be governed, so far as may be, by the Federal Rules of Civil Procedure, and in other respects those rules, where their application is appro-

priate, may be taken as a guide to procedure in original actions in this court."

2. Rule 19 of the Federal Rules of Civil Procedure adopts the test of necessary parties set forth in *Shields* v. *Barrow* (quoted *supra* at page 23). Rule 19 says:

> "*Necessary Joinder of Parties.*—(a) *Necessary Joinder.* Subject to the provisions of Rule 23 and of subdivision (b) of this rule, persons having a joint interest shall be made parties and be joined on the same side as plaintiffs or defendants. When a person who should join as a plaintiff refuses to do so, he may be made a defendant or, in proper cases, an involuntary plaintiff.
>
> "(b) *Effect of Failure to Join.* When persons who are not indispensable, but who ought to be parties if complete relief is to be accorded between those already parties, have not been made parties and are subject to the jurisdiction of the court as to both service of process and venue and can be made parties without depriving the court of jurisdiction of the parties before it, the court shall order them summoned to appear in the action. The court in its discretion may proceed in the action without making such persons parties, if its jurisdiction over them as to either service of process or venue can be acquired only by their consent or voluntary appearance or if, though they are subject to its jurisdiction, their joinder would deprive the court of jurisdiction of the parties before it; but the judgment rendered therein does not affect the rights or liabilities of absent persons.
>
> "(c) *Same: Names of Omitted Persons and Reasons for Non-Joinder to be Pleaded.* In any pleading in which relief is asked, the pleader shall set forth the names, if known to him, of persons who ought to be parties if complete relief is to be accorded between those already parties, but who are not joined, and shall state why they are omitted."

Rule 9(2) provides first that "the *form* of pleadings and motions in original actions shall be governed as far as may be by the Federal Rules of Civil Procedure". There has been no variance from this broad advice in the instant proceeding. The remaining part of the rule provides "in other respects these rules, *where their application is appropriate, may be taken as a guide* to procedure in original actions in this Court" (Emphasis added). In this we find no intent to abandon, to limit, or to vary the general principle applied by this Court, beginning at least as early as the case of *Louisiana* v. *Texas,* 176 U.S. 1 (1900), to the effect that parties must not only have a real interest in the subject matter of a dispute involving sovereign States, but also that the dispute must concern a presently "justiciable controversy." Of the long line of this Court's opinions adhering to this principle, we shall select a few for comment later in this report. It is quite unnecessary to comment on the reasons for committing controversies between States to the Supreme Court by the Constitutional Convention. However, the statement in *Missouri* v. *Illinois,* 180 U.S. 208, 241 (1900), that it is a substitute for war is amply supported by that history.

As to Rule 19 of the Rules of Civil Procedure, it is not made applicable by Rule 9(2) if it conflicts with the principles governing controversies between States to which reference is made above. Also, we comment, that, as pointed out later in this Report, the States of the Upper Division, in respect to the Upper Basin, have no joint interest with the present parties in the subject matter—to-wit, the allocation of the waters of the Lower Basin; and also, complete relief to the present parties can be given without the presence of the States of the Upper Basin, as Upper Basin States.

The opponents of this Motion say that in this case a proper test as to who are necessary parties is whether or not as to them is there a "present justiciable controversy". The opponents maintain that this is true as a policy on the basis of past decisions rendered by this Court in interstate litigation, a number of which are cited in the Briefs and Arguments in the joinder Motion. Indicative of this rule is the following quotation from *Colorado* v. *Kansas,* 320 U. S. 383 (1943) at pages 393-4:

> "In such disputes as this, the court is conscious of the great and serious caution with which it is necessary to approach the inquiry whether a case is proved. Not every matter which would warrant resort to equity by one citizen against another would justify our interference with the action of a state, for the burden on the complaining state is much greater than that generally required to be borne by private parties. Before the court will intervene the case must be of serious magnitude and fully and clearly proved. And in determining whether one state is using, or threatening to use, more than its equitable share of the benefits of a stream, all the factors which create equities in favor of one state or the other must be weighed as of the date when the controversy is mooted."

IV. THE APPLICATION OF THE GENERAL RULE TO THIS CASE.

1. The Colorado River Compact.

The California defendants maintain that the following rules apply to litigation in which a contract is the subject of litigation, and that these rules apply in this case because an interstate compact is no more than a contract between States. The rules and their authorities are:

(a) All parties to a compact must be joined. *Niles-Bement-Pond Co.* v. *Iron Moulders Union,* 254

U.S. 77 (1920); *Gregory* v. *Stetson,* 133 U.S. 579 (1890); *National Licorice Co.* v. *N.L.R.B.,* 309 U.S. 350 (1940); *Gauss* v. *Kirk,* 198 F. (2d) 83 (CA DC, 1952).

(b) Parties having interdependent rights and obligations under a compact must be joined. *Commonwealth Trust Company of Pittsburgh* v. *Smith,* 266 U.S. 152 (1924); *Independent Wireless Telegraph Co.* v. *Radio Corporation of America,* 269 U.S. 459 (1926); *Metropolis Theatre Co.* v. *Barkhausen,* 170 F. (2d) 481 (1948), cert. denied 336 U.S. 945 (1949) and others.

(c) All parties having interests in water from a river common to them all must be joined. *Arizona* v. *California et al.,* 283 U.S. 423 (1931); *Arizona* v. *California et al.,* 292 U.S. 341 (1934); *Arizona* v. *California et al.,* 298 U.S. 558 (1936); *California* v. *Southern Pacific Co.,* 157 U.S. 229 (1895); *Minnesota* v. *Northern Securities Co.,* 184 U.S. 199 (1902); *Railroad Company* v. *Orr,* 18 Wall. 471 (U.S. 1873).

The California defendants say that these rules are applicable because (1) a construction of the Compact will be necessary for a determination on the merits of this cause; (2) the absent States' rights and obligations are defined in the same article in the Compact (Article III (a), (b), (c), (d), (f) and (g)) as the rights and obligations of the present parties; and (3) the Compact deals with the Colorado River System in which all the parties are interested, and in order to make any determination of rights to Colorado River System water which will be effective, all the parties having an interest therein must be joined.

The opponents to this Motion argue that to join the Upper Basin States would be to disregard long established

precepts of this Court which have been laid down in prior interstate litigation. These precepts and their authorities are:

(a) The test with respect to joinder of parties in interstate litigation set forth in *Colorado* v. *Kansas,* 320 U.S. 383 (1943) (quoted *supra* at page 26).

(b) Before the Court will grant relief against a State the complaining State must show an existing or presently threatened injury of serious magnitude. *Missouri* v. *Illinois,* 200 U.S. 496 (1906); *New York* v. *New Jersey,* 256 U.S. 296 (1921); *North Dakota* v. *Minnesota,* 263 U.S. 365 (1923); *Connecticut* v. *Massachusetts,* 282 U.S. 660 (1931) and others.

(c) A potential threat of injury is insufficient to justify an affirmative decree against a State. *Alabama* v. *Arizona,* 291 U.S. 286 (1934).

(d) The judicial power does not extend to the determination of abstract questions. *New York* v. *Illinois,* 274 U.S. 488 (1927); *United States* v. *West Virginia,* 295 U.S. 463 (1935).

(e) The Court will not give advisory opinions or pronounce declaratory judgments. Its jurisdiction will not be exerted in the absence of absolute necessity. *Arizona* v. *California et al.,* 283 U.S. 423 (1931); *United States* v. *West Virginia, supra; Massachusetts* v. *Missouri,* 308 U.S. 1 (1939).

(f) It is beyond the judicial function to predetermine the rights of sovereignties pregnant with future controversies. The courts deal with concrete legal issues, not abstractions. *United States* v. *Appalachian Electric Power Company,* 311 U.S. 377 (1941).

The opponents to this Motion submit that these rules are a bar to the joinder of the Upper Basin States be-

cause (1) there is no relief sought from the Upper Basin; (2) there is no allegation that the Upper Basin is not abiding by the terms of the Compact; and (3) the interpretations of these various Articles can have no effect on the Upper Basin because they are not presently using their entire appropriation of water under Article III(a). The division of the Basins made by Article I of the Compact insulates the Upper Basin States from any interest in the division of Lower Basin water.

It is the Master's opinion, after thorough consideration of the complete, and able briefs and oral arguments heard upon this Motion, that in coming to a conclusion there must be kept in view the questions as to what, if any, legal interest the Upper Basin States have in the present litigation and whether or not as to them any justiciable controversy exists.

In considering the many authorities cited by the parties and by the States sought to be joined, we have endeavored to keep in mind the admonition of Chief Justice Marshall given in the case of *Cohens* v. *West Virginia,* 6 Wheat. 264 (U.S. 1821) at pages 399-400:

> "It is a maxim not to be disregarded, that general expressions, in every opinion, are to be taken in connection with the case in which those expressions are used. If they go beyond the case, they may be respected, but ought not to control the judgment in a subsequent suit when the very point is presented for decision. The reason of this maxim is obvious. The question actually before the court is investigated with care and considered in its full extent. Other principles which may serve to illustrate it, are considered in their relation to the case decided, but their possible bearing on all other cases is seldom completely investigated."

The Colorado River Compact is a controlling feature in this case. It is a long established rule that in construing any instrument it must be considered as a whole, (*Neilson* v. *Lagow*, 53 U.S. 98 (1851)). Also, it is an oft-quoted rule that several writings executed by the same parties relating to the same subject matter may be read together as parts of one transaction (*Bailey* v. *Hannibal & St. Joseph Railway Co.*, 84 U.S. 96 (1872)). For these reasons, the Colorado River Compact and all the documents which incorporate its provisions may be considered in determining the question of the interest herein of the Upper Basin States and whether or not as to them a justiciable controversy exists.

Article I of the Colorado River Compact provides:

> "The major purposes of this compact are to provide for the equitable division and apportionment of the use of the waters of the Colorado River System; to establish the relative importance of different beneficial uses of water; *to promote interstate comity; to remove causes of present and future controversies;* and to secure the expeditious agricultural and industrial development of the Colorado River Basin, the storage of its waters and the protection of life and property from floods. *To these ends the Colorado River Basin is divided into two Basins, and an apportionment of the use of part of the water of the Colorado River System is made to each of them with the provision that further equitable apportionments may be made.*" (Emphasis added)

From a reading of this Article, together with all other relevant documents, it must be considered that it was the intent of those relying thereon to avoid litigation if possible.

The proponents of this Motion rely on many cases to substantiate their argument. All of these have been considered.

The case of *Shields* v. *Barrow,* 17 How. 130 (U.S. 1855) is the basis for their argument as to the rule of law which must be followed in deciding whether or not these absent States must be joined to this action. It was a case in which private parties were the litigants.

The proponents cite cases in which the doctrine of *Shields* v. *Barrow* has been followed.

The *Shields* case on page 139 gives a definition of necessary parties:

> "Persons having an interest in the controversy, and who ought to be made parties, in order that the Court may act on that rule which requires it to decide on, and finally determine the entire controversy, and do complete justice, by adjusting all the rights involved in it. These persons are commonly termed necessary parties. . . ."

The proponents of this Motion cite the following cases: *Railroad Company* v. *Orr,* 18 Wall. 471 (U.S. 1873); *McArthur* v. *Scott,* 113 U.S. 340 (1885); *Gregory* v. *Stetson,* 133 U.S. 579 (1890); *Commonwealth Trust Company of Pittsburgh* v. *Smith,* 266 U.S. 152 (1924); and *California* v. *Southern Pacific Co.,* 157 U.S. 229 (1895). With the exception of one, each of these cases did not involve a State as a party. In the case of *California* v. *Southern Pacific Co.,* 157 U.S. 229 (1895), the Court dismissed the Bill of Complaint because this was not a cause within its original jurisdiction, saying on pp. 261-262:

> "It was held at an early day that Congress could neither enlarge nor restrict the original jurisdiction of this court (*Marbury* v. *Madison*), 5 U.S. 1 Cranch, 137, 173, 174 [2:60, 72] and no attempt to do so is suggested here. The jurisdiction is limited and manifestly intended to be sparingly exercised, and should not be expanded by construction. What Congress may

> have power to do in relation to the jurisdiction of circuit courts of the United States is not the question, but whether, where the Constitution provides that this court shall have original jurisdiction in cases in which the state is plaintiff and citizens of another state defendants, that jurisdiction can be held to embrace a suit between a state and citizens of another state and of the same state."

Next are cited cases in which the definition of indispensable parties set out in *Shields* v. *Barrow,* 17 How. 130 (U.S. 1855) at page 139 was followed, that definition being:

> "Persons who not only have an interest in the controversy, but an interest of such a nature that a final decree cannot be made without either affecting that interest, or leaving the controversy in such a condition that its final determination may be wholly inconsistent with equity and good conscience."

These cases are *Niles-Bement-Pond Co.* v. *Iron Moulders Union,* 254 U.S. 77 (1920); *Minnesota* v. *Northern Securities Co.,* 184 U.S. 199 (1902); *Barney* v. *Baltimore,* 6 Wall. 280 (U.S. 1868) and *Arizona* v. *California,* 298 U.S. 558 (1936).

Arizona v. *California,* 298 U.S. 558 (1936) was a suit in which Arizona sought to have its rights to water in the Colorado River System declared. This Court denied the petition to file the Bill of Complaint for two reasons. They were (1) because Arizona's Bill of Complaint set forth no justiciable controversy, and (2) the United States was an indispensable party and had not been joined, and could not be joined without its consent. This case supports the doctrine that in litigation between States a justiciable controversy must exist to induce this Court to take it under its original jurisdiction. In the instant case, the necessary parties have been joined.

Niles-Bement-Pond Co. v. *Iron Moulders Union,* 254 U.S. 77 (1920) was a case involving private parties. This case followed the *Shields* case test of indispensability. However, at page 80 of the opinion, the Court said:

> "There is no prescribed formula for determining in every case whether a person or corporation is an indispensable party or not. . . ."

This indicates that judgment must be used in applying the rules respecting who are necessary or indispensable parties in controversies between Sovereign States.

The proponents of this Motion cite cases in which the rule of *Shields* v. *Barrow,* 17 How. 130 (U.S. 1855) was followed, and in which it has been said that all parties to a contract must be joined in litigation dealing with the contract if an effective decree is to be entered. *Niles-Bement-Pond Co.* v. *Iron Moulders Union,* 254 U.S. 77 (1920); *Gregory* v. *Statson,* 133 U.S. 579 (1890). It is urged that this rule can be logically followed to the conclusion that all parties to a Compact must be joined when that Compact is in litigation, because of the statement in *Green* v. *Biddle,* 8 Wheat. 1 (U.S. 1823) that a Compact is no more than a contract between States.

Although a Compact may be no more than a contract between States, it does not follow that all the parties to the Colorado River Compact must be parties here.

The Compact, by its terms, provides two separate groups in the Colorado River Basin. Each of these is independent in its sphere. The members of each group make the determinations respecting that group's problems. To destroy this arrangement made by the Colorado River Compact and to make the members of one group parties to the controversies of another group would be to deny the arrangement to keep the two groups separate and apart. The many

cases which have been cited in support of the Motion do not bear upon this plain fundamental consideration. Save for some justiciable controversy existing between these two groups or between members of one group in respect to members of another group, there can be no sound reason for joining in a controversy within one group members of another group on the ground that in the making of the separation by the Colorado River Compact the members of both groups were parties thereto.

By Article I of the Colorado River Compact, the Upper and Lower Basins are separated for the purposes stated, one of them being that of avoiding litigation. One cannot rely upon an instrument such as the Colorado River Compact and avoid its terms. The proponents of the Motion rely upon the Colorado River Compact and say that the Upper Basin States should be joined because they were parties to it. It cannot be that this may be done when the instrument itself forbids it. Later in this report it will be observed that there are small parts, respectively, of Utah and New Mexico that are within the Lower Basin. As to these, we give special attention, beginning on page 60 of this report.

The cases of *Independent Wireless Telegraph Co.* v. *Radio Corporation of America,* 269 U.S. 459 (1926); *Metropolis Theatre Co.* v. *Barkhausen,* 170 F. (2d) 481 (CCA 7, 1948), cert. denied 336 U.S. 945 (1949); *Franz* v. *Buder,* 11 F. (2d) 854 (CCA 8, 1926), cert. denied 273 U.S. 756 (1927) have been cited for the proposition that parties having interdependent rights and obligations under a compact must be joined.

These were not cases between States falling under the original jurisdiction of this Court. There was no such

relationship of the parties as we find in the instant cause. As far as we know, the situation here is unique with respect to the fact that the entire Colorado River System is divided into two independent Basins. It may be compared to a case where four sovereigns make an agreement with three other sovereigns under which a division between the two groups is made of territory common to all, with provision made for the settlement of problems arising in one group to be settled by that group. It is because this Colorado River Compact seems so important to the attainment of allocations with respect to Colorado River waters that for convenience we have attached to this report the complete text of said Compact (Appendix A).

The cases of *Arizona* v. *California,* 283 U.S. 423 (1931); *Arizona* v. *California,* 292 U.S. 341 (1934); *Arizona* v. *California,* 298 U.S. 558 (1936) and *Railroad Company* v. *Orr,* 18 Wall. 471 (U.S. 1873) are cited to substantiate the proposition that all parties having an interest in the subject matter of the litigation must be joined. This rule cannot apply to this cause, because by Article III of the Colorado River Compact there was apportioned to each basin a given amount of water, and it is impossible for the Upper Basin States to have any interest in water allocated to the Lower Basin States, which is the subject matter of this litigation.

This cause was initiated by Arizona, as a Lower Basin State to quiet its title to waters of that Basin.

The caution with which the Supreme Court approaches interstate litigation, is illustrated by a long line of opinions given over many years.

In *New York* v. *New Jersey,* 256 U. S. 296 (1921), the State of New York sought to permanently enjoin the

State of New Jersey from discharging sewage into New York harbor. The opinion written for the Court by Mr. Justice Clarke contains the following observations with respect to the exercise of the Court's original jurisdiction in interstate litigation (p. 309):

> "Before this court can be moved to exercise its extraordinary power under the Constitution to control the conduct of one state at the suit of another, the threatened invasion of rights must be of serious magnitude, and it must be established by clear and convincing evidence."

The case of *Alabama* v. *Arizona,* 291 U. S. 286 (1934) considered an application by Alabama for leave to file a Bill of Complaint in this Court against the State of Arizona. That Complaint sought to have a statute of the State of Arizona which prohibited the sale of goods produced by convict labor declared unconstitutional.

In denying leave to file, this Court, in an opinion written for it by Mr. Justice Butler, made the following pronouncements with respect to the circumstances under which it will exercise its original jurisdiction in interstate litigation (pp. 291-292):

> "This court may not be called on to give advisory opinions or to pronounce declaratory judgments. *Muskrat* v. *United States,* 219 U. S. 346, 55 L. ed. 246, 31 S. Ct. 250; *Willing* v. *Chicago Auditorium Asso.* 277 U. S. 274, 288, 72 L. ed. 880, 884, 48 S. Ct. 507, and cases cited; *Nashville, C. & St. L. R. Co.* v. *Wallace,* 288 U. S. 249, 261, 262, 77 L. ed. 730, 734, 735, 53 S. Ct. 345, 87 A. L. R. 1191. Its jurisdiction in respect of controversies between States will not be exerted in the absence of absolute necessity. *Louisiana* v. *Texas,* 176 U. S. 1, 15, 44 L. ed. 347, 353, 20 S. Ct. 251. A State asking leave to sue another to prevent the enforcement of laws must allege, in the complaint offered for filing, facts that are clearly sufficient to call

for a decree in its favor. Our decisions definitely establish that not every matter of sufficient moment to warrant resort to equity by one person against another would justify an interference by this court with the action of a State. *Missouri* v. *Illinois,* 200 U. S. 496, 520, 521, 50 L. ed. 572, 578, 579, 26 S. Ct. 268; *New York* v. *New Jersey,* 256 U. S. 296, 309, 65 L. ed. 937, 943, 41 S. Ct. 492; *North Dakota* v. *Minnesota,* 263 U. S. 365, 374, 68 L. ed. 342, 345, 44 S. Ct. 138. Leave will not be granted unless the threatened injury is clearly shown to be of serious magnitude and imminent."

In the case of *Connecticut* v. *Massachusetts,* 282 U. S. 660 (1931), Connecticut instituted suit to enjoin the State of Massachusetts from diverting water from the watershed of the Connecticut River. This Court, in an opinion written by Mr. Justice Butler, pointed out some of the circumstances under which the Court will not exercise its original jurisdiction in interstate litigation. On page 669 it is said:

"The governing rule is that this court will not exert its extraordinary power to control the conduct of one State at the suit of another, unless the threatened invasion of rights is of serious magnitude and established by clear and convincing evidence. *New York* v. *New Jersey,* 256 U. S. 296, 309, 65 L. ed. 937, 943, 41 S. Ct. 492; *Missouri* v. *Illinois,* 200 U. S. 496, 521, 50 L. ed. 572, 579, 26 S. Ct. 268. The burden on Connecticut to sustain the allegations on which it seeks to prevent Massachusetts from making the proposed diversions is much greater than that generally required to be borne by one seeking an injunction in a suit between private parties."

In the case of *Massachusetts* v. *Missouri,* 308 U. S. 1 (1939) there was considered a Motion for leave to file a Bill of Complaint by Massachusetts which sought to have determined which State, Massachusetts or Missouri, had

the right to levy an inheritance tax upon the estate of a Massachusetts resident whose estate was situated in the State of Missouri.

This Court, in an opinion written for it by Chief Justice Hughes, denied the motion. The first reason given for the refusal is as follows (p. 15):

> "The proposed bill of complaint does not present a justiciable controversy between the States. To constitute such a controversy, it must appear that the complaining State has suffered a wrong through the action of the other State, furnishing ground for judicial redress, or is asserting a right against the other State which is susceptible of judicial enforcement according to the accepted principles of the common law or equity systems of jurisprudence."

The Supreme Court of the United States long has been circumspect in taking cases in which sovereign states are the parties, as was expressed by *Colorado* v. *Kansas,* 320 U. S. 383 (1943), quoted *supra* at page 26; *New York* v. *New Jersey,* 256 U.S. 296 (1921); *Missouri* v. *Illinois,* 200 U.S. 496 (1906); *North Dakota* v. *Minnesota,* 263 U.S. 365 (1923); *Connecticut* v. *Massachusetts,* 282 U.S. 660 (1931); and many others.

On the joinder Motion before us, both sides place reliance upon the Nebraska-Wyoming-Colorado litigation. They arrive at different conclusions respecting this Court's opinions and action thereon. The Nebraska-Wyoming-Colorado litigation involves three cases, to-wit: *Nebraska* v. *Wyoming,* 295 U. S. 40 (1935); *Nebraska* v. *Wyoming,* 296 U. S. 553 (1935); and *Nebraska* v. *Wyoming,* 325 U. S. 589 (1945). The parties have thoroughly treated these in oral arguments and briefs. Nebraska, with leave, filed a Bill of Complaint in this Court seeking to quiet its rights to waters of the North Platte River. It joined

Wyoming as the sole defendant. Wyoming moved to dismiss the Bill of Complaint. One of the reasons submitted was the fact that the North Platte River was common not only to Nebraska and Wyoming, but also to Colorado. For this reason, Colorado was said by Wyoming to be a necessary party.

The Court considered this argument in *Nebraska* v. *Wyoming,* 295 U. S. 40 (1935). The opinion states (p. 43):

> "Colorado is said to be an indispensable party, because the bill discloses that the North Platte rises in that state and drains a considerable area therein. The contention is without merit. Nebraska asserts no wrongful act of Colorado and prays no relief against her. We need not determine whether Colorado would be a proper party, or whether at a later stage of the cause pleadings or proofs may disclose a necessity to bring her into the suit. It suffices to say that upon the face of the bill she is not a necessary party to the dispute between Nebraska and Wyoming concerning the respective priorities and rights of their citizens in the waters of the North Platte River."

Wyoming's motion to dismiss was denied.

Wyoming then filed an Amended and Supplemental Answer, which charged contemplated and threatened diversions by Colorado of waters from the North Platte River, which was the subject matter of the controversy. Indicative of the allegations made by Wyoming is the following quotation from the Twentieth Count of its Amended and Supplemental Answer:

> "* * * Defendant says the respective rights of Colorado and Wyoming to the use of the waters of the North Platte River have never been determined as between said states, and that the State of Colorado

and its citizens *now contemplate and for a long time have contemplated and threatened and now threaten* the diversion and use in Colorado of waters of the North Platte River, which diversion and use would have the effect of taking from the North Platte River a large quantity of water, to wit, upwards of 250,000 acre feet per annum, all of which water now flows in the Channel of the North Platte River into the State of Wyoming, and will of necessity be the subject matter *pro tanto* of the determination of the rights in this action of the present parties." (Emphasis added)

The Amended and Supplemental Answer averred not only that Colorado was then threatening to divert upwards of 250,000 acre-feet per annum of waters of the North Platte River, to which the States of Nebraska and Wyoming asserted rights, but also pleaded that the sum of the claims asserted to North Platte River waters by the States of Nebraska and Wyoming, plus the present and threatened diversions by the State of Colorado, were greatly in excess of the total supply of water available in the North Platte River to meet the claims and diversions.

After the filing of Wyoming's Amended and Supplemental Answer, this Court, in a memorandum decision, joined the State of Colorado as a party to the cause (*Nebraska* v. *Wyoming,* 296 U. S. 553 (1935)). This joining of the State of Colorado indicates no reversal of the Court's position, respecting the legal principles on which the first decision was grounded. Rather, the Court, when making the decision to join the State of Colorado, was considering a new set of allegations—allegations which disclosed a present justiciable controversy existing between the State of Wyoming and Nebraska and the State of Colorado.

In the instant case, we do not have a situation paralleling that which was considered by the Court when it

joined Colorado as a party because (1) by the division into the Upper and the Lower Basins made by Article I and the apportionments made by Article III, the Upper Basin States are foreclosed from asserting any claim to water available to the present (Lower Basin) parties; (2) there is no allegation here that the Upper Basin States are threatening to infringe any rights to the use of water which the present parties now possess; and (3) there is no allegation in any pleading that the Upper Basin States are failing to meet, or are threatening not to meet, the delivery obligations to the Lower Basin States. For these reasons, the facts as presented in this cause are similar to those presented to the Court when it declared Colorado not to be a necessary party. In the cause before us, the Upper Basin States in their Upper Basin capacities should not be joined. This is because of lack of interest in the Lower Basin waters and because no justiciable controversy exists.

In *Nebraska* v. *Wyoming*, 325 U. S. 589 (1945), this Court made a determination on the merits of the Nebraska-Wyoming-Colorado litigation. In this opinion, the Court confirmed the view that when Colorado was made a party to the cause, it was because the Court then found a present justiciable controversy existing between the State of Colorado and the States of Nebraska and Wyoming. As evidence of this finding, the following is quoted from that opinion at page 610:

> "But where there is not enough water in the river to satisfy the claims asserted against it, the situation is not basically different from that where two or more persons claim the right to the same parcel of land. The present claimants being States, we think the clash of interests to be of that character and dignity which makes the controversy a justiciable one under our original jurisdiction."

2. Prior Arizona v. California Litigation.

The California defendants seek to support their view that these absent States should be joined by pointing out that prior to this case, Arizona had started three other suits involving the Colorado River Compact, and in each of them all of the parties to the Compact were named as defendants.

The suits were:

1. *Arizona* v. *California et al.*, 283 U. S. 423 (1931) to enjoin construction of Hoover Dam and the All-American Canal, to invalidate the Colorado River Compact, and to declare unconstitutional the Boulder Canyon Project Act. On defendants' Motion, the Bill of Complaint was dismissed.

2. *Arizona* v. *California et al.*, 292 U. S. 341 (1934) to perpetuate the testimony of the negotiators of the Colorado River Compact. The Motion for leave to file the Bill was denied.

3. *Arizona* v. *California et al.*, 298 U. S. 558 (1936) for a Motion for leave to file a Bill of Complaint against the parties of the Colorado River Compact seeking an equitable apportionment of Colorado River System water.

In the foregoing cases, Arizona joined the other six States who are members of the Colorado River Compact. In this we find nothing in the nature of a *quasi estoppel* against the complainant here, and nothing controlling with respect to who are necessary or indispensable parties in the instant cause. Also, none of the suits progressed far enough for the named defendants to question the propriety of their joinder. The question here is—are the Upper Basin States necessary parties in the cause before us?

The California defendants contend that the Upper Basin States are necessary parties to this cause because the Colorado River Compact, to which they are parties, will be necessarily construed in the consideration of the merits of this cause. With respect to this contention the case of *Hinderlider* v. *La Plata River & Cherry Creek Ditch Company*, 304 U.S. 92 (1938) is of interest. In that case, the States of Colorado and New Mexico entered into a Compact, approved by the United States, apportioning the use of waters of the La Plata River. Under the terms of the Compact, the State Engineer of each State was given the duty of administering the water so apportioned within the boundaries of his own State.

The La Plata River & Cherry Creek Ditch Company, a water user in Colorado, sued Hinderlider, the State Engineer of Colorado, for unlawfully depriving the Ditch Company of water. The suit was instituted in the District Court of Colorado. Hinderlider's defense was the Compact. The trial court held the Compact unconstitutional and void. This decision was affirmed by the Supreme Court of Colorado.

The case came to the United States Supreme Court for review of the ruling of the Colorado Supreme Court (101 Col. 73, 70 P. (2d) 849).

This Court, on pages 110-111, had the following to say about the necessity that the two States, who were the parties to the Compact, be parties to the cause because the validity and effect of the Compact were being considered:

> "It has been suggested that this Court lacks jurisdiction to determine the validity and effect of the Compact because Colorado and New Mexico, the parties to it, are not parties to this suit and cannot be made so. The contention is unsound. The cases are

many where title to land dependent upon the boundary between States has been passed upon by this Court upon review of judgments of federal and of State courts in suits between private litigants."

3. Claims Of The United States Of America, Intervener.

The California defendants urge the view that the United States of America, as an intervener in this cause, has the same rights as an original party to determine the scope of the controversy. It is the Master's view that there is no need to answer this, because even were it so, this is disposed of by the fact that the United States here asserts no rights against the Upper Basin States as to Upper Basin waters.

We find that the United States, as an intervener, does not attempt, even were it allowable so to do, to enlarge the scope of this cause. The United States is asserting rights solely to the use of water in the Lower Basin. Its Petition of Intervention sets forth the following (p. 25):

> "General Claims of the United States of America in the Colorado River System *in the Lower Basin*
>
> "The United States of America asserts claims, *as against the parties to this cause,* of *rights to the use of water in the Colorado River* and its tributaries. . . . " (Emphasis added)

The parties were and are Lower Basin States.

4. The California Limitation Act.

The California defendants urge that the joinder of these Upper Basin States may be premised upon the fact that these absent parties are co-beneficiaries of the California Limitation Act. The Master here relies upon what already has been said about the Colorado River Compact

and the circumstances under which it was enacted. These are set out above in Sec. 13(a) of the Boulder Canyon Project Act, quoted *infra*, on page 47, and Article I of the Colorado River Compact, quoted on page 30. From these, it will be seen that these Upper Basin States could not sue as beneficiaries of the California Limitation Act, due to the separation of basins made by Article I of the Colorado River Compact, whereby the Upper Basin States, after making delivery at Lee Ferry, have no further interest in the water, and how or by whom it is utilized in the Lower Basin. This view is enforced by the fact that California gets its waters from the Lower Basin, and obviously the limitation which it is under with respect to waters from the Colorado River System are waters of the Lower Basin. As heretofore pointed out, no claim is made that the Upper Basin is not performing its obligations with respect to the delivery of waters to the Lower Basin.

5. Considerations Of The Colorado River Compact, Which Are Claimed By The Proponents Of The Motion To Be Sufficient To Require The Joinder Of The Upper Basin States, Present The Question: Is The State Of Arizona A Member Of The Colorado River Compact?

This question is raised by the pleadings of this cause. (California defendants' Answer, p. 40). Arizona did not ratify the Compact within the time prescribed by Sections 4 and 13(a) of the Boulder Canyon Project Act. Due to Arizona's failure to ratify, the California Limitation Act became effective, as did the Colorado River Compact. In 1944, the Arizona Legislature passed an act ratifying the Compact (Ch. 5, 17th Legislature; Session Laws of Arizona, 1944, pp. 427-428). This question is one

which arises and is supplemented to two main questions on the merits: (1) If Arizona is not a party to the Colorado River Compact, may she now enforce it, or allege any interpretation thereof? (2) If Arizona is now a party to the Compact, does this revoke the California Limitation Act?

The California defendants maintain that this question raises a justiciable controversy between the present parties and the four absent States, because (1) the absent States are members of the Compact, (2) a Compact is no more than a contract, and (3) parties to a contract cannot have new parties added to that contract, anymore than could new provisions be added to it, in litigation to which they are not parties.

The Upper Basin opponents to this Motion are parties to the Compact, but deny that the question of Arizona's status respecting the Colorado River Compact is sufficient to grant the joinder motion because (1) to them it is immaterial whether or not Arizona is a party, and (2) their obligations and rights will not be affected regardless of the determination of this question since they are controlled by the Compact.

Arizona pleads that it is a party to the Compact. The proponents of the Motion deny this. No one has questioned the membership of the Upper Basin States in the Colorado River Compact or their rights and obligations thereunder. No one charges them with any failures of performance. How the waters of the Lower Basin are apportioned and whether in that apportionment Arizona technically or in equity is a party to the Colorado River Compact can be of no interest to them as Upper Basin States. The Court can do complete justice between the present parties without affecting the rights of the Upper Division States with

regard to the waters of the Upper Basin. Further, we cail attention to the provisions of Articles VIII and IX of the Compact and Section 13(a) of the Boulder Canyon Project Act following:

> "Article VIII. *Present perfected rights to the beneficial use of waters of the Colorado River System are unimpaired by this compact.* Whenever storage capacity of 5,000,000 acre feet shall have been provided on the main Colorado River within or for the benefit of the Lower Basin, then claims of such rights, if any, by appropriators or users of water in the Lower Basin against appropriators or users of water in the Upper Basin shall attach to and be satisfied from water that may be stored not in conflict with Article III.
>
> All other rights to beneficial use of waters of the Colorado River System shall be satisfied solely from the water apportioned to that Basin in which they are situate." (Emphasis added)
>
> "Article IX. Nothing in this compact shall be construed to limit or prevent any State from instituting or maintaining any action or proceeding, legal or equitable, for the protection of any right under this compact or the enforcement of any of its provisions."

Section 13(a) of the Boulder Canyon Project Act provides:

> "The Colorado River compact signed at Santa Fe, New Mexico, November 24, 1922, pursuant to Act of Congress approved August 19, 1921, entitled 'An Act to permit a compact or agreement between the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming respecting the disposition and apportionment of the waters of the Colorado River, and for other purposes,' is hereby approved by the Congress of the United States, and the provisions of the first paragraph of article 11 of the said Colorado River compact, making said compact

binding and obligatory when it shall have been approved by the legislature of each of the signatory States, are hereby waived, and this approval shall become effective when the State of California and at least five of the other States mentioned, shall have approved or may hereafter approve said compact as aforesaid and shall consent to such waiver, as herein provided."

The joinder of these Upper Basin States is not necessary when based upon an assertion of the existence of controversy among the Lower Basin States as to Arizona's status in relation to the Compact because (1) this is a suit by a State to quiet title to water of the Lower Basin; (2) the Compact does not apportion water among the States—but only between the Basins; (3) by considering Article VIII of the Compact it is clear that, regardless of how this question is resolved, it will not determine Arizona's right to waters of the Colorado River System. The only part of the Colorado River System involved here in which it has an interest is the Lower Basin; (4) the Compact does not provide for any change in the Upper Basin's rights or obligations whether or not Arizona becomes a party to said Compact; (5) should resolution of this question have a bearing on whether or not Arizona becomes a party to said Compact; or not, is a matter of concern to water users in the Lower Basin only.

6. Is There A Direct Relationship Between The Provisions Of Article III(d) That The States Of The Upper Basin Shall Not Deplete The Flow Of Water At Lee Ferry Below 75,000,000 Acre-Feet In Each Ten Year Period, And The Apportionment Of 7,500,000 Acre-Feet Per Annum To The Lower Basin By Article III(a)?

This question is raised by the pleadings. It has a relation to the question of whether or not the use of Gila

River water by Arizona is to be charged to the 7,500,000 acre-feet per annum apportioned to the Lower Basin by Article III(a), or the 1,000,000 acre-feet per annum given the Lower Basin by Article III(b).

The California defendants say that this question, by virtue of the fact that it must be resolved in a determination of the merits, forms a justiciable controversy between the present parties and the Upper Basin States. The reasoning advanced by the California parties is, that if Arizona's view is followed, the use of Gila River waters will be charged to the apportionment made by Article III(b). Arizona also claims right to 2,800,000 acre-feet per annum from the main stream. Thus, if Arizona gets 2,800,000 acre-feet per annum from the main stream, California 4,400,000 acre-feet per annum from the main stream, and Nevada 300,000 acre-feet from the main stream, it will use the entire 75,000,000 acre-feet the Upper Basin delivers at Lee Ferry over every ten year period. The effect of this will be that in order for the Lower Basin States to use the 7,500,000 acre-feet per annum to which they are entitled by Article III(a) of the Colorado River Compact, the Upper Basin must deliver 7,500,000 acre-feet per year at Lee Ferry. The California defendants contend that this is different than the 75,000,000 acre-feet the Upper Basin is obliged to deliver at Lee Ferry in each ten year period, as per Article III (d) of the Compact and that should Arizona's view be followed on a decision on the merits, it would increase the Upper Basin's delivery burden.

The Upper Basin States, and Arizona say that this question does not now constitute a justiciable controversy, and therefore is not a basis for joining these absent States because (1) the Upper Basin, as stated by counsel, is not

now using more than one-third of the 7,500,000 acre feet per annum apportioned to it by Article III(a) of the Compact, and there is no indication that the uses shall increase in the near future; also there is no averment that the Upper Basin is using more than its share; (2) so long as the Upper Basin does not use its entire apportionment or more than its share, there will be more than enough water delivered at Lee Ferry to meet all needs; and (3) there is no need at present to decide this question.

Of course, there is a possibility that the question may arise in the future. That future is likely to be a distant one.

This question does not now raise a justiciable controversy between present parties and the Upper Basin States because (1) it is clear from Article VIII of the Colorado River Compact that the Upper Basin States, by virtue of the erection of the Hoover Dam are "insulated" from further claims by Lower Basin States; (2) Article III(c) of the Compact makes it apparent that the Mexican supply shall come from surplus waters of the Lower Basin and there is no allegation that such surplus does not exist; (3) there is no present foundation for the question "How shall Mexican commitments be made up in case a surplus fails to exist?"; (4) it is clear that in any instance the Upper Basin cannot use more than 7,500,000 acre-feet per annum (Article III(a) of the Compact) and they cannot withhold water not used (Article III(e) of the Compact) and therefore the provision of Article III(d) would come into effect only in time of drought; and (5) it will be noted upon Plate 1 of the California defendants' Appendixes to their Answer that there are more sources of supply of water to the Lower Basin than the Gila River and the water delivered at Lee Ferry by the Upper Basin. There is no problem in the relationship so long as all parties' rights are satisfied.

There follows a series of questions raised by the pleadings on the merits of this cause which pertains to rights, and conversely, to obligations. These questions should be resolved on final hearing.

7. Does The Provision Of Article VIII Of The Compact That "Present Perfected Rights Are Unimpaired By This Compact" Mean Unimpaired Both As To Quantity And Quality, Or Quantity Alone?

The California defendants state that this question presents a basis for joining the Upper Basin States because it will affect their delivery obligations.

This does not now raise a justifiable controversy because there is no allegation anywhere that the quality of the water delivered at Lee Ferry by the Upper Basin States, if material, is unsuitable for the uses mentioned in Article IV of the Compact. Until such time, if ever, that such fact exists, there is no question calling for decision.

8. How Shall "Beneficial Consumptive Use" (Article II Of The Compact) Be Measured?

The California defendants say the resolution of this question requires the joinder of the Upper Basin States because (1) how can we be sure that they are not using their entire apportionment unless the term is defined; (2) the total flowage in terms of the entire Colorado River System cannot be determined in terms of "beneficial consumptive use" unless these absent parties are joined; and (3) the same interpretation of this term must be followed throughout the entire Colorado River System.

The opponents of the Motion say that this question does not form a basis for joining them because (1) they are not presently using their entire apportionment, as per Article III(a) of this Compact, and do not plan to do so in the

immediate future; and (2) whatever decision is made of this problem the Upper Basin States will follow it.

We find no warrant in this for joining the Upper Basin States, with respect to that Basin because (1) how "beneficial consumptive use" shall be measured in each Basin is a question for each Basin to determine so long as the Colorado River Compact endures. The quantities of water for the Upper Basin and its obligations to deliver are fixed by the Colorado River Compact; (2) what matter how the individual Basins measure "beneficial consumptive use" so long as it is possible to interpolate the two methods; and (3) as long as the Upper Basin is not using its entire apportionment (here no party alleges that it is), how can it be said that they are interested in the system used in the Lower Basin?

9. How Shall Evaporation Losses In Reservoirs Be Charged?

With respect to evaporation, the water delivered at Lee Ferry to the Lower Basin has been specified as to quantities and relates to the 7,500,000 acre-feet per annum or unused waters of the Upper Basin, or waters to meet any possible deficiency in the supply to the Republic of Mexico. This permits of no question of evaporation before Upper Basin waters reach the point of delivery at Lee Ferry, and the Upper Basin cannot be charged with evaporations occurring in the Lower Basin after that delivery.

The Upper Basin States, with respect to the waters of the Upper Basin, are privileged under the Colorado River Compact to make allocations of the beneficial use of water among the States or users in that Basin. They have done this by the Upper Colorado River Basin Compact of April 7, 1949. The States having rights to water of the Lower Basin have had this same opportunity and have not arrived at an allocation of waters by agreement. The Upper

Colorado River Basin Compact settles many matters that might have been controversial among the Upper Basin interests, and to now disregard this action and other actions that may follow under the Upper Colorado River Basin Compact, unless wholly necessary under sound legal and equitable principles, would be an act that plainly, under oft announced policies of this Court, should not be taken. These observations are also pertinent to the next question respecting the allocation of water to Indians, the wards of the United States.

The question of how Lower Basin waters shall be divided among the Lower Basin States is one for final hearing.

10. Shall The Use Of Colorado River System Waters By Indians Be Charged To The States In Which Such Uses Are Situated?

This question is a question to be resolved in each Basin. How it is done in one Basin has no relationship to how it is done in the other.

Article VII of the Colorado River Compact provides—

> "Nothing in this compact shall be construed as affecting the obligations of the United States of America to Indian tribes."

Article VIII of said Compact bears upon this. It provides that "Present perfected rights to the beneficial use of waters of the Colorado River System are unimpaired by this compact." It also provides that when "storage capacity of 5,000,000 acre feet shall have been provided on the main Colorado River within or for the benefit of the Lower Basin, then claims of such rights, if any, by appropriators or users of water in the Lower Basin against appropriators or users of water in the Upper Basin shall attach to and be satisfied from water that may be stored not in conflict with Article III."

After these provisions, Article VIII also provides that "all other rights to beneficial use of waters of the Colorado River System shall be satisfied solely from the water apportioned to that Basin in which they are situate."

From this, it appears that the rights of the Indian tribes in the Upper Basin shall be satisfied solely from waters of the Upper Basin, and the rights of Indian tribes in the Lower Basin shall be satisfied solely from water appropriated to that Basin.

The question of how Lower Basin waters shall be divided among the Lower Basin States is one for final hearing.

11. Does The Term "Per Annum", As It Is Used In Article III(a) And (b) Of The Compact Mean "Each Year", Or An Average Over A Period Of Years?

This question arises over Arizona's contention, denied by the California defendants, that use "per annum" should be averaged over a number of years.

The California defendants state that should Arizona's interpretation of the term be held to be the correct interpretation on the decision on the merits, the Upper Basin States would have a right to use excess waters in coming years to make up for that part of their apportionment not now used by them, thus diminishing the supply available to the Lower Basin. For this reason, the California defendants state that a justiciable controversy between the present parties and the absent parties does exist and they should be joined.

The opponents to this Motion point out that (1) the Upper Basin States are not presently using more than one-third of the apportionment made to them by Article III(a) of the Compact; (2) it is uncertain when, if ever, the States of the Upper Basin will use their entire apportionment; (3) only when the Upper Basin is using its entire apportionment will this question arise there; and (4)

it is not feasible to determine a question when facts do not exist from which the question is raised.

In interpreting the provision of the Colorado River Compact respecting the delivery by the Upper Basin of 7,500,000 acre-feet of water per annum (Article III(a)) and the other provision found therein respecting the requirement to deliver 75,000,000 acre-feet in a 10 year period commencing after the October 1st following the effective date of the Compact (Article III(d)), these must be considered together, and when so considered, they are not in opposition. The obvious meaning would seem to be that in referring to the 7,500,000 acre-feet per annum, and bearing in mind possible droughts, this requirement would be met by an average delivery over the 10 year period of 75,000,000 acre-feet. There is nothing necessary to be now decided on this Motion that will make any difference if some other interpretation is given, because on any interpretation there is no charge made by anyone that the Upper Basin is not fully performing.

12. Is The Apportionment Made By Article III(b) To The Lower Basin Made In Perpetuity, Or Is It Dependent Upon Appropriation And Use?

The State of Arizona contends that this is an apportionment in perpetuity to cover its uses of Gila River water. The California parties maintain that the use of this water is subject to apportionment and use. The State of Nevada maintains that this water may not be used until 1963. The California defendants maintain that the Upper Basin States should be joined to this action because of the interest they have in this water which, depending upon how this question is resolved, may or may not be available to them in the future.

The opponents to this joinder Motion say that this is insufficient upon which to base joinder, because the

argument is grounded on speculation and conjecture due to the fact that the conditions that would have to exist before the Upper Basin States would derive any benefit from the determination of this question do not now exist, and in any event, could not exist prior to October 1, 1963, as per Article III(f) of the Compact.

The Upper Basin States should not be joined on account of the question here presented because (1) insofar as it relates to the Upper Basin States it is a question of intra-basin apportionment of waters within the Upper Basin, a problem not involved in this litigation; (2) inter-basin apportionment is to be considered in 1963, at the earliest; it is not feasible to decide questions before they arise; and (3) regardless of whether or not this apportionment by Article III(b) is one in perpetuity or solely dependent upon apportionment and use, as is contended by the California defendants, the absent States have no present interest in it, and as to them no justiciable controversy now exists.

13. How Shall "Salvaged Water" Be Charged Under The Colorado River Compact?

The present parties of Nevada, Arizona and the California defendants all express different ideas on this question, with Arizona saying that such uses shall not be charged, Nevada saying such uses are chargeable in certain areas, and the California defendants saying that all such uses are chargeable.

The California defendants state that the Upper Basin States are interested in this in two respects: (1) The determination will involve the interpretation of "beneficial consumptive use" which must be uniform throughout the entire Colorado River System, and (2) Whether or not such uses are to be charged will affect the amount of surplus water available, thus affecting the Upper Basin's delivery obligations for the Mexican supply.

The absent parties say that this question should not necessitate their joinder in this cause because (1) this is solely a Lower Basin dispute; (2) when the uses in the Upper Basin necessitate resolution of this question, it can be done then; (3) this question is at present an intra-basin, not an inter-basin controversy; and (4) regardless of how "salvaged water" shall be charged, the Upper Basin is not using its entire apportionment.

The raising of this question does not require the joining of the absent States because (1) insofar as Upper Basin States are concerned, this will not be germane to them until they are using their entire apportionment, which is not within the foreseeable future; there is no charge that they are using their share of water; (2) by Article III(b)(1) of the Upper Colorado River Basin Compact these States have resolved this question for themselves; and (3) there is no requirement or necessity for having the same definitions of "salvaged water" or of "beneficial consumptive use" in both Basins, and there is nothing to show that such definitions are in any wise preventing the full performance by the Upper Basin States of their inter-basin obligations.

14. Arguments Relating To The California Limitation Act.

On the hearing on the merits, the effect of the California Limitation Act necessarily will be considered.

The California defendants urge that since the Act must be construed, it is necessary to join the four absent States because they, as co-beneficiaries of this Act, may at any time seek to enforce this Limitation Act. It is also urged that to save the California defendants from multiple and vexatious litigation, the absent States should be joined. It is argued, too, that the absent States have an interest in

the Limitation Act because it restrains the California defendants from extending their use of Colorado River System water past 4,400,000 acre-feet per annum.

Opponents of the Motion traverse these views. We find that there is nothing in the California Limitation Act to warrant the joining of the four absent States. This is because:

(1) The Colorado River Compact makes an apportionment of the uses of water between Upper and Lower Basins. Since these absent Upper Basin States have no interest in the allocation of Lower Basin water in which California shares, there is no reason to fear that they may institute an action based on the California Limitation Act.

(2) These absent States have not sought to give an interpretation of the California Limitation Act relevant to or affecting California's interest in Lower Basin water. The Upper Basin water which flows to Lee Ferry is wholly lost to the Upper Basin States when it passes Lee Ferry.

(3) Regardless of what interpretation is given to the California Limitation Act, it cannot affect the Upper Basin's delivery obligations since those are fixed as set forth in the Colorado River Compact.

(4) The California Limitation Act relates to Lower Basin water. There is no allegation or claim by any party that the Upper Basin States have failed, or that they threaten to fail, or ever will fail, to deliver to the Lower Basin all of the water they are committed to deliver under the Colorado River Compact.

15. Arguments Based Upon The Pleading And Prayer Of The United States Of America, Intervener, On The Merits Of The Cause.

The California defendants, in a view to which the State of Nevada, Intervener, subscribes, contend that the United States of America, in its Petition for Intervention, asserts claims to Colorado River System water, and that this is a basis for joining the absent States because the rights of the absent States will be affected by any decree in which the United States is granted title to the use of any Colorado River System water.

The opponents of the Motion submit that the claims made by the United States of America, in its Petition for Intervention, are insufficient on which to base joinder because (1) the United States is asserting rights only in the Lower Basin, and (2) that the Upper Basin States are not using all the water to which they are entitled and it therefore will not affect them in any way. However this may be, it is not alleged by anyone that the Upper Basin States are taking more than their share.

We find that the United States, as an intervener, even were it allowable so to do, does not attempt to enlarge the scope of this cause. The United States is asserting rights solely to the use of water in the Lower Basin. Its Petition for Intervention sets forth the following (p. 25):

> "GENERAL CLAIMS OF THE UNITED STATES OF AMERICA IN THE COLORADO RIVER SYSTEM *IN THE LOWER BASIN.*
>
> "The United States of America asserts claims, *as against the parties to this cause,* of *rights to the use of water in the Colorado River* and its tributaries. . . ." (Emphasis added)

The parties to this cause were and are Lower Basin States.

The Upper Colorado River Basin Compact, to which all these absent States are parties, as is the United States, specifically provides for the use of water by the United States in the Upper Basin by Articles VII and XIX.

We find that the claims of the United States to Lower Basin waters made in this cause furnish no ground for joining the absent States.

This report, in the foregoing pages, has treated the States of Wyoming, Colorado, Utah and New Mexico in their capacities as Upper Basin States. We now turn to the question of whether or not Utah and New Mexico should be joined as parties to the instant litigation in their capacities as and to the extent that they are Lower Basin States.

V. UTAH AND NEW MEXICO IN THEIR CAPACITIES AS LOWER BASIN STATES AND WITH RESPECT TO LOWER BASIN WATERS.

It has been said in some of the briefs and arguments that this is a suit upon the Colorado River Compact. In our view, it is a suit filed to quiet Arizona's title to the use of a certain part of Lower Basin water. The share claimed is set forth in the Complaint. To conclude what Arizona's rights may be involves a consideration of equities; of the Colorado River Compact; of water rights to which the Compact is subservient; of rights subservient to said Act; of the California Limitation Act; of the powers and actions of the Secretary of the Interior of the United States, including contracts made by said Secretary; and other matters relevant. It will require a consideration not only of Arizona's rights but of those of the California parties, and of Nevada and the United States of America, the two interveners. Arizona's Bill of Complaint includes specific prayers and a prayer for general relief, which,

of course, should not be overlooked. The California parties ask to be protected in what they urge and set forth as their equitable share to the use of the waters involved. Nevada, a Lower Basin State, is similarly interested. It seeks a determination of what it deems to be its equitable shares of Lower Basin waters. The United States of America seeks a determination of the extent of its rights so that it may meet its obligation with respect to Indian tribes, and with respect to other responsibilities which it bears.

As it has been pointed out above in this report, these controversies relate to the use of waters of the Lower Basin. That New Mexico and Utah each has an interest in such waters is averred by California (Defendants' Answer, page 23), by Arizona (Bill of Complaint, page 20), and by Nevada (Petition of Intervention on Behalf of Nevada for Leave to Intervene, page 15). It cannot be gainsaid that such interests exist in these two States in their respective capacities as States of the Lower Basin. How much Lower Basin water is there to be allocated among the several claimants? Who can now finally answer this? Under the Colorado River Compact, the Upper Basin is given its part—7,500,000 acre-feet per annum. That basin has the duty of delivering to the Lower Basin 7,500,000 acre-feet per annum, which duty presumably can be done by providing at least 75,000,000 acre-feet in 10 year periods. Thus recognition of annual averages reconciles these provisions, as they should be reconciled to give meaning to all provisions. If correct the Upper Basin must not withhold water not consumptively used by it. The Upper Basin is said to use at present only 2,500,000 acre-feet of its 7,500,000 acre-feet share. The remainder passes on to the Lower Basin. The Lower Basin aiso has water that flows from within that Basin to the Colorado

River below Lee Ferry. To learn how much, will require evidence which it is hoped may be based on reasonably accurate measurements, and perhaps there may be offered some well-grounded opinion evidence.

The Colorado River Compact provides that the Upper Basin and the Lower Basin are each to receive 7,500,000 acre-feet annually in perpetuity. A minimum of 1,500,000 acre-feet goes to the Republic of Mexico under its treaty with the United States of America (U. S. Treaty, Ser. No. 994, 59 Stat. 1219 (1945) Article 10(a)). At the time the Colorado River Compact was agreed upon by the Commissioners representing the seven Colorado River States and the United States but before it became effective, the quantity of water available was considered sufficient to meet all of the then fixed demands and requirements, with a surplus of 4,000,000 to 6,000,000 acre-feet per annum. (See the Report by Herbert Hoover, Chairman of the Colorado River Commission, addressed to the Speaker of the House of Representatives, H. Doc. 605, 67th Cong., 4th Sess.) The estimate used was a compromise between these two extremes—5,000,000 acre-feet. The Mexican Treaty, made afterwards, reduced the surplus over the fixed requirements to 3,500,000 acre-feet per annum. When, at the hearing on the merits in the instant case, the then presently available data is presented as to the volume of waters in the Lower Basin, we shall be confronted with the question, shall only the allocations to the United States, to Arizona, to California, and to Nevada be made? Shall the extent of the rights of Utah and New Mexico to Lower Basin waters be reserved for consideration in some other future proceeding or shall we wait until the Lower Basin allocations of water to New Mexico and Utah are made (if ever) by agreement of the Lower Basin parties? If

such delaying program were undertaken, what shall be the reservations of water for these two States in their Lower Basin capacities in terms of quantity? Such a delaying course will prevent final allocations of water to the present parties. As a practical matter, we are of the opinion that these allocations of Lower Basin water to New Mexico and Utah should be made in this presently pending cause. However, do we find here a justiciable controversy involving Utah and New Mexico as Lower Basin States? Obviously, these interests of Utah and New Mexico in an allocation of the waters involved are adverse to the interests of the present parties. Plainly, if allocations of water are made among the present parties, and if allowances are made to these two States without the presence of both or without the agreement of each, the decree will be invalid because of the absence of Utah and New Mexico. There is a now pending controversy involving a division or allocation of the waters that come to or are otherwise in the Lower Basin. There can be no final valid determination of the rights of the present parties to Lower Basin water without determining the equitable shares to which New Mexico and Utah are entitled. They should be joined herein.

Counsel for New Mexico, in speaking of New Mexico's interests in Lower Basin water, stated (Tr., p. 326):

> "The acreage presently being irrigated is less than 10,000 acres, a figure which is infinitesimal compared to the claims of Arizona and California . . . not including the Indians, so, as I understand it, the Indians have about 6,000, so that would be the full extent of the present uses as I am informed by my engineers of use made on the Gila and its tributaries in New Mexico."

It was also urged that there was no justification to bring a State like New Mexico into this litigation when no alle-

gation has been made as to any interference with anybody's rights who are parties to the suit, including the United States. The full facts should be given on the taking of evidence. It is likely that they can be quickly adduced.

On p. 327 of the transcript it was said, in regard to San Juan County, that water from the San Juan River was allocated to New Mexico. This relates to Upper Basin waters and refers to the Upper Colorado River Compact.

On p. 353 of the transcript, counsel for Utah stated, in presenting the *de minimis* point urged by both Utah and New Mexico, that he did not wish to leave the impression that the 52,000 acre-feet of Lower Basin water now used in Utah is not important. It was stated that "It is all important to the people that live in that section of Utah, and we will fight for that water and our rights to it to the last ditch; but compared with the lawsuit which has evolved between Arizona and California, it means nothing." New Mexico, with equal propriety, has not undertaken to yield its rights.

It was pointed out that Arizona, in its Complaint, has recognized the rights of Utah and New Mexico to their equitable share, whatever they may be, and also said that "Arizona doesn't know what it might be, Utah doesn't know what it might be, New Mexico doesn't know what it might be; but they recognize it." (Tr., p. 353). It is also said that "California recognizes it." We wish to say that counsel for Utah and New Mexico were each commendably frank and helpful on this question. But it is plain that to proceed to a final determination of the present suit, Utah and New Mexico must come in and be bound regarding the allocations to them, respectively, of waters of the Lower Basin if a valid decree as to the

present parties is expected. We are of the opinion that this is, of necessity, a justiciable controversy involving rights of both Utah and New Mexico, and though relatively small volumes of water are involved, as has been stated, nevertheless for the New Mexico dwellers in their area and the Utah dwellers in theirs, it is a matter of high importance. We find Utah and New Mexico but solely with respect to Lower Basin waters each to be an indispensable and necessary party.

It is recognized that Utah has an area of 82,346 square miles, with a population, according to the last census, of 688,862; and that New Mexico has an area of 121,511 square miles, with a population, according to the last census, of 681,187. Bringing these states into this litigation will plainly be a burden upon them that they would like to escape. The Special Master does not overlook this. There have been some endeavors, according to the pleadings and the oral argument, to negotiate Lower Basin settlements in respect to the interests of Utah and Colorado. It is hoped, but not urged, that these continue, and if successful, during the time that final hearings are on they can be made a part of and effective in the decree to be recommended.

We also suggest that if this does not eventuate, the Master will set a special time during the hearing for proofs to be devoted entirely to considerations relating to the rights of New Mexico and Utah as Lower Basin States. If this is done, the representatives of such States may find it agreeable to attend only the hearings of direct interest to them, and of course, such others as they may wish. The details of such arrangements can be worked out at a pretrial conference which, in view of the many complexities involved, the Master proposes to hold sometime early this fall. It is thought that these two States as Lower Basin

States can adduce the relevant and material evidence necessary to protect their interests in a very short time. Since the present parties to this cause recognize that these two States have rights in the Lower Basin, it is thought that they may aid in carrying out one or the other of the foregoing suggestions.

VI. CONCLUSIONS.

I conclude as follows:

1. No original party to the cause and no intervener charges any wrongful acts of commission or omission against the Upper Basin States, or presents any prayer for relief against them.

2. The Colorado River Compact divided the Colorado River System into two separate and distinct Basins.

3. By the Colorado River Compact, each Basin was left to make its own intra-basin allocations of the use of its waters.

4. In 1949 the Upper Basin States entered into a Compact, the "Upper Colorado River Basin Compact", which was approved by the Congress of the United States.

5. The Upper Basin States have since been and now are operating under that Compact.

6. By that Compact, they settled among themselves the inter-basin rights to the use of its waters, and also settled among themselves several Upper Basin questions which in the Lower Basin and in respect to its waters are now in controversy in this cause.

7. There is presently no legal or equitable reason for this Court to disturb the operation of the Upper Colorado

River Basin Compact, which result might come by joining these Upper Basin States as parties to this cause.

8. The States of the Upper Basin do not wish to join as parties in the instant cause. They resist the Motion to join them.

9. To join them would be a backward and retarding step with respect to the solution of problems relating to the Colorado River System.

10. To now join the Upper Basin States in this cause with respect to Upper Basin Waters would not tend to avoid litigation but would presently promote it.

11. The Upper Basin States in their capacities as such presently have no legal or equitable interest in the instant cause.

12. As to the Upper Basin States as such, there is no existent justiciable controversy between them and the present parties to this cause.

13. The United States, as Intervener, has not enlarged the scope of the instant cause.

14. The interest of the United States in this proceeding is confined to its rights relating to waters of the Lower Basin.

15. Whatever the possibility of future controversy may be, there exists in such possibility no sound equitable reason for now joining the Upper Basin States as such in the instant litigation.

16. A decree can be soundly entered in this cause that will not affect the Upper Basin States with respect to rights to water or the use of waters in the Upper Basin.

17. The Motion filed herein on July 15, 1954 by the California defendants to join Upper Basin States as parties ought to be denied as to Colorado and Wyoming, and denied as to Utah and New Mexico in their capacities as Upper Basin States.

18. Utah and New Mexico each has interests in the Lower Basin. These interests are small in comparison to the interests in Lower Basin water of the Lower Basin States, particularly California and Arizona. However small, they are substantial and important to Utah and to New Mexico, and likely will be so considered by dwellers in the areas having use and need for Colorado River water.

19. In the equitable allocation of the waters of the Lower Basin, the decree should not overlook these relatively small, but nevertheless substantial, interests.

20. The respective interests of Utah and New Mexico in Lower Basin waters are adverse to the interests of California, Nevada, Arizona and the United States in Lower Basin waters. A justiciable controversy presently exists respecting these Lower Basin waters which involves substantial interests of Utah and New Mexico therein. In order to make equitable allocations of the use of Lower Basin waters in this case, New Mexico and Utah are necessary and indispensable parties.

21. With respect to Utah and New Mexico in their capacities as Lower Basin States, and only to the extent of their respective interests in Lower Basin waters, the Motion should be allowed, and allowed separately as to each of them.

VII. RECOMMENDATION.

Accordingly, it is recommended that the Motion of the California parties to join the States of Colorado, Wyoming, Utah and New Mexico as parties to this cause, in their capacities as Upper Basin States and in respect to Upper Basin waters be denied. It is a further recommendation that as to each of the States Utah and New Mexico in their capacities as Lower Basin States and in relation to their respective Lower Basin waters only that the said Motion be allowed.

Respectfully submitted,

GEORGE I. HAIGHT
Special Master

Chicago, Illinois

July 11, 1955.

APPENDIX A.

THE COLORADO RIVER COMPACT.

November 24, 1922

The States of Arizona, California, Colorado, Nevada, New Mexico, Utah and Wyoming, having resolved to enter into a compact under the Act of Congress of the United States of America approved August 19, 1921 (42 Statutes at Large, Page 171), and the Acts of the Legislatures of the said States, have through their Governors appointed as their Commissioners:

W. S. Norviel	for the State of Arizona
W. F. McClure	for the State of California
Delph E. Carpenter	for the State of Colorado
J. G. Scrugham	for the State of Nevada
Stephen B. Davis, Jr.	for the State of New Mexico
R. E. Caldwell	for the State of Utah
Frank C. Emerson	for the State of Wyoming

who, after negotiations participated in by Herbert Hoover appointed by The President as the representative of the United States of America, have agreed upon the following articles:

ARTICLE I.

The major purposes of this compact are to provide for the equitable division and apportionment of the use of the waters of the Colorado River System; to establish the relative importance of different beneficial uses of water; to promote interstate comity; to remove causes of present and future controversies; and to secure the expeditious agricultural and industrial development of the Colorado

River Basin, the storage of its waters and the protection of life and property from floods. To these ends the Colorado River Basin is divided into two Basins, and an apportionment of the use of part of the water of the Colorado River System is made to each of them with the provision that further equitable apportionments may be made.

ARTICLE II.

As used in this compact:—

(a) The term "Colorado River System" means that portion of the Colorado River and its tributaries within the United States of America.

(b) The term "Colorado River Basin" means all of the drainage area of the Colorado River System and all other territory within the United States of America to which the waters of the Colorado River System shall be beneficially applied.

(c) The term "States of the Upper Division" means the States of Colorado, New Mexico, Utah and Wyoming.

(d) The term "States of the Lower Division" means the States of Arizona, California and Nevada.

(e) The term "Lee Ferry" means a point in the main stream of the Colorado River one mile below the mouth of the Paria River.

(f) The term "Upper Basin" means those parts of the States of Arizona, Colorado, New Mexico, Utah and Wyoming within and from which waters naturally drain into the Colorado River System above Lee Ferry, and also all parts of said States located without the drainage area of the Colorado River System which are now or shall hereafter be beneficially served by waters diverted from the System above Lee Ferry.

(g) The term "Lower Basin" means those parts of the States of Arizona, California, Nevada, New Mexico and Utah within and from which waters naturally drain into the Colorado River System below Lee Ferry, and also all parts of said States located without the drainage area of the Colorado River System which are now or shall hereafter be beneficially served by waters diverted from the System below Lee Ferry.

(h) The term "domestic use" shall include the use of water for household, stock, municipal, mining, milling, industrial and other like purposes, but shall exclude the generation of electrical power.

ARTICLE III.

(a) There is hereby apportioned from the Colorado River System in perpetuity to the Upper Basin and to the Lower Basin respectively the exclusive beneficial consumptive use of 7,500,000 acre feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist.

(b) In addition to the apportionment in paragraph (a), the Lower Basin is hereby given the right to increase its beneficial consumptive use of such waters by one million acre feet per annum.

(c) If, as a matter of international comity, the United States of America shall hereafter recognize the United States of Mexico any right to the use of any waters of the Colorado River System, such waters shall be supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b); and if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the Upper Basin and the Lower Basin, and when-

ever necessary the States of the Upper Division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d).

(d) The States of the Upper Division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of this compact.

(e) The States of the Upper Division shall not withhold water, and the States of the Lower Division shall not require the delivery of water, which cannot reasonably be applied to domestic and agricultural uses.

(f) Further equitable apportionment of the beneficial uses of the waters of the Colorado River System unapportioned by paragraphs (a), (b) and (c) may be made in the manner provided in paragraph (g) at any time after October first, 1963, if and when either Basin shall have reached its total beneficial consumptive use as set out in paragraphs (a) and (b).

(g) In the event of a desire for a further apportionment as provided in paragraph (f) any two signatory States, acting through their Governors, may give joint notice of such desire to the Governors of the other signatory States and to The President of the United States of America, and it shall be the duty of the Governors of the signatory States and of The President of the United States of America forthwith to appoint representatives, whose duty it shall be to divide and apportion equitably between the Upper Basin and Lower Basin the beneficial use of the unapportioned water of the Colorado River System as

mentioned in paragraph (f), subject to the legislative ratification of the signatory States and the Congress of the United States of America.

ARTICLE IV.

(a) Inasmuch as the Colorado River has ceased to be navigable for commerce and the reservation of its waters for navigation would seriously limit the development of its Basin, the use of its waters for purposes of navigation shall be subservient to the uses of such waters for domestic, agricultural and power purposes. If the Congress shall not consent to this paragraph, the other provisions of this compact shall nevertheless remain binding.

(b) Subject to the provisions of this compact, water of the Colorado River System may be impounded and used for the generation of electrical power, but such impounding and use shall be subservient to the use and consumption of such water for agricultural and domestic purposes and shall not interfere with or prevent use for such dominant purposes.

(c) The provisions of this article shall not apply to or interfere with the regulation and control by any State within its boundaries of the appropriation, use and distribution of water.

ARTICLE V.

The chief official of each signatory State charged with the administration of water rights, together with the Director of the United States Reclamation Service and the Director of the United States Geological Survey shall cooperate ex-officio:

(a) To promote the systematic determination and coordination of the facts as to flow, appropriation, consump-

tion and use of water in the Colorado River Basin, and the interchange of available information in such matters.

(b) To secure the ascertainment and publication of the annual flow of the Colorado River at Lee Ferry.

(c) To perform such other duties as may be assigned by mutual consent of the signatories from time to time.

ARTICLE VI.

Should any claim or controversy arise between any two or more of the signatory States: (a) with respect to the waters of the Colorado River System not covered by the terms of this compact; (b) over the meaning or performance of any of the terms of this compact; (c) as to the allocation of the burdens incident to the performance of any article of this compact or the delivery of waters as herein provided; (d) as to the construction or operation of works within the Colorado River Basin to be situated in two or more States, or to be constructed in one State for the benefit of another State; or (e) as to the diversion of water in one State for the benefit of another State; the Governors of the States affected, upon the request of one of them, shall forthwith appoint Commissioners with power to consider and adjust such claim or controversy, subject to ratification by the Legislatures of the States so affected.

Nothing herein contained shall prevent the adjustment of any such claim or controversy by any present method or by direct future legislative action of the interested States.

ARTICLE VII.

Nothing in this compact shall be construed as affecting the obligations of the United States of America to Indian tribes.

ARTICLE VIII.

Present perfected rights to the beneficial use of waters of the Colorado River System are unimpaired by this compact. Whenever storage capacity of 5,000,000 acre feet shall have been provided on the main Colorado River within or for the benefit of the Lower Basin, then claims of such rights, if any, by appropriators or users of water in the Lower Basin against appropriators or users of water in the Upper Basin shall attach to and be satisfied from water that may be stored not in conflict with Article III.

All other rights to beneficial use of waters of the Colorado River System shall be satisfied solely from the water apportioned to that Basin in which they are situate.

ARTICLE IX.

Nothing in this compact shall be construed to limit or prevent any State from instituting or maintaining any action or proceeding, legal or equitable, for the protection of any right under this compact or the enforcement of any of its provisions.

ARTICLE X.

This compact may be terminated at any time by the unanimous agreement of the signatory States. In the event of such termination all rights established under it shall continue unimpaired.

ARTICLE XI.

This compact shall become binding and obligatory when it shall have been approved by the Legislatures of each of the signatory States and by the Congress of the United States. Notice of approval by the Legislatures shall be given by the Governor of each signatory State to the Governors of the other signatory States and to the President

of the United States, and the President of the United States is requested to give notice to the Governors of the signatory States of approval by the Congress of the United States.

IN WITNESS WHEREOF, the Commissioners have signed this compact in a single original, which shall be deposited in the archives of the Department of State of the United States of America and of which a duly certified copy shall be forwarded to the Governor of each of the signatory States.

DONE at the City of Santa Fe, New Mexico, this twenty-fourth day of November, A. D. One Thousand Nine Hundred and Twenty-two.

EXCEPTIONS OF INTERVENING STATE OF NEVADA TO THE REPORT AND RECOMMENDATIONS OF THE SPECIAL MASTER CONCERNING CALIFORNIA'S MOTION TO JOIN COLORADO, NEW MEXICO, UTAH AND WYOMING:

EXCEPTIONS TO THE REPORT:

Comes now the Intervening State of Nevada and herein excepts to the Report and Recommendations of the Special Master, wherein he recommended the denial of the motion to join as parties in the cause the States of Colorado and Wyoming, and granted the motion insofar as it related to the States of New Mexico and Utah in their capacities as Lower Basin States, and only to the extent of their respective interest in Lower Basin Waters.

I

Nevada excepts to the Conclusions of the Special Master as enumerated at Pages 66-68 of the report.

1. Nevada agrees that Conclusions Numbers 1 to 6, inclusive, would be correct if qualified by the Statement that the right to the beneficial consumptive use of the waters apportioned by the Colorado River Compact to the Upper and Lower Basins respectively, was and is a right to the said use of such waters that was and will continue to be interrelated and interdependent as between said basins and controlled in its entirety by the provisions of the Colorado River Compact of 1922, to which said Compact, the Upper Colorado River Basin Compact of 1948 is not tantamount but made subservient and subject thereto in the following language—

> "It is recognized that the Colorado River Compact is in full force and effect and all of the provisions hereof are subject thereto." Art. I(b) Upper Colorado River Basin Compact.

2. Nevada excepts to Conclusions Numbers 7 to 12, inclusive, and to Conclusions Numbers 15 and 16 upon the following grounds:

The Colorado River Compact of 1922 was approved and ratified by each of the signatory states thereto excepting Arizona, as a six state compact, and later in 1944 ratified by Arizona thus completing the full seven state ratification. By such ratification each signatory state became and is now, and was at the time of the institution of the instant case bound by the terms of the Compact.

Such Compact provides, inter alia, First, the apportionment to the Upper Basin and to the Lower Basin, respectively the beneficial consumptive use in perpetuity of 7,500,000 acre feet of water per annum from the Colorado river stream system. Art. III (a).

Second, In addition to said apportionment provided in Article III (a) the Lower Basin was and is given the right to increase its beneficial consumptive use of such waters by one million acre feet per annum. Art. III (b).

Third, Article III (d) of said Compact provides that the States of the Upper Division, i.e., Colorado, New Mexico, Utah and Wyoming, will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of the Compact.

Fourth, Arizona's claim of the right to beneficial consumptive use of the Colorado River water is 3,800,000 acre feet per annum, Prayer, Arizona Bill of Complaint, page 30. California's minimum claim of its right to the beneficial consumptive use of said water is alleged as 5,362,000 acre feet—California's answer to Bill of Complaint, page 1. Nevada's claim of the right to the beneficial consumptive use of said waters is 539,000 acre feet of Article III (a) water plus an equitable share of Article III (b) water, Prayer, Nevada petition of Intervention, page 25. Thus the total of the amount of water subject to the right of beneficial consumptive use in and by Arizona, California and Nevada and concerning which the issues are clearly pleaded is 9,701,000 acre feet.

Fifth, Article III (f) of the Compact provides for further equitable apportionment of the beneficial uses of the waters of the Colorado River System Unapportioned by paragraphs (a), (b) and (c) of said Article may be made at any time after October 1st, 1963, if and when either basin shall have reached its beneficial consumptive use as set forth in paragraphs (a) and (b).

Article III (b) of the Compact in clear and unambiguous language apportions to the Lower Basin one million acre feet of water for beneficial consumptive uses in addition

to the 7,500,000 acre feet apportioned by Article III (a), and this apportionment is due for such use in the Lower Basin immediately upon the showing of the consumptive uses of all of the III (a) water. The Compact does not intend nor require that the use of III (b) water must await the year 1963.

Nevada has heretofore in its Motion to Intervene and Petition of Intervention, which said Motion was granted June 1st, 1954, directed attention to this important phase of the case in paragraphs VIII, XIII, and XIV of its said petition. It is conceded by all the states signatory to the Colorado Compact that the law of appropriation of beneficial uses of water as applied in and sanctioned by the Western States governs with respect to apportionments under the Compact and that the rights to such use should be and of necessity must be determined in advance. The doctrine was well sanctioned by this Court in the case of *Pacific Livestock Company* vs. *Oregon Water Board,* 241 U.S. 440, which case was submitted to the Special Master by Nevada in oral argument at Phoenix, Arizona, during the submission of the Motion to join the Upper Division States. Pages 122 et seq., Vol. 1, Transcript of Oral Arguments, now of record in the Court.

The issue then and now in this respect has not changed. The beneficial consumptive use of the waters has been apportioned to the Upper and Lower Basins in definitely stated amounts. In addition thereto the Lower Basin was apportioned and now is entitled to an increased beneficial consumptive use of one million acre feet of water per annum. It is not denominated in the Compact or elsewhere as surplus water. Its source is the Colorado River System as defined in Article II and Article III of the Compact, and it is submitted so recognized in the case of *Arizona* vs. *California et al.,* 292 U.S. 341.

Most certainly the Lower Basin, a basin composed of states of extreme aridity, once establishing its right to the

beneficial consumptive use of 8,500,000 acre feet of water per annum as apportioned by Article III (a) and (b) of the Compact will then and there have drawn in question an issue at once involving the right of the states of the Upper Basin to withhold water and deplete the flow of the river to the aforesaid aggregate of 75,000,000 acre feet. In brief a determination must be made of the paramount force and effect of Article III (b) and III (d) as to which provision shall govern. It is submitted that this issue alone warrants the joinder of all the States of the Upper Division, in order to fix and determine long prior to 1963 the right to the beneficial consumptive use of Article III (b) water. To enter a decree so determining this right without the States of the Upper Basin being parties thereto would not be consistent with equity and good conscience, for the reason that the waters of the Colorado River stream system constitute the common fund in which the Upper and Lower Basins are apportioned by mutual consent certain designated rights therein. Rights that are so interrelated and interdependent that any adjudication and determination of any one right is bound to seriously affect every other right and interest therein of either the Upper or Lower Basin.

It is therefore Nevada's contention that the Special Master's Conclusions Numbers 7 to 12, inclusive, and Conclusions Numbers 15 and 16 are in error.

II

The Interest of the United States, Special Master's Conclusions Numbers 13 and 14.

The Special Master concluded that the United States, as Intervener has not enlarged the scope of the case, and further, that its interest is confined to its rights relating to waters of the Lower Basin.

Nevada is not in agreement therewith and respectfully submits such conclusions are in error for the following reasons:

1. The Colorado River Compact of 1922, with respect to the rights of the United States provided in Article VII that "Nothing in this Compact shall be construed as affecting the obligations of the United States to Indian tribes," and in Article IV provided that if Congress did not consent to the use of waters for navigation being made subservient to domestic, agricultural and power purposes, nevertheless the other provisions of the compact shall remain binding.

2. It is also clear that Congress in the enactment of the Boulder Canyon Project Adjustment Act, approved December 21, 1928, 45 Stat. 1057, did not enlarge the powers of the United States or any department thereof to depart from nor encroach upon the binding effect of the Compact, but to the contrary expressly provided that the United States, its permittees, licensees, contractees, users and appropriators of water and the rights thereof, however claimed or acquired "shall be subject to and controlled by said Colorado River Compact". Sections 8 and 13, Project Act.

3. The Petition in Intervention of the United States alleges claims for the use of waters of the Colorado River in the Lower Basin totalling not less than 1,823,250 acre feet per annum exclusive of flood control and navigation, as follows:

Indian Claims—1,747,250 acre feet,
Ultimate use—Paragraph XXVII, and
Appendix II A. Petition of United States.
Fish and Wild Life—76,000 acre feet—
Paragraph XXVIII—Appendix III, Petition of United States.

4. Further, it is alleged in Paragraph XXX, pages 25-27 of the Petition of the United States that the foregoing claims of the United States are jeopardized because the present claims of the parties to the cause far exceed the quantity of water apportioned to the Lower Basin by the Colorado River Compact, and that—

"The United States of America also has claims throughout the States of Arizona and California in connection with the Colorado River and its tributaries for the use of the National Park Services and the Bureau of Land Management of the Department of the Interior, and the Forest Service of the Department of the Interior, and the Forest Service of the Department of Agriculture. In the event these claims are in any way put in issue or jeopardized in this litigation, the United States reserves the right to assert them."

"Due to the insufficient supply of water to the Lower Basin by the Colorado River Compact to meet the aggregate of the adverse claims of all the parties to this cause, this is a pressing need for a decree by this Court declaring, confirming and quieting the title of all parties to their respective rights and interest in and to the waters of the Colorado River, absent such a decree by this Court, the protracted conflict giving rise to this cause will continue to the detriment of all parties."

5. The United States alleges in Paragraph XIII, page 12 of its Petition that it has an international obligation arising from its Treaty with the United Mexican States of 1944, ratified by Congress and approved by the President in 1945, 59 Stats. 1219, whereby the United States guaranteed to furnish Mexico with an annual quantity of 1,500,000 acre feet of the waters of the Colorado River from any and all sources thereof. Section 10 (a) Treaty. Paragraph 6, Page 17, Master's Report.

Article III (c) of the Compact provides, in effect that if the United States shall recognize the right of Mexico to any of the waters of the Colorado River, that such waters shall be supplied first from waters that are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b), and if such surplus is insufficient then the burden of the deficiency shall be equally borne by the Upper Basin and Lower Basin. Such is the effect of Section 4 of the Boulder Canyon Project Act.

In view of this allocation of the waters in question the issue at once arises, it is submitted, that now requires the determination construing and reconciling the effect of Articles III (b), (c) and (d) of the Compact and Section 4 of the Project Act.

It is clearly apparent that if the rights of the United States are granted even in part that the scope of the case is so broadened that in order to satisfy such rights that even the increased beneficial consumptive use of the additional one million acre feet of water apportioned the Lower Basin by Article III (b) of the Compact will not be sufficient to even satisfy said rights and obligations of the United States in the Lower Basin. It cannot well be doubted but that the Upper Basin's rights will be materially affected by the demands of the United States.

III

Special Master's Report Re Article III(b) of Compact:

Nevada regretfully excepts to the statements of the Special Master interpreting Nevada's contention concerning the waters referred to in Articles III (b) and III (f) of the Colorado River Compact. Such statements appear in the report as follows:

> At page 22, lines 3-8, "(3) In 1963, when the Lower Basin shall become entitled to use the 1,000,000 acre feet per annum apportioned to the Lower Basin by Article III (a) of the Colorado River Compact, Nevada will have the right to use 900,000 acre feet per annum of Colorado River System Water. (Petition for Intervention, P. 13)"
>
> At page 55, lines 26-28, the statement, "The State of Nevada maintains that this water may not be used until 1963." Referring to Article III (b) water.
>
> And the further statement contained in lines 7-18, inclusive, page 56, to the effect that the Upper Basin States should not be joined "because (1) insofar as it relates to the Upper Basin States it is a question of

intra-basin apportionment of waters within the Upper Basin, a problem not involved in this litigation; (2) inter-basin apportionment is to be considered in 1963 at the earliest; it is not feasible to decide questions before they arise; and (3) regardless of whether or not this apportionment by Article III (b) is one in perpetuity or solely dependent upon apportionment and use, as is contended by the California defendants, the absent States have no present interest in it, and as to them no justiciable controversy now exists".

Nevada respectfully submits, as heretofore shown in Subdivision II of these exceptions to the report that with all due respect to the Special Master's Report and the Conclusions therein found, such conclusions with respect to Nevada's contentions as to the timely apportionment to the Lower Basin of Article III (b) water beyond question now presents a justiciable issue wherein the Upper Basin States, including Colorado and Wyoming are directly interested, and by reason thereof the Special Master's Report is in error thereon.

Conclusion:

Nevada respectfully represents to the Court that heretofore it submitted to the Special Master and in addition thereto lodged in the Court the BRIEF OF THE STATE OF NEVADA, INTERVENER, IN RE MOTION OF CALIFORNIA TO JOIN AS PARTIES THE STATES OF COLORADO, NEW MEXICO, UTAH AND WYOMING, and therein stated its position with respect to such joinder based upon the same premise as herein set forth to the end that New Mexico and Utah are indispensable parties and that Colorado and Wyoming at the very least are necessary parties. Nevada in such brief relied upon the rule as to the joinder of necessary parties as held in the case of *Washington* vs. *United States,* C.A.A. 9, 87 F. (2d) 421, followed with approval in *Pioche Mines Consolidated Inc.,* vs. *Fidelity-Philadelphia Trust Co.* C.A.A. 9, 202 F. (2d) 944, which said cases were and are based upon the case of *Shields* vs. *Barrow,* 17 How. 130, 15

L. Ed. 158 and *Mallow* vs. *Hinde*, 12 Wheat 193, 6 L. Ed. 599. The *State of Washington* vs. *United States* dealt with the right of the States of Washington and Oregon to intervene in a suit by the *United States* vs. *Columbia Packers Association*. The States were granted the right.

Nevada here refers to its said brief and adopts the same as its brief in support of its foregoing exceptions.

Respectfully submitted,

HARVEY DICKERSON
Attorney General

W. T. MATHEWS
WM. J. KANE
Special Assistant Attorneys General
Counsel for State of Nevada

Certificate of Service:

I, W. T. Mathews, one of the attorneys of record for the State of Nevada, an Intervener in the above entitled cause, and a member of the Bar of the Supreme Court of the United States, do hereby certify that, on the 12th day of October, 1955, I served copies of the foregoing exceptions to the Report of the Special Master on the several parties thereto, as follows:

1. On the Solicitor General of the United States, Department of Justice, Washington 25, D. C., by mailing a copy in a duly addressed envelope with airmail postage prepaid.
2. On J. H. Moeur, Chief Counsel for the Complainant State of Arizona, Heard Building, Phoenix, Arizona, by mailing a copy in a duly addressed envelope with airmail postage prepaid.
3. On Gilbert F. Nelson, Assistant Attorney General of California, and one of Counsel for defendants, 909 South Broadway, Los Angeles 15, California.
4. On Duke W. Dunbar, Attorney General of and Counsel for the State of Colorado, State Capitol Bldg., Denver, Colorado, by mailing a copy in a duly addressed envelope with air mail postage prepaid.
5. On Richard Robinson, Attorney General of and Counsel for New Mexico, State Capitol Building, Santa Fe, New Mexico, by mailing a copy in a duly addressed envelope with airmail postage prepaid.
6. On E. R. Callister, Attorney General of and Counsel for the State of Utah, State Capitol Building, Salt Lake City, Utah, by mailing a copy in a duly addressed envelope with airmail postage prepaid.
7. On George F. Guy, Attorney General of and Counsel for the State of Wyoming, State Capitol Building, Cheyenne, Wyoming, by mailing a copy in a duly addressed envelope with airmail postage prepaid.

W. T. Mathews
Special Assistant Attorney General Nevada

MOTION OF THE UNITED STATES OF AMERICA FOR DETERMINATION OF QUESTIONS OF LAW PRESENTED BY THE PLEADINGS IN THE CAUSE AND THE REPORT OF THE SPECIAL MASTER

The State of California [1] moved this Court to join as defendants the States of New Mexico, Utah, Colorado and Wyoming. The matter was duly referred by this Court to the Special Master with instructions "to hear the parties and report with all convenient speed his opinion and recommendation as to whether the motion should

---

1/ References to the "State of California" or "California" throughout this Motion include all of the California defendants listed in the caption.

16—69316-1

U. S. GOVERNMENT PRINTING OFFICE

be granted." Pursuant to that instruction there was filed on July 18, 1955, the "Special Master's Report on the Motion of the California Defendants to Join as Parties the States of New Mexico, Utah, Colorado and Wyoming." This Court allowed until October 20, 1955, for the filing of exceptions to that Report. As of this date exceptions have been filed by the State of Nevada and it is understood that exceptions will be filed by the State of California.

There are presented to the United States of America by the Report of the Special Master problems of great import. Absent rulings by this Court upon basic and fundamental questions of law stemming from the pleadings now before it, and the Report of the Special Master, the United States of America cannot properly agree or disagree with the Report. Reference in that regard is had to the analysis by the Special Master of the character of the cause in question. There it is declared that "In our view, it is a suit filed to quiet Arizona's title to the use of a certain part of Lower Basin water. The share claimed is set forth in the Complaint. To conclude what Arizona's rights may be involves a consideration of equities; of the Colorado River Compact; of water rights to which the Compact is subservient; of rights subservient to said Act; of the California Limitation Act; of the powers and actions of the Secretary of the Interior of the United States, including contracts made by said Secretary; and other matters relevant." 2/

2/ Special Master's Report on the Motion of the California Defendants to Join as Parties the States of New Mexico, Utah, Colorado and Wyoming, page 60, subdivision V.

16—69316-1

U. S. GOVERNMENT PRINTING OFFICE

Issue is not taken with the Special Master's conclusion that this is a proceeding to quiet title. Attendant upon that conclusion, however, are correlative propositions of law the resolution of which is essential to any determination as to the need for the joinder of the sovereign States of Colorado, New Mexico, Utah and Wyoming. There follows a review of those fundamental questions of law.

I.

The State of Arizona in its Bill of Complaint, seeking to have quieted its title to rights to the use of water in the Colorado River System, petitions among other things that the Colorado River Compact, the Boulder Canyon Project Act, related laws, contracts and documents be construed. California, however, denies that the State of Arizona ratified the Colorado River Compact; denies that Arizona is entitled at this date to claim rights pursuant to that Compact.[3/] There is thus presented for resolution the basic question of whether Arizona is entitled to participate as a party to the Compact; a question referred to by the Special Master but which remains unresolved. Necessarily if it is ultimately determined that Arizona is not a party to the Colorado River Compact, its status in the proceedings is materially changed. Similarly the status of the United States of America will be changed as will be subsequently

---

3/ Answer of California Defendants to Petition of Intervention on Behalf of the United States of America and Summary of the Controversy, (Exhibit A) page 34, paragraph 24. See in that connection Answer of Defendants to Bill of Complaint, Second Affirmative Defense, pages 39 et seq.

16—69316-1

U. S. GOVERNMENT PRINTING OFFICE

emphasized. Moreover, a protracted trial involving complex factual questions might be abortive with present parties if California should be sustained in its position respecting the State of Arizona in relation to the Colorado River Compact. It is difficult to assess the change that would transpire in this case if Arizona were declared not to be a party to the Colorado River Compact. It cannot be fairly assumed, however, that if it is declared that Arizona is not in fact a member of the Compact, it will abandon any claim to the waters of the Colorado River System. Rather it must be presumed that Arizona will assert a claim against the River System as a whole. Under those circumstances there could be no final relief awarded in this action without having all of the States of the Colorado River System, without regard to the Compact, before this Court.

II.

Arizona in its Complaint requests an interpretation of the Colorado River Compact in connection with these matters: 4/

> "(1) Is the water referred to and affected by Article III (b) of the Colorado River Compact apportioned or unapportioned water? * * *
>
> "(2) How is beneficial consumptive use to be measured? Article III of the Compact does not apportion water. Rather it apportions the beneficial consumptive use of water. The Compact contains no definition of beneficial consumptive use and does not establish any method of measuring beneficial consumptive use. * * *"

4/ Bill of Complaint, State of Arizona, page 25, Article XXII.

16—60316-1

U. S. GOVERNMENT PRINTING OFFICE

Should it ultimately be declared by this Court that Arizona is not a party to the Compact, there necessarily arises for consideration the matter of the propriety of presenting for resolution the matters set forth above. Quite possibly under those circumstances Arizona would claim rights on the theory of an equitable apportionment of the stream system in its entirety as distinguished from a claimant in the Lower Basin under the Colorado River Compact. 5/

III.

If this Court should declare that Arizona is not a party to the Colorado River Compact the United States of America has an immediate concern respecting its international obligations to deliver water arising in connection with its treaty with the United Mexican States. 6/ Those international obligations, the Colorado River Compact provides are to be "supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b); and if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the Upper Basin and the Lower Basin, * * *." 7/ It is clear that if Arizona is not a party to the Compact the provision made for delivery of water to Mexico is radically changed presenting for determination in that connection the obligation of Arizona and all of the other States of the Colorado River System.

5/ Arizona v. California, et al., 298 U. S. 558 (1936).

6/ See Petition of Intervention on Behalf of the United States of America, page 12, Article XIII.

7/ Colorado River Compact, Article III.

16—66816-1

U. S. GOVERNMENT PRINTING OFFICE

IV.

Correlative to the questions presented in paragraphs I, II and III above, arising from the status of Arizona under the Colorado River Compact, is another of extreme importance to the United States. It has entered into contracts with the State of Arizona for the delivery to it of 2,800,000 acre-feet of water from the Colorado River.[8] California asserts that its contracts with the United States of America are severally and collectively senior in time to the Arizona contracts.[9] It is patent that if the contracts between the United States of America and the State of Arizona should fall by reason of the determination that Arizona is not a party to the Colorado River Compact, its claimed rights to the water in the Colorado River would be materially changed very probably presenting issues that could not be resolved without the presence of the parties California seeks to join.[10]

V.

Another fundamental question of law is presented by the Report of the Special Master. It is provided by Article VII of the Colorado River Compact,[11] that "Nothing in this compact shall be construed as affecting the obligations of the United States of America to Indian tribes." Alluding to that quoted provision of

16—60316-1

U. S. GOVERNMENT PRINTING OFFICE

the Compact and related matters, the Special Master declares: "From this, it appears that the rights of the Indian tribes in the Upper Basin shall be satisfied solely from waters of the Upper Basin, and the rights of Indian tribes in the Lower Basin shall be satisfied solely from water appropriated to that Basin." 12/ Noteworthy in regard to the claims to rights to the use of water asserted by the United States of America on behalf of the Indians is the fact that they represent one of the largest claims to water from the stream system in question. 13/ It will be observed that the Special Master has not finally ruled on the question of law as to whether the claims of the Indians are to be satisfied from the Lower Basin or whether they are to be satisfied from the entire Colorado River Stream System. It must be assumed that the Special Master did not intend to declare as a matter of law that the rights of the Indians are subject to the Colorado River Compact. However, if the statement by the Special Master is interpreted to be a declaration that the Indians are subject to the Colorado River Compact irrespective of the explicit language of that document, there is presented for

13/ Petition of Intervention on Behalf of the United States of America, pages 56 and 57.

816-1

GOVERNMENT PRINTING OFFICE

consideration the question of whether this Court will adopt that conclusion as a matter of law. In either event, it is essential before the United States of America can agree or disagree with the language of the Special Master regarding the Indian claims, that there be a definitive ruling on that very important issue.

If the Indian claims are held to be "against the river" as distinguished from the Lower Basin as defined by the Colorado River Compact, that conclusion would have far-reaching effect upon the interests of all of the States in the Colorado River Stream System. Thus there is directly involved the construction of the above quoted Article VII of the Colorado River Compact and all that is implicit in such a construction. If Arizona is declared not to be a party to the Compact, the questions presented become even more pertinent.

VI.

These fundamental questions are of transcendent importance in regard to all of the relief which has been sought in this cause by the United States of America. In this complex case there are necessarily other questions related to and independent of those herein set forth. However, whether complete relief can be had in this action on the basis of the parties presently before the Court can be resolved only by the ultimate determination of the legal questions which are here presented.

16—66316-1

U. S. GOVERNMENT PRINTING OFFICE

WHEREFORE, the United States of America respectfully moves this Court to consider the questions here presented and to order briefs filed in connection with them and to declare the legal principles which will govern in regard to them prior to a determination as to whether the States of Colorado, New Mexico, Utah and Wyoming should or should not be joined as parties to this cause.

Exceptions to the Report and Recommendation of the Special Master with Respect to the Motion of the California Defendants to Join the States of Colorado, New Mexico, Utah and Wyoming 2

Brief of the California Defendants in Support of Their Exceptions 7

Rules, Treaties, Interstate Compacts and Statutes Involved 7

Statement of the Case 7

Question Presented 7

Are the States of Colorado, New Mexico, Utah and Wyoming Necessary Parties to This Action, in Their "Upper Basin" Capacities, and in Their Capacities as "States of the Upper Division," as those Terms Are Defined in the Colorado River Compact?

Summary of the Argument 8

Argument:

I. The Special Master Erred In Applying As A Test For The Joinder Of Necessary Parties Whether A Decree Can Be Soundly Entered In This Cause Which Will Not Affect The Absent States. The Proper Test Is Whether Any Decree Reasonably Responsive To The Pleadings Will Necessitate The Presence Of The Absent Parties In Order To Grant Complete Relief To Those Already Parties 20

Page

II. The Special Master Has Erred In Finding That The Four Absent States Are Not Necessary Parties To An Effective Adjudication Of The Claims Asserted By The United States To The Waters Of The Colorado River System 24

III. The Special Master Erred In Not Recommending Joinder Of The Absent States By Virtue Of Their Interest In The Resolution Of The Issues Of Whether Arizona Is A Party To The Colorado River Compact, Whether The Statutory Compact Contained In The Boulder Canyon Project Act And The California Limitation Act Remains In Effect, And The Interpretation Of That Statutory Compact 38

A. The Special Master's determination that the protection afforded the Upper Basin States by the Colorado River Compact is effective against Arizona even if Arizona is not a party to the Compact (Report, pp. 48, 50) is patently erroneous, and deeply affects the absent States 39

B. The Special Master's determination that the "Upper Basin States could not sue as beneficiaries of the California Limitation Act," is patently erroneous and deeply affects the absent States as well as California 44

IV. The Special Master Erred In Failing To Recommend Joinder Of The Four States Of Colorado, New Mexico, Utah And Wyoming As Necessary Parties To This Suit Because Complete Relief Cannot Be Afforded Among The Present Parties Without A Determination Of (A) The Rights Of The Absent States Under The Colorado River

Page

Compact To The Use Of Waters Of The Colorado River System Available To The "Upper Basin;" (B) Their Obligations Under That Compact As "States Of The Upper Division;" And (C) Their Interests In The Waters Of The Colorado River System Which Are Not Covered By The Colorado River Compact 51

The Special Master Erred In Finding That The Colorado River Compact, In Terms, Prohibits The Joinder Of The States Of The Upper Division In This Suit 51

The Special Master erred in his fundamental conception that the Colorado River Compact divides the Colorado River System into two parts as a political boundary might be drawn between two States. This leads to the erroneous conclusion that the present controversy relates exclusively to "water allocated to the Lower Basin," a phrase impossible even to define without resolving issues of construction of the Colorado River Compact 51

A. The relief, essentially declaratory in nature, which Arizona asks with respect to three interpretations of the Colorado River Compact affects the rights of the absent States under the Compact 56

1. The definition of "beneficial consumptive use" under the Compact vitally affects the absent Upper Basin States 57

2. The Upper Basin States are affected by the issue of whether Article III(b) constitutes an apportionment to the Lower Basin of an additional 1,000,000 acre-feet per annum or whether the Lower Basin's right thereto is dependent upon appropriation and use 66

Page

3. The absent Upper States are affected by the issue whether reservoir evaporation losses in the Lower Basin are to be charged to "surplus" waters in excess of the quantities specified in Articles III(a) and III(b), or whether these losses are to be charged to the Lower Basin Article III(a) apportionment 71

B. Arizona's suit to quiet title to the consumptive use of 2,800,000 acre-feet per annum from the main stream, as waters apportioned by Article III(a), directly involves the obligations of the States of the Upper Division to deliver water under Articles III(c) and III(d) of the Colorado River Compact 74

1. Arizona's claimed title to 2,800,000 acre-feet per annum under Article III(a) from the main stream is dependent upon quieting title in the Lower Basin to the 75,000,000 acre-feet per decade delivered by the States of the Upper Division, under Article III(d), as apportioned to the Lower Basin by Article III(a) 74

2. If the deliveries by the States of the Upper Division under Article III(d) are all apportioned to the Lower Basin by Article III(a), they contain no "surplus" available for delivery to Mexico, and the States of the Upper Division are accordingly required by Article III(c) to increase their deliveries to supply one-half of the Mexican deficiency 77

3. California asserts that the Article III(a) apportionment to the Lower Basin includes uses under "rights

Page

which may now exist" on the tributaries, and that there is no identity between that apportionment and the Article III(d) obligation of the States of the Upper Division 80

4. The Special Master's assumption that the obligation of the States of the Upper Division under Article III(d) is identical with the apportionment under Article III(a) to the Lower Basin is erroneous, and predetermines an issue which requires the presence of the States of the Upper Division .. 82

C. The absent States, as states of the Colorado River System, are vitally affected by the present controversy over the establishment of present rights to waters of the Colorado River System not covered by the Colorado River Compact ... 87

1. The absent States are affected by whether the claimed rights for water for Indians in the Lower Basin are chargeable against the apportionments made by the Colorado River Compact, or are excluded therefrom by Article VII 87

2. The Upper States are affected by the issue whether valid appropriative rights may be initiated in waters not covered by the Compact 87

D. The Special Master is in error in assuming that the Colorado River Compact, in terms, prohibits the joinder of the States of the Upper Division in this action 92

V. The Special Master Has Erroneously Concluded That The Absent States Should Not

Page

Be Joined Even Though They May Be Affected By The Resolution Of Issues Among The Present Parties 96

A. The Special Master erred in determining that the absent Upper States, whose rights and obligations are vitally and inseparably affected by the present controversy to quiet title to certain waters of the Colorado River System, may not be joined for lack of a controversy independently justiciable as to them 96

B. Despite the absence of a present breach of obligation or a present physical invasion of a claimed right, a quiet title suit by Arizona against the absent States alleging the identical title here asserted would state a justiciable controversy within the constitutional power of this Court to decide. A fortiori, such a breach of obligation or invasion of right is not required where the joinder of the absent States is required to accord complete relief in the suits to quiet title brought by Arizona against California and by the United States against Arizona and California 103

C. Even if the Special Master's concept of justiciability is accepted, it cannot be the basis at this stage of the litigation for denial of the motion to join the absent States. His recommendation that joinder be denied is based on assumed facts as to water supply and water use which have no foundation in the record and are not the subject of judicial notice. Moreover, the assumed facts are contrary to what evidence would show to be the actual facts 112

Page

D. The Special Master's recommendation that California, sued as a sovereign, be denied the right to join Colorado, New Mexico, Utah and Wyoming because they are also sovereigns, is without support either in reason or in judicial precedent 122

Conclusion 136

Exceptions of the California Defendants to the Report and Recommendations of the Special Master With Respect to Their Motion to Join the States of Colorado, New Mexico, Utah and Wyoming

and

Brief in Support of Exceptions

EXCEPTIONS TO THE REPORT AND RECOMMENDATION OF THE SPECIAL MASTER WITH RESPECT TO THE MOTION OF THE CALIFORNIA DEFENDANTS TO JOIN THE STATES OF COLORADO, NEW MEXICO, UTAH AND WYOMING

The recommendation of the Special Master is that the motion of the California defendants to join, as parties, the States of Colorado, New Mexico, Utah and Wyoming, be denied with respect to the four States in their "Upper Basin" capacities, but that it be granted as to Utah and New Mexico in their "Lower Basin" capacities and as to Lower Basin waters. The California defendants except to so much of the Special Master's Report as relates to denial of the motion, and respectfully request to be heard in oral argument.

Exceptions I through IV are based on grounds that the rights and obligations of the present parties, those whom the Special Master proposes to join, and those of the remaining States of the Colorado River Basin, are so interdependent that the absent States "ought to be made parties, in order that the court may act on that rule which requires it to decide on, and finally determine the entire controversy, and do complete justice, by adjusting all the rights involved in it. . . ." *Shields* v. *Barrow,* 17 How. 130, 139 (U.S. 1855). Exception V is based on the ground that California, sued here as a sovereign, is entitled to invoke this rule as against her sister sovereigns in the circumstances of this case, because those States "not only have an inter-

est in the controversy, but an interest of such a nature that a final decree cannot be made without either affecting that interest, or leaving the controversy in such a condition that its final termination may be wholly inconsistent with equity and good conscience." (*Id.*, p. 139.)

If the absent States were without the Court's jurisdiction, the case should be dismissed because of the absence of indispensable parties. Since they are within the Court's jurisdiction, they should be joined as necessary parties, and the Special Master, in ruling otherwise, erred in the following particulars:

I.

General Exception

The Special Master erred in assuming how substantive issues will be decided after the trial, and in testing the necessity for joinder of the absent States by the effect upon them of a decree conforming to those assumptions. The proper test is whether any decree reasonably responsive to the pleadings will necessitate the presence of the absent parties in order to afford complete relief to those who are already parties.

II.

Exceptions Relating to the Claims of the United States

The Special Master erred in failing to find that the four States of Colorado, New Mexico, Utah and Wyoming are necessary parties to the adjudication of the claims of the United States to the waters of the Colorado River System.

III.

Exceptions Relating to the Issues of Whether Arizona Is a Party to the Colorado River Compact, Whether the Statutory Compact Created by the Boulder Canyon Project Act and the California Limitation Act Remains in Effect, and the Interpretation of That Statutory Compact

A. The Special Master erred in finding that Colorado, New Mexico, Utah and Wyoming are not necessary parties to a suit that will determine whether Arizona is a party to the Colorado River Compact.

B. He erred in finding that the four States are not necessary parties to a suit that may determine the continued existence and interpretation of California's obligations to all six of her sister Colorado River Basin States under the California Limitation Act.

IV.

Exceptions Relating to the Colorado River Compact

The four States of Colorado, New Mexico, Utah and Wyoming are necessary parties to this action because complete relief cannot be afforded among the present parties without a determination of (A) the rights of the absent States under the Colorado River Compact to the use of waters of the Colorado River System available to the "Upper Basin," (B) their obligations under that Compact as "States of the Upper Division" to deliver water to the Lower Basin, and (C) their interests in the waters of the Colorado River Sys-

tem which are not covered by the Colorado River Compact. The Special Master erred in ruling to the contrary.

The Special Master erred in finding that the Colorado River Compact, in terms, prohibits the joinder of the States of the Upper Division in this action.

V.

Exceptions Relating to Justiciability, the Sovereign Status of the Parties, and Rules of Joinder

A. The Special Master erred in determining that the absent Upper States, whose rights and obligations are vitally and inseparably affected by the present controversy to quiet title to certain waters of the Colorado River System, may not be joined for lack of a controversy independently justiciable as to them.

B. The Special Master erred in recommending that the motion be denied because a present breach of obligation against the absent States has not been alleged. Despite the absence of a present breach of obligation or a present physical invasion of a claimed right, a suit brought by Arizona or by the United States to quiet title against the absent States alleging the identical titles here asserted by them would state a justiciable controversy within the constitutional power of this Court to decide. *A fortiori,* such a breach of obligation or invasion of right is not necessary where the joinder of the absent States is required in order to accord com-

plete relief in the existing quiet title suits brought by Arizona and by the United States.

C. The Special Master's conclusion that no justiciable controversy is stated between the present parties and the absent States is based on assumed facts as to water supply and water use which have no foundation in the record, and which, since they are the subject of dispute among qualified engineers, are not proper subjects of judicial notice. Moreover, the assumptions are contrary to what evidence would establish as the actual facts.

D. The Special Master's recommendation that California, sued as a sovereign, be denied the right to join Colorado, New Mexico, Utah and Wyoming because they are also sovereigns is without support either in reason or in judicial precedent.

BRIEF OF THE CALIFORNIA DEFENDANTS IN SUPPORT OF THEIR EXCEPTIONS TO THE REPORT AND RECOMMENDATION OF THE SPECIAL MASTER UPON THEIR MOTION TO JOIN, AS PARTIES, THE STATES OF COLORADO, NEW MEXICO, UTAH AND WYOMING

RULES, TREATIES, INTERSTATE COMPACTS AND STATUTES INVOLVED

These are cited in our opening brief on this Motion, filed October 7, 1954, pp. 2-4. Their text appears in two volumes of Appendixes to our Answer to Arizona. The Statement of Jurisdiction appears at page 1 of our opening brief.

STATEMENT OF THE CASE

The facts are summarized in our opening brief, filed October 7, 1954, pages 4-25. A "Summary of the Controversy" is annexed to this Motion filed July 15, 1954, page 7.

QUESTION PRESENTED

The question presented upon these exceptions is:

Are the States of Colorado, New Mexico, Utah and Wyoming necessary parties to this action, in their "Upper Basin" capacities, and in their capacities as "States of the Upper Division," as those terms are defined in the Colorado River Compact?

SUMMARY OF THE ARGUMENT

I.

Whether additional parties are necessary to grant complete relief to the present parties requires a determination of whether issues in the controversy, however resolved, will affect the interests of those parties. No particular resolution of them can be assumed. The Special Master has departed from this rule, and has made substantive determinations without evidence on the merits of the issues determined.

II.

The four absent States are necessary parties to an adjudication of the claims asserted by the United States to the waters of the Colorado River System.

The United States' claims include: (1) water to supply the existing water delivery and electrical energy contracts of the United States in the Lower Basin; (2) water to satisfy the international obligations of the United States, including the Mexican Water Treaty; (3) water to fulfill obligations of the United States to Indians and Indian Tribes in Arizona and California; (4) water to supply the full capacity of the various structures owned by the United States in the Lower Basin; (5) water to supply the needs of the National Park Service, the Bureau of Land Management and the Forest Service in Arizona and California should these needs be jeopardized in this suit; and (6)

water to protect the interests of the United States in flood control and navigation. Specific claims in the first three categories aggregate 11,785,250 acre-feet per annum—far in excess of the 8,500,000 acre-foot aggregate of uses for the Lower Basin specified under Articles III(a) and III(b) of the Colorado River Compact.

The Special Master has erred in not recognizing the impact of these claims, if they are sustained, upon the interests of the absent States. He has confused the place where water is used, or delivered to Mexico (*i.e.*, the Lower Basin or the international boundary), with the place from which the water must be supplied.

The United States denies that all its rights are subjected by the Boulder Canyon Project Act to the Colorado River Compact. It expressly asserts that its claims on behalf of Indians are in no way subject to or affected by the Colorado River Compact and, contrary to the Special Master's determination, are not chargeable under the Compact to the Basin and State in which they are situated. The Mexican Water Treaty obligation, in terms, is to supply a guaranteed quantity from "any and all sources." Thus, the United States' claims are asserted to be independent of the Compact. It would be grossly inequitable either to saddle the Lower Basin with federal claims which are claims to the waters of the whole river system, or to leave in doubt the obligation of the absent States to contribute to the satisfaction of those claims.

Clearly, the magnitude of the Upper Division responsibility to deliver water is placed directly in issue by the prayer of the United States to quiet title to water to serve the Mexican treaty, and to quiet title to water for all purposes and from all sources in an aggregate amount greater than that which can be found in the Lower Basin.

The United States will be bound, throughout the entire Colorado River Basin, by the decree of this Court determining its rights under the Boulder Canyon Project Act and the Colorado River Compact. To subject the United States in the operation of federal works in the Upper Basin to one interpretation of the Compact, leaving the Upper Basin beneficiaries of those works free to assert a contrary interpretation, would produce hopeless chaos.

III.

Two of the issues in this litigation are (1) whether Arizona effectively ratified the Colorado River Compact in 1944, and (2) whether, if Arizona's purported ratification was effective, California's obligation to all her sister Colorado River Basin States under the California Limitation Act continues to be binding. California denies that Arizona effectively ratified the Colorado River Compact, and further asserts that a seven-State Colorado River Compact (*i.e.*, with Arizona a party) and the California Limitation Act are mutually exclusive.

The Special Master disposes of the first issue, as it affects the absent States, by determining that

the absent States are protected against Arizona appropriations by the Colorado River Compact regardless of whether Arizona is a party to that agreement. His conclusion is contrary to the decision in *Arizona* v. *California,* 283 U.S. 423 (1931), which held that Arizona, because not a party to the Compact, could appropriate all unappropriated water in the Colorado River System. That decision is *res judicata* in this litigation.

The Special Master disposes of the second issue, as it affects the absent States, by determining that those four States have no legal rights under and no interest in the California Limitation Act. This decision is contrary to the words of the Limitation Act and the Boulder Canyon Project Act, which prescribed the Limitation Act's terms expressly making the absent States beneficiaries, and is contrary to the legislative history of the Project Act. The Special Master's determination with respect to the Limitation Act has been neither urged nor acquiesced in by the absent States.

IV.

A fundamental misconception of the Special Master is that the Colorado River Compact divides the Colorado River System into two separate and independent parts, as geographical territory might be divided between two States. This misconception is the basis of his failure to understand the nature of the suit.

Arizona's suit merges three objectives, each involving the rights and obligations of all of the

other Colorado River Basin States under the Colorado River Compact:

1. *Relief essentially declaratory in character.*

Arizona asks:

(a) a declaration of the meaning of the term "beneficial consumptive use," appearing in Articles III(a) and III(b) of the Colorado River Compact. These Articles relate only to *inter*-basin rights. A declaration of their meaning affects both Basins. Arizona's allegation that "the use of water salvaged by man is not a beneficial consumptive use" would enable her to encroach, without charge, to the extent of more than 1,000,000 acre-feet upon the unapportioned surplus above the quantities specified in Articles III(a) and III(b) in which all seven States have undivided common interests.

(b) a declaration that the waters referred to in Article III(b) of the Compact are "apportioned," *i.e.*, apportioned not only to Arizona but to the Lower Basin against the Upper Basin.

(c) a declaration that reservoir losses shall be charged as beneficial consumptive uses against the apportionment made by Article III(a) to the Lower Basin. Nevada, intervening, insists that such losses be charged to the "surplus" in which the absent States have an undivided interest.

2. *A suit to quiet title.*

Arizona asks that her title be forever quieted to beneficial consumptive uses (measured in terms

of main stream depletion, with no charge for the use of "salvaged" water) as follows:

(a) 1,000,000 acre-feet per annum of the increase of use permitted to the Lower Basin by Article III(b), all to be taken from the Gila River System.

(b) 2,800,000 acre-feet per annum of the 7,500,000 acre-feet per annum of beneficial consumptive uses apportioned to the Lower Basin by Article III(a) of the Colorado River Compact, all from the main stream (except to the extent that uses on the Gila exceed 1,000,000 acre-feet per annum), subject to equitable shares for New Mexico and Utah. The 2,800,000 claimed by Arizona is the "residue" of the Lower Basin's Article III(a) apportionment after deducting the quantities of Article III(a) uses she concedes to California and Nevada from the main stream, *i.e.*, 4,400,000 acre-feet to California, and 300,000 to Nevada. Arizona identifies the apportionment made by Article III(a) to the Lower Basin with the obligation imposed by Article III(d) on the States of the Upper Division to deliver 75,000,000 acre-feet at Lee Ferry in each decade. Thus, to quiet title in Arizona to 2,800,000 acre-feet of Article III(a) uses from the main stream, Arizona must quiet title in the Lower Basin, as against the Upper Division to all of the 75,000,000 acre-feet of Article III(d) deliveries as water the use of which is "apportioned" by Article III(a). The Special Master apparently agrees with Arizona's contention.

This is a fundamental revision of the Compact, converting it from a system-wide Compact into what would be essentially a main stream agreement, and from an allocation of beneficial consumptive uses to an allocation of the flow of the main stream. Such a revision could not be effected without the concurrence of the four States of the Upper Division. Article III(a), as written, is an apportionment "from the Colorado River System," defined in Article II(a) as "the Colorado River and its tributaries." That apportionment includes "all water necessary for the supply of any rights which may now exist," *i.e.*, rights to uses on the tributaries as well as on the main stream. The Lower Basin thus cannot claim all of its Article III(a) apportionment from the main stream. Accordingly the obligation of the States of the Upper Division under Article III(d) to deliver 75,000,000 acre-feet in each decade to the Lower Basin is not identical with the Article III(a) apportionment to the Lower Basin, but contains water available for Mexico, to which the Lower Basin has no title. If the 75,000,000 acre-feet per decade were decreed to the Lower Basin as its Article III(a) apportionment, Article III(c) would require the States of the Upper Division to increase their deliveries to supply water to Mexico, since, upon Arizona's measurement of "consumptive use," there is no "surplus" in the 75,000,000 acre-feet out of which the Mexican burden can be met. Statistics published by the State of Colorado show that if a minimum of

75,000,000 acre-feet per decade were delivered by the States of the Upper Division during a period like that of 1930-52, the Upper Basin would have available no more than 6,200,000 acre-feet per year of its apportioned consumptive use of 7,500,000 acre-feet, and at that these statistics do not provide for the Mexican burden. The Special Master's contrary assumptions as to water supply are not supported by any record.

If title cannot be quieted in the Lower Basin to 7,500,000 acre-feet per annum in the main stream as apportioned by Article III(a), title cannot be quieted in Arizona to 2,800,000 acre-feet of main stream Article III(a) uses, for she concedes 4,700,000 acre-feet to Nevada and California.

3. *A suit for injunctive relief.*

Arizona asks an injunction against the assertion by California of any right in the excess or surplus waters not covered by Articles III(a) and III(b) of the Compact, unless and until a new compact, made after 1963, apportions such waters to the Lower Basin. This presupposes that neither Basin can acquire appropriative rights in such waters except by a new compact, *i.e.*, with Arizona's concurrence. California asserts that either Basin may validly appropriate unapportioned waters, subject only to divestiture by a new compact or by the superior requirements of the Mexican Water Treaty. Inasmuch as the unapportioned surplus is a common fund of water in which the absent States have undivided and

undetermined interests in common with the present parties, the questions both of how rights in that common fund shall be established and what rights have been established cannot be determined in their absence. The magnitude of that common fund is affected by the question of whether Arizona may encroach upon it by avoiding any charge under Articles III(a) or III(b) for the use of "salvaged water."

V.

The Special Master expressly concedes that the resolution of some of the issues in the present litigation may ultimately affect the interests of the absent States. He nevertheless finds that their joinder is not appropriate at this time. The Special Master bases this conclusion on two legal premises that are in fundamental error. The first is that an independently justiciable controversy, which could provide the basis for a separate lawsuit by or against absent parties, must be stated before they can be joined. The second erroneous premise is that a present breach of obligation or a present physical invasion of a claimed right is required as an element of a justiciable controversy when suit is brought to quiet title. He combines with these legal premises an assumption, contrary to the pleadings and based neither on evidence nor on a proper exercise of judicial notice, that water supply exceeds all the claims against it, and that this condition will continue into the indefinite future. Thus, he concludes, requirements for a

justiciable controversy forbid joining the absent States, a conclusion he reinforces by an erroneous postulate that the sovereign status of the absent parties precludes the application of the usual rules of joinder.

The legal premises are in error. If a controversy is "justiciable" among present parties—and the Special Master expressly finds that it is—there is no further question of justiciability on the joinder motion. This Court has constitutional power to dispose fully and effectively of all disputes which are properly before it. The power to join as parties those who are necessary in order to accord complete relief to those already parties is a familiar application of this power. If a finding of justiciability is necessary with respect to the absent States sought to be joined, the joinder rules themselves satisfy the justiciability standards set by this Court in that the resolution of issues in the existing controversy vitally affects the rights and interests of the absent States, thereby constituting an immediate invasion of their present rights.

Even if this were not true, the Special Master's conception of a justiciable controversy as a dispute based on a present breach of obligation or present physical invasion of a claimed right is too restrictive. In the absence of such a breach of obligation or invasion of right, a suit to quiet title by Arizona or the United States against the absent States alleging the identical title here asserted

would clearly state a justiciable controversy within the constitutional power of this Court to decide. *A fortiori,* such a breach or invasion is not required in order to accord complete relief in the existing quiet title suits brought by Arizona and the United States.

Even if the Special Master's concept of justiciability were correct, both as related to joinder and as related to suits to quiet title, there is no basis to apply that concept in this case. There is no basis in the evidence (none having been taken) and there can be no basis in judicial notice (the facts being controversial) for the Special Master's assumptions as to water supply and water use. Evidence, if taken, would show the true facts to be contrary to those he has assumed.

Finally, the Special Master's recommendation that California, sued as a sovereign, be denied the right to join the absent States, is without support either in reason or in judicial precedent. This Court has been consistently careful to respect the quasi-sovereign status of states sued as defendants. A defendant state is entitled to at least as much consideration as a non-sovereign defendant. California, a sovereign defendant in this case, is sued on her obligation stated in the California Limitation Act. That obligation runs to six States named as beneficiaries. California is entitled to the same protection that would be accorded a non-sovereign obligor—namely, joinder of all joint obligees or dismissal of the suit. Sued for a declaration of rights and obligations under the

Colorado River Compact, California is entitled to the same protection that would be accorded a non-sovereign party similarly sued—namely, joinder of all the States among whom the rights and obligations of the Compact run. Sued by the United States, California is entitled to the joinder of her sister sovereigns, who by virtue of their common agreement and equal status, must share the burden of the Federal claims.

ARGUMENT

I.

GENERAL EXCEPTION

THE SPECIAL MASTER ERRED IN APPLYING AS A TEST FOR THE JOINDER OF NECESSARY PARTIES WHETHER A DECREE CAN BE SOUNDLY ENTERED IN THIS CAUSE WHICH WILL NOT AFFECT THE ABSENT STATES. THE PROPER TEST IS WHETHER ANY DECREE REASONABLY RESPONSIVE TO THE PLEADINGS WILL NECESSITATE THE PRESENCE OF THE ABSENT PARTIES IN ORDER TO GRANT COMPLETE RELIEF TO THOSE ALREADY PARTIES*

The Special Master's conclusions that the absent States "presently have no legal or equitable interest in the instant cause" and that "a decree can be soundly entered in this cause that will not affect the Upper Basin States with respect to rights to water or the uses of waters in the Upper Basin" (Report, p. 67, conclusions 11, 16) depend upon a number of substantive determinations of both fact and law which he has made. Such substantive determinations are improper at this stage of the litigation because:

(a) They have been made without taking evidence, without information as to the legislative history of the laws he interprets, and without a full hearing on the issues decided.

---

* Rule 19 of the Federal Rules of Civil Procedure and the case authority on joinder of parties are analyzed in the California Defendants' Initial Brief, pp. 26-31, and their Reply Brief, pp. 7-19. The applicability of this rule to interstate cases is discussed in Part V, Section D of this Brief.

(b) Most of the determinations adversely affect the absent States even as decided by the Special Master. Even where the Special Master's determination does not adversely affect the absent States, a different decision which can reasonably be reached under the pleadings would so affect them.

(c) The Special Master's substantive determinations can properly be made only in a judicial proceeding to which the absent States are parties, clearly bound by the decisions so made. If determinations different from those of the Special Master are reached on the merits, joinder of the absent States will be compelled later in the suit when their joinder will greatly prolong the litigation.

Whether the Special Master was right or wrong in his substantive determinations, we do not ask the Court at this time to decide. A number of the determinations in our view are erroneous, and will not be sustained on the merits. At least one determination (that Indian uses are to be charged to the State and Basin where they take place) we believe to be correct, and should be reflected in the Court's final decree. In this and in every other instance here discussed, however, the Special Master's determination is a matter which properly can be decided only after trial at which the facts have been developed. They relate to issues which cannot be decided now.

If this case presented the problem of indispensable parties, whose joinder would destroy the

Court's jurisdiction, it might be desirable to try certain issues to find whether a decree can be fashioned to permit retaining jurisdiction. That, however, would require a full hearing and trial on the matters decided.*

In this case, however, the issue of indispensability is not involved, and, on any view, one hearing on the merits is enough. In necessary party cases no particular decision of contested issues can be assumed but must await hearing on the merits. This standard has been applied even in indispensable party cases.**

---

* "[N]o evidence was taken by the Special Master, as it was his opinion that this was unnecessary and also that it would entail a consideration substantially as extensive as that required for a final hearing on the merits." (Report, p. 4.)

** ". . . The fact that their [indispensable parties'] interests may not have been prejudicially affected by the final judgment below, which was rendered after a trial on the merits, is not controlling, because the question of indispensable parties, and particularly of diversity jurisdiction, does not depend upon the result of the suit. The true test is the situation that existed before and not after entry of the final judgment." *Calcote* v. *Texas Pac. Coal & Oil Co.*, 157 F.2d 216, 218 (5th Cir.), *cert. denied*, 329 U.S. 782 (1946).

"The slightest consideration will show that if appellee were right in the view he takes, that the relief granted, rather than that asked, determines indispensability, the whole doctrine and the equitable basis on which it rests would be gone by the board." *Young* v. *Powell*, 179 F.2d 147, 152 (5th Cir.), *cert. denied*, 339 U.S. 948 (1950).

"The interest of absent parties must be determined by the issues presented by the pleadings and the evidence and not by the final decision in the case. The mere fact that the court decides the issues in such a way that the absent parties

Issues which are frivolous, immaterial, or otherwise lacking in substance can, of course, be disposed of summarily. *Cf. Bourdieu* v. *Pacific Western Oil Co.*, 299 U.S. 65 (1936) (indispensability of United States need not be decided where complaint fails to state cause of action against defendant). However, this is not true of the issues dealt with by the Special Master. Some of the issues which he has decided go to the very heart of the controversy. To decide them at this stage of the litigation is virtually to decide the case itself without trial.

To these issues we now turn.

---

would have no interest in the subject matter of the suit does not control." *Oglesby* v. *Springfield Marine Bank*, 385 Ill. 414, 426, 52 N.E. 2d 1000, 1005 (1944).

"In determining who are necessary parties we cannot speculate as to how the case might be decided." *Lewis* v. *Hanson*, 124 Mont. 492, 499, 227 P.2d 70, 73 (1951).

II.

THE SPECIAL MASTER HAS ERRED IN FINDING THAT THE FOUR ABSENT STATES ARE NOT NECESSARY PARTIES TO AN EFFECTIVE ADJUDICATION OF THE CLAIMS ASSERTED BY THE UNITED STATES TO THE WATERS OF THE COLORADO RIVER SYSTEM

In its Petition of Intervention, the United States prays this Court "To quiet the title of the United States of America in and to each and every right to the use of water claimed and exercised by it, all as asserted in this Petition, ..." (Petition of Intervention, par. XXXIX, p. 42.) These claims include rights:

(1) To the use of Colorado River System water to fulfill its obligations arising from water delivery contracts aggregating 8,462,000 acre-feet of the water stored in Lake Mead behind Hoover Dam and from contracts to generate electrical energy in the Lower Basin,* (*Id.*, par. XX, p. 18.) The United States alleges "that each and every contract entered into by the United States of America involving the use and delivery of water or electric power . . . are valid, binding covenants constituting the measure of the rights of the parties

---

* With the average head January through September, 1955, of 450 feet at Hoover Dam, 11,300,000 acre-feet of water per year must pass through the turbines to generate contract firm energy.

to the extent that they are reflected by those covenants." (*Id.*, par. XXXI, pp. 27-28.)*

(2) To the use of water in sufficient quantity to fulfill its obligations arising from international treaties and conventions. (*Id.*, par. XIII, pp. 12-13; par. XXVIII, p. 24.) This claim includes 1,500,000 acre-feet of water per annum, measured at the international boundary, required to satisfy the Mexican Water Treaty. Delivery at the international boundary requires much more water at Lee Ferry because of channel losses and evaporation in transit. In addition, this claim includes 76,000 acre-feet per annum for specified fish and wildlife projects stemming from international conventions with Great Britain and Mexico.

(3) To the use of water to satisfy its obligations to Indians and Indian tribes in California and Arizona. (*Id.*, pars. XXV-XXVII, pp. 22-23.) This claim totals 1,747,250 acre-feet of annual diversions (not beneficial consumptive use).

(4) To the use of water in sufficient quantities "to satisfy the maximum legal demands for . . . the various projects . . . to the full capacity of the diversion, carrying, and storage structures described in this Petition and its appendixes; . . . ." (*Id.*, par. XXX, p. 25.) The quantity of water included in this claim is unspecified, but presumably

---

* In listing the allegations of the United States (Report, pp. 20, 21), the Special Master omits any reference to this claim, despite the fact that it is the largest single claim asserted by the United States.

includes the full capacity of all structures owned by the United States in the Lower Basin.*

(5) To the use of water in unspecified quantities for the satisfaction of the needs in Arizona and California of the National Park Service, the Bureau of Land Management and the Forest Service should these needs be jeopardized in this suit. (*Id.*, par. XXX, p. 26.)

(6) To the use of water in unspecified quantity to protect the interests of the United States in flood control and navigation. (*Id.*, par. XXIX, pp. 24-25.)

The United States' claims are urged to be independent of the Colorado River Compact. (Petition of Intervention, pars. XXXIV and XXXVII, pp. 34, 38.) If so held, they necessarily become claims and rights against the waters of the entire Colorado River System. The specified United States claims total 11,785,250 acre-feet of water per annum.** Manifestly, this amount

---

* This claim is not mentioned by the Special Master in his listing of the United States' claims. (Report, pp. 20-21.)

Some of the major Lower Basin structures listed by the United States (Petition of Intervention, Appendixes I, II, pp. 43-58), with stated storage capacities, under this category are:

Hoover Dam (32,359,000 acre-feet)
Davis Dam (1,820,000 acre-feet)
Parker Dam (717,000 acre-feet)
Roosevelt Dam (1,398,430 acre-feet)
Other federal dams on Salt River and other tributaries in Arizona (631,135 acre-feet)
Coolidge Dam (1,285,000 acre-feet)

** Some of these claims are stated in terms of beneficial consumptive uses, and some in terms of diversions. Of course, 11,785,250 acre-feet of diversions will support a lesser total

cannot be decreed from the 8,500,000 acre-feet of beneficial consumptive uses per annum allocated to the Lower Basin by Articles III(a) and III(b) of the Colorado River Compact. Therefore, a minimum of over 3,000,000 acre-feet of water per annum could be decreed only from the waters of the entire System—either surplus or the water apportioned to the Upper Basin by Article III(a) of the Compact. The interest of the absent States in such a resolution of the United States' claims is obvious. Equally obvious is the interest of the defendants in having these claims adjudicated only in a suit to which all seven Colorado River Basin States are parties.

In finding that these United States claims do not materially affect the absent States, the Special Master:

(1) Determines that "rights of the Indian tribes in the Upper Basin shall be satisfied solely from waters of the Upper Basin, and the rights of Indian tribes in the Lower Basin shall be satis-

---

quantity of beneficial consumptive uses. And, conversely, to the extent that claims are for beneficial consumptive use, considerably more than 11,785,250 acre-feet of water would be required. The California and Arizona contracts, which are included in this figure, call for the delivery of water from storage in quantities to provide 8,162,000 acre-feet of beneficial consumptive uses. The remainder of the specified United States claims, including the water for the Nevada Water Delivery Contract, relate to "wet" water, *i.e.*, diversions or physical deliveries. In addition the United States claims water for certain large projects for which it gives acreages but not the requirements in acre-feet of water; *e.g.*, Salt River Project, 243,000 acres. (Petition of Intervention, p. 56.)

fied solely from water appropriated [*sic*] to that Basin." (Report, p. 54.)

(2) Finds that "the interest of the United States in this proceeding is confined to its rights relating to waters of the Lower Basin" (Report, p. 67, conclusion 14), and that the United States' claims do not "enlarge the scope of this cause." (Report, pp. 44, 59, 67.)

(3) Finds that the "United States here asserts no rights against the Upper Basin States as to Upper Basin waters." (Report, p. 44.)

(4) Determines that, since the United States' claims are asserted only "against parties to this cause," the absent States cannot be affected by the claims. (Report, p. 59.)

Each of these conclusions misconstrues the Government's pleading; each is premature in determining a substantial issue on the merits; each is wrong in its assumption that the issue does not affect the absent States.

The Special Master's determination that Indian rights are chargeable to the Basin in which they are situated flatly contradicts the position of the United States that "the rights to the use of water of the Indians and Indian Tribes *are in no way subject to or affected by the Colorado River Compact.*" (Emphasis supplied.) (Petition of Intervention, par. XXXVII, p. 38.). Moreover, the United States specifically denies that Indian rights are chargeable to the Basin and State in which they

are located.* On the merits, a conclusion contrary to that of the Special Master is entirely possible under the pleadings and would affect the absent States profoundly.

The United States relies on Article VII of the Colorado River Compact, which provides:

---

*The United States "denies each and every allegation of the paragraphs of the pleadings of the parties to which reference has here been made" including expressly the "counter allegation of the defendants . . . declaring that all beneficial consumptive uses of water by Indian Tribes pursuant to obligations of the United States to such Tribes are chargeable to the beneficial consumptive uses available to the Basin under the Compact, and to the State in which such uses are situated, ..." (Petition of Intervention, par. XXXVII, pp. 37, 38.)

The United States has taken the same position in a meeting with the Special Master and other counsel. The following colloquy beween the Special Master and Assistant United States Attorney General J. Lee Rankin, which took place at the Special Master's first meeting with counsel in August 1954, is instructive:

> "THE MASTER: [referring to whether claims for Indians are to be embraced within whatever share Arizona is claiming or in addition to it] Do you think before the time we get to the actual hearing you can know what the specificities are in that regard?
>
> "MR. RANKIN: Yes, but in regard to the claims, you are going to have to determine before this case is over whether or not the Indian claims as will finally be determined are charges on the whole river or charges against each state in which they are or what the rights of the Indians are in that regard from a legal standpoint.
>
> "THE MASTER: I see.
>
> "Mr. RANKIN: And I don't think you will be able to decide that until you have seen the whole picture about the entire controversy." (Transcript of Organizational Meeting, August 5, 1954, pp. 96-97.)

> "Nothing in this compact shall be construed as affecting the obligations of the United States of America to Indian tribes."

Before the Colorado River Compact became effective the rights of the Indian tribes were clearly rights against the entire Colorado River System. Now, under the Special Master's view, they are rights only against the waters available to each Basin. Whatever the ultimate conclusion may be, it is clear that the problem is a substantial one and should not be decided in advance of trial.

The Special Master's second conclusion—that the United States' claims do not affect the absent States because the claims are limited to the use of water in the Lower Basin and therefore the United States has not attempted to "enlarge the scope of this cause"—is equally in error.* At

---

* The Special Master twice raises a question, which he finds unnecessary to decide, whether an intervener can enlarge the scope of the controversy. (Report, pp. 44, 59.) This Court, in *Oklahoma* v. *Texas*, 258 U.S. 574, 581 (1922), held that the United States as an intervener in an original action can enlarge the scope of the suit:

> "Under the Constitution our original jurisdiction extends to suits by one state against another, and to suits by the United States against a state. [Citing cases.] In its first stage this was a suit by one state against another. When the United States intervened it became also a suit by the United States against those states. *In its enlarged phase,* it presents in appropriate form the conflicting claims of the two states and the United States to the river bed, and calls for their adjudication." (Emphasis added.)

See earlier opinion, *Oklahoma* v. *Texas*, 252 U.S. 372, 376 (1920).

See also 4 MOORE, FEDERAL PRACTICE ¶¶ 24.16, 24.17 (2d ed. 1950).

several points in his report, the Special Master characterizes "the subject matter of this suit" as the "water allocated to the Lower Basin States."* (*E.g.*, Report, p. 35.) It appears that the Special Master views this litigation as confined in scope to 8,500,000 acre-feet of beneficial consumptive use per annum.** The Special Master is obviously wrong because the specific claims of the United States total 11,785,250 acre-feet.

The Special Master, in his third conclusion with respect to the United States' claims (Report, p.

---

* One ground for the Special Master's conclusion is that the Upper Colorado River Basin Compact in Articles VII and XIX specifically provides for use of waters in the Upper Basin by the United States, and the United States is a party to that Compact. (Report, p. 60.) Although the United States consented to the Upper Basin Compact, the Special Master is in error in stating that the United States thereby became a party. The legislative history makes this clear. The House Committee on Public Lands, in reporting legislation to give this consent, declared:

> ". . . It is recognized that the Upper Colorado River Basin Compact is binding only upon the States which are signatory thereto . . . . It is further recognized that Congress, by giving its consent to the Upper Colorado River Basin Compact, does not commit the United States to any interpretation of the Colorado River Compact expressed in, or implied from, the Upper Colorado River Basin Compact, and expresses neither agreement nor disagreement with any such interpretation." H.R. Rep. No. 270 on H. R. 2325, 81st Cong., 1st Sess. (1949).

** However, the Special Master recognizes the evidence must be received at the trial on the merits to determine the total quantity of water, including surplus, physically available to the Lower Basin. (Report, pp. 61-62.)

44) says that the "United States here asserts no rights against the Upper Basin States as to Upper Basin waters." (*Ibid.*) While the United States' claims relate to uses located in the Lower Basin, they constitute claims upon the unappropriated waters of the entire system, thus reaching to the unappropriated portion of the water apportioned to the Upper Basin by Article III(a) of the Compact. The Special Master confuses the site of use with the source of water to satisfy the use.

In his fourth conclusion, the Special Master attaches additional significance to the fact that the United States asserts its claims only "against the parties to this cause." (Report, pp. 44, 59.) He holds that since "the parties to this cause were and are Lower Basin States," the absent States cannot be affected by the United States' claims. (*Ibid.*) If this standard had been applied in *Texas* v. *New Mexico,* No. 9 Original, 1955, it would have been unnecessary to refer the question of indispensability of the United States to the Special Master (348 U.S. 805 (1954)), since Texas did not name the United States in her complaint. *Cf. Arizona* v. *California,* 298 U.S. 558 (1936), in which the United States was held indispensable although Arizona alleged no claims against the Government. Obviously, the Special Master's reasoning would simplify to the point of extinction all rules to determine necessary parties.

In each of his above four conclusions, the Special Master erred in finding that claims of the United States do not affect the absent States.

Some of the ways in which they are necessarily affected are:

(1) The United States "denies that Section 8 and Section 13(b), (c) and (d) of the Boulder Canyon Project Act subject all of its rights to the provisions of the Colorado River Compact . . . ." (Petition of Intervention, par. XXXIV, p. 34.)* These sections provide that the United States and those claiming under it shall be subject to and controlled by the Colorado River Compact, and also (Section 8(b)) by a compact authorized among Arizona, California, and Nevada, or any two of them, which was never in fact consummated.** The references in the Project Act to the Colorado River Compact must be read in the light of the fact that the Compact has escape clauses for navigation (Article IV(a)), Indian

---

* This denial of the United States is a negative pregnant with the affirmative implication that some of the rights of the United States are subjected by the Project Act to the Colorado River Compact. Uncertainty over which rights are claimed by the United States to be governed by the Compact should have been resolved before deciding the joinder motion.

At the hearing on this motion before the Special Master, the California defendants sought such clarification. However, the Special Master refused to address the relevant inquiries to counsel for the United States. (Transcript, pp. 355-56, 419.)

** The Special Master says that "The Colorado River Compact, by reference, was made a part of the Boulder Canyon Project Act, by Section 8(b) . . . ." the text of which he then quotes. (Report, p. 15.) Section 8(b) does not refer to the Colorado River Compact but to the proposed tri-state compact. Sections 8(a) and 13(b),(c),(d) cover the relationship between the Colorado River Compact and the rights of the United States.

rights (Article VII), obligations to Mexico (Article III(c)), and "present perfected rights" (Article VIII). Moreover, the Compact, as Articles I and VI expressly recognize, covers only a part of the waters of the Colorado River System. If any of the claims of the United States are held to be independent of and unaffected by the Colorado River Compact, the apportionment to the absent States of 7,500,000 acre-feet of beneficial consumptive use per annum in perpetuity would provide no effective insulation against appropriations by the United States.

(2) To the extent that the United States' claims, other than those relating to the Mexican Water Treaty, are satisfied from surplus over the quantities specified in Articles III(a) and III(b) of the Compact, these claims reduce or eliminate the "buffer" of surplus which protects the Upper Division States from the obligation imposed by Article III(c) to deliver additional water in satisfaction of any Mexican Treaty deficiencies. The absent States must necessarily be affected by any determination that permits reduction in, if not complete exhaustion of, the amount of surplus available to satisfy the Mexican Treaty.

(3) To the extent that the United States' claims are satisfied from this surplus, they reduce the surplus water to which, in California's view, the absent States could otherwise secure rights by priority of appropriation and which would otherwise be subject to further apportionment after 1963 under Articles III(f) and III(g).

(4) Since the United States seeks to quiet title to 1,500,000 acre-feet of water at the international boundary for the Mexican Treaty, the absent States are affected by the type of decreed rights the United States may secure in this regard. The United States does not confine her claim under the Mexican Treaty to "surplus" water. The Treaty obligation, by Article 10, is a first call on all water "from any and all sources," not merely a claim against "surplus." Indeed, as Arizona alleges in her Complaint, "It is uncertain whether excess or surplus flows of the Colorado River unapportioned by the Compact will be adequate to satisfy the allotment of water to Mexico." (Complaint, par. XVI, p. 21.) Clear title in the United States requires a determination of the magnitude of the respective obligations of all of the Colorado River Basin States to satisfy Mexican Treaty deficiencies under Article III(c).

The Special Master obviously contemplates a decree in this case which will bind the United States with respect to its Lower Basin rights only. It is doubtful that the binding effect of the Court's decree can be so limited.* The United States will

---

* The United States would be bound, under the doctrine of collateral estoppel, in any future litigation involving exclusively Upper Basin States. Three Upper Basin States (Arizona, New Mexico and Utah) will be parties if the Special Master's recommendation is followed, and those three will also be bound.

A precise parallel is *Oklahoma* v. *Texas*, 256 U.S. 70 (1921). That case held that an earlier suit, *United States* v. *Texas*, 162 U.S. 1 (1896), conclusively determined that the Texas-

be bound by the decree in this case. It must operate its reservoirs and works in the Upper Basin, which control supply to both Upper and Lower Basins, in conformity with the decree. For example, if the contention of the United States that its rights are not subjected by Sections 13(b), (c) and (d) of the Boulder Canyon Project Act* to the Colorado River Compact is sustained by the decree in this case, the United States would be free of the Compact in its operations throughout the Colorado River Basin.** Similarly, should the decree determine that rights can and have been acquired in surplus water by present parties (as

---

Oklahoma border, first delineated in a treaty with Spain in 1819, is the south bank of the Red River, and not the center of the channel. The earlier case was conclusive despite the fact that it had involved only a small segment of the boundary in dispute in the later suit. The Colorado River Compact, even more than the Spanish Treaty, is indivisible. It cannot mean one thing in California, Nevada, parts of Arizona, New Mexico, and Utah, and something else in Colorado, Wyoming, and other parts of Arizona, New Mexico and Utah.

* These sections of the Project Act, if effective at all, operate with respect to claims of the United States throughout both basins. Their operation is not limited to the Lower Basin.

** This is not an academic matter to the Upper Basin. In the pending case of *United States* v. *Northern Colorado Water Conservancy District*, Civil No. 2782 (D. Colo. 1955), the decree recently entered reserves for future judicial determination the issue of the extent to which the United States, by virtue of Section 13 of the Project Act, subjected its rights in the *Upper* Basin to Article IV of the Colorado River Compact. An expanded domestic water supply for the City and County of Denver and the City of Colorado Springs may turn on the ultimate resolution of this issue.

the California defendants contend), the United States cannot be permitted to impound and withhold surplus in Upper Basin reservoirs on the theory that no rights in surplus can be secured prior to a 1963 compact. To confine the binding effect of the decree upon the United States to its Lower Basin operations only would create a bifurcated sovereign whose Upper and Lower Basin responsibilities would be administered without reference to each other. Such a result would produce hopeless confusion.

Moreover, if the federal works in the Upper Basin are controlled by the Colorado River Compact as construed by a decree in this case, to which the United States is a party, but the beneficiaries of those works in the Upper Basin are free to assert contrary interpretations because they are not parties to the decree, confusion will be converted into chaos.

III.

THE SPECIAL MASTER ERRED IN NOT RECOMMENDING JOINDER OF THE ABSENT STATES BY VIRTUE OF THEIR INTEREST IN THE RESOLUTION OF THE ISSUES OF WHETHER ARIZONA IS A PARTY TO THE COLORADO RIVER COMPACT, WHETHER THE STATUTORY COMPACT CONTAINED IN THE BOULDER CANYON PROJECT ACT AND THE CALIFORNIA LIMITATION ACT REMAINS IN EFFECT, AND THE INTERPRETATION OF THAT STATUTORY COMPACT

The Boulder Canyon Project Act, by which Congress consented to the Colorado River Compact, was specified to become effective on one of two alternatives stated in the first paragraph of section 4(a):

(1) ratification by all seven signatory States within six months and proclamation by the President;

(2) in default of seven-State ratification within six months, ratification by six States including California (the six States waiving the Compact requirement for seven-State ratification) and the enactment by the California Legislature of a Limitation Act in terms prescribed by the Project Act, and proclamation by the President.

The Boulder Canyon Project Act and the Colorado River Compact became effective June 25, 1929, upon the President's Proclamation that the first alternative had failed and the second alterna-

tive had been accomplished. (46 STAT. 3000 (1929), Appendix 4 to California Answer.)

California contends that a seven-State Colorado River Compact and a six-State Colorado River Compact plus the California Limitation Act are mutually exclusive alternatives. Arizona sues here, however, relying both upon asserted rights as a party to the Colorado River Compact and as a beneficiary of the California Limitation Act. The Special Master finds that the absent States are not affected by this issue because (1) the protection afforded the Upper States by the Colorado River Compact is effective against Arizona even if Arizona is not a party, and (2) the absent States have no rights under and no interest in the California Limitation Act. (Report, pp. 45, 58.)

A. The Special Master's determination that the protection afforded the Upper Basin States by the Colorado River Compact is effective against Arizona even if Arizona is not a party to the Compact (Report, pp. 48, 50) is patently erroneous, and deeply affects the absent States

Arizona contends that in 1944 she effectively ratified the Colorado River Compact. California denies that Arizona's ratification was effective. In 1934, this Court determined that Arizona, because she was not a party to the Compact, lacked standing to litigate against the six other Colorado River Basin States interpretations of the Com-

pact which she again asserts in this suit.* The 1934 decision upon that point is *res judicata* in this suit. If the Court determines that Arizona is not a party to the Compact, Arizona still lacks standing to seek some and possibly all of the relief she asks.

On the merits of whether Arizona is now a party to the Compact, the Special Master makes no determination. Indeed, he could not, because many factual matters are involved, and no evidence has been taken. However, he finds that the issue "is a matter of concern to water users in the Lower Basin only." (Report, p. 48.) "The only part of the Colorado River System involved here in which it [Arizona] has an interest is the Lower Basin; . . . ." (*Ibid.*)

The effect of this determination on the absent States is clear from the decision of this Court in *Arizona* v. *California,* 283 U.S. 423 (1931). If not a party to the Compact, Arizona is entitled to appropriate all the unappropriated water in the Colorado River System, including any unappro-

---

* *Arizona* v. *California,* 292 U.S. 341 (1934). Arizona's bill against the Secretary of Interior and the six other States sought to perpetuate testimony of the Compact negotiators that uses permitted the Lower Basin by Article III(b) are "for the sole and exclusive use and benefit of the State of Arizona." Arizona makes the same claim in this suit. The Court denied leave to file the bill in the earlier suit, on the ground, *inter alia,* that ". . . the meaning of the Compact, considered merely as a contract, can never be material in the contemplated litigation, since Arizona refused to ratify the Compact." 292 U.S. at 356-57.

priated part of the water necessary to satisfy beneficial consumptive uses apportioned to the Upper Basin by Article III(a).* If a party to the Colorado River Compact, she is obligated to respect the apportionment, insulated from the law of prior appropriation, which the Compact makes to the Upper Basin. The 1931 decision is *res judicata* as to that determination in this suit.**

Moreover, if Arizona's view that rights cannot be acquired in surplus should prevail, and if she is held to be a party to the Compact, she may not appropriate any surplus water which is subject, under Articles III(f) and III(g), to apportionment between the two Basins by a compact

---

* 283 U.S. at 463, n.15: "It is also argued that of the 7,500,000 acre-feet allotted by the compact to the upper basin states, only 2,500,000 have already been appropriated, and that thus the presently unused surplus of 5,000,000 acre-feet cannot be appropriated in Arizona. But Arizona is not bound by the compact as it has withheld ratification. If and when withdrawals pursuant to the compact by the upper basin states diminish the amount of water actually available for use in Arizona, appropriate action may then be brought."

** In the 1931 suit, as in two later suits, Arizona joined all six States of the Colorado River System, *Arizona* v. *California*, 292 U.S. 341 (1934); *Arizona* v. *California*, 298 U.S. 558 (1936). The Special Master finds nothing in the nature of a "*quasi estoppel*" in this fact which would compel Arizona to join the absent States in this action. (Report, p. 42.) The proponents of the joinder motion have not urged estoppel as a basis for joinder, but have called attention to the parties in the prior cases to show the unquestioned recognition of the fact that issues in those cases, which are also issues in the present litigation, could not be decided without the presence of all the Colorado River Basin States.

negotiated sometime after October 1, 1963. But if Arizona is not a party to the Colorado River Compact, and her view as to surplus (also urged by Nevada) is followed by the Court, Arizona alone among the Colorado River Basin States is entitled to appropriate all of the unapportioned water otherwise subject to apportionment by a post-1963 compact. The other States in the Colorado River Basin, since they are bound by the Compact, could not even compete with Arizona in the appropriation of this surplus water.

The Special Master attributes to the absent States the position that the issue of Arizona's status under the Compact does not require joinder "because (1) to them it is immaterial whether or not Arizona is a party, and (2) their obligations and rights will not be affected regardless of the determination of this question since they are controlled by the Compact." (Report, p. 46.)

The fact is that neither in their briefs nor in their oral argument did the absent States take either of the two positions the Special Master ascribes to them. Arizona's status under the Compact has long been a matter of pressing concern to all four States. More than once their official representatives have opposed any development in Arizona which would enable her to use more water unless and until, either by supplementary compact among all seven States or by a

contractual limitation act, Arizona should accept the obligations of the Colorado River Compact.*

---

*See "Protest Of The States of Colorado, New Mexico, Utah and Wyoming Against The Proposed Gila Valley Irrigation Project In Arizona And The Proposed Pilot Knob Power Plant In California, By the Representatives of the States in Interstate Conference at Denver, February 5th, 1936." This document was signed by the Attorneys General for Colorado, New Mexico, and Wyoming and by Special Counsel for Utah. This Protest stated:

"One of the principal purposes of the Compact is to protect the protesting States in respect to their present and future allocations against the acquisition of priorities that might be asserted against their basinal allocation by the States of the Lower Basin. It contemplates that Arizona, like California and Nevada, shall take her water, not out of the allocations made and to be made under the Compact to the Upper Basin, but out of those to the Lower Basin in which she belongs. Arizona, by not ratifying the Compact, denies and repudiates the inter-basinal division of the water made by the Compact and thereby questions the legal effect of water appropriations made and to be made in the protesting States of the Upper Basin, as against water appropriations made and to be made within her own limits. (p. 6.)

". . . .

". . . [T]hese protesting States would have no objection to Federal aid to water projects in Arizona if, as a condition precedent to the operative effect of such aid, that State, with the consent of the Congress which is now in session, would enter into an inter-state agreement with the other six States whereby she would become a signatory to the Compact, or, if, with the consent of the Congress, she were to enact a Self Limitation Act whereby she would contract with the United States for the benefit of the other Colorado River States, and each thereof, that her interests and rights in the Colorado River System should be bound by the Compact. . . ." (p. 10.)

For further protest by Upper Basin Representatives see 80 CONG. REC. 9388-89 (1936) and testimony of official representatives from Colorado, New Mexico, Utah, and Wyoming, before Subcommittee of House Committee on Appropriations, on Interior Department Appropriation Bill for 1938, Hearings, Part II, pp. 1807-43 (1937).

Even were it not for the 1931 decision, there could be no colorable argument for the proposition that the Compact's rights or obligations run to a non-signatory State. If the Compact protects the Upper Basin's apportionment against Arizona's appropriations, although Arizona is not a party, it could do so also against appropriations by California and Nevada if neither State had ratified the Compact. The Upper Basin could have negotiated an effective compact for the Colorado River Basin without the concurrence of any Lower Basin State.

Were the Colorado River Compact a contract between individuals, it is clear that all six original parties would be necessary to any decision as to whether a seventh had been added. (See California Defendants' Reply Brief, pp. 32-4.) If the curious anomaly of a six-state compact in the Lower Basin, a seven-state compact in the Upper Basin, and a six-and-one-half state compact for New Mexico and Utah is to be avoided, all the signatory States are necessary parties in a suit which must decide this issue.

B. The Special Master's determination that the "Upper Basin States could not sue as beneficiaries of the California Limitation Act," is patently erroneous and deeply affects the absent States as well as California (Report, p. 45)

The California Limitation Act, in conformity with the first paragraph of Section 4(a) of the Boulder Canyon Project Act, in express terms recites that the State of California "agrees irrevocably and unconditionally with the United States

and for the benefit of the States of Arizona, *Colorado,* Nevada, *New Mexico, Utah,* and *Wyoming* as an express covenant and in consideration of the passage of the said 'Boulder canyon project act' [emphasis supplied]" to limit her uses in California of Colorado River System water. The Limitation Act and the Boulder Canyon Project Act thus constitute a compact between California and the United States. Precedent for such a compact between a state and the United States, embodied in reciprocal legislation, is ample.* *Stearns* v. *Minnesota,* 179 U.S. 223, 248 (1900); *Neil, Moore & Co.* v. *Ohio,* 3 How. 720 (U.S. 1845); *Searight* v. *Stokes,* 3 How. 151 (U.S. 1845). See THURSBY, INTERSTATE COOPERATION 51 (1953). To distinguish this compact from the Colorado River Compact the California defendants have referred to it in their briefs and pleadings as the Statutory Compact.

Arizona sues California on an alleged breach of the Statutory Compact and to enforce her claimed rights thereunder. (Arizona Complaint, pars. XXVI, XXVII, pp. 28-29.) The California defendants deny any breach of that Compact, and further assert that if the Colorado River Compact has been effectively ratified by Arizona (as Arizona contends) all obligations to the six beneficiary States under the Statutory Compact are at an end. A seven-State Colorado River Compact, or a six-State Colorado River Compact plus the

* The Colorado River Compact also became effective through reciprocal legislation modifying Article XI which calls for seven-State ratification.

California Limitation Act, we contend, are mutually exclusive alternatives.

On every principle of necessary parties, this issue requires joinder of the absent States. If California's obligation under the Limitation Act is broken as to one State, it is broken as to all. If Arizona's ratification of the Colorado River Compact terminated California's obligation under the Limitation Act, that obligation is terminated as to every state in the Colorado River Basin. The reason for the rule which universally makes joint obligees necessary (and, where relevant, indispensable) parties is to protect obligors from the harassment of multiple suits and possible inconsistent decrees. The difficulties of interstate litigation provide even more reason for affording the protection of this rule to a state sued by one of several joint obligees than to a private party who might be similarly sued on such an obligation.

The Special Master denies neither the statement of the rule nor its application to states. Rather, he reads four of the six joint obligees out of the Statutory Compact by finding that they cannot sue on California's obligation. Never before, so far as we know—and certainly not in this litigation—has such a proposition been asserted.* The

* Even the Special Master wavers in adhering to his determination that the absent States *cannot* sue when he asserts, later in his Report, that "there is no reason to fear that they may institute an action based on the California Limitation Act." (Report, p. 58.) As we shall demonstrate later in this portion of the brief, this latter assertion is equally incorrect.

Special Master's determination of itself adversely and materially affects the absent States. Moreover, we believe it is patently erroneous.

Doubt that the Special Master's determination will be sustained, either in this suit or later litigation, is based on the following reasons:

(1) Considered as a contract, the Statutory Compact bears on its face the clear and unmistakable evidence of an intent to confer rights on the States as third-party beneficiaries.

(2) Considered as a federal and a state statute, the Statutory Compact should be construed, if possible, to give some meaning and operative effect to every term.* The conclusion that the absent States have no rights under the Statutory Compact renders meaningless terms in that Compact which name the "states of Arizona, *Colorado,* Nevada, *New Mexico, Utah,* and *Wyoming,*" as beneficiaries of its covenants [emphasis supplied].

(3) The provision of the Statutory Compact which limits California to the use of one-half the "excess or surplus" waters unapportioned by the Colorado River Compact concerns the absent

---

*". . . No rule of statutory construction has been more definitely stated or more often repeated than the cardinal rule that 'significance and effect shall, if possible, be accorded to every word. As early as in Bacon's Abridgment, § 2, it was said that "a statute ought, upon the whole, to be so construed that, if it can be prevented, no clause, sentence, or word shall be superfluous, void, or insignificant." ' [citation.]" Ex parte *Public National Bank,* 278 U.S. 101, 104 (1928).

States. Such "excess or surplus" includes the surplus subject, under Articles III(f) and III(g), to apportionment by a post-1963 compact if all the present signatory states are able to agree.* This surplus is, in the words of Article VI of the Colorado River Compact, "waters of the Colorado River System not covered by the terms of this compact." Subject to a possible later compact, the Colorado River Compact, we contend, left these waters available to appropriation and use by any of the Colorado River Basin States. As to this surplus water, "separation of basins made by Article I of the Colorado River Compact," to which the Special Master refers (Report, p. 45), has never taken place.

Apparently the Special Master's conclusion that the absent States cannot sue on the Limitation Act is based on inadvertence in overlooking the provision of the Limitation Act which applies to "excess or surplus."

The probability that the Special Master overlooked this second part of the Limitation Act is

---

* Article III(c) of the Colorado River Compact defines surplus which is available for Mexico as water "over and above the aggregate of the quantities specified in paragraphs (a) and (b)" of Article III. California contends that the "*excess or surplus* waters unapportioned by said [Colorado River] compact" to which California is entitled under the Statutory Compact includes but is not limited to Article III(c) "*surplus*," and that the balance of such "*excess* or surplus waters" is that referred to by Article III(b). California has a right to use, not one-half of each component, but one-half of the aggregate of both components of "excess or surplus."

strongly suggested by his misreading contentions of the California defendants:

> "It is argued, too [by the California defendants], that the absent States have an interest in the Limitation Act because it restrains the California defendants from extending their use of Colorado River System water past 4,400,000 acre-feet per annum." (Report, pp. 57-58.)

The California defendants have made no such argument. In affirmative defenses California has asserted rights to use not less than 5,362,000 acre-feet per annum, all within the Limitation Act.

(4) The legislative history of the Boulder Canyon Project Act makes abundantly clear that the California Limitation Act provision was inserted in the Project Act at the insistence of representatives of the absent States.* The express purpose

---

* S. REP. No. 592, 70th Cong., 1st Sess. at p. 4 (1928), majority report to accompany S. 728 (Boulder Canyon Project Bill), contains this explanation of the first version of the provision which gave rise to the Statutory Compact:

> "The amendment on page 6, line 9, provides that the Secretary shall not make contracts for use in California for an aggregate amount of water exceeding 4,600,000 acre-feet per year, and one-half of the surplus or excess water. This amendment, like numerous other provisions of the bill, is designed to give further assurances to the various States, particularly those in the upper basin, against any undue advantages or rights to California."

For the full legislative history of Section 4(a), see H. Doc. No. 717, 80th Cong., 2d Sess., p. 55, n.14 (1948).

was to protect those States against the possibility that California would appropriate all the water permitted the Lower Basin under the Compact, and that Arizona, not a party to the Compact, would invade the Upper Basin's apportionment, as this Court held in *Arizona* v. *California,* 283 U.S. 423 (1931), she was free to do. If Arizona is held in this suit not to be a party to the Compact, the situation is no different in this respect today from that which was contemplated when the Boulder Canyon Project Act was passed. To hold that the absent States have no rights under the Statutory Compact would thwart the legislative purpose that brought it into existence.

In the light of the legislative history of the Statutory Compact, in the light of its purpose, and in the light of its unambiguous and unmistakable language, we feel that the Special Master's determination that it gives the absent States no rights is clearly wrong. That, however, is not the issue posed by these exceptions. Unless the Special Master is so clearly right in his determination that no other view merits a hearing, issues under the Statutory Compact clearly compel joinder of the absent States.

IV.

THE SPECIAL MASTER ERRED IN FAILING TO RECOMMEND JOINDER OF THE FOUR STATES OF COLORADO, NEW MEXICO, UTAH AND WYOMING AS NECESSARY PARTIES TO THIS SUIT BECAUSE COMPLETE RELIEF CANNOT BE AFFORDED AMONG THE PRESENT PARTIES WITHOUT A DETERMINATION OF

(A) THE RIGHTS OF THE ABSENT STATES UNDER THE COLORADO RIVER COMPACT TO THE USE OF WATERS OF THE COLORADO RIVER SYSTEM AVAILABLE TO THE "UPPER BASIN;"

(B) THEIR OBLIGATIONS UNDER THAT COMPACT AS "STATES OF THE UPPER DIVISION;" AND

(C) THEIR INTERESTS IN THE WATERS OF THE COLORADO RIVER SYSTEM WHICH ARE NOT COVERED BY THE COLORADO RIVER COMPACT

THE SPECIAL MASTER ERRED IN FINDING THAT THE COLORADO RIVER COMPACT, IN TERMS, PROHIBITS THE JOINDER OF THE STATES OF THE UPPER DIVISION IN THIS SUIT

The Special Master has erred in his fundamental conception that the Colorado River Compact divides the Colorado River System into two parts as a political boundary might be drawn between two states. This leads to the erroneous conclusion that the present controversy relates exclusively to "water allocated to the Lower Basin" (Report, p. 35), a phrase impossible even to define without resolving issues of construction of the Colorado River Compact.

The Special Master apparently believes that the Colorado River System can be, and, by the Colorado River Compact has been, divided into

two unrelated and "independent" parts, that is, an Upper Basin and a Lower Basin, so that the determination of rights and obligations of water users in one basin can be made without affecting the rights and obligations of the water users in the other. In fact, the Special Master compares the situation to that in which territories are divided between sovereigns. (Report, p. 35.) On this premise, he concludes that "The only part of the Colorado River System involved here . . . is the Lower Basin," for the Compact "apportioned to each basin a given amount of water, and it is impossible for the Upper Basin States to have any interest in water allocated to the Lower Basin States, which is the subject matter of this litigation." (Report, pp. 48, 35.) This concept of a complete separation, as though these were separate river systems, is a fundamental error running through the entire report.*

Even were the Special Master correct in treating the Colorado River Compact like a division of territory, he is in error that this precludes joinder, since the controversy among present parties centers on the size or amount of "territory"

---

* At page 9 of his Report the Special Master quotes a statement on the "division into two Basins" which he attributes to Hon. Carl Hayden, Representative from Arizona. It is in fact part of a reply by Hon. Herbert Hoover to a questionnaire submitted by Mr. Hayden. See 64 CONG. REC. 2710-13 (1923) reprinted in H. Doc. No. 717, 80th Cong., 2d Sess., pp. A31-A43 (1948). The paragraphs quoted by the Special Master should be read in relation to the other twenty-five questions which Mr. Hoover was answering.

allocated to present parties as against the Upper States. For example, in a suit over a boundary described as the "center of the river" it would be impossible to say that the meaning of "center of the river" is for the state on each side of the river to determine for itself, as the Special Master says of the issue over meaning of "beneficial consumptive use" in the Colorado River Compact. (Report, p. 52.) Territorial dispositions are the frequent subject of controversy, as the interstate boundary cases in this Court show. See cases collected, Annot., 74 L. Ed. 784, 786-87 (1930). The fact, however, is that the Special Master erred in treating the Colorado River Compact as an instrument which divides geographical territory.

A related error, which reappears through the report, is the confusion between *flow* and *consumptive use* of water; *e.g.*, between the obligations of the States of the Upper Division, stated in Article III(d), not to deplete the *flow* at Lee Ferry below 75,000,000 acre-feet in each decade, and the apportionment of the beneficial consumptive *use* made by Article III(a) to the Lower Basin from the Colorado River System, which includes, by definition, the tributaries. He treats flow and use as identical. (Report, pp. 55, 61.) This is a fundamental misinterpretation of the Compact, as demonstrated in Part IV, Section A, page 56.

The confusion between flow and use also involves confusing Basins and Divisions. States of the

Upper Division are Colorado, New Mexico, Utah and Wyoming (Article II(c)). States of the Lower Division are Arizona, California and Nevada (Article II(d)). Colorado and Wyoming have areas in the Upper Basin only (Article II(f)). California and Nevada have areas in the Lower Basin only (Article II(g)). Arizona, New Mexico and Utah have areas in both Upper and Lower Basins. (See map (Plate I) inside front cover.) Delivery obligations and obligations not to withhold water are imposed by the Compact exclusively on the States of the Upper Division (Articles III(c), III(d), and III(e)). Rights to beneficial consumptive use are conferred exclusively on Basins (Articles III(a) and III(b)). Flow and use of water cannot be treated as equivalent without ignoring this distinction between Basins and Divisions as the Special Master does in twelve different places at which he refers to Basins delivering or withholding water. (Report, pp. 12, 13 (two places), 41, 45, 49 (two places), 50, 55, 56, 58, 61.) We submit that this confusion reflects not inadvertent inaccuracy of expression, but a failure to grasp the fundamental nature of the Compact.

Rights to the use of water flowing in a stream system must be distinguished from rights to land which may be subject to a territorial division by agreement on a boundary line. Under the law of prior appropriation generally applicable among the Western States, a prior appropriation on the lower reaches of a stream constitutes a valid right

to the use of water from the stream as against junior appropriators upstream. *Wyoming* v. *Colorado,* 259 U.S. 419 (1922), which accentuated the demand of the States of the upper Colorado River for a compact because of expanding uses in California and Arizona on the lower river, applied this doctrine of "first in time, first in right" on an interstate stream regardless of state lines. This law of prior appropriation, except to the extent superseded by the Compact, still governs. Hence, with respect to waters not covered by the Compact, it is clear that there can be no "boundary line" territorial division of the river system, for the waters originating in the upper River are directly affected by rights established by Lower Basin uses.

The Special Master correctly perceived that the Colorado River Compact, to the extent of the use of the water covered thereby, cut across the principle of priority of appropriation and preserved to the Upper Basin and the Lower Basin respectively rights in perpetuity to make future appropriations and use of water valid as against appropriations and uses which otherwise would be prior in time, and hence prior in right, in the other Basin. The Special Master erred, however, in failing to see that the heart of the present controversy concerns (a) the extent and amount of rights the Lower Basin acquired against the Upper under the Compact; (b) the amount of water the Upper Division States are obligated to deliver to the Lower Basin at Lee Ferry; and (c) rights

to the use of water not covered by the Compact. An analysis of these issues in controversy demonstrates the impossibility of dividing the present River System under the Compact into two separate and unrelated parts.*

A. The relief, essentially declaratory in nature, which Arizona asks with respect to three interpretations of the Colorado River Compact, affects the rights of the absent States under the Colorado River Compact

Arizona's Complaint (Par. XXII, pp. 25-26) poses three questions of interpretation of the Compact upon which, in effect, she asks declaratory relief. They are:

> "How is beneficial consumptive use to be measured?"
>
> "Is the water referred to and affected by Article III (b) of the Colorado River Compact apportioned or unapportioned water?"
>
> "How are evaporation losses from Lower Basin main stream storage reservoirs to be charged?"

---

* The physical facts alone indicate the interrelationship of the Basins. Water physically available to the Lower Basin and Mexico originates in large part (80%) in the Upper Basin. Most of the water passing the division point will ultimately be return flow of water which has been diverted and re-diverted at several thousand points of diversion on the main stream and tributaries in the Upper Basin. R. J. Tipton, Report on Water Supply of Colorado and Allied Matters to the Upper Colorado River Basin Committee 25 (1938), excerpt reprinted in *Hearings Before a Subcommittee on Irrigation and Reclamation of the House Committee on Public Lands on H.R. 934 and H.R. 935,* 81st Cong., 1st Sess. at 1175 (1949).

The Special Master ruled, in effect, that however these questions may be answered in the final decree, the answer will not affect the Upper States. We think he is in error, for the reasons stated below.

1. *The definition of "beneficial consumptive use" under the Compact vitally affects the absent Upper Basin States.*

The Colorado River Compact uses the phrase "beneficial consumptive use" in two places and only two: in Article III(a) to apportion in perpetuity the beneficial consumptive use of 7,500,000 acre-feet of water per annum respectively to the two Basins, and in Article III(b) to permit the Lower Basin to increase its beneficial consumptive use by 1,000,000 acre-feet of water per annum. Thus, under the Compact, the sole significance of the term "beneficial consumptive use" is to establish *inter*-basin rights of the two Basins with respect to each other.

Arizona in the fifth paragraph of her prayer for relief asks that

> "A decree be entered herein recognizing, confirming and establishing that the beneficial consumptive use of water apportioned by the Colorado River Compact be measured in terms of stream depletion." (Complaint, pp. 30-31.)

Arizona asserts (Complaint, par. XXII, p. 26) that under the Colorado River Compact, "bene-

ficial consumptive use is measured in terms of main stream depletion, that is, the quantity of water which constitutes the depletion of the stream by the activities of man. . . . Water salvaged by man is not chargeable as a beneficial consumptive use."

California alleges (Answer to Arizona's Complaint, par. 8, pp. 11-12) to the contrary that "beneficial consumptive use" means the quantity of water actually consumed, at place of use, as defined in Section 4(a) of the Boulder Canyon Project Act ("diversions less returns to the river"), and in Article 1(j) of the Mexican Water Treaty (" 'Consumptive use' means the use of water by evaporation, plant transpiration or other manner whereby the water is consumed and does not return to its source of supply. In general it is measured by the amount of water diverted less the part thereof which returns to the stream.").

This treaty definition has basin-wide application. Article 10 of the treaty authorizes reductions in the guaranteed delivery to Mexico, in the event of extraordinary drought or serious accident, "in the same proportion as consumptive uses in the United States are reduced."

Nevada says (Petition of Intervention, par. XVIII, p. 20) in substance, that the rule of "diversion less return flow" applies generally subject to an exception in favor of the "main stream depletion theory" on certain tributaries, and that no

debit should be made for the use of salvaged water on the main stream in the Lower Basin.*

The Special Master finds that this issue does not warrant joining the Upper Basin States because:

> "(1) how 'beneficial consumptive use' shall be measured in each Basin is a question for each Basin to determine so long as the Colorado River Compact endures. The quantities of water for the Upper Basin and its obligations to deliver are fixed by the Colorado River Compact; (2) what matter how the individual Basins measure 'beneficial consumptive use' so long as it is possible to interpolate the two methods; . . . ." (Report, p. 52.)

These findings by the Special Master show a fundamental misconception of the controversy before the Court.

A decree determining how beneficial consumptive use shall be measured, limited to the Lower Basin,

---

* The four absent States, in the Upper Colorado River Basin Compact, have provisionally agreed upon a fourth method whereby "beneficial consumptive use" under Article III(a) of the Compact is measured by the "inflow-outflow method in terms of man-made depletions of the virgin flow at Lee Ferry." But they reserve the right to change this method by unanimous agreement of their Upper Basin Compact Commission (Article VI). Arizona is a party to that Compact but is not represented on that Commission (Article VIII). The decree here sought by Arizona would "freeze" the definition of consumptive use throughout the Colorado River Basin.

is not the relief Arizona asks, and is not the issue in this suit. Rather, Arizona asks for a determination of the method of measurement under the Colorado River Compact, and the Compact uses the term only in establishing rights *between* Basins.

The heart of the dispute is not how to divide up a "known" quantity of water available to the Lower Basin under the Compact, as the Special Master assumes, but the more basic question of how much water the Lower Basin is entitled to under Articles III(a) and III(b), against the Upper Basin. The Court must determine how much water is legally available to the Lower Basin before it can decide the rights of the individual States in that water.

The issue is somewhat as though a syndicate of buyers bought 7,500,000 tons of ore from a syndicate of sellers, to be delivered over a period of time, but without defining the word "ton." As the ore begins to arrive, one of the buyers demands his share from the other buyers in long tons of 2240 pounds; the other buyers object, saying the seller's obligation is in short tons of 2000 pounds, and that the buyers' shares are to be computed in short tons. The discontented buyer sues his partners, asking that the term "ton," in their contract of purchase from the sellers, be defined as a "long ton of 2240 pounds," but he fails to join the sellers in the suit. Of course, the weight of a long ton and of a short ton can be "interpolated," but that is not the question. The question is, what is the sellers' obligation to the buyers: 7,500,000 long tons or 7,500,000

short tons? And how can this be determined in a suit among the buyers alone? Moreover, suppose that without such a determination of the term between buyer and seller, the discontented buyer persuades the court that a decree can be entered quieting title in one of them to 2,800,000 *long* tons, but in a later suit, the sellers establish that their obligation is in short tons? Is this an equitable position in which to leave the buyers, as among themselves?

Even this analogy vastly oversimplifies the problem involved in this suit. Long tons and short tons can be "interpolated." Beneficial consumptive use under the various methods urged by the present parties, and the provisional method used by the Upper Basin, cannot be "interpolated." There is fundamental disagreement not merely over method of measurement, but over what is to be measured. By no conceivable mathematical formula can the various methods, or any two of them, be translated one to the other. California contends that beneficial consumptive use means consumption at the site of use, and is there measured. The other three formulas involve computing the depletion of the estimated "virgin flow" of the main stream caused by the use in question. But water uses from different tributaries deplete the main stream in different proportions, depending on the tributary, its flow, and the season at the time uses are made. Uses from a single tributary affect the main stream differently depending on whether they take place near the headwaters of the tributary or near the main stream.

Arizona prays that "Its title to the annual beneficial consumptive use of 3,800,000 acre-feet of the water apportioned to the Lower Basin by the Colorado River Compact* be forever confirmed and quieted . . . ." (Complaint, p. 30.) But these same uses by these same farms and cities, measured at the site of use, exceed 5,000,000 acre-feet. The measurement by "stream depletion" of the 8,500,000 acre-feet per annum allocated by the Compact to the Lower Basin by Articles III(a) and III(b) would enable the Lower Basin to balloon its right to over 10,500,000 acre-feet of true consumptive use, measured by actual consumption at the site of use. This is the result of Arizona's contention that no accounting need be made for the use of waters salvaged by the activities of man, if such waters would be lost in a state of nature.

To which of these quantities is the Lower Basin entitled, as against the Upper?

Irrespective of the inherent unworkability of the Special Master's ruling that allows each Basin to determine the amount of its rights against the other Basin under Article III(a) through its own method of measurement, the Upper States are directly affected by the resolution of the issue in

---

* Alleged, in par. XVII, p. 21 of the Complaint, to consist of 2,800,000 acre-feet out of the 7,500,000 acre-feet apportioned by Article III(a) and 1,000,000 acre-feet "apportioned" by Article III(b), the former being identified with the main stream and the latter (Reply, par. 8, p. 17) being identified with the Gila River.

the Lower Basin alone. For if Arizona's method of measurement prevails, and the Court grants the fifth paragraph of her prayer (Complaint, pp. 30-31), approximately 1,000,000 acre-feet of the over 2,000,000 acre-feet of uses on the Gila, even though they may be "rights which may now exist" within the meaning of Article III(a), will not be chargeable under the Compact to the Lower Basin's allocations. This directly affects the Upper Basin States, for if the Lower Basin may use water without a corresponding charge against the Basin allocation, the total surplus waters of the River System, available in part for satisfaction of the Mexican obligation of both Basins under Article III(c), and the subject of a future apportionment by an interstate compact after 1963 among all the States under Articles III(f) and III(g), are thereby directly reduced in a corresponding amount.

The Upper States are sensitive to this effect upon the "surplus," and hence upon their obligations under Article III(c). The statement of W. J. Wehrli, then Special Counsel for Wyoming (2 Official Record, UPPER COLORADO RIVER BASIN COMPACT COMMISSION, Proceedings of July 8, 1948, pp. 58-60), is illustrative:

> ". . . I believe no one can assume that you can construe the term, 'beneficial consumptive use', in Article III(a) of this Compact as meaning depletion at Lee Ferry for the Upper Basin without at the same time construing it as meaning depletion at the International

Boundary for the Lower Basin. I don't believe that it will be possible to accept one construction for the Upper Basin and have a different one apply in the Lower Basin. Ultimately probably this question will reach the Supreme Court of the United States. And I am inclined to the view that whatever is determined by that court will be something that is determined for both the Upper and the Lower Basin.

"Coming then to the question of whether or not this may be an entirely unmixed blessing, the figure has been given that by construing the Colorado River Compact as depletion at Lee Ferry, the Upper Basin will enjoy an additional 400,000 acre-feet of water at the site of use. Our Engineering Committee has not worked out the relative figure for the Lower Basin, at least it has not inserted it in any report, but I understand the Committee has agreed that under such an interpretation the Lower Basin will acquire at the site of use an additional amount of water of 2,150,000 acre feet.

"So that while the construction of depletion at the lower end of the Basin will permit the Upper Basin to use an additional amount of 400,000 acre feet of water at the point of use, the same construction applied to the Lower Basin will permit in the Lower Basin the use of 2,150,000 acre feet, which of course is not an exact figure any more than the 400,000 at site of use in the Upper Basin."

". . . .

"In order to make Wyoming's position in this matter entirely clear we do not propose

> to have anything adopted or inserted in the compact that will adopt one theory to the exclusion of the other. We see no necessity for it. The Upper Basin States will get the amount of water to which they are entitled under the Colorado River Compact regardless of what we say about it in this compact or what may be said by anyone else in the negotiation for this compact. The Supreme Court of the United States at some time will probably say what the Colorado River Compact means, and when that has been said, then we will know which of these theories has been adopted."

The Special Master attributes to "the opponents of the Motion" the statement that "whatever decision is made of this problem [measurement of beneficial consumptive use] the Upper States will follow it." (Report, pp. 51-52.) Neither in briefs nor in oral argument did counsel for the absent States take such a position.

The meaning and method of measurement of beneficial consumptive use under the Colorado River Compact are at issue in this suit. The issue is unavoidably an issue between Basins since the Compact uses the term for establishing rights *in perpetuity* between Basins. Arizona is seeking a declaration of the meaning of that term. The question is not whether anyone, either in the Lower Basin or Upper, is "fully performing." The Special Master, in this instance, has in effect recommended dismissal of that portion of the

complaint and the other pleadings which call for a determination.

Such dismissal, at this stage of the proceedings is improper; dismissal of this issue would make impossible the judicial resolution of other issues in the controversy.

2. *The Upper Basin States are affected by the issue of whether Article III(b) constitutes an apportionment to the Lower Basin of an additional 1,000,000 acre-feet per annum or whether the Lower Basin's right thereto is dependent upon appropriation and use.*

Article III(b) of the Compact provides that:

> "In addition to the apportionment in paragraph (a), the Lower Basin is hereby given the right to increase its beneficial consumptive use of such waters [of the Colorado River System] by one million acre-feet per annum."

At issue in this case is the question of whether this paragraph constitutes an apportionment in perpetuity to the Lower Basin as against the Upper, as Arizona contends,* or whether the

* The real issue is not whether the Compact "apportioned" III(b) water to the Lower Basin, but whether Congress in enacting the Boulder Canyon Project Act, by failing to mention Article III(b) specifically in the proposed limitation, intended to exclude California from sharing in Article III(b) uses under its Limitation Act, whether "apportioned" by the Compact or not. The legislative history is clear that Congress did not so intend. (See H. Doc. No. 717, 80th Cong., 2d Sess., p. 55 n.14 (1948).)

Lower Basin's right thereto as against the Upper is dependent upon appropriation and use, as California contends,* the unused portion becoming available for possible future apportionment between the two Basins under Article III(f).

Arizona seeks to quiet title to the 1,000,000 acre-feet of Article III(b) uses in herself as "apportioned" by the Compact. (Complaint, par. XVII, p. 21.) California alleges that the language of Article III(b) does not constitute an apportionment to the Lower Basin, which remains good in perpetuity against the Upper Basin regardless of non-use, as does the apportionment made in Article III(a), but that the "right to increase its use" given the Lower Basin becomes effective only as rights are established to such increase of use in that Basin, by appropriation or contracts with the United States for the use of water stored by the United States in Lake Mead, that only upon the establishment of such rights by appropriation or otherwise and not until then, does the right become vested in the Lower Basin (Answer to Arizona's Complaint, par. 9, p. 13); and that the first million acre-feet so committed in excess of 7,500,000 in any year, throughout the

* The Special Master twice misstates California's contention, saying (p. 55), "The California parties maintain that the use of this water is subject to *apportionment* and use" and (p. 56) "solely dependent upon *apportionment* and use, as is contended by the California defendants." (Emphasis supplied.) Our position is just the reverse. We think he meant to say "appropriation."

Lower Basin, is covered by this permission.* It follows that if such rights have not been exercised by the time the Upper Basin becomes entitled under Articles III(f) and III(g) to seek a further apportionment, the uncommitted portion of this million acre-feet becomes available for further apportionment upon demand of the Upper

---

* Nevada takes yet a third position and prays that "this . . . Court enter its judgment and decree, that the additional one million acre-feet of water set forth and provided in Article III(b) . . . is water apportioned to the Lower Basin, and be subject to use only when all the Lower Basin States shall have by authoritative Compact or Agreement increased the beneficial consumptive use in said Basin as provided in said Article III(b) . . . ." (Petition of Intervention, Prayer 3, p. 25.)

The Special Master twice misstates the Nevada contention:

(1) "~~In~~ 1963, when the Lower Basin shall become entitled to use the 1,000,000 acre-feet per annum apportioned to the Lower Basin by Article III(a) [III(b)?] of the Colorado River Compact, Nevada will have the right to use 900,000 acre-feet per annum of Colorado River System water (Petition for Intervention, p. 13)." (Report, p. 22.)

(2) "The State of Nevada maintains that this water [specified in Article III(b) of the Compact] may not be used until 1963." (Report, p. 55.)

In fact the compact or agreement which Nevada says is necessary to bring Article III(b) into operation is a Lower Basin Compact which may be executed at any time. It is not the Compact on or after October 1, 1963, among all signatories to the Colorado River Compact, which Articles III(f) and III(g) contemplate may apportion surplus water between basins. See Transcript, Oral Argument on Joinder Motion, pp. 141, 361-3.

Basin, as a part of the waters unapportioned by the Colorado River Compact.*

The Special Master gives three grounds for concluding that the absent States have no interest in the resolution of this issue, all of which are insufficient to preclude joinder. He first concludes that the absent States should not be joined because "insofar as [this issue] relates to the Upper Basin States it is a question of intra-basin apportionment of waters within the Upper Basin, a problem not involved in this litigation." (Report, p. 56.) It is difficult to ascertain exactly what the Special Master means here. Perhaps he meant to say *Lower* Basin, but if so he missed our point. The question of whether 1,000,000 acre-feet of Article III(b) uses are considered "apportioned" to the Lower Basin as against the Upper under the Colorado River Compact, and thereby valid in perpetuity as

---

* See Report of Delph E. Carpenter, Compact Commissioner for Colorado, to the Governor of Colorado, December 15, 1922; 70 CONG. REC. 577-586 reprinted in H. Doc. No. 717, 80th Cong., 2d Sess., p. A81 (1948):

> "... a permissible additional development in the lower basin to the extent of a beneficial consumptive use of one million acre-feet, was recognized in order that any further apportionment of surplus waters might be altogether avoided or at least delayed to a very remote period. *This right of additional development is not a final apportionment.* This clause does not interfere with the apportionment to the upper basin or with the right of the States of the upper basin to ask for further apportionment by a subsequent commission." (Emphasis supplied.)

against the Upper Basin, clearly strikes to the heart of *inter*-basin rights under the Compact.

Second, the Special Master finds no effect on the Upper States because: "inter-basin apportionment is to be considered in 1963, at the earliest; it is not feasible to decide questions before they arise." (Report, p. 56.) However, Arizona has called upon the Court to determine that under the Colorado River Compact, the 1,000,000 acre-feet of Article III(b) uses are "apportioned" to the Lower Basin, and seeks to forever quiet title to this water *now*. The Special Master admits that this is a question "raised by the pleadings on the merits of this cause" which must be "resolved on final hearing." (Report, p. 51.) If the determination sought by Arizona were made, the rights of the Upper Basin States would be immediately affected by the present removal of this 1,000,000 acre-feet from any possible future allocation. In view of this the Special Master's third conclusion that "regardless of whether or not this apportionment by Article III(b) is one in perpetuity or solely dependent upon apportionment [*sic*] and use, as is contended by the California defendants, the absent States have no present interest in it" (Report, p. 56), seems clearly erroneous. Under the Special Master's reasoning there would be no interest in or harm to an absent remainderman in a suit to declare a devise invalid, on the ground that until the death of the life tenant, the remainderman could have no interest in the litigation. The Upper States, like contingent

remaindermen, have an immediate interest in the present resolution of the issue, and should be joined as necessary parties. *Wilson* v. *White*, 109 N.Y. 59, 15 N.E. 749 (1888).

3. *The absent Upper States are affected by the issue whether reservoir evaporation losses in the Lower Basin are to be charged to "surplus" waters in excess of the quantities specified in Articles III(a) and III(b), or whether these losses are to be charged to the Lower Basin III(a) apportionment.*

Arizona contends that main stream reservoir losses in the Lower Basin are to be charged to uses apportioned by Article III(a) of the Compact, as between Arizona and California. (Reply to California's Answer, p. 50.)* Nevada, on the other hand, contends that:

> "evaporation losses of water from storage reservoirs on the main stream of the Colorado River in the Lower Basin are first chargeable out of excess or surplus water and that such evaporation losses are not chargeable against Article III(a) or III(b) waters unless and until all such available excess or surplus water is exhausted in any given year." (Petition of Intervention, par. XVIII, p. 21.)

The quantities of reservoir evaporation losses involved in the whole Lower Basin are of the

* The Special Master paraphrases the prayer appearing at p. 31 of the Complaint. (Report, p. 19.) Actually Arizona amended her prayer in her reply to our answer.

order of 1,100,000 acre-feet per annum. The Upper States are affected by this issue, for if the reservoir losses in the Lower Basin are charged to surplus waters, it will automatically reduce (1) the quantity of such water available to satisfy the Mexican Treaty obligation before the States of the Upper Division are called on to make additional deliveries under Article III(c), as well as (2) the surplus available for future apportionment under Article III(f) and (g), in which all seven States of the Colorado River System have an undivided common fund interest.

The Special Master ruled that this issue does not affect the Upper States because:

> "With respect to evaporation, the water delivered at Lee Ferry to the Lower Basin has been specified as to quantities and relates to the 7,500,000 acre-feet per annum or unused waters of the Upper Basin, or waters to meet any possible deficiency in the supply to the Republic of Mexico. This permits of no question of evaporation before Upper Basin waters reach the point of delivery at Lee Ferry, and the Upper Basin cannot be charged with evaporations occurring in the Lower Basin after that delivery."* (Report, p. 52.)

---

* The Special Master's determination that the Upper Basin cannot be charged with reservoir evaporation losses occurring in the Lower Basin seems especially unfair with respect to exclusively federal claims such as the Mexican Treaty. The Mexican Treaty of 1944 guarantees to Mexico "from any and all sources" an annual quantity of 1,500,000 acre-feet of water per year at the International Boundary. To meet

The Special Master begs the question when he states that the "water delivered at Lee Ferry to the Lower Basin has been *specified as to quantities*" part of which he identifies as including the quantity specified "to meet any possible deficiency in the supply to the Republic of Mexico." (Emphasis supplied.) Such "quantities" cannot be "specified" until there has been a resolution of issues, such as this issue over chargeability of reservoir losses in the Lower Basin. How reservoir losses are charged directly affects the "buffer" of surplus available for Mexico insulating the four absent States of the Upper Division against the liability for additional specified deliveries to satisfy the Mexican Treaty burden. The absent Upper States are therefore directly concerned with the resolution of this issue.

---

this obligation, the Treaty provided for the construction of Davis storage dam and reservoir on the main stream. To charge the Lower Basin with all reservoir losses incidental to meeting this obligation of the entire River System is manifestly unwarranted. Also unwarranted is charging the Lower Basin with channel losses incidental to the flow of water which Article III(c) of the Compact requires the States of the Upper Division to deliver at Lee Ferry, which must flow to the international boundary. So also with reservoir losses properly allocable to other federal functions, *e.g.*, flood control, navigation and power operations, none of which is related to consumptive uses in any State as such.

B. Arizona's suit to quiet title to the beneficial consumptive use of 2,800,000 acre-feet per annum from the main stream, as waters apportioned by Article III(a), directly involves the obligations of the States of the Upper Division to deliver water under Articles III(c) and III(d) of the Colorado River Compact

1. *Arizona's claimed title to 2,800,000 acre-feet per annum under Article III(a) from the main stream is dependent upon quieting title in the Lower Basin to the 75,000,000 acre-feet per decade delivered by the States of the Upper Division under Article III(d) as apportioned to the Lower Basin by Article III(a).*

Arizona prays to have her title quieted to the annual beneficial consumptive use of 3,800,000 acre-feet per annum, subject to the rights of Utah and New Mexico and subject to availability under the Colorado River Compact. (Complaint, p. 30.) She alleges that "Such quantity is made up of 2,800,000 acre-feet out of the 7,500,000 acre-feet apportioned to the Lower Basin by Article III(a) of the Compact plus the 1,000,000 acre-feet apportioned by Article III(b) of the Compact." (Complaint, par. XVII, p. 21.)

As to the 2,800,000 acre-feet from the main stream Arizona alleges:

> "Arizona has the right to the beneficial consumptive use of 2,800,000 acre-feet of water diverted from the main stream of the Colorado River either above or below Hoover Dam subject only to the rights of Utah and New

> Mexico as Lower Basin States.'"* (Reply to California's Answer, par. 41(1), p. 33.)

Her claim of title to 2,800,000 acre-feet per annum under Article III(a) from the main stream is spelled out as follows:

> "The 7,500,000 acre-feet of water per year apportioned to the Lower Basin by Article III(a) was and is within the water present in the main stream and measured at Lee Ferry, a point approximately 675 miles northerly and upstream from the confluence of the Gila River and the Colorado River." (Reply to Defendants' Answer, par. 8, p. 16.)

This 7,500,000 acre-feet, Arizona says, bears a "direct quantitative relationship" to the 75,000,000 acre-feet which Article III(d) requires the States of the Upper Division to let pass Lee Ferry in each 10-year period. (Reply, par. 11, p. 18.)

Article III(d) provides:

> "The States of the Upper Division will not cause the flow of the river at Lee Ferry to be

---

* This concession to Utah and New Mexico is meaningless. The main stream does not touch either State in the Lower Basin. Their Lower Basin interests are in tributaries, primarily the Virgin River in Utah, the Gila in New Mexico.

Arizona apparently assumes that Utah's uses on the Virgin River, and New Mexico's on the Gila, will not be protected by the apportionment made by Article III(a). The water of these streams is never present in the main stream at Lee Ferry. So also with uses on the Bill Williams, Little Colorado, Muddy, and other streams which enter below Lee Ferry, and, on Arizona's theory, are not covered by either Article III(a) or Article III(b).

> depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of this compact."

Arizona also alleges that

> "The apportionment made by Article III(a) of the Colorado River Compact does not include and was not intended to include, any of the waters of the Gila River or its tributaries." (Reply, par. 8, p. 16.)

Arizona further alleges that "uses of the waters of the Gila River and its tributaries are chargeable to the apportionment made by Article III(b) of the Compact and are only chargeable to the apportionment made by Article III(a) of the Compact to the extent that such uses exceed 1,000,000 acre-feet of water per annum," (Reply, par. 8, pp. 16-17), and "Article III(b) relates solely to the waters of the Gila River and its tributaries."* (Reply, par. 9, p. 17.)

Arizona's allegations, identifying Article III(a) uses with Article III(d) main stream deliveries, and Article III(b) uses with the Gila, both of which California denies, are central to Arizona's case. Since she admits that California is entitled to 4,400,000 acre-feet of Article III(a) uses from the main stream (Complaint, p. 30) and

---

* This contention that Article III(b) relates solely to the Gila was rejected in *Arizona* v. *California*, 292 U. S. 341, 358 (1934).

Nevada 300,000* (Reply, par. 63, p. 46), her claim to a residue of 2,800,000 acre-feet depends on the contention that all 7,500,000 acre-feet of the water for III(a) uses is found in the main stream. Without such allegations, Arizona's complaint would fail to state a cause of action to quiet title to the use of 2,800,000 acre-feet per annum under Article III(a) from the main stream.

If the Lower Basin is entitled to less than 7,500,000 acre-feet from the main stream under Article III(a), Arizona, on her own pleadings, is entitled to less than 2,800,000.

2. *If the deliveries by the States of the Upper Division under Article III(d) are all apportioned to the Lower Basin by Article III(a), they contain no "surplus" available for delivery to Mexico, and the States of the Upper Division are accordingly required by Article III(c) to increase their deliveries to supply one half of the Mexican deficiency.*

Article III(c) provides:

> "If, as a matter of international comity, the United States of America shall hereafter recognize in the United States of Mexico any

* Nevada denies this and asserts "the right to the beneficial consumptive use of 900,000 acre-feet of water per annum. The State of Nevada alleges that said 900,000 acre-feet of water consists of 539,100 acre-feet of the water apportioned to the Lower Basin by Article III(a) of the Colorado River Compact plus an equitable share in the water to be apportioned under Article III(b) and III(f) of the said Compact. . . ." (Petition of Intervention, par. VII, p. 13.)

> right to the use of any waters of the Colorado River System, such waters shall be supplied first from the waters which are *surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b)*; and if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the Upper Basin and the Lower Basin, and whenever necessary *the States of the Upper Division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d).*" (Emphasis supplied.)

Arizona's case leaves no surplus water either in (1) the Upper Division III(d) deliveries, or (2) in the Gila River, or (3) elsewhere in the Lower Basin, for satisfaction of the Mexican burden:

(1) *There is no surplus in the Article III(d) deliveries.* Under Arizona's view, the Article III(d) deliveries of 75,000,000 acre-feet each ten years are fully accounted for as apportioned to the Lower Basin by Article III(a).

(2) *There is no surplus on the Gila.* Arizona not only identifies the Gila River with Article III(b) of the Compact, but alleges that "When and if any curtailment of Lower Basin use is required to satisfy the Mexican right, then such curtailment must be of the use apportioned by Article III(a).". She "denies that the Gila River and its tributaries are subject to any obligations imposed by the Mexican Water Treaty." (Reply, par. 10, p. 18; compare par. 62, p. 45.)

(3) *There is no surplus anywhere else in the Lower Basin.* The inflow to the main stream from Lower Basin tributaries other than the Gila System is substantially offset by natural stream losses.* On Arizona's interpretation of "beneficial consumptive use," if these natural losses were salvaged, the consumptive use of the salvaged tributary inflow would not be chargeable, but would be used (like the more than 1,000,000 acre-feet salvaged on the Gila) in the States where salvaged, without accounting for that use at all.

Arizona concedes that

> "It is uncertain whether excess or surplus flows of the Colorado River unapportioned by the Compact will be adequate to satisfy the allotment of water to Mexico." (Complaint, par. XVI, p. 21.)**

---

* See A. P. Davis, then Commissioner of Reclamation, "Answer No. 5" to Congressman Hayden's questionnaire, 64 CONG. REC. 2713-2717 (1923) reprinted in H. Doc. No. 717, 80th Cong., 2d Sess., p. A48 (1948). He states that mean flows during 1903-1920 at Lee Ferry and at Laguna Dam just above the mouth of the Gila are assumed to be substantially equal. More recent figures have been published by the United States Bureau of Reclamation, in H. Doc. No. 419, 80th Cong., 1st Sess., pp. 282-83 (1947). Based on data for the period 1897 to 1943, the report shows an average net inflow between Lee Ferry and a point above the mouth of the Gila of 180,000 acre-feet per annum.

** There is no uncertainty about it; on her theory in a quarter century of precipitation like 1930-54, there would be a deficit of one to two million acre-feet per year. See Plate II in Part V, Section C of this Brief, p. 119.

The States of the Upper Division, under Arizona's theory, would be obligated to increase their deliveries under Article III(c) in consequence of the fact that the 75,000,000 acre-feet delivered under Article III(d) contains no surplus for delivery to Mexico.

3. *California asserts that the Article III(a) apportionment to the Lower Basin includes uses under "rights which may now exist" on the tributaries, and that there is no identity between that apportionment and the Article III(d) obligation of the States of the Upper Division.*

Under California's interpretation of the Compact there is no identity between Articles III(a) and III(d). The deliveries under the latter include surplus available for delivery to Mexico. The Lower Basin cannot quiet title thereto as water the use of which is apportioned to that Basin.

California alleges (Answer to Arizona's Complaint, par. 11, p. 15) that "the quantity of 75,000,000 acre-feet specified in Article III(d) bears no quantitative relationship to the beneficial consumptive use of 7,500,000 acre-feet per annum apportioned to either the Upper Basin or Lower Basin by Article III(a);" that "Said apportionment [by Article III(a)] is from the waters of the entire Colorado River System, including the Gila

River and its tributaries,* and not merely from the virgin flow of the main stream" (*id.*, par. 8, p. 11); and that "Uses of the waters of the Gila River and its tributaries under rights which existed as of June 25, 1929, are chargeable first against the apportionment made to the Lower Basin by Article III(a) of the Compact. Such uses in Arizona as of that date aggregated not less than 2,000,000 acre-feet per annum." (*Id.*, par. 8, p. 12.)

As to Article III(b), California alleges (Answer to Arizona's Complaint, par. 9, p. 13): "The first million acre-feet of beneficial consumptive uses above 7,500,000 acre-feet per annum, wherever

---

* See the Colorado River Compact: Analysis by Hon. Herbert Hoover, Chairman of the Colorado River Commission (Answer, Dated January 27, 1923, to Questionnaire submitted by Hon Carl Hayden, Representative from Arizona); 64 CONG. REC. 2710-13 (1923), reprinted in H. Doc. No. 717, 80th Cong., 2d Sess., p. A33 (1948):

> "*Question 4. Why was the term 'Colorado River system' used in paragraph (a) of Article III, wherein 7,500,000 acre-feet of water is apportioned to the upper and lower basins respectively?*
>
> "This term is defined in Article II as covering the entire river and its tributaries in the United States. No other term could be used, as the duty of the commission was to divide all the water of the river. It serves to make it clear that this was what the commission intended to do and prevents any State from contending that, since a certain tributary rises and empties within its boundaries and is therefore not an interstate stream, it may use its waters without reference to the terms of the compact. The plan covers all the waters of the river and all its tributaries, and the term referred to leaves that situation beyond doubt."

such uses in the Lower Basin may occur, are encompassed by Article III(b), and said Article III(b) does not relate solely to waters found flowing in the Gila River or any other specific portion of the Lower Basin.'"*

Thus, upon California's interpretation, the 75,000,000 acre-feet delivered each decade by the States of the Upper Division under Article III(d) is not water apportioned to the Lower Basin by Article III(a), but contains, in addition to water available for the "increase of use" permitted the Lower Basin by Article III(b), substantial quantities of water which are surplus to the quantities specified under Articles III(a) and III(b) and hence available for delivery to Mexico before either Basin is required by Article III(c) to contribute to the deficiency in the Mexican supply. It may amount to several million acre-feet in each decade.

4. *The Special Master's assumption that the obligation of the States of the Upper Division under Article III(d) is identical with the apportionment under Article III(a) to the*

---

* See Hoover Analysis in response to Hayden Questionnaire cited in footnote at p. 81, *supra:*

> *"Question 6. Are the 1,000,000 additional acre-feet of water apportioned to the lower basin in paragraph (b) of Article III supposed to be obtained from the Colorado River or solely from the tributaries of that stream within the State of Arizona?*
>
> "The use of the word 'such waters' in this paragraph clearly refers to waters from the Colorado River system, and the extra 1,000,000 acre-feet provided for can therefore be taken from the main river or from any of its tributaries."

Lower Basin is erroneous, and predetermines an issue which requires the presence of the States of the Upper Division.

The Special Master in his Report apparently decides this issue in favor of Arizona and against California. At page 55 he says:

> "In interpreting the provision of the Colorado River Compact respecting the delivery by the Upper Basin of 7,500,000 acre-feet of water per annum (Article III(a)) and the other provision found therein respecting the requirement to deliver 75,000,000 acre-feet in a 10 year period commencing after the October 1st following the effective date of the Compact (Article III(d)), these must be considered together, and when so considered they are not in opposition. The obvious meaning would seem to be that in referring to the 7,500,000 acre-feet per annum, and bearing in mind possible droughts, this requirement would be met by an average delivery over the 10 year period of 75,000,000 acre-feet."

Again, at page 61, he writes:

> "[The Upper] basin has the duty of delivering to the Lower Basin 7,500,000 acre-feet per annum, which duty presumably can be done by providing at least 75,000,000 acre-feet in 10 year periods."

We think the Special Master in this determination is wrong. He confuses beneficial consumptive use, apportioned by Article III(a), with water supply, *i.e.*, the flow of the stream, dealt with by Article III(d). He reads Article III(a)

as a "delivery" obligation, which clearly it is not. If 75,000,000 acre-feet were diverted each decade, the consumptive use would be less, because on any theory the Lower Basin is entitled to credit for return flow at the Mexican border. He ignores the clear language of Article III(a) which apportions uses from the "Colorado River System," not the main stream alone. The Special Master's interpretation leaves the uses by Nevada and Utah on the Virgin River, New Mexico's uses on the Gila, and uses on all other Lower Basin tributaries, outside the scope of Article III(a). The identification of Articles III(a) and III(d) is a mathematical impossibility, in view of Arizona's admission that the uses on the Gila, to the extent that they exceed 1,000,000 acre-feet, are chargeable to Article III(a) and her further admission that they exceed that quantity by 170,000 acre-feet per annum. (Reply, par. 8, p. 17.) He ignores the deliberate distinction which the Compact makes between an apportionment "per annum" (Article III(a)), which can only refer to calendar years, and the ten year periods beginning October 1 of each year (Article III(d)). He assumes, as a fact, that there is water enough to satisfy both the Upper Basin's Article III(a) apportionment and the Upper Division's Article III(d) obligation.*

---

* See "Report on Depletion of Surface Water Supplies of Colorado West of Continental Divide," Bulletin No. 1, Surface Water Series, Colorado Water Conservation Board, State of Colorado; reprinted as S. Doc. No. 23, 84th Cong., 1st Sess. (1955) (known as the Hill Report). This report is discussed in detail in Part V, Section C, *infra*.

California has pleaded that Arizona is estopped and precluded from now asserting the interpretations which the Special Master adopts. (Answer, Second Affirmative Defense, pp. 39-45.)

It is perfectly clear, from Arizona's own record, that the 7,500,000 acre-feet which was apportioned to the Lower Basin by Article III(a) was arrived at as a summation of the anticipated uses on the main stream plus those on the tributaries, and that the 75,000,000 acre-feet stated in Article III(d) was arrived at as a summation of the anticipated uses on the main stream plus the water for Mexico. As the Special Master's substantive interpretation in advance of trial amounts to rewriting the key feature of the Compact, upon which Arizona's whole quiet title action is hinged, the Court's attention is called to the following:

1. Excerpt from statement of Richard E. Sloan, Legal Adviser to the Arizona Colorado River Commissioner, (and Chairman of the Legal Committee in the Negotiation of the Compact) January 15, 1923, (Reprinted in H. Doc. No. 717, 80th Cong., 2d Sess., p. A69 (1948)).

> "It may be of interest to know why the figures of 7,500,000 acre-feet for the upper basin and 8,500,000 acre-feet for the lower basin were reached. It grew out of the proposition made by the upper basin that there should be a fifty-fifty division of rights to the use of the water of the river between the upper and lower basins which should include the flow of the Gila, and the insistence of Mr. Norviel, commissioner from Arizona, that no

fifty-fifty basis of division would be equitable unless the measurement should be at Lee's Ferry. As a compromise the known requirements of the two basins were to be taken as the basis of allotment with a definite quantity added as a margin of safety. The known requirements of the upper basin being placed at 6,500,000 acre-feet, a million acre-feet of margin gave the upper basin an allotment of 7,500,000 acre-feet. The known future requirements of the lower basin from the Colorado river proper were estimated at 5,100,000 acre-feet. To this, when the total possible consumptive use of 2,350,000 acre-feet from the Gila and its tributaries are added, gives a total of 7,450,000 acre-feet. In addition to this, upon the insistence of Mr. Norviel, 1,000,000 acre-feet was added as a margin of safety, bringing the total allotment for the lower basin up to 8,500,000 acre-feet."

2. Statements made in the Arizona brief (p. 32) submitted in *Arizona* v. *California,* 283 U. S. 423 (1931), (extracts from which are printed in the present case in Appendix 28 to California's Answer, pp. 397-399).

Surely any determination that will make the difference between whether States of the Upper Division are required to supply 75,000,000 acre-feet every ten years, *including* water for Mexico, or 75,000,000 acre-feet every ten years, *plus* water for Mexico, involves a direct and important determination of their obligation. Arizona, in seeking to quiet title to 7,500,000 acre-feet of Article III(a) uses each year from the main stream has,

in effect, brought an action to quiet title *pro tanto* against States of the Upper Division, the suppliers of that water. California's motion is designed to add four States which Arizona should have named as defendants in her complaint.

C. The absent States, as States of the Colorado River System, are vitally affected by the present controversy over the establishment of present rights to waters of the Colorado River System not covered by the Colorado River Compact

1. *The absent States are affected by whether the claimed rights to water for Indians in the Lower Basin are chargeable against the apportionments made by the Colorado River Compact or are excluded therefrom by Article VII.*

This question is discussed in Part II of this Brief, which relates to claims of the United States.

2. *The Upper States are affected by whether valid appropriative rights may be initiated in waters not covered by the Compact.*

We have heretofore pointed out the numerous respects in which the issues in this case bear upon the magnitude of the "surplus" in which the seven States have undivided common interests. But also at issue in this case is the question of whether surplus waters of the Colorado River System, unapportioned by Articles III(a), (b) and (c), and described by Article VI as "waters . . . not covered by the terms of this compact," may be validly appropriated prior to a possible interstate com-

pact apportionment after 1963. With respect to these waters, Article III(f) of the Compact provides that:

> "Further equitable apportionment of the beneficial uses of the waters of the Colorado River System unapportioned by paragraphs (a), (b), and (c) may be made in the manner provided in paragraph (g) at any time after October first, 1963, if and when either Basin shall have reached its total beneficial consumptive use as set out in paragraphs (a) and (b)."

Under California's view, rights to this unallocated surplus water beyond that needed to supply consumptive uses under Articles III(a) and III(b) could be acquired by appropriation* just as rights could be acquired in all of the water of the Colorado River System prior to the six-State Compact in 1929. (Answer to Arizona's Complaint, par. 27, p. 28; par. 13, p. 16.) Those rights are subject to divestment by interstate compact, just as rights acquired before 1929 in the rest of the waters of the System might have been divested by compact.** *Hinderlider* v. *La Plata*

---

* The word "appropriation" as used in this brief with reference to rights to the use of water in California, includes rights arising out of contracts with the United States executed under the Boulder Canyon Project Act.

** "There is an essential difference between a substantial property right which may be enjoyed until taken away in the appropriate exercise of a paramount authority, and an uncertain and contingent privilege which may not be allowed at all." *United States* v. *River Rouge Improvement Co.*, 269 U. S. 411, 420-21 (1926).

River & Cherry Creek Ditch Co., 304 U.S. 92 (1938). They are valid until so divested. See comments of Herbert Hoover, United States representative in the Compact negotiations: H. Doc. No. 717, 80th Cong., 2d Sess., p. A34 (1948).

The United States apparently supports this view for it alleges that its contracts aggregating 8,462,000 acre-feet of deliveries of water stored in Lake Mead "are valid, binding covenants constituting the measure of the rights of the parties." (Petition of Intervention, par. XXXI, pp. 27-28.)

Arizona, however, takes a contrary position, and maintains that no "firm rights" may be acquired to the use of surplus water prior to a post-1963 compact, to which all States must agree. (Reply to Defendants' Answer, par. 13, pp. 18-19.)

Since under the Compact the surplus waters of the river system constitute an undivided common fund of water in which the seven States of the Colorado River Basin have undetermined interests, the four absent States of Colorado, New Mexico, Utah and Wyoming are directly affected by the resolution of this issue.

Just as the Special Master finds that Utah and New Mexico must be joined because of their unascertained rights to the common fund of water allocated to the Lower Basin under the Compact, so also should the absent Upper States be joined in this suit to determine rights in the undivided common fund of water not covered by the Compact. See *Williams* v. *Bankhead,* 19 Wall. 563

(U.S. 1874); *United States* v. *Bank of New York & Trust Company,* 296 U.S. 463 (1936); *Barney* v. *Baltimore,* 6 Wall. 280 (U.S. 1868).

If Arizona may enjoin California's assertion of rights in excess or surplus waters unapportioned by the Colorado River Compact (notwithstanding the specific language of the Project Act recognizing California's right to contract with the Secretary of the Interior for the storage and delivery of one-half of that excess or surplus), no other State than Arizona may acquire appropriative rights in "surplus" without a new compact, *i.e.,* without Arizona's consent. Arizona may acquire such rights, however, regardless of the post-1963 compact, if she is held not to have effectively ratified the Colorado River Compact in 1944.

While the Special Master gave no specific consideration to this issue, as presented by the Defendants in this Motion to Join, he did make two substantive determinations which bear on the question. In discussing the relationship between Articles III(a) and III(d) (Report, p. 50), the Special Master concludes that "it is clear that in any instance the Upper Basin cannot use more than 7,500,000 acre-feet per annum (Article III(a) of the Compact)." Hence under this determination all of the System's surplus water must go to the Lower Basin. If the Special Master means that the Upper States can never acquire rights in surplus waters, it is clear that the determination

deeply affects their rights. Second, the Special Master in discussing the California Limitation Act has made the substantive determination on the merits, without hearing or briefs thereon, that the "excess or surplus" referred to relates to "waters of the Lower Basin."* (Report, pp. 45, 58.) This is another instance of premature determination of an issue between Arizona and California as a technique for testing the necessity of joinder of the absent States.

---

* What the Special Master means by "waters of the Lower Basin" is left in some doubt. The Special Master says (Report, p. 50), "Article III(c) of the Compact makes it apparent that the Mexican supply shall come from surplus waters of the Lower Basin . . . ."

Of course, at the instant that any waters flow into Mexico, they are flowing from the Lower Basin, but that does not mean that they are surplus waters of the Lower Basin. If they are "surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b)" of Article III, they are surplus of the entire Colorado River System, in which all seven States have an undivided interest. We suggest that here, as elsewhere in the Report, there is confusion between the place of use, and classification of the waters used.

D. The Special Master is in error in assuming that the Colorado River Compact, in terms, prohibits the joinder of the States of the Upper Division in this action

The Special Master declares:

> "By Article I of the Colorado River Compact, the Upper and Lower Basins are separated for the purposes stated, one of them being that of avoiding litigation. . . . The proponents of the Motion rely upon the Colorado River Compact and say that the Upper Basin States should be joined because they were parties to it. It cannot be that this may be done when the instrument itself forbids it." (Report, p. 34.)

This conclusion is contrary to express terms in Article I itself:

> ". . . To these ends the Colorado River Basin is divided into two Basins, and an apportionment of the use of *part* of the water of the Colorado River System is made to each of them . . . ." (Emphasis supplied.)

This conclusion is also contrary to two other provisions of the Colorado River Compact.

1. *Article VI* provides for two alternative methods of solution for five classes of disputes among the parties to the Compact:

> "Should any claim or controversy arise between any two or more of the signatory States: (a) *with respect to the waters of the Colorado River System not covered by the terms of this compact;* (b) *over the meaning*

or performance of any of the terms of this compact; (c) *as to the allocation of the burdens incident to the performance of any article of this compact or the delivery of waters as herein provided;* (d) as to the construction or operation of works within the Colorado River Basin to be situated in two or more States, or to be constructed in one State for the benefit of another State; or (e) as to the diversion of water in one State for the benefit of another State; the Governors of the States affected, upon the request of one of them, shall forthwith appoint Commissioners with power to consider and adjust such claim or controversy, subject to ratification by the Legislatures of the States so affected.

"Nothing herein contained shall prevent *the adjustment of any such claim or controversy by any present method* or by direct future legislative action of the interested States." (Emphasis supplied.)

It is clear that this suit involves controversies in the first three categories mentioned in Article VI:

"(a) *with respect to the waters of the Colorado River System not covered by the terms of this compact.*" See, for example, paragraph 27 of California's Answer to Arizona's Complaint, p. 28, alleging a present right to one-half of the excess or surplus waters of the Colorado River System not apportioned by Article III(a) of the Colorado River Compact.

"(b) *over the meaning or performance of any of the terms of this compact.*" See, for ex-

ample, paragraph 5 of the prayer of Arizona's Complaint, pp. 30, 31, which asks a decree "establishing that the beneficial consumptive use of water apportioned by the Colorado River Compact be measured in terms of stream depletion."

"(c) *as to the allocation of the burdens incident to the performance of any article of this compact or the delivery of waters as herein provided.*" See, for example, Arizona's allegations that the waters to supply uses apportioned to the Lower Basin by Article III(a) are to be found flowing in the river and measured at Lee Ferry, and bear a quantitative relationship to the guarantee of the States of the Upper Division in Article III(d). (Reply, par. 8, p. 16; par. 11, p. 18.) Arizona's claims directly affect and increase the burdens imposed upon the absent States of the Upper Division under Articles III(c) and III(d) with respect to their "delivery of waters." (See discussion at pp. 74-87, *supra.*)

Negotiations extending over a period of more than thirty years, participated in by all seven States, have failed to resolve these controversies. We are here concerned with the second method for their resolution contemplated and preserved by Article VI.*

---

* "[T]he adjustment of any such claim or controversy by any present method" by Article VI clearly envisages litigation. Jurisdiction of this Court to determine interstate controversies over the waters of interstate streams had been decided in *Kansas* v. *Colorado,* 185 U.S. 125 (1902). *Wyoming* v. *Colorado,* 259 U.S. 419 (1922), had been decided while

2. *Article IX* provides:

> *"Nothing in this compact shall be construed to limit or prevent any State from instituting or maintaining any action or proceeding, legal or equitable, for the protection of any right under this compact or the enforcement of any of its provisions."*

The purpose of Article IX becomes clear when read in connection with Article VI.

Certainly it may not be held, as the Special Master does, that the Compact forbids by implication what express language of the Compact is so careful to preserve.

Colorado River Compact negotiations were in progress, and the negotiators had that case very much in mind. See statement by Richard E. Sloan, Legal Adviser to Colorado River Commissioner for Arizona (1923), reprinted in H. Doc. No. 717, 80th Cong., 2d Sess., pp. A63, A65 (1948).

V.

THE SPECIAL MASTER HAS ERRONEOUSLY CONCLUDED THAT THE ABSENT STATES SHOULD NOT BE JOINED EVEN THOUGH THEY MAY BE AFFECTED BY THE RESOLUTION OF ISSUES AMONG THE PRESENT PARTIES

A. The Special Master erred in determining that the absent Upper States, whose rights and obligations are vitally and inseparably affected by the present controversy to quiet title to certain waters of the Colorado River System, may not be joined for lack of a controversy independently justiciable as to them

The Special Master expressly finds that a justiciable controversy respecting "Lower Basin waters" exists. (Report, p. 68, conclusion 20.) The Special Master also expressly concedes that certain of the issues may ultimately affect the absent States,* but nevertheless has concluded that "As to the Upper Basin States as such, there is no existent justiciable controversy between them and the present parties to this cause." (Report, p. 67, conclusion 12.) If we understand the position taken by the Special Master—a position never previously suggested by this or any other court—it is that something like a separate cause of action, based upon a present breach of obligation or physical invasion of a claimed right, must exist

---

* *E.g.*, whether there is a quantitative relationship between uses apportioned under Article III(a) of the Colorado River Compact and the delivery obligation imposed by Article III(d) (Report, pp. 49-50); whether the protection extended by Article VIII to "present perfected rights" extends to water quality as well as quantity (Report, p. 51); whether "salvaged water" is chargeable under the Compact as a beneficial consumptive use. (Report, p. 57.)

and must be pleaded between present parties and absent parties before joinder is appropriate.

The Special Master's error in this respect is two-fold.

First, the Special Master considers the question of justiciability with respect to the absent Upper Basin States as though there were no present justiciable controversy before the Court. He treats the issue of justiciability as if it required a separate bill of complaint against the Upper States, stating a de novo justiciable cause of action.* The error here, however, is that while an original bill of complaint may be dismissed, the justiciable controversy in the suit already before the Court requires judicial action regardless of the disposition of the joinder motion.**

Second, the Special Master's concept of justiciability is based upon his assumption that there can be no present effect upon the absent Upper States due to an abundance of water in the Colorado River System. Even assuming this assumption of fact to be presently true (and it is

---

* In Part V, Section B of this Brief, p. 103, we demonstrate that the Special Master has applied an erroneous concept of justiciability, even considering the question on his own grounds as one of a de novo finding of justiciability.

** Only if the absent States were beyond the Supreme Court's jurisdiction so that the Court would have no power to join them, would the question be one of "indispensability" requiring dismissal of the suit. See California Defendants' Initial Brief in Support of Motion to Join, p. 30.

gravely mistaken, as is shown in Part V, Section C, pp. 112-121, this concept overlooks the fact that if the Upper States' permanent rights and obligations relating to the use of water are presently altered or affected by the resolution of issues in an existing controversy, then it is justiciable as to them, and whether they are presently using their rights is immaterial.

The requirement of "justiciability" to sustain the jurisdiction of this Court stems from the constitutional confinement of the judicial power to the resolution of matured and real disputes. Here these purposes are fully served by the justiciable character of the controversy already before the Court. The issues affecting the absent States are issues which must be decided in this suit whether the absent States are joined or not. If the dispute among present parties is "justiciable"—and the Special Master agrees with the present parties that it is*—there is no further justiciability problem to consider on the joinder motion.**

---

* Report, p. 68, conclusion 20; Statement in Support of Motion, Arizona Complaint, p. 5; Return of Defendants to Rule to Show Cause and Brief in Support of Return, pp. 5-6; Motion by United States for Leave to Intervene, par. VIII, pp. 8-9; Nevada Petition of Intervention, par. I, pp. 7-8; Nevada Answer to United States, par. XVIII, p. 8.

** The well-established principles of ancillary jurisdiction support such a conclusion in that they give the Court power to hear questions even though there is no independent jurisdictional basis for a determination of the rights involved. See California Defendants' Reply Brief in Support of Motion to Join, pp. 19-27.

If, however, a separate element of justiciability as to the absent parties is required for joinder, this requirement is satisfied in the present case because the existing controversy immediately and vitally affects the present legal interests of the absent States.

In *Arizona* v. *California,* 298 U.S. 558, 567 (1936), Justice Stone announced the following standard for determining the existence of a justiciable controversy:

> "... A justiciable controversy is presented only if Arizona, as a sovereign state, or her citizens, whom she represents, *have present rights in the unappropriated* water of the river, or if the privilege to appropriate the water is capable of division and when partitioned may be judicially protected from appropriations by others pending its exercise." (Emphasis supplied.)*

By this standard, there can be no doubt of the existence of a justiciable controversy as to the

---

* The suit, in which Arizona sought to have her rights in the River System decreed against the other six Colorado River Basin States, preceded Arizona's purported ratification of the Colorado River Compact in 1944. The Special Master errs in stating that one of the reasons for the Court's denial of leave to file the bill of complaint was the absence of a justiciable controversy. (Report, p. 32.) The Court found it unnecessary to decide the question of justiciability because of the absence of the United States, which was held to be an indispensable party and could not be sued without its consent. 298 U.S. at 568.

absent States if their "present rights in the unappropriated water of the river" are affected by the existing controversy before the Court. The Colorado River Compact apportions in perpetuity the right to use water which has not yet been appropriated. Article III(a) of the Compact confers on the Upper Basin, in Justice Stone's terms, "present rights in the unappropriated water of the river." The dispute among present parties involves the extent of the insulation afforded by Article III(a) to the Upper Basin and its effectiveness against both Arizona and the United States. Similarly the obligations of the absent States, as "States of the Upper Division," under Articles III(c) and III(d) of the Compact constitute present duties with respect to delivery of water at Lee Ferry. In settling the controversy among the present parties, this Court must determine the extent of the present duties of the Upper Division States to deliver water under these Articles of the Compact. The absent Upper States also share with all seven States of the River Basin a present undivided interest under Article III(f) in a common fund of surplus water, just as Arizona, California, Nevada, New Mexico and Utah share an interest in the undivided common fund of water allocated to the Lower Basin by Articles III(a) and III(b).

In Part II, we showed that the claims of the United States are asserted in such magnitude that they cannot be satisfied out of the 8,500,000 acre-

feet of beneficial consumptive use allocated to the Lower Basin by Articles III(a) and III(b) of the Compact. Those claims are urged as being outside of and unaffected by the Colorado River Compact. If this contention of the United States is sustained, and its claims are determined in the magnitude asserted, the United States will have acquired rights in the unused Upper Basin apportionment. Similarly, as we demonstrated in Part III, Section A, if the Court finds that Arizona has not effectively ratified the Colorado River Compact, she too is free to acquire rights in the unused Upper Basin apportionment to which her title may be quieted in the pending case. Even if it is determined that Arizona is a party to and bound by the Colorado River Compact, her claim to quiet title to 2,800,000 acre-feet of main stream uses can only be accomplished by identifying the Lower Basin's Article III(a) apportionment with the Upper Division States' Article III(d) delivery, thereby increasing their present obligation to deliver water under Article III(c) of the Compact. (See Part IV, Section B, pp. 74-87.) Further, the claim of California that her rights be decreed, and the claim of the United States that its title be quieted, to surplus waters of the Colorado River System, not covered by the Compact, immediately affect the present rights of the absent States in this undivided common fund of waters. (See Part IV, Section C, pp. 87-91.) If this Court, in its exercise of jurisdiction over the controversy before it, quiets title or determines rights

in any one of the instances enumerated above, the decreed rights would constitute an immediate invasion of the present rights of the absent States, whether or not those rights are being presently used to their full extent. A justiciable controversy as to the absent States is thus necessarily present.

In *United States* v. *Louisiana,* 339 U.S. 699, 702 (1950), Justice Douglas noted that Louisiana asserted:

> "... [T]hat there are no conflicting claims of governmental powers to authorize the use of the bed of the Gulf of Mexico for the purpose of searching for and producing oil and other natural resources, on which the relief sought by the United States depends, since the Congress has not adopted any law which asserts such federal authority over the bed of the Gulf of Mexico. Louisiana therefore contends that there is no actual justiciable controversy between the parties." 339 U.S. at p. 702.

This Court took jurisdiction, noting that its ruling in *United States* v. *California,* 332 U.S. 19 (1947) controlled. The absent Upper States argue in the present case, as did Louisiana in the tidelands case, that no justiciable controversy exists because they are not presently using their rightful share of water (as the United States was not using its rights in the tidelands), even though their rights to use the water may be presently invaded by resolution of the existing controversy. The Special Master adopted this

view. This position, rejected in *United States* v. *Louisiana,* must be similarly rejected here, as immaterial to the primary consideration of whether there is an invasion of existing rights.

B. Despite the absence of a present breach of obligation or a present physical invasion of a claimed right, a quiet title suit by Arizona against the absent States alleging the identical title here asserted would state a justiciable controversy within the constitutional power of this Court to decide. A fortiori, such a breach of obligation or invasion of right is not required where the joinder of the absent States is required to accord complete relief in the suits to quiet title brought by Arizona against California and by the United States against Arizona and California

A suit to quiet title by either the United States or Arizona against all of the Colorado River Basin States as defendants, claiming the same rights each alleges in the present suit, would state a justiciable controversy with respect to them. Since this is true, there can be no lack of justiciability to prevent joinder of the Upper States as parties to the present suit.

The specified claims of the United States to Colorado River System water amount to 11,785,250 acre-feet of water per year, of which about 11,000,000 acre-feet are asserted against the main stream water of the Colorado River.* Under

* These claims are for both diversions and beneficial consumptive use. All of the United States' claims which are included in the total of 11,785,250 acre-feet relate to the main stream except 822,800 acre-feet of Indian claims upon the tributaries.

Article III(a) of the Colorado River Compact, the Upper Basin States claim a right to the beneficial consumptive use of 7,500,000 acre-feet per annum. These combined claims total about 18,500,000 acre-feet per year. Yet, an engineering report recently published by the State of Colorado* indicates that the average annual dependable water supply of the Colorado River at Lee Ferry is approximately 13,700,000 acre-feet (virgin flow). (See Part V, Section C, p. 112.) On this basis, the claims exceed the supply by over 4,500,000 acre-feet per year.

Similarly, Arizona's claim that the Lower Basin is entitled to the ten-year 75,000,000 acre-feet Article III(d) delivery at Lee Ferry as water to supply Article III(a) uses, conflicts with the Upper States' claim to 7,500,000 acre-feet per annum under Article III(a) of the Compact. This is because 15,000,000 acre-feet of claims under Article III(a) cannot be satisfied if there is only 13,700,000 acre-feet flowing at Lee Ferry.** The Special Master would conclude that the Court has no power to hear these cases as long as the Upper

---

*"Report on Depletion of Surface Water Supplies of Colorado West of Continental Divide," Bulletin No. 1, Surface Water Series, Colorado Water Conservation Board, State of Colorado (1953). Reprinted as S. Doc. No. 23, 84th Cong., 1st Sess. (1955).

** The quantity of water flowing at Lee Ferry, of course, is not a reliable index of water available for use at the site of use in the Upper Basin, which would be somewhat larger. Even so, there would not be sufficient water to supply 15,000,000 acre-feet of beneficial consumptive uses in both Basins.

Basin is not using its entire apportionment. (Report, p. 52.) However, where there is not enough water in the river to satisfy the claims asserted against it, the clash of interests is of that character and dignity which makes the controversy justiciable. *Nebraska* v. *Wyoming,* 325 U.S. 589, 610 (1945). Compare *Texas* v. *Florida,* 306 U.S. 398 (1939), with *Massachusetts* v. *Missouri,* 308 U.S. 1 (1939).

The Special Master's criterion of justiciability is internally inconsistent. He has found that New Mexico and Utah are necessary (the Special Master says indispensable) parties to this controversy, although no allegation of any present injury or threat of injury by or against them has been made. They are necessary simply because they have an interest in the subject matter of the dispute that will be affected.

At the same time, the Special Master says that justiciability requirements prevent making the absent States parties in their Upper Division and Upper Basin capacities, that because no one has alleged a breach of obligation by them, the Court cannot make them parties.

If the Special Master had applied his Utah and New Mexico standard to all of the absent Upper States, there could be no question of the propriety of joining all of them. If applied to interstate controversies over interstate streams generally, the standard of justiciability which the Special Master has applied to the absent Upper Basin

States would mean that no method exists for those who wish to build projects to put at rest their uncertain water rights short of risking their treasure and the welfare of the people who will come to depend on those projects.

Nothing could be clearer than the equity court's traditional willingness to quiet title although no trespass or other wrong by the defendant has occurred. In most jurisdictions today, claims of ownership to property are asserted in a statutory suit to quiet title. These statutory suits embrace three traditional remedies: (1) bill of peace, (2) bill *quia timet,* and (3) bill to remove cloud on title. Of these remedies only the bill of peace required existing conflict in the claims of the parties. Chafee, *Bills of Peace with Multiple Parties,* 45 HARV. L. REV. 1297 (1932). The others required neither a present adverse claim nor a breach of obligation or duty on the part of the defendant.* Their purpose was to protect the

---

* The bill *quia timet,* in contrast to the bill of peace, did not seek to put an end to existing vexatious litigation concerning claims to property. Rather it sought to prevent future litigation. The plaintiff sought "the aid of a Court of Equity because he fears (quia timet) some future probable injury to his rights or interests, and not because an injury has already occurred which requires any compensation or other relief." 2 STORY, EQUITY JURISPRUDENCE § 1142 (14th ed. 1918). The bill was ordinarily applied "to prevent wrongs or anticipated mischiefs, and not merely to redress them when done." *Ibid.*

The bill to remove a cloud on title did not depend on the conduct of the defendant. It was designed to protect the marketability of the plaintiff's title against existing clouds whether actually asserted by the defendant or not. Howard, *Bills to Remove Clouds from Title,* 25 W. VA. L.Q. 4 (1917).

marketability and hence the usefulness of real property, and not to restrain unlawful conduct by the defendant.

The principle is illustrated by *Sharon* v. *Tucker,* 144 U.S. 533 (1892). Efforts of the complainants to dispose of the property had been frustrated, not by adverse claims by the defendants, but by the difficulty of securing an abstract of title which potential purchasers would accept. In ordering a decree quieting title in the plaintiffs, the Court found that

> "up to the commencement of these suits . . . [none] of the defendants therein or their predecessors in interest [have] asserted any claim to the property or interest in it, or attempted in any way to interfere with its possession or control. . . . The title of the complainants is not controverted by the defendants, nor is it assailed by any actions for the possession of the property, and this is not a suit to put an end to any litigation of the kind. It is a suit to establish the title of the complainants as a matter of record, that is, by a judicial determination of its validity. . . ." 144 U.S. at 535-36, 543.

See also, *e.g., Simmons Creek Coal Co.* v. *Doran,* 142 U.S. 417 (1892); *Peirsoll* v. *Elliott,* 6 Pet. 95 (U.S. 1832); *Allen* v. *Hanks,* 136 U.S. 300 (1890).

Equity courts, of course, exercise discretion in determining whether relief is appropriate in a particular case. This does not, however, go to jurisdiction, but to the propriety of its exercise, after the case has been heard.

The usual reason given for the jurisdiction to quiet title is expressed in terms of "marketability." Here, the ability to utilize the property is at stake. No problem of justiciability would be presented if Arizona had brought suit against California to quiet title to 50,000 acres of barren desert land. Present injury or threatened injury stemming from the defendant's conduct would not be necessary to such a suit. Surely it would be a tragic anomaly if the judicial power of the United States were held to be incapable of determining the rights to the water which alone could give those 50,000 acres any utility.

This Court has jurisdiction to determine, in a quiet title suit, rights to the stream bed underlying the Colorado River System. *United States* v. *Utah*, 283 U.S. 64 (1931). Surely it has power to determine the incomparably more important issues over the rights to the use of water which flows in that stream bed.

Suits to quiet title have long been commonplace in dealing with western water rights.* *E.g.*, *Stone* v. *Imperial Water Co. No. 1*, 173 Cal. 39, 159 Pac. 164 (1916); *Yuba River Power Co.* v.

---

* In fact, an essential feature of the doctrine of appropriation, developed to meet the needs of the western states, is the mechanism by which water users can establish their rights in advance of spending time and money in building works to put water to use. Chandler, *The Appropriation of Water in California*, 4 CAL. L. REV. 206, 212 (1916). Recognition of these policy considerations may be found in *Pacific Live Stock Co.* v. *Lewis*, 241 U. S. 440, 448 (1916).

Nevada Irrigation Dist., 207 Cal. 521, 279 Pac. 128 (1929); *New Brantner Extension Ditch Co.* v. *Kramer*, 57 Colo. 218, 141 Pac. 498 (1914); *Conant* v. *Deep Creek & Curlew Valley Irrigation Co.*, 23 Utah 627, 66 Pac. 188 (1901). In such suits it is clear that "Actual present damage is not necessary in actions to quiet title, settle rights, or bills *quia timet* generally." WIEL, WATER RIGHTS IN THE WESTERN STATES 729 (3d ed. 1911). *Cf. Washington State Sugar Co.* v. *Sheppard*, 186 Fed. 233, 237 (C.C. Idaho 1911).

This Court has repeatedly recognized that the justiciability of an original suit to quiet title does not depend upon the same showing of injury that attends a suit for injunctive relief against a State, as in *Connecticut* v. *Massachusetts*, 282 U.S. 660 (1931), and *New York* v. *New Jersey*, 256 U.S. 296 (1921) (both of which are cited by the Special Master in his Report at pp. 35-38). Indeed, the Special Master's fundamental error lies in his application of an injunction standard to a quiet title suit.*

---

* Analytically, the quiet title suit is a species of declaratory relief, long antedating modern statutory actions for declaratory judgment. The Special Master quotes (Report, p. 36) from *Alabama* v. *Arizona*, 291 U.S. 286, 291 (1934), the declaration:

> "This court may not be called on to give advisory opinions or to pronounce declaratory judgments."

Cited in the Court's opinion for this proposition are three prior Supreme Court decisions, all in the appellate jurisdiction. The statement with reference to declaratory judgments has been inaccurate since this Court in *Aetna Life*

In *United States* v. *West Virginia,* 295 U.S. 463 (1935), this Court dismissed, for want of a justiciable controversy, an original bill brought by the United States to enjoin West Virginia and certain corporate defendants from constructing and asserting any interest in a dam on the New River. The Court indicated that, had the United States asserted a property right to which title could be quieted, a justiciable controversy would have been presented. Mr. Justice Stone said (295 U.S. at 474-75):

> "The government places its chief reliance upon the decision in *United States* v. *Utah* . . . in which this Court took original jurisdiction of a suit, brought by the United States against the State, to quiet title to the bed of the Colorado River. But *the issue presented by adverse claims of title to identified land is a case or controversy traditionally within the jurisdiction of courts of equity. Such an issue does not want in definition. The public assertion of the adverse claim by a defendant out of possession is itself an invasion of the property interest asserted by the plaintiff, against*

Insurance Co. v. *Haworth,* 300 U.S. 227 (1937), upheld the constitutionality of the federal Declaratory Judgments Act. A suit for a declaratory judgment, other than a suit to quiet title, today may clearly present a case or controversy within the judicial power of the United States, and no distinction as to the existence of the power can be found between suits in the original jurisdiction of the Supreme Court and suits in the inferior federal courts. The judicial power of the United States is defined only once in Article III, Section 2, of the Constitution and the definition applies with equal force in all courts of the United States.

> *which equity alone can afford protection.*" (Emphasis supplied.)

The Court contrasted the position of the United States with that of a property owner "who because of the adverse claims to ownership can neither sell his property nor be assured of continued possession." 295 U.S. at 475. See also *United States* v. *Utah,* 283 U.S. 64 (1931); *United States* v. *Oregon,* 295 U.S. 1 (1935); *United States* v. *California,* 332 U.S. 19 (1947).

In *Nebraska* v. *Wyoming,* 325 U.S. 589 (1945), this distinction was invoked to support jurisdiction despite the absence of present interference with existing uses of the plaintiff as follows (325 U.S. at 610):

> "... If this were an equity suit to enjoin threatened injury, the showing made by Nebraska might possibly be insufficient ... But where there is not enough water in the river to satisfy the claims asserted against it, the situation is not basically different from that where two or more persons claim the right to the same parcel of land. The present claimants being States we think the clash of interests to be of that character and dignity which makes the controversy a justiciable one under our original jurisdiction."

Colorado moved to dismiss on the ground that her uses were not conflicting with the present uses of either Wyoming or Nebraska and therefore there was no controversy with respect to them. The Court denied the motion, despite the fact that

Colorado's actual uses did not exceed those to which she was held to be entitled. Since the dependable natural flow of the North Platte River was overappropriated, as is the natural flow of the Colorado River, the Court found that a "controversy exists appropriate for judicial determination," in that the "claims" exceeded the supply. (*Ibid.*)

From the above, it is apparent that a quiet title suit by Arizona or the United States naming the absent States as parties defendant would be within the constitutional power of this Court to determine. There would be no lack of a justiciable controversy despite the existence of unused Upper Basin apportioned water. On what principle can it then be argued that this Court does not have the constitutional power to order the joinder of these same States in a quiet title suit which requires their presence in order to accord complete relief to those already parties?

C. Even if the Special Master's concept of justiciability is accepted, it cannot be the basis at this stage of the litigation for denial of the motion to join the absent States. His recommendation that joinder be denied is based on assumed facts as to water supply and water use which have no foundation in the record and are not the subject of judicial notice. Moreover, the assumed facts are contrary to what evidence would show to be the actual facts

The Special Master's conclusion that at present there is nothing for this Court to decide affecting the rights and obligations of the absent States is based on the assumption that the Upper Basin is

presently using only a small part of its 7,500,000 acre-foot apportionment, and that the unused remainder is physically available and flows to the Lower Basin* (*e.g.*, Report, pp. 52, 61); and on the further assumption that there is 3,500,000 to 5,000,000 acre-feet per annum of uncommitted surplus in the Colorado River System. (Report, p. 62.) He also assumes that this situation will persist into the distant future. (Report, p. 50.)

The Special Master's assumptions are obviously not based on evidence submitted to him, since none has been taken. Nor, from what appears in the Report, do the assumptions rest on data judicially noticed. The only factual data relating to the subject found in the Special Master's Report (p. 62) is the Report of Herbert Hoover, chairman of the Colorado River Commission which negotiated the compact (H. Doc. No. 605, 67th Cong., 4th Sess. (1923)), stating that the Compact commissioners assumed that there would be approximately 5,000,000 acre-feet of water per annum in the Colorado River System in excess of the quantities specified in Articles III(a) and III(b) of the

---

*This assumption, constituting a major determination of fact, is made by the Special Master in apparent contradiction of his disclaimer that "The Special Master . . . makes no determination of facts. Such determinations are unnecessary on this joinder Motion." (Report, p. 22.) He also refers to the necessity of taking evidence upon the water supply in the Lower Basin. (Report, p. 62.)

Compact. (Report, p. 62.) The Special Master states that this figure has been reduced by virtue of the Mexican Treaty to 3,500,000 acre-feet per annum.* (*Ibid.*) On the basis of the information now known, it is clear that the assumptions of water supply made by the Colorado River Commission thirty years ago were optimistic.

With the exception of Herbert Hoover's 1923 figures, the Special Master's conclusion rests on unspecified information of which judicial notice has presumably been taken without notice to the parties.** These assumptions do not relate to facts

---

*The accuracy of these figures was specifically challenged at the oral hearing on this motion by Mr. Hatfield Chilson, counsel for Colorado. Mr. Chilson said:

". . . [A]s Your Honor knows, the negotiators started out with a history of a water supply of the river system of some, oh, eighteen to twenty million acre-feet per year. The historical flow since that time has shown that the negotiators were optimistic and that the average annual supply since that time has been considerably less to the point that at the present time there is very serious doubt that there is any surplus waters in the Colorado River." (Transcript, p. 271.)

In 1945, Herbert Hoover, in a formal letter to Senator Albert W. Hawkes of New Jersey on the Mexican Treaty, advised that the Compact was negotiated on the basis of overestimated supply and underestimated demand. SEN. Doc. No. 32, 79th Cong. 1st Sess. (1945), reprinted in H. Doc. No. 717, 80th Cong. 2nd Sess., at 159 (1948).

**Fairness will ordinarily require that the court before making a final ruling that judicial notice will be taken of a given fact should notify the parties of his intention to do so and afford them an opportunity to present information which might bear upon the propriety of noticing the fact, or upon

which "can be immediately and accurately demonstrated to be true by resort to easily accessible sources of indisputable accuracy." Morgan, *Judicial Notice,* 57 HARV. L. REV. 269, 292 (1944). See also, 9 WIGMORE, EVIDENCE § 2571 (3d ed. 1940).

It is manifest that facts which are the subject of disagreement among qualified experts are not properly subject to judicial notice.

In 1953, the engineering firm of Leeds, Hill and Jewett, under contract with the State of Colorado, reported after extensive study on the availability of water to the State of Colorado and to the other Upper Basin States. Two conclusions from that report (known as the Hill Report)* are:

> "1. All of the 7,500,000 acre-feet of water per annum apportioned to the Upper Basin by the Colorado River Compact may not actually be available for use because of the requirement that 75 million acre-feet be delivered at Lee Ferry during each consecutive 10-year period.
>
> "2. Compliance with this provision and limiting the carryover in cyclic storage to the

---

the truth of the matter to be noticed." McCormick, *Judicial Notice,* 5 VAND. L. REV. 296, 319 (1952). Such notice is required by the MODEL CODE OF EVIDENCE, Rule 804(1) (1942). See also, *Ohio Bell Telephone Co.* v. *Public Utilities Comm'n,* 301 U. S. 292, 300-303 (1937).

* Originally published as "Report on Depletion of Surface Water Supplies of Colorado West of Continental Divide," Bulletin No. 1, Surface Water Series, Colorado Water Conservation Board, State of Colorado. Reprinted as S. Doc. No. 23, 84th Cong., 1st Sess. (1955).

> 22 years from 1930 to 1952 would have required that reservoirs of 21 million acre-feet capacity had been available in 1927 for cyclic regulation and that the aggregate depletion in the upper basin be no more than 6,200,000 acre-feet per year." S. Doc. No. 23, 84th Cong., 1st Sess., p. vii (1955).

The Hill Report has been criticized by Governor Edwin C. Johnson of Colorado and others because, among other things, it does not take into account water that must be supplied for the Mexican Treaty and water for certain reservoir evaporation losses.*

As to water available to the Upper Basin as a whole, Governor Johnson has said:

> "Under the Seven State Compact the Upper States must deliver at Lee Ferry in each ten year period 75 million acre-feet to the Lower States and 7½ million acre-feet to Mexico before they can use one drop of water themselves beyond what they used before the Seven State Compact was ratified. In the current ten year period that will leave only 3,250,000 acre-feet per year for their total use. In the previous

---

* ". . . Had Mr. Hill recognized these binding and irrevocable priorities and the evaporation of the down-river storage plans, which is to be charged to Colorado as 'consumptive use' of 400,000 acre-feet, he could not have shown any unappropriated water whatsoever in Colorado for Colorado." Statement by Governor Johnson of December 20, 1954, quoted in California Reply Brief, p. 54, at p. 72; see also, *Hearings Before the Senate Committee on Interior and Insular Affairs on S. 500*, 84th Cong., 1st Sess., pp. 251, 257, 717-718 (1955).

ten year period they would have had 4,150,000 acre-feet a year. In 1902 the Upper Basin States under this formula would have had no water at all." California Reply Brief, at page 70; *Hearings before the Senate Committee on Interior and Insular Affairs on S. 500,* 84th Cong., 1st Sess., pp. 251, 256 (1955).

The Special Master's statements that there is no foundation for deciding issues concerning the Mexican Treaty, and that there is no allegation that surplus for Mexico does not exist (Report, p. 50), require special attention. No party has alleged that such surplus does exist in quantities adequate to supply Mexico. To the contrary, Arizona alleges: "It is uncertain whether excess or surplus flows of the Colorado River unapportioned by the Compact will be adequate to satisfy the allotment of water to Mexico." (Complaint, par. XVI, p. 21.) Similarly, counsel for Colorado, in his argument on this Motion, said that "at the present time there is very serious doubt that there is any surplus waters in the Colorado River." (Transcript of Oral Argument, p. 271.) The Special Master ignores the pleadings and the argument and, in effect, creates a conclusive presumption that surplus exists. The presumption is unwarranted.

Evidence would show that in some years, on any theory, surplus water (over and above the aggregate of the quantities specified in Articles III(a) and III(b)) clearly is available. In other years surplus, on any theory, clearly is not available. During the period 1930-1954, the average yearly water supply of the Colorado River System was

not sufficient to service the Mexican Treaty out of surplus waters. In fact, during this period, on the average, there was no surplus at all, if Arizona's theory of measurement of consumptive uses is followed. This is demonstrated by the computation on Plate II formally submitted on behalf of Arizona by Sidney P. Osborn, then Governor of Arizona, to the Department of the Interior on April 24, 1948, in connection with the Central Arizona Project. (Reprinted in Letter from the Secretary of the Interior transmitting a Report and Findings on the Central Arizona Project, H. Doc. No. 136, 81st Cong., 1st Sess., p. 11 (1948).) The first column represents the figures submitted by Governor Osborn, contained in H. Doc. No. 136. The second column represents the same computation, with one change made by us—an adjusted average Lee Ferry flow to conform with the period 1930-1954.* The second column, however, shows

*The adjusted Lee Ferry flow is based on two factors: (1) the average historical flow of 11,480,000 for the period as measured by the United States Geological Survey (USGS, Water Supply Paper No. 1313 (1954) and provisional records) and (2) the addition of 2,170,000 acre-feet representing average Upper Basin depletions estimated at Lee Ferry during the period in accordance with the technique adopted by the U. S. Bureau of Reclamation in THE COLORADO RIVER, H. Doc. No. 419, 80th Cong., 1st Sess. (1947).

The 1930-1954 period is used because it more nearly represents the dependable flow. As this Court recognized in *Nebraska* v. *Wyoming*, 325 U. S. 589, 620 (1945), "the decree which is fashioned must be based . . . on the dependable flow." As said in *Wyoming* v. *Colorado*, 259 U. S. 419, 476 (1922), "Crops cannot be grown on expectations of average flows . . . which have passed down the stream in prior years."

Plate II

Item	Acre-Feet (Osborn)	Acre-Feet (1930-54 Average Showing Breach of III(d) Obligation)	Acre-Feet (1930-54 Average Showing III(d) Obligation Performed)
[Average] Virgin flow at Lee Ferry	16,270,000	13,650,000	13,650,000
Less apportionment [available] to Upper Basin by Article III(a) of Colorado River Compact	7,500,000	7,500,000	6,150,000*
Total	8,770,000	6,150,000*	7,500,000
Natural gain from tributaries, Lee Ferry to Boulder [Hoover] Dam	1,060,000	1,060,000	1,060,000
Total	9,830,000	7,210,000	8,560,000
Natural gain from tributaries, Boulder [Hoover] Dam to Mexican Border	1,420,000	1,420,000	1,420,000
Total	11,250,000	8,630,000	9,980,000
Less natural losses, estimated	1,030,000	1,030,000	1,030,000
Total	10,220,000	7,600,000	8.950,000
Allocated to Mexico by treaty	1,500,000	1,500,000	1,500,000
Total	8,720,000	6,100,000	7,450,000
Apportionment to Lower Basin by Article III(a) and (b)	8,500,000	8,500,000	8,500,000
Not apportioned to Lower Basin but present in Lower Basin	220,000	2,400,000 (deficit)	1,050,000 (deficit)

* The figure of 6,150,000 in the second column indicates that if the Upper Basin used 7,500,000 acre-feet per year, in a period like 1930-54, the States of the Upper Division could supply only 61,500,000 acre-feet at Lee Ferry in any ten-year period, breaching the obligation under Article III(d) not to deplete the flow to less than 75,000,000 acre-feet in any period of ten successive years. Conversely, the figure of 6,150,000 in the third column illustrates that if the States of the Upper Division performed their obligation to supply 75,000,000 acre-feet under Article III(d) during each decade of such a historical period of water flow, they would not be entitled to consume more than 6,150,000 acre-feet per annum. Arizona's interpretations of the Compact are used throughout.

the States of the Upper Division in breach of their Article III(d) obligation to deliver 75,000,000 acre-feet every ten years. Hence, we show a third column reflecting a second necessary adjustment to show the absent States honoring their Article III(d) delivery obligation.

Although we challenge several of the assumptions made in Governor Osborn's computation, including his exclusion of the actual supply of water on tributaries available at the site of use, it is clear from his figures that, on the basis of the calculated average virgin flow at Lee Ferry during the period 1930-1954, the Arizona theory would leave no surplus in the Colorado River System to service the Mexican Treaty. How the burden of the deficits would be borne, Governor Osborn's calculations do not, of course, show. It is apparent, however, that under his theory, which follows Arizona's contentions in this suit, there is a substantial deficit in the system which, to serve Mexico, would require the Upper Basin to disgorge its uses to the extent of over a million acre-feet. Under the California theory that the available supply is determined by what is available for consumptive use at the site of use, the over-all deficit shown by Governor Osborn would be considerably reduced.*

*The quantity of the waters of the Colorado River System classifiable in the language of Article III(c) as "surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b)" of Article III, depends in large part upon how beneficial consumptive use is charged under those articles, particularly the accounting for use of salvaged

A further symptom of the shortage conditions which prevail throughout the System is reflected by the United States Bureau of Reclamation notification of July 20, 1955, to all agencies making water orders from Lake Mead for delivery at Imperial Dam that at its maximum level in 1955, Lake Mead held only enough water to supply downstream uses for about a year and one half. Letter from J. P. Jones, Regional Director, Region III, USBR (July 20, 1955).

It is clear that the motion may not be disposed of on the basis of the Special Master's unsubstantiated assumption as to the water supply and hence as to the remoteness of the issues between the two Basins.

---

waters. If the depletion theory were applied throughout the Colorado River Basin, about 18,000,000 acre-feet could be consumed, measured at the site of use, to deplete the main stream by 16,000,000 acre-feet, the "aggregate of the quantities specified in paragraphs (a) and (b)." For example, the use of about 400,000 acre-feet per annum in the Palo Verde Valley of California would not deplete the stream at all. Natural losses on swampy land, now reclaimed, exceeded present uses. But if the standard set by Section 4(a) of the Project Act and by Article 1(j) of the Mexican Water Treaty were applied, *i.e.*, measurement of consumptive use at the site of use, the consumption of this same 18,000,000 acre-feet would invade the surplus above the "aggregate of the quantities specified in paragraphs (a) and (b)" by 2,000,000 acre-feet. See the discussion of the "beneficial consumptive use" issue at pp. 57-66 of this brief.

D. The Special Master's recommendation that California, sued as a sovereign, be denied the right to join Colorado, New Mexico, Utah and Wyoming because they are also sovereigns, is without support either in reason or in judicial precedent

The classic test for determining necessary parties, set forth in *Shields* v. *Barrow,* 17 How. 130, 139 (U.S. 1855), is that the Court should join all persons subject to its jurisdiction

> ". . . having an interest in the controversy, and who ought to be made parties, in order that the court may act on that rule which requires it to decide on, and finally determine the entire controversy, and do complete justice, by adjusting all the rights involved in it."

In accordance with the reference of the new Revised Rules of this Court, prescribing that the Federal Rules of Civil Procedure "where their application is appropriate, may be taken as a guide to procedure in original actions. . . ."* the California defendants framed this motion under Rule 19(b) of the Federal Rules of Civil Procedure on the ground that the absent States are subject to the jurisdiction of this Court and "ought to be parties if complete relief is to be accorded between those already parties."**

---

* Rule 9(2), Revised Rules of United States Supreme Court, 1954.

** Rule 19 of the Federal Rules of Civil Procedure and the case authority on joinder of parties is analyzed in the California Defendants' Initial Brief, pp. 26-31, and their Reply Brief, pp. 7-19.

The Special Master finds that Rule 19 of the Rules of Civil Procedure "is not made applicable by Rule 9(2) [of the new Supreme Court Rules] if it conflicts with the principles governing controversies between States." (Report, p. 25.) He distinguishes *Shields* v. *Barrow,* 17 How. 130 (U.S. 1855), and other cases cited in support of the joinder motion on the ground that they involved private parties and not States. (Report, pp. 31, 33, 34.)

We submit that there is no basis for such a distinction. This Court has applied the tests emanating from *Shields* to determine joinder questions in previous original suits and has more specifically applied them in a previous original suit brought by Arizona over the waters of the Colorado River System, now in litigation. *Arizona* v. *California,* 298 U.S. 558 (1936). Whether Rule 9(2) makes Rule 19 of the Federal Rules applicable to this motion does not, we believe, have any important bearing on disposition of the motion. If the purpose of the new Supreme Court rules is to unify procedure in the federal district courts and in the Supreme Court, and to provide definite guides for original suits in the Supreme Court, it would be preferable to follow Federal Rule 19, but the result should not be different whether Rule 19 is followed or not. This is because Rule 19 embodies the long-established joinder principles which this Court has con-

sistently applied in the exercise both of its appellate and original jurisdictions.*

In *Arizona* v. *California,* 298 U.S. 558, 572 (1936), this Court applied the established rules of joinder to determine that the interests of the United States in the waters of the Colorado River System were such as to make it an indispensable party to a suit by Arizona against all seven States of the Colorado River Basin for an equitable apportionment of the rights to the use of waters of the Colorado River System:

> "Every right which Arizona asserts is so subordinate to and dependent upon the rights and the exercise of an authority asserted by the United States that no final determination of the one can be made without a determination of the extent of the other. Although no decree rendered in its absence can bind or affect the United States, that fact is not an inducement for this Court to decide the rights of the states which are before it by a decree which, because of the absence of the United States, could have no finality. *California* v. *Southern Pacific Co.,* 157 U.S. 229, 251, 257; *Minnesota* v. *Northern Securities Co.,* 184 U.S. 199, 235, 245-247; *International Postal Supply Co.* v. *Bruce,* 194 U.S. 601, 606; *Texas* v. *Interstate Commerce Commission,* 258 U.S. 158, 163."

An analysis of the above cases cited by Mr. Justice Stone indicates the interchangeability of

---

* Rule 19 "is substantially a restatement of the practice prevailing before its promulgation." 3 MOORE, FEDERAL PRACTICE ¶¶ 19.02, 19.05(1) (2d ed. 1948).

authority on joinder in original and appellate cases, as well as the applicability of the rules to interstate cases like this litigation over rights to use waters of the Colorado River System:

California v. *Southern Pacific Co.*, 157 U.S. 229, 251, 257 (1895), an original action, relying on the classic statement of the rules in *Shields* v. *Barrow*, 17 How. 130 (U.S. 1855), a case in the Court's appellate jurisdiction.

Minnesota v. *Northern Securities Co.*, 184 U.S. 199, 235, 245-47 (1902), also an original action, and also relying on *Shields* v. *Barrow, supra.*

International Postal Supply Co. v. *Bruce*, 194 U.S. 601, 606 (1904), a case in the Court's appellate jurisdiction.

Texas v. *Interstate Commerce Commission*, 258 U.S. 158, 163 (1922), an original action, in which the Court relied on *California* v. *Southern Pacific Co.*, and *Minnesota* v. *Northern Securities Co., supra.*

No case and no treatise writer cited either by the Special Master or by the opponents of the motion has suggested that different principles of joinder apply among states and among other parties. Indeed, the contrary view seems universally to be assumed.* Not to apply the joinder principles,

---

* In *Texas* v. *New Mexico*, No. 9 Original, 1953 Term, the Special Master first recommended that the suit be dismissed because the United States was an indispensable party and had not consented to be sued. Cases cited by him are very largely cases involving non-sovereign parties. (See Special Master's

where their requirements are fulfilled,* to original actions between States would depart from the consistent practice of this Court over the years.

The only direct authority on joinder in litigation between States, we believe, favors the motion, despite the Special Master's contrary conclusion. (Report, pp. 38-41.) We refer to two decisions in the preliminary stages of litigation over the waters of the North Platte River to which the parties were Nebraska, Wyoming and Colorado. *Nebraska* v. *Wyoming,* 325 U.S. 589 (1945).

Report filed March 15, 1954, pp. 7-8, 12, 47. This Court followed the Special Master's suggestion that Texas be given the opportunity to amend her complaint, and referred the question of the indispensability of the United States under a proposed amendment to the Complaint to the Special Master. *Texas* v. *New Mexico,* 348 U.S. 805 (1954). The Special Master reported on February 28, 1955, again applying the classic test of joinder announced in *Shields* v. *Barrow,* 17 How. 130 (U.S. 1855). (Report, p. 8.) New Mexico filed exceptions to the recommendation that the United States is not, under the amended complaint, indispensable. In her exceptions, filed April 23, 1955, New Mexico's discussion hinges on the rules applied among private parties, and expressly assumes the applicability of Rule 19(b) of the Federal Rules of Civil Procedure. (New Mexico Exceptions and Brief, pp. 18, 20.)

A leading case on necessary and indispensable parties is *State of Washington* v. *United States,* 87 F.2d 421 (9th Cir. 1936). Nowhere in its exhaustive opinion does the Court suggest that the sovereign character of the parties is a factor to be considered.

* Parts II, III, and IV of this Brief, *supra,* demonstrate that the absent States are vitally affected by the resolution of issues in the present controversy.

The first decision in that litigation was *Nebraska* v. *Wyoming,* 295 U.S. 40 (1935). The Court there decided that Colorado's joinder was not required because the only allegations in the pleadings were that the North Platte rises in Colorado and drains a considerable area of that State. With that decision we have no quarrel. No problem of justiciability was raised or discussed. The decision followed application of the normal rules of joinder.

The second decision followed an Amended and Supplemental Answer by Wyoming. Without opinion, this Court ordered that Colorado be made a party. *Nebraska* v. *Wyoming,* 296 U.S. 553 (1935). In substance, the amended answer alleged that Colorado and its citizens "now contemplate and for a long time have contemplated and now threaten" the diversion of waters from the North Platte which would, of necessity, be the subject matter *pro tanto* of the controversy between Nebraska and Wyoming.* The new allegations, says the Special Master (Report, p. 40), "disclosed a present justiciable controversy existing between the State of Wyoming and Nebraska and the State of Colorado."

The Special Master distinguishes *Nebraska* v. *Wyoming* from the present case on three grounds, each of which is unsound:

---

* The amended Wyoming pleadings on the basis of which Colorado was joined are quoted and analyzed in our Reply Brief on this Motion, pp. 12-17.

(1) *That the Upper Basin States are foreclosed from asserting claims to water available to the Lower Basin States.* (Report, p. 41.)

This conclusion, of itself, deeply and materially affects the absent States and affords a conclusive reason for their joinder. Moreover, it errs in two major respects:

> (a) Unless the absent States are foreclosed from litigating claims involving the construction of the Colorado River Compact, contrary to the express provision of Articles VI and IX, they cannot be foreclosed from asserting claims to water covered by Article III of the Compact.
>
> (b) The Compact does not purport to deal with "surplus" water, as defined in Article III(c), and the controversy involves such surplus. As to such water "not covered by the terms of this compact," the Compact in Article VI provides that "Nothing herein contained shall prevent the adjustment of any such claim or controversy by any present method . . . . " This is said with respect to "any claim or controversy . . . between any two or more of the signatory States."

(2) *That there is no allegation that the absent States are threatening to infringe rights of the present parties.* (Report, p. 41.)

This ground for distinction is based on an erroneous assumption that a complaint must be stated against absent parties before their joinder is required. That there is no such requirement is

recognized by the Special Master in his recommendation to join New Mexico and Utah in their Lower Basin capacities, although no threat by either of them is alleged. See *Minnesota* v. *Northern Securities Co.*, 184 U.S. 199 (1902); *Northern Indiana R.R.* v. *Michigan Central R.R.*, 15 How. 233 (U.S. 1854).

The pleadings of Wyoming, on the basis of which Colorado was joined, fail to indicate whether the threatened and contemplated diversions were in the next several years or in the next several decades. However, the decision on the merits (which also rejected a Colorado motion to be dismissed from the suit) makes clear that the threat was long range. Colorado's uses at the time of the decree, ten years after the pleading alleging the threat, were for 131,800 irrigated acres, and 6,000 acre-feet a year of exportations from the basin. 325 U.S. at 600. None of these uses, including out-of-priority diversions by Colorado, was wrongful in the light of the decree which limited Colorado uses to the irrigation of 135,000 acres and export of 60,000 acre-feet of water in any period of ten consecutive years. 325 U.S. at 665. The nature of the "threat," however, which justified judicial intervention, arose from 34,000 acres of additional land that could be irrigated. Concerning projects to irrigate those acres the Court said (325 U.S. at 600):

> ". . . Those projects, however, are not completed; they are indeed projects for the indefinite future."

(3) *That there is no allegation that the Upper Basin States are failing to meet, or threatening not to meet, delivery obligations to the Lower Basin States.* (Report, p. 41.)

A present breach of obligation is not a requisite to justiciability in a suit to quiet title, as authorities cited in Part V, Section B, p. 103, clearly show. The Special Master recognizes this in recommending the qualified joinder of New Mexico and Utah. The reasons for joining those States are compelling, even though no allegation of threatened or actual breach of obligation by either of them has thus far been made.

In interstate suits justiciability is based not on rigidly prescribed doctrines but on the necessity, in a federal system, of some effective means of resolving important controversies.* As Charles Warren concluded, "the Supreme Court has *power* . . . to settle, as between the States, questions which, between foreign nations, would be known as 'non-justiciable,' and for the Supreme Court, a 'justiciable question' means simply a question which the Court decides it will settle in any particular

*"Some things, undoubtedly, were made justiciable [by the Constitution] which were not known as such at the common law; such, for example, as controversies between States as to boundary lines, and other questions admitting of judicial solution." Bradley, J., in *Hans* v. *Louisiana*, 134 U.S. 1, 15 (1890), quoted with approval in *Louisiana* v. *Texas*, 176 U.S. 1, 15 (1900).

case."* WARREN, THE SUPREME COURT AND SOVEREIGN STATES 55 (1924).

The ultimate question as to justiciability among sovereign states is whether the Court should decide the controversy presented. A subsidiary problem is at what stage should the decision to decide or not decide be made? On the pleadings or on the basis of evidence?

Here, the answers seem clear. The subject matter of this dispute—rights of states in an interstate stream—has been cognizable by the Court since the first decision in *Kansas* v. *Colorado,* 185 U.S. 125 (1902). Moreover, after States have settled their differences by a compact, and a dispute arises over the meaning of the compact, there is no occasion for reluctance to decide an interstate case as there sometimes is before a compact has been executed. See *Washington* v. *Oregon,* 214 U.S. 205, 218 (1909). The usefulness of interstate compacts, and hence the willingness of states to enter into compacts, depends on their enforceability in this Court.**

---

* Compare Frankfurter, J., in *Joint Anti-Fascist Refugee Committee* v. *McGrath,* 341 U.S. 123, 156 (1951):

> "Whether 'justiciability' exists . . . has most often turned on evaluating both the appropriateness of the issues for decision by courts and the hardship of denying judicial relief."

** The Special Master quotes a dictum from *Hinderlider* v. *La Plata River & Cherry Creek Ditch Co.,* 304 U.S. 92, 110-11 (1938), to the effect that the Court has jurisdiction to determine the validity and effect of a Compact between Colorado and New Mexico in a suit to which neither State is a

The Special Master quotes (Report, p. 26) from the opinion in *Colorado* v. *Kansas,* 320 U.S. 383, 393-94 (1943), the statement of a proposition well recognized:

> "In such disputes as this, the court is conscious of the great and serious caution with which it is necessary to approach the inquiry whether a case is proved. Not every matter which would warrant resort to equity by one citizen against another would justify our interference with the action of a state, for the burden on the complaining state is much greater than that generally required to be borne by private parties. Before the court will intervene the case must be of serious magnitude and fully and clearly proved. And in determining whether one state is using, or threatening to use, more than its equitable share of the benefits of a stream, all the

---

party. (Report, pp. 43-4.) The case is not a departure from principles that would be followed in a suit similarly involving a private contract. Since neither State was a party to the suit, neither State was affected except through the operation of *stare decisis.* Insofar as affected by *stare decisis,* both States were affected equally.

Moreover, a different result would have meant that no court in the United States would have had jurisdiction of the suit initiated by the Ditch Company against Hinderlider in the state courts of Colorado. Neither the state nor federal courts of Colorado or New Mexico could have exercised jurisdiction over the other State. The Supreme Court of the United States obviously would have lacked jurisdiction of the suit initiated by the Ditch Company against an individual officer and resident of the State of Colorado. The question in the *Hinderlider* case was whether Colorado and New Mexico were indispensable parties, not whether they were necessary parties.

> factors which create equities in favor of one state or the other must be weighed as of the date when the controversy is mooted."

The Special Master says that this quotation shows that this Court "long has been circumspect in taking cases in which sovereign states are the parties." (Report, p. 38.) The quotation, however, is clearly directed to the problem then before the Court. That problem was not whether to take the case, but whether the case in which jurisdiction had first been taken many years earlier had been proved and whether relief should be granted. The question of whether a case has been "fully and clearly proved" can only arise after jurisdiction has been assumed and the evidence heard. Compare earlier phases of the same dispute: *Kansas* v. *Colorado,* 185 U.S. 125 (1902) (overruling demurrer to complaint) and 206 U.S. 46 (1907) (opinion denying Kansas relief on the merits).

The 1943 opinion does not question justiciability, and it does not go to joinder of parties (although the Special Master attributes to the opponents of the motion the statement that it provides "the test with respect to joinder of parties in interstate litigation"). (Report, p. 28.) In fact, the case supports the view that, at this stage of the present litigation, any doubt about whether the absent States may be affected by the litigation should be resolved by taking jurisdiction over them. The fact that this Court in neither of two suits between Colorado and Kansas saw fit to enjoin Colorado's uses of water has never before, we believe, been cited to show that jurisdic-

tion to determine the merits was improperly assumed.

The first *Kansas* v. *Colorado* opinion, overruling Colorado's demurrer to Kansas' complaint, has recently been cited, in *United States* v. *Texas*, 339 U.S. 707, 715 (1950), for a necessary corollary of the doctrine that requires an interstate case to be fully proved:

> "The Court in original actions, passing as it does on controversies between sovereigns which involve issues of high public importance, has always been liberal in allowing full development of the facts." (Citing, *inter alia*, *Kansas* v. *Colorado*, 185 U.S. 125 (1902).)

California expects to prove all affirmative elements of her case, fully and clearly, according to the interstate standard. The fact that she has a burden of proving her case not imposed on a private litigant requires that she be given at least as full an opportunity to prove her case as would be accorded a private litigant.

Moreover, one consideration which differentiates the judicial treatment accorded States has been overlooked by the Special Master. A State suing a private citizen clearly has only the normal burdens of any other plaintiff. A State suing another State, however, must establish a case of serious magnitude, fully and clearly proved, before it is entitled to relief. Special consideration is accorded not to States as plaintiffs, but to States as defendants.

In this suit, California is a defendant. She is sued by one of six joint obligees of her obligation

under the Statutory Compact. She is sued for a declaration of rights under the Colorado River Compact whose rights and obligations run between the two Basins and the two Divisions which that Compact establishes. She is sued by the United States asserting claims independent of the Colorado River Compact which must be satisfied, if at all, from waters of the entire Colorado River System, most of which originate outside of Arizona, California and Nevada. The absent States have an interest in the controversy and "ought to be made parties, in order that the court may act on that rule which requires it to decide on, and finally determine the entire controversy, and do complete justice, by adjusting all the rights involved in it." The absent States "not only have an interest in the controversy, but an interest of such a nature that a final decree cannot be made without either affecting that interest, or leaving the controversy in such a condition that its final termination may be wholly inconsistent with equity and good conscience." *Shields* v. *Barrow,* 17 How. 130, 139 (U.S. 1855). If neither California nor the absent States were sovereigns, joinder under these rules would clearly be required. The States whom we seek to join under these rules have no higher sovereign status than does California, and all have equal status in this Court.

Certainly California as a sovereign defendant is entitled to at least the protection that would be accorded a private defendant. If joinder is denied, we believe it will be the first instance of treating a defendant State by a more severe rule of law than would be applied to a private party.

CONCLUSION

For the reasons stated in the exceptions and in this brief, we respectfully ask the Court to grant the motion to join the four absent States in their capacities as States of the Upper Division and States of the Upper Basin, notwithstanding the adverse report of the Special Master.

We also ask the Court's permission to be heard in oral argument on the motion and the exceptions to the Report of the Special Master.

Respectfully submitted,

For the State of California

Memorandum of the California Defendants in Reply to Motion of the United States for Determination of Questions of Law Presented by the Pleadings in This Cause and the Report of the Special Master

The motion by the United States repeats in large part a proposal contained in "Memorandum of the United States Requesting Pre-Trial Con-

ference" filed with this Court May 13, 1954. The United States then proposed a pre-trial conference, to be presided over by a member of this Court to decide in advance of reference of the case to a Special Master what the United States called two "transcendent" issues and "such others as are susceptible of that disposition." (Memorandum, p. 8.) The "transcendent" issues were (1) whether Arizona is a party to the Colorado River Compact, and (2) whether the California water delivery contracts with the United States are superior in time and right to contracts between the United States and other parties. (Memorandum, p. 4.)

California objected to this proposal in a memorandum filed May 28, 1954, on the ground (1) that a decision in advance of determination of the parties to the case would be premature; (2) that an attempt to decide the "transcendent" issues in advance of trial would unnecessarily delay termination of the controversy, because the decisions do not relate to matters of law alone, and therefore require taking evidence; and (3) that the issues cannot be considered out of their context with other issues of fact and law, some of which have an even more controlling effect on the disposition of the case. (Memorandum of the California Defendants in Reply to Memorandum of the United States Requesting a Pre-Trial Conference, filed May 28, 1954.) The proposal of the United States was disposed of on June 1, 1954, by the

Court's order of reference of the case to the Special Master. 347 U. S. 986 (1954).

I.

The present Motion by the United States modifies the earlier proposal and urges, as we understand it, piece-meal decision of certain issues by the entire Court, rather than in pre-trial conference conducted by a single Justice. Most important among these issues, says the United States, is whether the State of Arizona is a party to the Colorado River Compact, but other issues would be decided as well. These decisions would be made by the Court in advance of decision who the parties to the case are to be, and presumably without taking evidence. The extent of the participation of the absent States in the hearing and whether the decisions to be made would bind the absent States as to matters decided is not made clear by the United States' Motion.

II.

The California defendants object to the present Motion of the United States on each of the grounds urged in our response to the earlier proposal advanced by the United States in May, 1954.

A. We believe that a decision cannot be made as to whether Arizona is a party to the Colorado River Compact without the presence in the suit of all six signatory States who were parties on the effective date of the Compact, June 25, 1929.

California Reply Brief, p. 32, and Exceptions and Brief on Special Master's Report, p. 38.

B. We believe that this issue should not be decided without taking evidence. The evidence relates, *inter alia,* to events occurring between 1929 and 1944 and to the stated position of Arizona in 1944 about the meaning of the Compact which prevented the agreement essential to the formation of any compact contractual in character.

C. We believe that this issue should not be decided out of its context with other issues in the case. It is true, as the United States says, that the decision affects many other issues. For precisely that reason, it should not be made without reference to those other issues. The Court, we believe, should decide the controversy before it as a whole, and not attempt to render an advisory opinion declaring an abstract proposition of law without consideration of its effect on the entire case.

III.

Answers to specific paragraphs of the United States' Motion follow:

A. In paragraph I the United States says that it seeks a determination of whether Arizona is a party to the Colorado River Compact because if she is held not to be a party "it must be presumed that Arizona will assert a claim against the River System as a whole. Under those circumstances there could be no final relief awarded in this action

without having all of the States of the Colorado River System, without regard to the Compact, before this Court." (p. 4)

The United States is correct that claims against the River System outside the Compact cannot be decided in the absence of all States affected. It is wrong, however, in the assumption that this reason disappears if Arizona is held to be a party.

The United States' proposal, even if otherwise acceptable, does not avoid a present decision on the joinder motion. The United States, California and Nevada assert claims relating to waters which, in the words of Article VI of the Colorado River Compact, are "waters not covered by this Compact."

B. In paragraph II the United States says that if Arizona is not a party to the Compact, there arises a question of propriety of considering two of the questions of Compact interpretation which Arizona raises. While it is true that Arizona would lack standing to raise these issues if held not a party to the Compact, quite similar issues have been raised by Nevada and California, and require decision whether Arizona is a party to the Compact or not.

C. In paragraph III the United States says that if Arizona is not a party to the Colorado River Compact the United States has an immediate concern respecting its obligation under the Treaty with Mexico. In fact, such issues are presented

whether Arizona is a party to the Colorado River Compact or not. See California Brief on Exceptions to Special Master's Report, pp. 74-87. The Treaty obligation of the United States is independent of the Compact, and by its terms commits the United States to deliver waters of the Colorado River "from any and all sources." At issue in the present suit among present parties is the extent to which those sources are waters to be delivered by States of the Upper Division and the extent to which they embrace water available to the Lower Basin. The United States' proposal, if followed, could not dispose of this issue, since, whether or not Arizona is a party to the Compact, it is nonetheless true that the Mexican Treaty involves "the obligation of Arizona and all of the other States of the Colorado River System." (p. 5.)

D. In paragraph IV the United States says that if the Arizona water delivery contract falls by reason of a determination that Arizona has not effectively ratified the Colorado River Compact, issues will probably be raised that "could not be resolved without the presence of the parties California seeks to join." (p. 6.) However, the validity of the Arizona water delivery contract is challenged in this case without reference to whether Arizona ratified the Colorado River Compact. See California Answer to United States Petition of Intervention, par. 35, p. 43. This issue requires joinder of the absent States whether or not Ari-

zona is a party to the Compact, for the very reason stated by the United States.

E. In paragraph V of its Motion, the United States says that the decision whether Indian claims are held to be "against the river" has a "far-reaching effect upon the interests of all States of the Colorado River Stream System." With this we agree. However, this issue is not distinguishable from a number of other issues raised by the United States (*e. g.*, Mexican Treaty water, water for fish and wildlife, and water to service water delivery contracts which, if all such contracts are valid as the United States has pleaded, necessarily include surplus water of the entire Colorado River System not allocated by the Colorado River Compact to either Upper or Lower Basins.) We do not know how the United States expects to distinguish this issue from the others presented in the case. The United States' proposal, even if followed, would still leave the Court facing the issues presented by the joinder motion.

F. In paragraph VI of its Motion the United States asks the Court to determine certain "legal principles" before deciding whether the absent States should be joined as parties. This, in effect, asks the Court first to decide the case and then to decide whether the absent parties are affected by that decision. This, we submit, would be to decide the case backwards. The United States does not indicate what "legal principles" the Court should pronounce, but to do so in the absence of

evidence, and without regard to all the issues in the controversy, would have all the vices of an advisory opinion. Further, it could produce only delay and confusion. It would require withdrawing the order of reference to the Special Master, it would leave the parties in doubt as to what issues they should brief and how they might present their factual evidence, and it would postpone the trial indefinitely.

IV.

With the major premises of the United States' Motion, however, we agree. The issues listed by the United States do require joining the absent States. They require joining them, however, before rather than after decision of those issues. The absent States must be bound by the decision on these issues as well as by the decision on the balance of the case. Furthermore, even if the issues listed by the United States could be disposed of as suggested, the other reasons for joinder would not disappear.

Accordingly, we ask that the United States' Motion be denied, and that defendants' motion to join the absent States be granted.

Respectfully submitted,

Memorandum of Arizona (a) in Reply to Motion of the United States for Preliminary Determination of Questions of Law; and (b) in Reply to California's and Nevada's Exceptions to the Master's Report on the Question of Joinder of Four States.*

JURISDICTION

This case comes to this Court under its original jurisdiction, leave to file the Complaint having been

* This Court has not yet declared what briefs, if any, are required on the exceptions; but the Motion of the United States appears to require a Response. Since it relates to the same subject matter as the exceptions, it appears most economical of time to treat the entire problem under one cover.

given at 344 U.S. 919 (1953). On June 1, 1954, this Court referred the matter to a Special Master, 347 U.S. 986. Subsequently, this Court also referred to the Master the question of joinder of parties which had been moved by the State of California, 348 U.S. 947. On July 11, 1955, the Special Master filed his report on the question of joinder of parties.

STATEMENT

This is an action by the State of Arizona to determine its rights to a claimed 3,800,000 acre feet of Colorado River water in accordance with the terms of the Colorado River Compact, the Boulder Canyon Project Act, 45 Stat. 1057, and various other federal and state enactments. The 3,800,000 acre figure is made up of 2,800,000 acre feet of water allowed to Arizona under its contract with the United States for water from Lake Mead, subject to its availability under the applicable provisions of law and with due allowances for the interests of Utah and New Mexico, and 1,000,000 acre feet of water from other sources. The action was originally brought against the State of California and others by Arizona in 1952. The United States, as custodian of the works at Lake Mead and as the possessor of other interests, was permitted to intervene by an Order of this Court, 347 U.S. 986. The State of Nevada also intervened, 347 U.S. 986.

A few words of background will illuminate the general problem. The Colorado River and its tributaries drain or adjoin the seven states of Arizona, California, Nevada, New Mexico, Utah, Wyoming, and Colorado. For many years there has been dispute as to the distribution of the water of this system. As an initial step towards solution the Colorado River Compact

was drafted in 1922. This Compact made one basic determination: It divided the basin into two parts, an Upper Basin and a Lower Basin, the division point being Lee Ferry in Arizona. Basic ground rules were laid down in the Compact relating to the use of water in each Basin, and requiring the Upper Basin to let down a certain amount of water at regular intervals to the Lower States.

This Compact was slow in its ratification, Arizona in particular holding out against it for a number of years. However, upon the passage of the Boulder Canyon Project Act in 1928, *supra,* it was promptly ratified by the six states other than Arizona, and it was finally ratified by Arizona in 1944. (Ariz. Laws, 1st Spec. Sess., Ch. 5, 1944).

The Compact itself, though it divided the states into two Basins, did not attempt to work out the distribution of water within the Upper and the Lower Basins. This task was left to each Basin separately, to be solved among themselves, either by further compact or by litigation. The Upper Basin States proved able to solve these internal problems of distribution by compact, and this they did by the adoption of the Upper Colorado River Basin Compact, approved 63 Stat. 31, which, so far as they were concerned, settled their difficulties. Notwithstanding that the Congress in Section 4 (a) of the Project Act outlined a proposed distribution of Lower Basin water identical with Arizona's present request, no solution by agreement proved possible in the Lower Basin; all efforts to achieve agreement for distribution by Compact proved unsuccessful.

Against this background, the following events occurred:

1. In both the Eighty-First and Eighty-Second Congresses, the Senate of the United States passed legislation for the Central Arizona Project, a great reclamation work intended to utilize what Arizona conceives to be its share of the mainstream water of the Colorado. This legislation was not passed in the House of Representatives, largely due to the insistence of the State of California that the title to the water to be used in the State of Arizona was not clearly established, and that, indeed, a portion of the water required was rightfully that of the State of California.[1] In both Houses the Californians pressed the series of so-called "Suit Resolutions," repeatedly assuring the various committees that in the words of the chief counsel for the State of California:

> "We believe the questions required to be presented to the Supreme Court in this matter are all questions of law, interpretation of statutes, compacts, and documents of which the Court would take judicial notice, and that no protracted case or hearing shall be involved, of the character of which the committee has probably heard or may be familiar, with respect to" (various of the long drawn-out cases.)[2]

Repeated assurances of speedy litigation, many of which are collected in Arizona's response to defend-

---

[1] The language adopted by a House Committee on April 18, 1951 was a recommendation of postponement of the Central Arizona Project "until such time as use of water of the *lower* Colorado River Basin is either adjudicated or binding or mutual agreement as to the use of the water is reached by the States of the *lower* Colorado River Basin." (Emphasis added) Hearings, House Rep. Com. on Interior & Insular Affairs, 82nd Cong., 1st Sess., on H. R. 1500 and 1501, Pt. 2, p. 739.

[2] Hearings before Sub. Com. No. 4, H. Rep. Com. Jud., H. J. Res. 225, 226, 236, & H. R. 4097, 80th Cong., 1st Sess., p. 32.

ants' motion to join the States of Colorado, New Mexico, Utah, and Wyoming, previously filed in this action, were given by California. In response to a direct question by Senator O'Mahoney, inquiring whether any of the Upper Basin states would need to be involved in such litigation, one of California's principal attorneys in this action said:

> "So far as California is concerned, I think the answer is 'No'. We have no controversy with any of the Upper Basin States that requires any judicial examination."[3]

In the face of these representations, a House Committee concluded not to pass upon the Central Arizona Project until the litigation requested by California could be concluded.[4]

2. Thereupon Arizona filed the instant proceedings. It very carefully confined its case to the exact matters which had been in issue before the Congress. A glance at its prayer for relief will show that it asked in varying ways for the establishment in it "of 3,800,000 acre feet of the water *apportioned to the Lower Basin* by the Colorado River Compact." (Emphasis added) It asked for no relief whatsoever aimed at any water which was not apportioned to the Lower Basin of the Colorado by the Compact.

3. Thereafter the United States intervened. The claims of the United States are either limited explicitly to Lower Basin interests or are limited to claims "as against the parties to this cause;" see, for example,

---

[3] Hearing, Subcommittee of the Committee on Interior and Insular Affairs, United States Senate, 80th Cong., 1st Sess., S. J. Res. 145, p. 120.

[4] See n. 1, supra.

the basic claim of the United States in paragraph XXX of its petition for intervention. The United States claims were thus limited to Lower Basin controversies.

4. Nevada filed its petition of intervention made also only against the Lower Basin interest.

5. California then moved for the joinder of the States of New Mexico, Utah, Colorado, and Wyoming in their Upper Basin capacity, and the States of Utah and New Mexico in their Lower Basin capacity. A word of explanation is here required: The states of Wyoming and Colorado are in the Upper Basin of the Colorado. The states of New Mexico and Utah are predominantly in the Upper Basin, but small areas in each, covering comparatively minor tributaries, are below the line drawn through Lee Ferry which divides the two Basins.

6. This Court referred the question of joinder to the Special Master who heard five days of oral argument in Phoenix, Arizona, in April, 1955. At this argument, abundant opportunity to be heard was given to all, and all of the states were heard. The United States was there represented by Assistant Attorney General Lee Rankin and Mr. William H. Veeder. At the beginning the Special Master inquired of all counsel present whether they wished to be heard and the following dialogue took place:

> "The Master: How about the United States?
> "Mr. Rankin: The United States will not require any time on the motion.
> "The Master: You have filed no briefs and do not intend to speak?
> "Mr. Rankin: That is right.
> "The Master: What would you do if the Master asks you some questions?

"Mr. Rankin: We will try to answer, depending upon the question, though we may stand mute at times."

(Oral arguments before Special Master on motion to join, Volume 1, page 5.)

The same desire not to express itself was reiterated by the United States at Volume 2, page 356, of the oral argument. At that point California had sought to induce the United States to take some position. In response the Master noted in particular that he was anxious to find out from the United States what its position was in regard to the Indians, "because that is the subject of considerable mystery to me so far, and I think we all ought to know; but I believe that goes to the merits." Nonetheless, he said, if the United States wished to file no brief and make no argument saying, "We will stand by the result whatever it may be," then, said Mr. Haight, "I think that is their privilege." In reply Mr. Veeder said, "Thank you, Your Honor." Id. p. 356.

7. On July 11, 1955, the Special Master filed his Report concluding that the States of Utah and New Mexico ought to be joined in their Lower Basin capacity only, and not in their Upper Basin capacity; and that the States of Wyoming and Colorado ought not to be joined at all.

8. California and Nevada filed exceptions to the Master's Report, California also asking oral argument. California also filed a brief on the exceptions in supplement to the earlier briefs filed in the joinder question. The United States on October 20, 1955 also filed a motion for determination of questions of law presented by the pleadings in the cause and report of

the Special Master. The questions which the United States wished to determine in advance were, principally, the question of whether Arizona is a party to the Compact (California contends that it is not); and how the Compact may be said to affect the rights of the Indians in general. To this California has filed a response, denying that these questions could or should be settled in advance by this Court but contending that the very existence of the Motion of the United States is further reason for joining the additional parties.

QUESTIONS PRESENTED

1. Whether this Court should order special argument on a series of questions of law raised by the United States before disposing of the Master's Report on Joinder?

2. Whether the Master's recommendations as to joinder should be approved?

3. Whether the Court should order oral argument before deciding the immediately preceding questions?

SUMMARY OF ARGUMENT

The motion of the United States and the exceptions of California and Nevada are so closely related that argument as to one necessarily touches the other.

A. THE MOTION OF THE UNITED STATES.

The United States is estopped from offering the motion now presented by it. It expressly renounced the opportunity to discuss before the Master the questions it now seeks to raise. Moreover, the principal matters raised by the United States on this motion are either frivolous or not open to serious question; for

there is not room for reasonable difference of lawyer's opinion over whether Arizona is a party to the Colorado River Compact, and the Master's determination that the rights of the Indians are to be satisfied from the waters of the Basin in which they are is sound. Piece-meal review can serve no useful purpose.

B. THE EXCEPTIONS.

The motion of the United States in any case loses all point if the Master's Report deserves confirmation on the question of joinder. Such matters are largely discretionary with him who serves as a trial judge; see *United Mine Workers* v. *Coronado Coal Company,* 259 U.S. 344, 382 (1922).

The exceptions go largely to matters of dicta, detail or expression which do not affect the ultimate judgment on joinder. The absent states are not indispensable parties under the doctrine of *Shields* v. *Barrow,* 17 How. 130 (1854). As to whether they should be joined as necessary or proper parties, the best test is whether any relief is sought as to them, *West Coast Exploration Co.* v. *McKay,* 213 Fed. (2d) 582 (C.A. D.C. 1954), cert. den., 347 U.S. 989 (1954), for a so-called "community of interest" is not enough, *Samuel Goldwyn, Inc.* v. *United Artists Corp.,* 113 Fed. (2d) 703 (C.A. 3, 1940).

The instant case is controlled by the First Order in *Nebraska* v. *Wyoming,* 295 U.S. 40 (1935), and is distinguishable from the Second Order in that case, 296 U.S. 553 (1935), because the Second Order was based upon assertions of actual threatening and immediate concrete dispute over the subject matter of the action.

The well-established policy of avoidance of needless interstate litigation precludes joinder of the Up-

per Basin States here, *Alabama* v. *Arizona,* 291 U.S. 286, 291-292 (1934). This is a policy of particular importance where, as here, the Upper Basin States have settled for themselves the bulk of questions in dispute in the Lower Basin by the Upper Basin Compact. See *Colorado* v. *Kansas,* 320 U.S. 383, 392 (1944).

Finally, no justiciable question is presented as to the absent states, *United States* v. *West Virginia,* 295 U.S. 463 (1935). As that case declares, the judicial power does not extend to the "adjudication of such differences of opinion" which is all that is here involved as to the Upper Basin States. The California contention that there need not be a justiciable controversy as to all parties to a law suit is unsound, *United Public Workers* v. *Mitchell,* 330 U.S. 75 (1947).

Nothing in the circumstances warrants oral argument on the joinder question.

ARGUMENT

I. INTRODUCTION.

The interest of Arizona is to get on with the business at hand. Shortly before the opening of this term of Court, the Special Master passed away and this Court appointed in his stead Judge Simon Rifkind. We are advised that Judge Rifkind hopes soon to be ready to proceed with the matter, and we are anxious to give him the opportunity to do so. As this memorandum is prepared, this Court has not yet entered an order determining what briefs, if any, may be required in connection with the exceptions; but in view of the circumstance that we feel compelled to respond to the motion of the United States, which involves the same matter, it has seemed most expeditious to file under

one cover a statement of Arizona both as to the motion of the United States and as to the Nevada and California exceptions.

II. THE MOTION OF THE UNITED STATES SHOULD BE DENIED.

We submit that the motion of the United States for preliminary determination of questions should be denied. We doubt if this Court ever has referred a case to a master and then taken it back to decide two or three legal points before the master proceeds, as the United States now suggests. For the following reasons in particular, we see no reason for establishing such a precedent now:

A. The United States Is Estopped From Offering the Motion Now Presented by It.

The United States has had over a year within which it might have made its present proposal. As the quotations above show, the United States chose to stand mute before the Special Master, making no expression on the exact questions which it now wants this Court to take up and determine. It did so when the Special Master had made abundantly clear that he would be most glad to hear anything that the United States wished to say, and when the United States had explicitly agreed to abide the result of its silence. We can conceive of no reason which would permit the United States now to take the time of this Court to discuss the exact matters which it declined to discuss before the Special Master. Such a proceeding would utterly defeat the purpose of reference to a master.

B. The Principal Matters Raised by the United States Are Either Frivolous or Not Open to Serious Question.

1. With all due respect to the State of California, we submit that there is not room for reasonable difference of opinion as to whether Arizona is a party to the Colorado River Compact. California admits that Arizona passed an act of ratification (California Answer, Par. 59). In all this mountain of pleadings and proceedings, we find no concrete reason suggested as to why this ratification is thought to be ineffective. Clearly under Article XI of the Compact, Arizona was entitled to ratify in 1922 and nothing in the Compact put a time limit on the right of ratification. The legislative history of the Compact shows that those who drafted it considered that the time for ratification would be indefinite.[5] Nothing in the Boulder Canyon Project Act contains any limitation on the right to ratify, and nothing subsequent indicates any loss of the right. When Arizona finally in 1944 entered into its contract with the Department of the Interior, which was expressly conditioned upon its ratification of the Compact, Mr. Shaw, then counsel for California, was positively enthusiastic about Arizona's ratification.[6] The Upper Colorado River Basin Compact, approved by the Congress, necessarily assumes the validity of Arizona's ratification of the main Compact. Nothing in the sheer passage of time vitiates the power of rati-

---

[5] The minutes of the Twenty-First Meeting of the Compact Commission, November 20, 1922, page 9, contains a dialogue on the subject of time of ratification. Chairman Hoover raised the question of length of time. The consensus, as expressed by Mr. Davis for the Bureau of Reclamation, was "that the time was indefinite", to which Mr. Hoover replied, "All right, if that is clear, it satisfies me."

[6] See minutes of Committee of Fourteen on the drafting of the Arizona contract, May 3, 1943, page 27.

fying a compact, and numerous compacts have been outstanding for ratification for approximately as long as that here involved.[7]

2. The Special Master at pages 53 and 54 of his Report, dealing with the Indian question, analyzed the various provisions of the Compact and said:

> "From this, it appears that the rights of the Indian Tribes in the Upper Basin shall be satisfied solely from waters of the Upper Basin, and the rights of Indian Tribes in the Lower Basin shall be satisfied solely from water appropriated to that Basin.
>
> "The question of how Lower Basin water shall be divided among the Lower Basin States is one for final hearing."[8]

Further argument might delay, but we think could not materially alter, the acceptance of the Master's conclusions in this regard.

C. Piece-Meal Review in This Court Would Delay Proceedings to No Good End.

We assume that the United States is asking for a determination of these questions, not in the abstract, but because they are supposed to have some relation

---

[7] See for one of numerous instances the Interstate Oil Compact of 1935, ratified by four states in 1945, by two states in 1947, and by one state in 1951; Book of the States, 1948-49, p. 40, 1952-53, p. 23.

[8] We believe that California in its exceptions, p. 21, misconstrues this conclusion of the Special Master when they read the passage as a holding that the "Indian uses are to be charged to the State and Basin where they take place." We believe that the Master held that the uses should be charged to the Basin in which they take place, reserving the question of what the distribution within the Basin should be.

to the only matter now concretely before this Court, namely whether the Master's Report on the question of joinder should be accepted. We submit, for the reasons set forth in the Master's Report, supported by the balance of the argument in this brief, that the Master's Report should be accepted; and that it could serve no useful purpose to delay the resolution of that question pending consideration of these preliminary issues. By familiar doctrine, this Court does not sit to decide abstractions, however interesting.

III. THE JUDGMENT AS TO JOINDER WAS WITHIN THE FAIR DISCRETION OF THE MASTER AND SHOULD NOT BE LIGHTLY DISTURBED.

Questions of joinder involve large areas of discretion, and while they may be reviewed for abuse of discretion, the determination on such a question will not be lightly set aside. *United Mine Workers* v. *Coronado Coal Company,* 259 U.S. 344, 382 (1922); and see on the related question of intervention of parties, *Allen Calculators, Inc.* v. *National Cash Register Co.,* 322 U.S. 137, 141, 142 (1944); 4 Moore's *Fed Prac.,* 62-64. We appreciate that a Master does not stand in the identical position of a trial court, although the relationship is a very close one; see, *e.g., Anderson* v. *Mount Clemens Pottery Co.,* 328 U.S. 680 (1946), on the finality of master's reports as to matters of fact. While a master's report on a question of law is reviewable, *Louisiana* v. *Mississippi,* 282 U.S. 458, 465 (1931), the conclusions of the Master are nonetheless entitled to very serious consideration; *Lupton* v. *Chase National Bank,* 89 Fed. Supp. 393 (1950).

We respectfully submit that these discretionary considerations are particularly applicable in the circum-

stances of this case, where the matter was heard with singularly exhaustive patience by one well qualified to make the necessary determination.

IV. ON FAMILIAR PRINCIPLES OF JOINDER, THE UPPER BASIN STATES SHOULD NOT BE INCLUDED IN THESE PROCEEDINGS.

A. Introduction.

This Court has before it a question of joinder of parties, and of joinder only. In the course of determining that question it could lay out its position on numerous matters of law, but there is no necessity to do so. The Special Master attempted in his ruling and opinion generally to outline his understanding of the various matters presented, as much for the purpose of revealing to counsel where he needed further clarification himself as for the purpose of disposing of the matters involved. As a result, there are dicta in the Master's Report. There are also little slips of a word here or there; thus, as California points out at page 67 of its Exceptions, at one point the Master used the word "apportionment" when he may have meant to use the word "appropriation;" and as California contends at page 52, the Master may have erred in attributing certain language to Senator Hayden when in fact that language was used by then Secretary Hoover to Senator Hayden. But this Court need not concern itself with matters of dicta, or vocabulary, or citation. All that matters here is the end result; and we respectfully submit that many of the objections made to the Master's Report can only highlight the circumstance that the concrete question before him was soundly answered.

B. Under the Applicable Rules, the Resisting States Cannot be Joined. They are at Most "Proper" Parties, and are Neither Indispensable Nor Necessary Parties.

Under the familiar doctrine of *Shields* v. *Barrow*, 17 How. 130, 139 (1854), indispensable parties are those without whom "a final decree cannot be made without either affecting that interest, or leaving the controversy in such a condition that its final termination may be wholly inconsistent with equity and good conscience." Necessary parties are those required to be present in order that "complete relief may be accorded between those already parties." *Greenleaf* v. *Safeway Trails*, 140 Fed. (2d) 889, 890 (C.A. 2, 1944). It is these parties who are covered by Rule 19 of the Rules of Civil Procedure. In the instant case, the absent parties are neither indispensable nor necessary. Far from being essential to a disposition of the case, this Court will have to reach far afield indeed to take any action which might affect the absent states. At most, the absent states are proper parties, permissibly joinable under Rule 20; see 3 Moore, *Federal Practice*, 2153 (2nd Ed.); although it is not conceded that they are even this.

"There is no prescribed formula for determining in every case whether a person or corporation is an indispensable party or not," *Niles-Bement-Pond Co.* v. *Iron Moulders Union*, 254 U.S. 77, 80 (1920). In making these practical determinations, the best test is the test of the relief to be granted; if relief is impossible without absent parties, those parties are indispensable; if relief amongst the parties to the action will be rendered greatly more effective by the addition of other parties, those parties are "necessary," but this only if those parties would otherwise be affected by the actual op-

eration of the judgment. *West Coast Exploration Co.* v. *McKay,* 213 Fed. (2d) 582 (C.A. D.C. 1954).

California and Nevada confuse possible intellectual interest in particular points with the proper test, which is that of the actual bearing of the relief to be granted. A so-called "community of interest" is not enough, *Samuel Goldwyn, Inc.* v. *United Artists Corp.,* 113 Fed. (2d) 703 (C.A. 3, 1940), even as in that case where identical contracts of persons sought to be joined might be affected by the litigation. As the Third Circuit there held, it was immaterial that the holding would affect the strangers to the litigation for "Such a conclusion however would not constitute an adjudication" (113 Fed. (2d), at 706) of the rights of the others, nor was there any relief which was actually being sought by the moving parties against the strangers. In those circumstances, said the Court, there could be no justiciable controversy between the parties and those sought to be joined.[9]

---

[9] The cases cited by California do not require inclusion of the absent states. As California concedes in its original brief at page 49, the *Shields* case is of course distinguishable; it involved rescission of a contract. No more in point is *Niles-Bement-Pond Company* v. *Iron Moulders Union,* 254 U.S. 77 (1920), a suit in which a corporation sought to enjoin a strike not against itself but against a subsidiary corporation without making the subsidiary a party. Omission of the subsidiary corporation in those circumstances was a palpable fraud on the jurisdiction, and the Court, of course, held the subsidiary not merely a necessary but an indispensable party in the circumstances. *Gregory* v. *Stetson,* 133 U. S. 579 (1890), also relied upon, is particularly clearly inapplicable because it involved a suit for the proceeds of a note which by the very terms of the contract was "subject to the joint order and direction" of other persons, who hence were held not merely necessary but indispensable parties under the familiar rule. The further citation of a dictum in *National Licorice Company* v. *N.L.R.B.,* 309 U.S. 350, 363 (1940), is in substance approximately as remote from the conventional problem of joinder as the title of the case

In the instant case no party is seeking any relief whatsoever against any of the absent states. Arizona and her neighbors to the north and west ask nothing but the opportunity to live in peace with each other. All Arizona seeks is its share of the Lower Basin water as against its rivals, California, and to a lesser extent, Nevada.

> "The general rule in equity has been that one against whom nothing is alleged and no relief is demanded need not be impleaded as a defendant . . . ," 6 *Cyc. Fed. Proc.* (3rd Edition) 548.

And see *Clark on Code Pleading* (2nd Ed.) 205.

C. The Rulings of This Court in the Nebraska-Wyoming-Colorado Litigation Preclude Joinder in the Instant Case.

Since all parties invoke as precedent the two orders of the Supreme Court on the joinder question in the Nebraska-Wyoming-Colorado litigation, the exact events there require special attention. We refer to *Nebraska* v. *Wyoming,* 295 U.S. 40 (1935), hereafter referred to as the First Order; and *Nebraska* v. *Wyoming,* 296 U.S. 553 (1935), hereafter referred to as the Second Order.

1. The First Order.

Nebraska sued Wyoming for an equitable apportionment, as between those states, of the waters of the North Platte River. Wyoming moved to dismiss on the ground, among others, that Colorado was an indis-

---

would suggest; and the immediately succeeding passage in *National Licorice* shows its inapplicability to extra-contractual rights.

The *Goldwyn* case, *supra,* distinguishes *Commonwealth Trust Company* v. *Smith,* 266 U. S. 152 (1924), on which California particularly relied in the instant case, on the grounds that in that case the interests of the absent parties were cognizable in that suit.

pensable party. The contention was that the North Platte rose in Colorado, just as the Colorado rises in the Upper Basin States here. Wyoming rested its motion basically upon much the same cases as those offered by California in the instant situation.[10]

The position taken by Nebraska was the same as that taken here by Arizona, that "Since no relief is asked by complainant as against the State of Colorado, and since the State of Colorado has no interest in the relief asked, as against the State of Wyoming, or in the controversy between the State of Nebraska and the State of Wyoming, the State of Colorado is not a necessary or indispensable party." The Supreme Court accepted this position, saying of the Wyoming plea:

> "The contention is without merit. Nebraska asserts no wrongful act of Colorado and prays no relief against her. We need not determine whether Colorado would be a proper party, or whether at a later stage of the cause pleadings or proofs may disclose a necessity to bring her into the suit. It suffices to say that upon the face of the bill she is not a necessary party to the dispute between Nebraska and Wyoming concerning the respective priorities and rights of their citizens in the waters of the North Platte River."

2. The Second Order.

In due course, Wyoming filed a supplemental answer alleging that Colorado was *presently* contemplating and threatening the diversion of large amounts of water in the North Platte in such quantity as "will of necessity be the subject matter pro tanto of the deter-

---

[10] See particularly *Commonwealth Trust Company* v. *Smith*, 266 U. S. 152 (1924), which was just as applicable in the first Colorado case as it is here, and which was rejected as inapplicable by the Supreme Court in the first proceedings.

mination of the rights in this action of the present parties." In these circumstances, Wyoming prayed for an equitable apportionment which included Colorado. In these circumstances, this Court permitted the joinder of Colorado.

The differences between the order in the second case and the instant situation are glaring. In the instant case there is no allegation at all of any actual present interference by the Upper Basin with the flow of water in controversy among the Lower Basin States, nor is there any plea of equitable apportionment against the Upper Basin by any party in the Lower Basin. That these differences are significant is shown by the discussion in the final disposition of the merits of the controversy in *Nebraska* v. *Wyoming,* 325 U.S. 589, 608 (1945), where this Court observed that where the controversy was among states all seeking the identical water, it was necessary to join absentees, particularly where "states have not been able to settle their differences by Compact." In the instant case the states have settled their major differences among themselves as between Basins by the Colorado River Compact, and the Upper Basin States have further settled the detailed differences amongst themselves by the Upper Colorado River Basin Compact.

We respectfully submit that this matter is controlled by the first Wyoming-Colorado-Nebraska order, which is virtually on all fours with the instant situation.[11]

---

[11] California also makes some argument based on the fact that in the preceding Arizona-California cases, 283 U.S. 423 (1931), 292 U.S. 341 (1934), and 298 U.S. 558 (1936), Arizona did join all the states. In each of those cases, Arizona did in fact seek relief against all of the states, a position it could then take because it had not ratified the Compact. The claims for relief in those cases were radically different from those made here.

D. The Policy of Avoidance of Needless Interstate Litigation Precludes Joinder of the Upper Basin States Here.

This Court has made clear its basic policy on this score in *Alabama* v. *Arizona,* 291 U.S. 286, 291-292 (1934), when it said:

> The Supreme Court's "jurisdiction in respect of controversies between States will not be exerted in the absence of absolute necessity. A state asking leave to sue another to prevent the enforcement of laws must allege, in the complaint offered for filing, facts that are clearly sufficient to call for a decree in its favor. Our decisions definitely establish that not every matter of sufficient moment to warrant resort to equity by one person against another would justify an interference by this court for the action of a State. Leave will not be granted unless the threatened injury is clearly shown to be of serious magnitude and imminent." (Citations omitted)

The jurisdiction of this Court in respect to the Upper Basin States cannot, even by the most vivid imaginings, be fairly described as a matter of "absolute necessity."

This policy is of particular importance where the matters involved can best be settled by compact, for this Court prefers compact settlement where this is possible:

> "We say of this case, as the Court has said of interstate differences of like nature, that such mutual accommodation and agreement should, if possible, be the medium of settlement, instead of invocation of our adjudicatory power." *Colorado* v. *Kansas,* 320 U.S. 383, 392 (1944).

In the instant case the involvement of the Upper Basin States in litigation which they obviously wish to avoid

can only have the effect of unsettling compact commitments which they have already made for themselves. The questions of apportionment among states, Indian rights, evaporation loss distribution, and definition of "consumptive use," which are at the heart of this case, the Upper Basin States have already determined by their own agreement.

V. NO JUSTICIABLE QUESTION IS PRESENTED AS TO THE ABSENT STATES.

The Special Master found that there was no justiciable controversy between the Upper and Lower Basin States. California in its exceptions takes the position that there need be no justiciable controversy between original parties to an action and additional parties as a condition of the addition of those parties. California contends (a) that there is a justiciable controversy between the Lower and Upper Basin States; and (b) that if not, none is required.

California relies on *United States* v. *West Virginia,* 295 U.S. 463 (1935), for the proposition that the Court has jurisdiction of quiet title actions, and then assimilates this to such an action. But this is not a quiet title action so far as the Upper Basin States are concerned. As the Court said in the *United States* v. *West Virginia,* at 475, speaking of quiet title actions:

> "The public assertion of the adverse claim by a defendant out of possession is itself an invasion of the property interest asserted by the plaintiff, against which equity alone can afford protection."

Here there is absolutely no public assertion of any adverse claim by any of the Upper Basin States.

We believe that *United States* v. *West Virginia* teaches quite a different lesson. In that case this Court

held that there was no case or controversy where the United States sought to enjoin the construction of a dam upon a navigable stream by a state which had not first obtained a license from the Federal Power Commission. The state had licensed the construction of the dam but, said the Court, this was not enough to allege the invasion of any property right of the United States. In language which directly parallels the instant situation, this Court said:

> "There is presented here, as respects the state, no case of an actual or threatened interference with the authority of the United States. At most, the bill states a difference of opinion beween the officials of the two governments, . . . There is no support for the contention that the judicial power extends to the adjudication of such differences of opinion." 295 U.S., at 473, 474.

For illustration of the requirement that there be a justiciable controversy as to each party involved in a case, see *United Public Workers* v. *Mitchell,* 330 U.S. 75 (1947), and for further affirmation that the case and controversy rule applies in full force to interstate litigation, see *Massachusetts* v. *Missouri,* 308 U.S. 1 (1939). See also the concurring opinion of Mr. Justice Frankfurter in *Joint Anti-Fascist Refugee Com.* v. *McGrath,* 341 U.S. 123, 149-157 (1951), none of whose tests are met by the proposed joinder of the Upper Basin States.

VI. THE EXISTENCE OF QUESTIONS OF LAW IN WHICH THE ABSENT STATES MAY HAVE SOME INTELLECTUAL INTEREST IS NOT SUFFICIENT TO REQUIRE JOINDER.

As it seems to Arizona, the bulk of the Nevada exceptions and the heart of the California contentions go to discussion of questions of law in which the Upper

Basin States are said to be "interested." For example, Nevada contends that if the United States is given all it asks in the Lower Basin there will be too little water left for the Lower Basin States and therefore somehow the Upper Basin will be "materially affected," presumably because of the added pressures which, given this unhappy result, the Upper Basin States would then feel from their Lower Basin neighbors. Similarly California contends that the settlement of the allocation of reservoir losses by evaporation will affect the amount of "surplus" in the River; that this in turn will affect the amount of water available for the Mexican Treaty; and that the Upper Basin States are therefore concerned with the resolution of the question because there might conceivably be some added call upon them someday for Mexican Treaty purposes.

In the interest of brevity, we have chosen only a sample of the contentions of each of the excepting states. The point is that the case and controversy doctrine preserves this Court from the necessity of deciding hypothetical questions. Arizona disclaims any controversy with the Upper Basin States, and they with her. So far as California is concerned, we think its position was correctly stated in the passage quoted in the beginning of this brief when one of its most respected counsel told Senator O'Mahoney, while urging the reference of these questions to this Court, that there was no necessity for joinder of the Upper Basin States. As California's attorney said then:

> "We have no controversy with any of the Upper Basin States that requires any judicial examination."

VII. NOTHING IN THE CIRCUMSTANCES WARRANTS ORAL ARGUMENT ON THE JOINDER QUESTION.

We are aware of no instance in which this Court has ever interrupted an original proceedings after reference to a master for oral argument on a question of joinder of necessary or proper (as distinguished from indispensable, cf. *Texas* v. *New Mexico,* No. 9 Original) parties. The briefs are commonly adequate for decision one way or another, and they are particularly so here when the Master's Report is so extensive.

CONCLUSION

It is respectfully submitted that the motion of the United States should be denied and that the Report of the Special Master on the question of joinder be approved by this Court without oral argument.

Respectfully submitted,

RESPONSE OF THE STATES OF COLORADO, WYOMING, UTAH AND NEW MEXICO TO MOTION OF THE UNITED STATES OF AMERICA FOR DETERMINATION OF QUESTIONS OF LAW PRIOR TO DETERMINATION OF JOINDER MOTION.

PRELIMINARY STATEMENT

The State of Arizona instituted this action against the State of California and others; thereafter, the United States of America and the State of Nevada intervened. California moved to join the States of Colorado, Wyoming, Utah and New Mexico as parties to the action. Extensive briefs on the question of joinder were filed in this Court by all parties to the action except the United States, and by the States of Colorado, Wyoming, Utah and New Mexico.

On February 28, 1955, the Court referred the joinder motion to the Special Master, the Honorable George I.

Haight, "to hear the parties and report with all convenient speed his opinion and recommendation as to whether the motion should be granted."

The Special Master held hearings on the joinder motion in Phoenix, Arizona, on April 12, 13, 14 and 15, 1955. At this hearing all parties to the action were represented by counsel. Also present by their counsel were the States of Colorado, Wyoming, Utah and New Mexico. All parties represented at the hearing, except the United States, participated in the hearing and the oral arguments. Although the United States was represented by counsel at the hearing, they did not participate in the arguments, although given an opportunity to do so. The following is taken from the report of the oral arguments in Volume 1, at page 5:

"The Master: How about the United States?

"Mr. Rankin: The United States will not require any time on the motion.

"The Master: You have filed no briefs and do not intend to speak?

"Mr. Rankin: That is right.

"The Master: What would you do if the Master asks you some questions?

"Mr. Rankin: We will try to answer, depending upon the question, though we may stand mute at times."

Later during the oral arguments, the following took place:

"Mr. Ely: Your Honor, I understand that counsel for the United States may not be here all through tomorrow, and while counsel for the government is still here I should like to suggest to Your Honor that it might be appropriate to address to the United States in some form an inquiry as to what position it cares to take as to the necessity of joinder of the absent states with respect to the claims made by the United States. We are in the dark as to how certain allegations of the government pleadings are interpreted by the United

States itself, particularly as to the Indian claims and their effect upon the Upper Basin.

"Mr. Chilson: If the Master please, on behalf of Colorado I seriously object to the suggestion made by Mr. Ely. The United States had an opportunity to come in here and file briefs and make its position clear if it took any position on this motion. It has not seen fit to do so, which is their right. They can remain neutral, they can remain mute, and they have done so. I think it would be entirely wrong to follow the suggestion of counsel for California.

"The Master: I will say right now I am not going to force the United States to say anything. If they wish to stay out and let it be a quarrel between states, I think that is their privilege. We are going to encounter a quite different situation when we get into the merits and when we get into the merits, one of the first things I am going to ask is to have a statement from the United States, particularly in regard to the Indians, because that is a subject of considerable mystery to me so far, and I think we all ought to know; but I believe that goes to the merits.

"Now, on this motion, if the United States comes in here and says, 'We file no brief, we make no argument, we leave it to the states to battle it out, we will stand by the result whatever it may be,' I think that is their privilege.

"Mr. Veeder: Thank you Your Honor."

(See Oral Arguments, Volume II, pages 355 and 356).

On July 11, 1955, the Special Master made his report to this Court and submitted to the Court the following recommendation:

"VII. RECOMMENDATION.

"Accordingly, it is recommended that the Motion of the California parties to join the States of Colorado, Wyoming, Utah and New Mexico as parties to this cause, in their capacities as Upper Basin States and in

respect to Upper Basin waters be denied. It is a further recommendation that as to each of the States Utah and New Mexico in their capacities as Lower Basin States and in relation to their respective Lower Basin waters only that the said Motion be allowed."

(Special Master's Report, page 69).

In October, 1955, California and Nevada filed exceptions to the Master's report and requested oral argument on the joinder motion and the exceptions.

Thereafter and on or about October 24, 1955, Colorado and Wyoming received a copy of the motion of the United States of America for determination of questions of law presented by the pleadings and the Report of the Special Master.

STATEMENT OF THE QUESTIONS PRESENTED

The motion of the United States is to the effect that there are certain legal questions which have a bearing on the determination of the joinder motion, and which should be determined by this Court before a determination of the joinder question.

The motion requests the Court to order briefs filed in connection with these legal questions before action on the joinder motion.

The legal questions which the motion of the United States contends should be first determined are:

1. Is Arizona a party to the Colorado River Compact, and thereby entitled to share in the water apportioned to the Lower Basin by that compact?

2. Are Indian claims to use of water a charge against the river as a whole, or are they to be satisfied from water apportioned by the Colorado River Compact to the basin in which the water use is made?

We object to the granting of the motion of the United States for the following reasons:

1. These legal questions and their bearing on the joinder motion, have been fully discussed and argued in the

briefs filed herein on the joinder motion and in the oral arguments before the Special Master.

2. The Special Master, after consideration of these questions and their bearing on the joinder motion, was of the opinion that the Upper Basin States, in their Upper Basin capacities, were not necessary or indispensable parties to this litigation.

3. That the United States had ample opportunity to file briefs with this Court and to participate in the proceedings before the Special Master, and state its position on these legal questions and their bearing on the joinder question, but refused so to do. Having waived its rights to participate, the United States should not now be heard on the joinder question.

ARGUMENT

I. THE QUESTION OF WHETHER OR NOT ARIZONA IS A PARTY TO THE COMPACT, HAS NO BEARING ON THE JOINDER QUESTION IN THIS ACTION.

The Colorado River Compact divides the use of the waters of the Colorado River between the Upper Basin and the Lower Basin. *The compact, by intent, does not divide the use of waters within either basin.*

Because the Colorado River Compact did not divide water use within either basin, the States of each basin have faced the problem of dividing the water use apportioned to the basin among the States therein.

The Upper Basin attacked the problem by negotiation, which eventually led to a division of the Upper Basin use by an agreement in the form of the Upper Colorado River Compact. By this compact the water apportioned to the Upper Basin by the Colorado River Compact was divided among the States of the Upper Basin. In view of the fact that the Colorado River is the only major source of water remaining for the development and growth of the Upper Basin region, division by agreement was thought improbable if not impossible, but this monumental task was achieved.

The Upper Basin Compact was negotiated and ratified without the consent or participation of the Lower Basin.

The Lower Basin of the river failed to accomplish the division of its water use by agreement, and this action was brought for the purpose of obtaining a division among the States of the Lower Basin, of the water use apportioned to the Lower Basin by the Colorado River Compact.

The Lower Basin States were not necessary parties to the division of the Upper Basin's apportionment, and the Upper States, in their Upper Basin capacities, are not necessary parties to a division of Lower Basin water use, whether that division is by agreement and compact or by litigation.

In this respect the Special Master said:

> "Although a Compact may be no more than a contract between States, it does not follow that all the parties to the Colorado River Compact must be parties here.
>
> "The Compact, by its terms, provides two separate groups in the Colorado River Basin. Each of these is independent in its sphere. The members of each group make the determinations respecting that group's problems. To destroy this arrangement made by the Colorado River Compact and to make the members of one group parties to the controversies of another group would be to deny the arrangement to keep the two groups separate and apart. The many cases which have been cited in support of the Motion do not bear upon this plain fundamental consideration. Save for some justiciable controversy existing between these two groups or between members of one group in respect to members of another group, there can be no sound reason for joining in a controversy within one group on the ground that in the making of the separation by the Colorado River Compact the members of both groups were parties thereto."
>
> (Special Master's Report, pages 33 and 34).

By Article III(a) of the Colorado River Compact, there is apportioned in perpetuity to the Upper Basin the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum. The Upper Basin's present consumptive use is approximately 2,500,000 acre-feet per annum, or about one-third of its apportionment. (See Hearings Before the Subcommittee on Irrigation and Reclamation of the Committee on Interior and Insular Affairs, United States Senate, 83rd Congress, Second Session, on S. 1555, page 286).

There is no allegation in the pleadings, and the facts warrant no allegation, that the Upper Basin is exceeding its apportioned use or is depriving the Lower Basin, or any user in the Lower Basin, of any water or right under the Colorado River Compact. Neither is there any allegation in the pleadings by the United States that the Upper Basin is depriving the United States of any rights which it claims in the Lower Basin or the Upper Basin.

Clearly the scope of the present action, and the justiciable issues therein, relate solely to a division of the Lower Basin's apportionment under the compact, among the various states in the Lower Basin and the United States. The Special Master, in this regard, said:

> "This cause was initiated by Arizona, as a Lower Basin State to quiet its title to waters of that basin." (Page 35, Special Master's Report).

The Special Master further said:

> "We find that the United States, as an intervener, does not attempt, even were it allowable so to do, to enlarge the scope of this cause. The United States is asserting rights solely to the use of water in the Lower Basin."

(Page 44, Special Master's Report).

Let us now turn to the motion of the United States. There is nothing of substance in this motion which was not argued before and considered by the Special Master. The question of whether or not Arizona is a party to the Colorado River Compact, and the bearing of this question on

the joinder of the Upper States, was argued at length in the briefs and in the oral argument before the Master.

Whether Arizona is or is not a party to the compact and entitled thereby to share in the apportionment to the Lower Basin under the Compact, is of only academic interest to the Upper Basin. Whether the Lower Basin's share is to be divided between California, Arizona and Nevada, or only between California and Nevada, neither increases nor decreases the Upper Basin's rights and obligations under the compact.

Arizona's claim in this suit is limited to a share of water use under the compact, and not in derogation or outside of the compact.

The United States, in Section IV of her motion, states:

> "It is patent that if the contracts between the United States of America and the State of Arizona should fall by reason of the determination that Arizona is not a party to the Colorado River Compact, its claimed rights to the water in the Colorado River would be materially changed, very probably presenting issues that could not be resolved without the presence of the parties California seeks to join."

We disagree with this statement. Arizona, by her complaint and otherwise, has specifically limited her claim in this action to a part of the Lower Basin apportionment under the compact.

In her brief filed in opposition to the motion of the United States, Arizona states:

> "It asked for no relief whatsoever aimed at any water which was not apportioned to the Lower Basin of the Colorado by the Compact."

If, therefore, it should be determined in this action that Arizona is not entitled to water under the compact, then certainly in this action Arizona cannot enlarge its claim to one in derogation of or outside of the scope of the compact.

Should Arizona at any time in the future institute liti-

gation, making claim beyond the Lower Basin's apportionment, most certainly the Upper Basin States will be concerned. No such issue has here been raised.

The Special Master, after considering the briefs and hearing the question discussed at length in oral argument, said:

> "The California defendants maintain that this question raises a justiciable controversy between the present parties and the four absent States, because (1) the absent States are members of the Compact, (2) a Compact is no more than a contract, and (3) parties to a contract cannot have new parties added to that contract, any more than could new provisions be added to it, in litigation to which they are not parties.
>
> "The Upper Basin opponents to this Motion are parties to the Compact, but deny that the question of Arizona's status respecting the Colorado River Compact is sufficient to grant the joinder motion because (1) to them it is immaterial whether or not Arizona is a party, and (2) their obligations and rights will not be affected regardless of the determination of this question since they are controlled by the Compact.
>
> "Arizona pleads that it is a party to the Compact. The proponents of the Motion deny this. No one has questioned the membership of the Upper Basin States in the Colorado River Compact or their rights and obligations thereunder. No one charges them with any failures of performance. How the waters of the Lower Basin are apportioned and whether in that apportionment Arizona technically or in equity is a party to the Colorado River Compact can be of no interest to them as Upper Basin States. The Court can do complete justice between the present parties without affecting the rights of the Upper Division States with regard to the waters of the Upper Basin. Further, we call attention to the provisions of Articles VIII and IX of the Compact and Section 13(a) of the Boulder Canyon Project Act following:
>
> "'Article VIII. *Present perfected rights to the beneficial use of waters of the Colorado River System*

are unimpaired by this compact. Whenever storage capacity of 5,000,000 acre feet shall have been provided on the main Colorado River within or for the benefit of the Lower Basin, then claims of such rights, if any, by appropriators or users of water in the Lower Basin against appropriators or users of water in the Upper Basin shall attach to and be satisfied from water that may be stored not in conflict with Article III.

"'All other rights to beneficial use of waters of the Colorado River System shall be satisfied solely from the water apportioned to that Basin in which they are situate.' (Emphasis added.)

"'Article IX. Nothing in this compact shall be construed to limit or prevent any State from instituting or maintaining any action or proceeding, legal or equitable, for the protection of any right under this compact or the enforcement of any of its provisions.'

"Section 13(a) of the Boulder Canyon Project Act provides:

"'The Colorado River compact signed at Santa Fe, New Mexico, November 24, 1922, pursuant to Act of Congress approved August 19, 1921, entitled, "An Act to permit a compact or agreement between the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming respecting the disposition and apportionment of the waters of the Colorado River, and for other purposes,' is hereby approved by the Congress of the United States, and the provisions of the first paragraph of article 11 of the said Colorado River compact, making said compact binding and obligatory when it shall have been approved by the legislature of each of the signatory States, are hereby waived, and this approval shall become effective when the State of California and at least five of the other States mentioned, shall have approved or may hereafter approve said compact as aforesaid and shall consent to such waiver, as herein provided.'

"The joinder of these Upper Basin States is not necessary when based upon an assertion of the existence of controversy among the Lower Basin States

as to Arizona's status in relation to the Compact because (1) this is a suit by a State to quiet title to water of the Lower Basin; (2) the Compact does not apportion water among the States—but only between the Basins; (3) by considering Article VIII of the Compact it is clear that, regardless of how this question is resolved, it will not determine Arizona's right to waters of the Colorado River System. The only part of the Colorado River System involved here in which it has an interest is the Lower Basin; (4) the Compact does not provide for any change in the Upper Basin's rights or obligations whether or not Arizona becomes a party to said Compact; (5) should resolution of this question have a bearing on whether or not Arizona becomes a party to said Compact, or not, is a matter of concern to water users in the Lower Basin only."

(See Special Master's Report, pages 46, 47 and 48.)

In Section III of her motion, the United States says, "If this Court should declare that Arizona is not a party to the Colorado River Compact the United States of America has an immediate concern respecting its international obligations to deliver water arising in connection with its treaty with the United Mexican States."

Again we disagree. Article III(c) of the compact provides that the water due the United States of Mexico under the Mexican treaty shall be supplied from waters which are surplus over and above the Upper Basin and Lower Basin apportionments set forth in Articles III(a) and III(b), and further provides that if the surplus shall prove insufficient, that the burden of the deficiency shall be equally borne by the Upper Basin and the Lower Basin.

The compact does not impose any direct burden upon the State of Arizona for the Mexican treaty water. The compact apportions the burden upon the two basins. Whether Arizona is or is not a party to the compact, does not change the burden upon either the Upper or Lower Basin.

As we have pointed out heretofore, Arizona is not claiming any rights to the use of water in derogation or outside of the compact. Her claims are under the compact, and her claims are specifically subjected to the provisions

of the Colorado River Compact. The burden of the Mexican treaty water falls upon the users in both basins. If Arizona is not entitled to any water under the compact, she has no burden. If Arizona is entitled to water under the compact, then her rights in the Lower Basin are subject to the burden of the Mexican treaty water. In this litigation, whether Arizona is or is not a party to the Colorado River Compact, has no effect on either the Lower Basin's or Upper Basin's obligations with respect to the Mexican treaty water.

II. INDIAN RIGHTS HAVE NO BEARING ON THE QUESTION OF JOINDER IN THIS ACTION.

In Section V of its motion, the United States contends that the question of Indian rights has a bearing on the determination of the question of joinder. In the last paragraph of Section V of her motion, the United States says:

> "If the Indian claims are held to be 'against the river' as distinguished from the Lower Basin as defined by the Colorado River Compact, that conclusion would have far reaching effect on the interests of all of the states in the Colorado River stream system."

The question of Indian claims and their bearing on the question of joinder was discussed quite extensively in the briefs of the parties and in the oral argument before the Master.

The Special Master's analysis of the interests of the United States, including Indian claims, in this litigation and their bearing on the joinder question is as follows:

> "3. Claims Of The United States Of America, Intervener.
>
> "The California defendant urge the view that the United States of America, as an intervener in this cause, has the same rights as an original party to determine the scope of the controversy. It is the Master's view that there is no need to answer this, because even were it so, this is disposed of by the fact that the United States here asserts no rights against the Upper Basin States as to Upper Basin waters.
>
> "We find that the United States, as an intervener,

does not attempt, even were it allowable so to do, to enlarge the scope of this cause. The United States is asserting rights solely to the use of water in the Lower Basin. Its Petition of Intervention sets forth the following (p. 25):

" 'General Claims of the United States of America in the Colorado River System *in the Lower Basin.*

" 'The United States of America asserts claims, *as against the parties to this cause, of rights to the use of water in the Colorado River* and its tributaries—' (Emphasis added.)

The parties were and are Lower Basin States." (Special Master's Report, page 44.)

"10. Shall The Use of Colorado River System Waters By Indians Be Charged To The States In Which Such Uses Are Situated?

"This question is a question to be resolved in each Basin. How it is done in one Basin has no relationship to how it is done in the other.

"Article VII of the Colorado River Compact provides—

" 'Nothing in this compact shall be construed as affecting the obligations of the United States of America to Indian tribes.'

"Article VIII of said Compact bears upon this. It provides that 'Present perfected rights to the beneficial use of waters of the Colorado River System are unimpaired by this compact.' It also provides that when 'storage capacity of 5,000,000 acre feet shall have been provided on the main Colorado River within or for the benefit of the Lower Basin, then claims of such rights, if any, by appropriators or users of water in the Lower Basin against appropriators or users of water in the Upper Basin shall attach to and be satisfied from water that may be stored not in conflict with Article III.'

"After these provisions, Article VIII also provides that 'all other rights to beneficial use of waters of the Colorado River System shall be satisfied solely from

the water apportioned to that Basin in which they are situate.'

"From this, it appears that the rights of the Indian tribes in the Upper Basin shall be satisfied solely from waters of the Upper Basin, and the rights of Indian tribes in the Lower Basin shall be satisfied solely from water appropriated to that Basin.

"The question of how Lower Basin waters shall be divided among the Lower Basin States is one for final hearing." (Special Master's Report, pages 53 and 54.)

"15. Arguments Based Upon The Pleading and Prayer Of The United States Of America, Intervener, On The Merits Of The Cause.

"The California defendants, in a view to which the State of Nevada, Intervener, subscribes, contend that the United States of America, in its Petition for Intervention, asserts claims to Colorado River System water, and that this is a basis for joining the absent States because the rights of the absent states will be affected by any degree in which the United States is granted title to the use of any Colorado River System water.

"The opponents of the Motion submit that the claims made by the United States of America, in its Petition for Intervention, are insufficient on which to base joinder because (1) the United States is asserting rights only in the Lower Basin, and (2) that the Upper Basin States are not using all the water to which they are entitled and it therefore will not affect them in any way. However this may be, it is not alleged by anyone that the Upper Basin States are taking more than their share.

"We find that the United States, as an intervener, even were it allowable so to do, does not attempt to enlarge the scope of this cause. The United States is asserting rights solely to the use of water in the Lower Basin. Its Petition for Intervention sets forth the following (p. 25):

'GENERAL CLAIMS OF THE UNITED STATES OF AMERICA IN THE CLORADO RIVER SYSTEM *IN THE LOWER BASIN.*

'The United States of America asserts claims, *as against the parties to this cause*, of *rights to the use of water in the Colorado River* and its tributaries—' (Emphasis added)

"The parties to this cause were and are Lower Basin States.

"The Upper Colorado River Basin Compact, to which all these absent States are parties, as is the United States, specifically provides for the use of water by the United States in the Upper Basin by Articles VII and XIX.

"We find that the claims of the United States to Lower Basin waters made in this cause furnish no ground for joining the absent states."

(Special Master's Report, pages 59 and 60).

Article VII of the Upper Basin Compact referred to by the Master reads:

"The consumptive use of water by the United States of America or any of its agencies, instrumentalities or wards shall be charged as a use by the State in which the use is made; provided, that such consumptive use incident to the diversion, impounding, or conveyance of water in one State for use in another shall be charged to such latter State."

The pertinent parts of Article XIX of the Upper Basin Compact referred to by the Master are:

"Nothing in this Compact shall be construed as:

"(a) Affecting the obligations of the United States of America to Indian tribes;

"(b) Affecting the obligations of the United States of America under the Treaty with the United Mexican States (Treaty Series 994);

"(c) Affecting any rights or powers of the United States of America, its agencies or instrumentalities, in or to the waters of the Upper Colorado River System, or its capacity to acquire rights in and to the use of said waters; . . ."

The Upper Basin Compact was ratified by the Upper Division States and consented to by the Congress of the United States.

There are no allegations in the pleadings that the Upper Basin States have violated these provisions of the Upper Basin Compact or any provisions of the Colorado River Compact. There is no allegation that the Upper Basin States are depriving the United States or the Indians in either the Upper or Lower Basins of the River of any water.

The issue in this case is the division of the water use apportioned to the Lower Basin by the Colorado River Compact. As the Master pointed out, the Upper Basin States have divided the Upper Basin apportionment by compact. The Lower Basin States are attempting to accomplish their division by litigation. There is no good reason that the Upper States should be drawn into this controversy to determine the basic issues in this litigation. The Master so found after extensive hearings and consideration of the same legal questions which are set forth in the motion of the United States.

CONCLUSION

We repectfully submit that the legal questions set forth in the motion of the United States, and their bearing upon the issue of joinder, were fully discussed and considered in the briefs filed with this Court on the joinder motion. These legal questions and their effect on the issue of joinder were further orally argued before the Special Master at Phoenix, Arizona. It is apparent from the Report of the Special Master that he gave full consideration to these legal questions and their bearing on the issue of joinder. The Master's Report and his conclusions and recommendation are before the Court for its determination.

The United States had ample opportunity to participate in the discussions by filing briefs with this Court or by participating in the oral argument before the Special Master at Phoenix, Arizona. The United States elected not to participate.

We rsepectfully submit that the motion of the United States, requiring further briefs to be filed in connection with these matters, should be denied.

Reply of California Defendants to Arizona's Memorandum Filed November 1, 1955, Directed to the Report of the Special Master

By her memorandum Arizona simultaneously attacks the "Motion of United States for Determination of Questions of Law Presented by the Pleadings in the Cause and the Report of the Spe-

cial Master", and the Exceptions to the Report of the Special Master filed by the California Defendants and by Nevada.

I. THE CLAIMS OF THE UNITED STATES ARE NOT "FRIVOLOUS". THEY ARE "OPEN TO SERIOUS QUESTION", AND THE PRESENCE OF ALL THE STATES IS NECESSARY TO THEIR ADJUDICATION

Arizona opposes the motion of the United States on the grounds that the United States is estopped to present it, that its grounds are frivolous, and that the matters the Government raises are not open to serious question. We also oppose the Government's motion (see California's memorandum filed October 21, 1955), but on opposite grounds.

1. The Government is not estopped to raise the questions it now presents. California's motion at the hearing before the Special Master to require the United States to state its position, particularly with respect to Indian claims, was objected to by Colorado and Arizona, not the Government, and the objection was sustained by the Special Master. (Transcript, p. 355-57.) We renewed the motion, and the Special Master said he intended to call upon the United States for an authoritative statement of its position. (*Id.*, p. 419.) He died before doing so, in advance of a conference he had called on this and other subjects for October 12, 1955. Arizona may not complain if the Government now asks the Court for instructions. We differ with the Government in that we think the issues involved in the federal claims, which we say are basin-wide in scope, can be decided on the

merits only after joinder of the other States, rather than before.

2. Nor are the Government's issues "frivolous." Arizona has not suggested how federal claims to 11,785,250 acre-feet of water per year are to be satisfied from the 8,500,000 acre-feet per annum that both Arizona and the United States say is available to the Lower Basin; nor why the Government's demands for Colorado River System water for Mexico, which the Mexican Water Treaty calls guaranteed "from any and all sources", are claims against the Lower Basin only; nor why the requirements of navigation and flood control, under which the Government claims the right to empty any reservoir, are not claims against the whole river system; nor why, as Arizona now implies (p. 13), the Government's claims for Indians shall be charged against "surplus" but not against Arizona; nor how the question of whether Indian claims are in or out of the Compact has suddenly been settled without hearing from the United States as guardian of the Indians. If there ever was any doubt that the Government contends that its Indian claims are outside of the Compact and prior and superior to claims under the Compact, that doubt is dispelled by the language of the Government's pending motion.

3. Certainly Arizona, like California and Nevada, should welcome the presence here of the other four States which we say must share the federal burdens. Of what possible advantage is it to Ari-

zona to leave only herself, California and Nevada to litigate the impact of federal claims which are half again as large as those of Arizona, California and Nevada all put together, and which are alleged to cut right across the Compact?

4. Are the Government's issues "not open to serious question"? The one issue which Arizona apparently most fears is the question of how she can simultaneously claim rights as beneficiary under the California Limitation Act (which Congress and California's legislature both stipulated should be operative only if a seven-state compact should *not* come into existence), and as party to a seven-state compact whose very existence—if it exists at all—precludes the existence of the Limitation Act. No one has yet submitted briefs on the merits of this question—it cannot be decided in the absence of the States which are parties to the Compact and beneficiaries of the Limitation Act—but it is obviously one which is "open to serious question", and it is certainly not frivolous. For example: Just how did Arizona, by delaying ratification until 1944, acquire a better position for herself, and impose greater burdens on California, than she could have acquired by timely ratification within the six months prescribed by Congress for her to make her election?

II. THIS IS A QUIET TITLE ACTION AGAINST THE ABSENT STATES OF THE UPPER DIVISION, MASKED AS AN ACTION FOR DECLARATORY RELIEF

Arizona says (p. 22), that "this is not a quiet title action so far as the Upper Basin States are concerned."

Of course it is. Arizona alleges:

(1) "The 7,500,000 acre-feet of water per year apportioned to the Lower Basin by Article III(a) was and is within the water present in the main stream and measured at Lee Ferry. . . . " (Reply to California's Answer, par. 8, p. 16.)

(2) " . . . that the 75,000,000 acre-feet specified in Article III(d) bears a direct quantitative relationship to the 7,500,000 acre-feet per year apportioned to the Lower Basin by Article III(a)." (*Id.*, par. 11, p. 18.)

(3) She has title to "2,800,000 acre-feet out of the 7,500,000 acre-feet apportioned to the Lower Basin by Article III(a) of the Compact. . . . " (Complaint, par. XVII, p. 21.)

(4) Since Arizona concedes California 4,400,000 acre-feet (Complaint, p. 30) and Nevada 300,000 (Reply to California's Answer, par. 63, p. 46), her title to 2,800,000 acre-feet per annum is utterly dependent, upon her own pleadings, on the establishment of title in the Lower Basin to 7,500,000 acre-feet of III(a) water at Lee Ferry.

As all this is in the face of the mandate of Article III(a) that the apportionment is from the waters of the "Colorado River System", defined by Article II(a) to include "its tributaries", and that this apportionment shall include "all water necessary for the supply of any rights which may now exist," Arizona's case turns upon the rewriting of Article III(a) to cast the whole burden of the Lower Basin's apportionment thereunder upon the States of the Upper Division, while exempting Arizona—and Arizona alone—from any charge for the use of water upon the tributaries.

This is a quiet title action against the States of the Upper Division, cloaked under a plea for declaratory relief. The declaratory relief which Arizona asks with respect to the meaning of "beneficial consumptive use", the identification of the Gila River with the "increase of use" permitted by Article III(b), the classification of Article III(b) as an "apportionment", and so on, all has just one purpose: the elimination of the Gila River from the accounting which the Lower Basin must make for its consumptive uses under Article III(a), and the resulting inflation of its claims upon the main stream, for Arizona's benefit, against the States of the Upper Division. This is to be done

(1) by down-grading Arizona's oldest uses, those on the Gila, from the status of "rights which may now exist" under Article III(a) and "present perfected rights" under Article

VIII to the status of a mere "right to increase its beneficial consumptive use" under Article III(b);

(2) by tailoring the rights on the Gila to fit the 1,000,000 acre-feet allowed by Article III(b), ignoring the fact that over 2,000,000 acre-feet of measured water is used each year in that area, and asserting that a new standard of "depletion of the virgin flow of the main stream"—applicable to Arizona, but not California—has replaced the statutory definitions of consumptive use in the Boulder Canyon Project Act and the Mexican Water Treaty, thus writing off 1,000,000 acre-feet of actual consumptive use;

(3) by offering, as an appendix to Arizona's reply to California's answer, the very same ex parte statements that this Court rejected in *Arizona* v. *California,* 292 U.S. 341 (1934), to prove that the Compact and Project Act identified the Gila with Article III(b), and gave the III(b) uses exclusively to Arizona.

But all of Arizona's "elaborate argument"—as the Court called it in 292 U.S. 341, 352—is simply the underbrush surrounding and confusing the main point: that this is essentially a quiet title action, first, against the States of the Upper Division, to brand as apportioned to the Lower Basin all of the 75,000,000 acre-feet they are obligated

to deliver each decade at Lee Ferry, and thus to convert the Compact from a System-wide agreement covering *uses* to a main-stream agreement covering *flow;* second, against California and Nevada to fix the rights of the three States in the water won from the States of the Upper Division.

To do so, Arizona now repudiates the interpretation of the Compact she formally presented to this Court in *Arizona* v. *California,* 283 U.S. 423 (1931), when all seven States were before the Court:

> "The provision in paragraph (d) of Article III that the Upper Basin States will not cause the flow of the river to be depleted below 75,000,000 acre-feet over ten year periods, has, as the Colorado brief, page 41, correctly states, no bearing on the amount of the apportionment to the Lower Basin. This 75,000,000 acre-feet is not apportioned to the Lower Basin. It may not be appropriated in the Lower Basin. Only so much of it may be appropriated as together with existing and future appropriations of water in or from tributaries entering the river below Lee Ferry will total 7,500,000 acre-feet per year. The 75,000,000 acre-feet includes all surplus waters which under paragraph (c) must first bear any Mexican burden, which may not be appropriated, and which are subject to apportionment after 1963. It is fundamental to an understanding of the Compact that the annual beneficial consumptive use in perpetuity of 7,500,000 acre-feet of water apportioned by it to the Lower Basin includes all

beneficial consumptive use in perpetuity which may be made from the whole river system, and is not merely an apportionment of such uses in main stream water flowing at Lee Ferry. The agreement not to deplete the flow at Lee Ferry below the specified amount does not mean, and cannot under the plain words of the Compact be construed to mean, that the guaranteed flow is apportioned to the Lower Basin or may be appropriated there. As to this, at least, there can be no shadow of doubt.

"Under the Compact, then, the only water of which the right to exclusive beneficial use in perpetuity may be acquired in the Lower Basin is the water apportioned to that basin. Such apportionment is limited to 7,500,000 acre-feet of water per annum by Article III(a). The Colorado brief, page 40, contends that paragraph (b) of Article III operates to increase this apportionment to 8,500,000 for the Lower Basin. This, we submit, is not the case. If it had been intended to apportion the larger amount, the Compact could easily have said so. The difference in language between paragraphs (a) and (b) is plain, and the difference in meaning is clear. Paragraph (b) does not *apportion in perpetuity,* as does paragraph (a), any beneficial use of water. It is very careful not to do this. It is to be read with paragraph (c) and relates solely to the method of sharing between the basins any future Mexican burden which this Government might recognize. This burden is to be satisfied first out of 'surplus' waters, and surplus waters are defined, not as surplus over quantities 'apportioned', but

> as surplus over quantities '*specified* in paragraphs (a) and (b).' Any deficiency remaining is to be borne equally by the two basins. Thus the Lower Basin, which without paragraph (b) might use water in excess of its apportionment without acquiring any exclusive right in perpetuity thereto, is enabled to retain such uses to the extent of 1,000,000 acre-feet per annum against the first incidence of the Mexican burden. Thereafter it is entitled to require the Upper Basin to share from its apportionment equally in the satisfaction of any deficiency. In other words, all that paragraphs (b) and (c) accomplish is to require the Upper Basin to reduce its apportionment in favor of Mexico before the Lower Basin is required to do so, the Lower Basin being entitled to contribute first, to the extent of 1,000,000 acre-feet, water which it may have used but to which it has no exclusive right in perpetuity—that is, water not apportioned to it. The water apportioned is that to which exclusive beneficial use in perpetuity is given in paragraph (a), less any deductions which may have to be recognized as provided in paragraphs (b) and (c)." (Brief of Complainant in Opposition to Motion to Dismiss the Bill of Complaint, pp. 32-34)

Has the Compact been amended, that Arizona now may quiet in the Lower Basin the title which she said in 1930 did not exist? Did Arizona's belated unilateral ratification of the Compact in 1944 change the meaning which Arizona so clearly spelled out in 1930? May Arizona obtain a judicial reconstruction of the agreement in the

absence of all its parties, and in respects which amplify the obligations of the absent States of the Upper Division?

Why is Arizona so anxious to exclude now the States which she joined in three earlier actions in this Court? The reason is obvious: if called upon to declare their interests, the four Upper States could not for an instant acquiesce in Arizona's new interpretation of their obligations. If left out of the case, they might hope to assert at some later time the reverse of Arizona's contentions as to the identity of Articles III(d) and III(a). But that is the very reason why a decree in the instant case, predicated upon Arizona's interpretation, absent those States, would be inequitable or futile or both. If the absent States do acquiesce in Arizona's enlargement of their obligations, let them say so in a form which will subject them to the decree in this case.

III. ARIZONA'S NEW CONTENTION THAT UNDER THE SPECIAL MASTER'S REPORT INDIAN DIVERSION RIGHTS OF 1,556,250 ACRE-FEET, WITHIN ARIZONA, MAY BE IN ADDITION TO THE 3,800,000 ACRE-FEET OF CONSUMPTIVE USES CLAIMED BY THAT STATE, NECESSITATES THE JOINDER OF THE STATES OF THE UPPER DIVISION, AS IT WOULD INVADE AND DESTROY THE "SURPLUS" WHICH ALONE PROTECTS THEM FROM THE MEXICAN BURDEN UNDER ARTICLE III(c) OF THE COMPACT.

Arizona's memorandum (p. 13, n. 8) says:

> ". . . We believe that the Master held that the uses should be charged to the Basin in which they take place, reserving the question

of what distribution within the Basin should be."

Arizona seems to think that the Indian rights should be treated as those of an additional State in the Lower Basin; that the 1,556,250 acre-feet of diversion rights claimed for Indians *in Arizona* (Petition of Intervention of the United States, Appendix II, pp. 56-57) may be *in addition* to the 3,800,000 acre-feet claimed by the State of Arizona; that California "misconstrues this conclusion of the Special Master" when we say he held that "Indian uses are to be charged to the *State* and Basin where they take place." (Arizona Memorandum, p. 13, n. 8, emphasis supplied.)

Arizona thus hints at her hopes for a windfall of 1,556,250 acre-feet of diversion rights over and above the 3,800,000 acre-feet she claims.

But at whose expense? All of the 8,500,000 acre-feet of consumptive use available to the Lower Basin under Articles III(a) and III(b) of the Compact is already accounted for, on her theory: 4,400,000 acre-feet to California, 300,000 to Nevada, 3,800,000 to Arizona. Where is the added 1,556,250 acre-feet of diversion rights to come from? Obviously only from the waters which are "surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b)", of Article III (Article III(c)). But these are the waters dedicated in those very words to the supply of the Mexican burden, insulating the States of the Upper Division from the obligation otherwise imposed

by Article III(c) to increase their deliveries at Lee Ferry to supply one-half of the Mexican deficiency.

This new disclosure alone, in Arizona's brief, would necessitate the joinder of the States of the Upper Division. The surplus thus to be invaded for Arizona's benefit is the surplus of the entire Colorado River System, the only cushion against the impact of the Mexican burden upon the States of the Upper Division.

IV. ARIZONA'S MEMORANDUM FAILS TO MEET THE ISSUES PRESENTED BY THE EXCEPTIONS

Arizona's memorandum carefully avoids any discussion of the question whether the absent States are necessary to an adjudication of the claims of the United States; whether their rights as third party beneficiaries of the California Limitation Act survive if Arizona has become a party to the Compact; whether the declaratory relief which Arizona seeks can be granted without affecting their interests; whether Arizona's prayers to quiet title, if granted, would take their water; whether Arizona's invasions of the "surplus" deprive them of their protection against Mexico; whether they are affected by Arizona's denial of their right, and California's, to appropriate "surplus"; and so on, as to all the substantive issues.

Arizona's argument begs the whole question of whether, under the classic doctrine of *Shields* v. *Barrow*, 17 How. 130, 139 (U. S. 1855), followed by this Court for a hundred years, these States "ought

to be made parties, in order that the court may act on that rule which requires it to decide on, and finally determine the entire controversy, and do complete justice, by adjusting all the rights involved in it. . . ." Manifestly, if these States have the interests which we have spelled out in our exceptions and brief, but which Arizona now declines to brief and on which she shuns oral argument (Arizona Memorandum, p. 25), then the absent States "not only have an interest in the controversy, but an interest of such nature that a final decree cannot be made without either affecting that interest, or leaving the controversy in such a condition that its final termination may be wholly inconsistent with equity and good conscience." (*Ibid.*)

Arizona, avoiding all these questions, seemingly relies on the rule (Arizona Memorandum, p. 14) that a Special Master's finding of fact should be accepted by a District Court under Rule 53 (e) (2) of the Federal Rules of Civil Procedure. But the Special Master here held that, notwithstanding Rule 9 (2) of the Supreme Court Rules, Rule 19 of the Federal Rules, which would manifestly require joinder here if the parties were private, did not apply to this original action (Report, p. 25); and if not, then it is not clear why Rule 53 (e) (2) is applicable. Even if applicable, it relates only to findings of fact, and the Special Master in our case thought that he was making none, as no evidence had been taken. (Report, p. 4.) Moreover, the case on which Arizona principally relies,

Anderson v. *Mt. Clemens Pottery Co.*, 328 U. S. 680 (1946), is one in which the Court disagreed with a Special Master's finding of fact and sent the case back for further proceedings—notwithstanding that the employees aggrieved by the Master's finding had not appealed.

In the three cases which preceded the suit now before the Court, Arizona joined all six States. Were they proper parties, or did she improperly invoke the process of the Court to call her sister sovereigns here? If proper parties, it was only because the controversy she disclosed was justiciable as to them. She now says that "The claims for relief in those cases were radically different from those made here." (Arizona Memorandum, p. 20, n. 11) But in *Arizona* v. *California*, 292 U. S. 341 (1934), Arizona tendered a bill to perpetuate the identical testimony which she now annexes to her reply to California's answer (pp. 57-76), to establish the very contention she repeats here: that Article III(b) of the Compact was intended to apportion 1,000,000 acre-feet to Arizona. She told the Court in the 1934 case, in which she joined all these States, that at some time in the future she would commence an action against these six States "or some of them", in which she wished to use that testimony. This is that action. It is not a "radically different" one.

Arizona, while disclaiming the materiality of anything her counsel told this Court in pleadings and briefs in the three previous cases (Reply to

California's Answer, par. 40, p. 32), now dwells on the fact that various witnesses for California, testifying before Congressional Committees, have expressed the opinion that California could state a cause of action against Arizona that would not necessarily involve the Upper Basin States. That is not the problem here. It is Arizona, not California, which alleges that the water apportioned to the Lower Basin by Article III(a) is all to be found flowing at Lee Ferry, excluding the tributaries. It is Arizona, not California, which alleges that all of the deliveries by the States of the Upper Division under Article III(d) are apportioned to the Lower Basin and contain no water to satisfy the Mexican burden. It is Arizona, not California, which alleges that Article III(b) constitutes an apportionment in perpetuity to the Lower Basin. It is Arizona, not California, which seeks to use a million acre-feet of salvaged water free of any accounting under the Compact. It is Arizona, not California, which denies the existence of surplus above the quantities specified in Articles III(a) and III(b) and denies the right of any State to appropriate it if it exists. It is the United States which now asserts claims against the Colorado River System fifty per cent greater than the combined claims of Arizona, California and Nevada. In the light of all this, note the following colloquy in the hearings on the "Litigation Resolutions",* which Arizona omits:

---

* See *Hearings before a Subcommittee of the Senate Committee on Interior and Insular Affairs on S.J. Res. 145,* 80th

"Senator MILLIKIN. Are you limiting the issues that you would raise before the court to those which have been mentioned here?

"Mr. ELY. Well, if we control the issues to go to the court, we would ask to have these three go.

"Senator MILLIKIN. And as to any others? Would you reserve the right to raise others?

"Mr. ELY. It w ld depend entirely upon what position the other States took.

"Senator MILLIKIN. Then you are reserving the right to raise any issues in your own interest, as you should.

"Mr. ELY. Yes, sir."

(*Hearings before a Subcommittee of the Senate Committee on Interior and Insular Affairs on S. J. Res. 145,* 80th Cong., 2d Sess., p. 114.)

Even if the suit had been restricted to the three issues on which Arizona asks declaratory relief, it was the opinion of counsel for the Upper States at the same hearing that they would have to be in the litigation. Counsel for Colorado said:

"Colorado is one of the signatory States to the Colorado River compact. We feel that any matter which involves the interpretation or application of the Colorado River compact necessarily involves every States (sic) which is signatory to that compact. In fact, we

---

Cong., 2d Sess. (1948); *Hearings before Subcommittee No. 4 of the House Committee on the Judiciary on H.J. Res. 225, 226, 227, 236 and H.R. 4097,* 80th Cong., 2d Sess. (1948); *Hearings before the Senate Committee on Interior and Insular Affairs on S. 75 and S.J. Res. 4,* 81st Cong., 1st Sess. (1949).

feel that in any litigation each of the signatory States would be an indispensable party to the litigation." (*Id.*, p. 198.)

And counsel for Wyoming said:

"Now, there is another matter that I would like to mention briefly, and that is whether or not a suit, if commenced, will be in any way confined as to parties and whether or not Wyoming, for whom I speak, might not become a party. I doubt that very much. The resolution names all of the States in the basin except Colorado and Wyoming, but says "other parties." Regardless of what the resolution may say or what it may leave out, I do not believe that a controversy of this kind would be determined by the Supreme Court of the United States without Wyoming and Colorado being made parties to it." (Id., p. 302.)

V. THE PROPER TEST OF JOINDER IS THE EFFECT OF THE RELIEF SOUGHT AMONG PRESENT PARTIES ON THE ABSENT STATES, NOT THE LACK OF AN ALLEGATION OR CLAIM FOR RELIEF AGAINST THEM

Arizona asserts that the absent States are at most "proper parties" who have only a "possible intellectual interest" in the relief sought in the present controversy. She asserts magnanimously that all she wants is to live in peace with her neighbors to the north and west. (Arizona Memorandum, pp. 16-18.) Yet she carefully soft pedals any discussion or analysis of her claims which she seeks to have adjudicated. The reason is obvious. Arizona's claims to Colorado River water

can only be granted out of water to which the absent Upper States have present rights under the Colorado River Compact.

(1) Arizona's claim to quiet title to 2,800,000 acre-feet of main stream water under Article III (a) of the Compact can only be adjudicated by quieting title in her to Article III(d) water delivered by the Upper States in satisfaction of their Mexican obligation.*

(2) Arizona prays that her claims to "beneficial consumptive use" under the Colorado River Compact "be measured in terms of stream depletion." (Complaint, pp. 30-31.) This method of measurement would result in ballooning the rights of the Lower Basin (for the sole benefit of Arizona) against the absent Upper States from the 8,500,000 acre-feet per annum allocated to it under Articles III(a) and III(b) of the Compact to over 10,500,000 acre-feet of true consumptive use, measured by actual consumption at the site of use.**

(3) Arizona seeks an adjudication that the 1,000,000 acre-feet of "increase of use" permitted to the Lower Basin under Article III(b) of the Compact is apportioned in perpetuity to it (again, however, for the sole use and benefit of Arizona) as against the Upper Basin.***

---

* See California Defendants' Brief on Exceptions, pp. 74-87.

** See California Defendants' Brief on Exceptions, pp. 57-66.

*** *Id.*, pp. 66-71.

These are but a few of Arizona's claims for relief that vitally affect the present legal rights of the absent Upper States. Arizona seeks to avoid their joinder by asserting that no party has formally asked for any relief against any of the absent states. However, if this were the test of joinder, no one would ever be found a necessary or indispensable party, for it is quite infrequent for a party litigant to admit that his asserted claims could involve the taking of property to which an absent party could have legal rights.* The Arizona position competely misconceives the question posed by a joinder motion. The issue is not whether the present parties have alleged a cause of action against the absent States, but whether their interests will be affected by the resolution of issues among the present parties. Former cases decided by this Court are clear that there need be no cause of action alleged, nor relief sought, nor allegation of a threat to infringe rights against the absent parties, as a prerequisite to their joinder, if they are affected by the issues to be resolved in the controversy before the Court. In *Arizona* v. *California,* 298 U.S. 558 (1936), this Court held that the United States was an indispensable party to a suit brought by Arizona to declare her equitable apportionment of the

* An exception to this in the present case is the United States, which frankly admits that unless its Indian claims are restricted under the Compact, which it submits they cannot be under Article VII of the Compact, then the Upper States are vitally affected, requiring joinder.

waters of the Colorado River System, even though there was no allegation by any of the parties that the United States was threatening to infringe any water rights, nor was any relief sought against the United States. The United States was indispensable solely because:

> " . . . The relief asked, and that which upon the facts alleged would alone be of benefit to Arizona, is a decree adjudicating to petitioners the 'unclouded . . . rights to the permanent use of' the water. Such a decree could not be framed without the adjudication of the superior rights asserted by the United States. . . . " (p. 571.)

Arizona asserted there, as she does here, that her rights do not conflict with those of the absent parties sought to be joined. In *Minnesota* v. *Northern Securities Company,* 184 U.S. 199 (1902), the State of Minnesota brought an original action to enjoin the Northern Securities Company from acquiring the stock of and exercising control over two parallel and competing railroads in Minnesota. There was no cause of action against the railroads and no relief against them was sought. Moreover, there was no controversy between the railroads and the Northern Securities Co. Nevertheless, they were held to be indispensable parties because their rights necessarily would have been affected by the litigation. For similar rulings see *Northern Indiana R.R.* v. *Michigan Central R.R.,* 15 How. 233 (U.S. 1854); *Mallow* v. *Hinde,* 12 Wheat. 193 (U.S. 1827), and

Keegan v. *Humble Oil & Refining Co.*, 155 F.2d 971 (5th Cir., 1946).

The justiciability of Arizona's quiet title action does not depend on whether any claims of the absent States invade Arizona's rights; it depends upon whether Arizona's claims invade the rights of the absent States to such a degree that those claims cannot be fully adjudicated in their absence.

Arizona, avoiding all discussion of whether *her* claims affect the absent States to a degree which makes those States necessary parties, dresses her argument on the straw man of whether *California* alleges any wrongdoing by those States. If Arizona's case is justiciable against California, it is justiciable against the States of the Upper Division, for her claims cannot be sustained unless the States of the Upper Division are first required to yield to the Lower Basin the water which Arizona would then take from California and Nevada.

In the language of Mr. Justice Stone in *Arizona* v. *California*, 298 U.S. 558, 567 (1936), a justiciable controversy would there exist if Arizona, "as a sovereign state, or her citizens, whom she represents, have present rights in the unappropriated water of the river . . . . " This test of Mr. Justice Stone is similar to that asserted by the Court opinion in *Joint Anti-Fascist Refugee Committee* v. *McGrath*, 341 U.S. 123, 141-142, 149-157 (1951), that "[t]he touchstone to justiciability is injury to a legally protected right. . . ." and the similar

tests laid down by Mr. Justice Frankfurter in his concurring opinion. Under all tests as applied to the facts and claims of the present suit (which the Arizona Memorandum neglects to do), it is clear that the decreed rights sought by the present parties would constitute an immediate invasion of the present rights of the absent States, thus posing a justiciable controversy with respect to them.

VI. THE NEBRASKA - WYOMING - COLORADO LITIGATION SUPPORTED JOINDER OF AN ABSENT STATE ON FACTS NO MORE INDUCIVE TO JOINDER THAN THOSE PRESENT IN THE INSTANT CASE

1. The First Order. (295 U. S. 40 (1935).)

Here the only ground alleged by Wyoming as to why Colorado was an indispensable party was because "the bill discloses that the North Platte rises in that state and drains a considerable area therein." (*Id.*, p. 43.) The Court properly held that that ground alone was "without merit," reserving the determination "whether at a later stage of the cause pleadings or proofs may disclose a necessity to bring her into the suit." (*Ibid.*) The mere fact that the water rises in the Upper State does not mean that there is any conflict between that State and the present parties to the controversy. Arizona asserts that the decision in the First Order is "on all fours" with the present case (Arizona Memorandum, p. 20)—in other words that the only ground asserted or present for joinder in the present case is that the Colorado River rises in and drains a considerable portion

of the Upper Basin States. This patently overlooks the claims of both the United States and Arizona to waters of the Colorado River System, asserted under as well as outside of the Colorado River Compact, which adversely affect the present legal rights and duties of the absent States to the same Colorado River System waters.

2. The Second Order. (296 U. S. 553 (1935).)

Some eight months later, the Court unanimously and without opinion ordered that Colorado be made a party "in accordance with the prayer of the amended and supplemental answer of the State of Wyoming. . . . " (*Ibid.*) That amended and supplemental answer,* so far as it dealt with Colorado's actions, alleged no present injury by Colorado but recited only contemplated and threatened diversions by Colorado of waters which were the "subject matter pro tanto of the determination of the rights in this action of the present parties." Hence the crucial point was not the threat but the fact that the rights of Colorado to the use of water of the North Platte conflicted with the asserted rights to the same waters claimed by Nebraska and Wyoming in their suit for an equitable apportionment. Wyoming made this fact clear when she stated in her amended and supplemental answer, after alleging Colorado's contemplated diversion, that

---

* See pp. 13-14 of California Reply Brief on this Motion for the pertinent paragraphs of the Amended and Supplemental Answer.

> " . . . . if the present suit is permitted to proceed without making the State of Colorado a party, defendant will be subject to further litigation with the State of Colorado and its appropriators, involving the waters of the North Platte River which constitute the subject matter of this suit. And defendant says that a proper and equitable allocation of the waters of the North Platte River, as complainant well knows, cannot be made between the present parties upon any equitable basis without at the same time determining the rights, whatever they may be, of the State of Colorado and of its appropriators in said waters. . . . " (*Ibid.*, Paragraph Twentieth.)

This Court, in its final opinion (325 U.S. 589 (1945)), removed any doubt or ambiguity as to its action in joining Colorado in 1935. Colorado, after final hearing, moved to be dismissed from the suit on the ground that she had not injured or threatened to injure downstream water users in Wyoming and Nebraska. Indeed the actual uses of Colorado at that time did not exceed the amounts to which she was limited by the decree. Colorado asserted that her proposed projects were not planned for the immediate future and hence did not constitute a present threat. The Court held that

> "The fact that Colorado's proposed projects are not planned for the immediate future is not conclusive in view of the present overappropriation of natural flow. . . . If this were an equity suit to enjoin threatened in-

> jury, the showing made by Nebraska might possibly be insufficient. But Wyoming v. Colorado, supra, indicates that where the claims to the water of a river exceed the supply a controversy exists appropriate for judicial determination. . . ." (*Ibid.*, pp. 609-610.)

There is no question but that the Colorado River, like the North Platte, is greatly over-appropriated, *Arizona* v. *California et al.*, 298 U. S. 558 (1935), so that the claims of the present parties to the suit cannot be granted without quieting title to water to which the absent States may have present rights.

The case now before the Court is much stronger than the second *Nebraska* v. *Wyoming* order for the joinder of the absent States. In addition to factors almost identical, the present litigation is based upon the interpretation of the meaning and effect of the Colorado River Compact and Statutory Compact which control the rights and obligations of all seven States of the Colorado River Basin. Contrary to Arizona's assertion that the Colorado River Compact settled the major differences between the Basins, her claims raise new interpretations of the Compact that strike at the heart of the understood rights between the Basins. Arizona's Complaint hence raises the central issue of the extent of rights allocated to the Lower Basin under the Compact, which directly involves the converse rights and obligations of the absent Upper States under that document.

CONCLUSION

The "business at hand", as Arizona calls it (memorandum, p. 10) would be a good deal further along if Arizona had joined the necessary parties in the first place, and if Arizona had not resisted, for the past year and more, California's efforts to cure that defect. This is the first of Arizona's four cases in this Court in which the United States, an indispensable party, has intervened, and hence the first in which there has been an opportunity for a complete settlement of the Colorado River controversy. In the other three cases, all seven States were before the Court upon Arizona's summons, but the United States was not. We respectfully submit that it will not be in the interest of any State of the Basin if the present opportunity for a final determination is lost through the failure to join the parties necessary to that determination.

Respectfully submitted,

(See list of signatures to this Reply on page 28.)

Inquiry to Solicitor General requested, under Rule 58(3):

Are the claims which the United States pleads for water for Indian use, satisfaction of contract obligations, treaty requirements, navigation, flood control, and other federal purposes, restricted to the waters available to the Lower Basin under the Colorado River Compact, or are they claims against the waters of the entire Colorado River System? 2

Court's previous inquiry to Solicitor General.... 2

I. Federal Indian claims are pleaded "against the River," not against "Lower Basin waters" 4

II. Has the United States, by constructing Hoover Dam, appropriated the "surplus" unapportioned by the Colorado River Compact? 6

III. Federal treaty claims are clearly "against the River," not merely against "Lower Basin waters" 8

IV. The Federal requirements for flood control and navigation, like those for the Mexican Water Treaty, are "against the River," not merely against "Lower Basin waters"..... 9

Conclusion 13

The Government's silence here, and before the Special Master, is "leaving the controversy in such a condition that its final termi-

Page

nation may be wholly inconsistent with equity and good conscience." Are the Federal claims "against the River" or against only "Lower Basin waters"?

Petition for Rehearing of Decision Denying Motion to Join the States of Colorado, New Mexico, Utah and Wyoming

PETITION FOR REHEARING

The per curiam decision of December 12, 1955, denies our motion to join Colorado and Wyoming, and grants the motion to join Utah and New Mexico as parties "only to the extent of their interest in Lower Basin waters."

The motion to join was decided in the absence of any brief or argument by the United States, which is by far the major claimant.

We respectfully petition for rehearing, and ask that the Court, under Rule 58 (3) of this Court, request the Solicitor General of the United States to reply to this petition, and, in so doing, to answer this question:

INQUIRY TO SOLICITOR GENERAL REQUESTED

> Are the claims which the United States pleads for water for Indian use, satisfaction of contract obligations, treaty requirements, navigation, flood control, and other federal purposes, restricted to the waters available to the Lower Basin under the Colorado River Compact, or are they claims against the waters of the entire Colorado River System?

COURT'S PREVIOUS INQUIRY TO SOLICITOR GENERAL

The Clerk of the Court, on October 15, 1952, wrote the Solicitor General, saying, *inter alia:*

> "I have been directed by the Court to request you to state your views as regards jurisdiction."

The Government's motion for leave to intervene (December 31, 1952) and Petition of Intervention (December 8, 1953), followed. To our eyes, the Petition is a plain claim of paramount federal powers "against the river", not merely "Lower Basin waters". Unfortunately, the Government's silence here and before the Special Master has created a situation which should be clarified before final disposition of the joinder motion.

If the Government, now or later, confirms that any of its claims are against the waters of the entire Colorado River System (there is no reason to believe that the Government will contend otherwise), then all seven States are necessary to their adjudication. It is better to know that now rather than later. "A decree could not be framed without the adjudication of the superior rights asserted by the United States." *Arizona* v. *California, et al.*, 298 U. S. 558, 572 (1936).

But if the Government's reply should be that the federal interests are limited to "Lower Basin waters", however defined,* that answer would be

* The expression "Lower Basin waters" used in the Court's per curiam decision of December 12, 1955, is not found in the Colorado River Compact or the Boulder Canyon Project Act. Does it mean the 7,500,000 acre-feet per annum, the use of which is apportioned to the Lower Basin by Article III (a) of the Compact? The added 1,000,000 acre-feet of consumptive use covered by Article III (b)? The 75,000,000 acre-feet per decade guaranteed by the States of the Upper Division in Article III (d)? The additional de-

inconsistent with the following claims made or necessarily implied in its Petition of Intervention:

I. FEDERAL INDIAN CLAIMS ARE PLEADED "AGAINST THE RIVER", NOT AGAINST "LOWER BASIN WATERS"

The Petition of Intervention claims 1,747,250 acre-feet per annum of diversion rights, of which 1,556,250 acre-feet are in Arizona (Petition, Par. XXVII, p. 23, Appendix II-A, pp. 56, 57), and *denies that these are subject to the Colorado River Compact* (Par. XXXIV, p. 34), *denies that Indian uses are chargeable to the Basin and State in which they are located* (Petition, Par. XXXVII, pp. 37, 38), and specifically alleges that Indian rights *"are in no way subject to or affected by the Colorado River Compact."* (Petition, Par. XXXVII, p. 38.) (Emphasis supplied) If that is so, they are not subject to the Compact's division of the Colorado River System into Basins. In a motion "for determination of questions of law" filed here October 20, 1955, denied November 7, 1955, the Government said, "If the Indian claims are held to be 'against the river' as distinguished from the Lower Basin as defined by the Colorado River Compact, that conclusion would have far-reaching effect upon the interests of all the States

---

liveries required by Article III (c)? The "unapportioned excess or surplus" of which the Boulder Canyon Project Act permits California to use one-half? It seems clear that the federal claims are not restricted to waters fitting any of these descriptions.

in the Colorado River Stream System." Has it changed its view?

In *Texas* v. *New Mexico,* No. 9 Original, this Court now has under review a report of a Special Master on the relation of the Indian claims on the Rio Grande to the claims of Texas and New Mexico. The Rio Grande Compact, there litigated, contains an exemption of Indian rights (Art. XVI) which is modeled on that in the Colorado River Compact (Art. VII). In an *amicus* brief filed April 16, 1952, in *Texas* v. *New Mexico,* the United States contended, "In the absence of authority from Congress, the Compact could not bind the United States or its wards, the Pueblo Indians. The consent of Congress to the states entering into the Compact was not a consent to be a party bound by the Compact. Cf. *Hinderlider* v. *LaPlata Co.,* 304 U. S. 92, 109." On October 17, 1955, the Court requested the Department of Justice to again state its position on the indispensability of the United States as a party to the Rio Grande controversy.

Indian claims now asserted by the Government on the Colorado are at least thirty times larger than on the Rio Grande.

In *Federal Power Commission* v. *Oregon,* 349 U. S. 435 (1955), the United States asserted and the Court recently sustained federal water rights, based on Indian ownership of riparian lands, in contravention of statutes of Oregon. See *Winters* v. *United States,* 207 U. S. 564 (1908); *United*

States v. *Powers,* 305 U. S. 527 (1939); *United States* v. *Winans,* 198 U. S. 371 (1905).

The States of the Colorado River Basin cannot safely assume, in the teeth of the Government's Petition of Intervention here, that federal Indian claims on the Colorado are softer and less extensive than those asserted on the Columbia, the Milk River and the Rio Grande.

Does the Government here claim 1,747,250 acre-feet of diversion rights *in addition* to the "Lower Basin" waters referred to by the Court? If so, where is this water to come from, except the waters of the entire System? Does it claim 1,556,250 acre-feet in Arizona as part of the 3,800,000 Arizona claims, or *in addition* thereto? If in addition, how can this quantity possibly be supplied out of "Lower Basin waters"?

II. HAS THE UNITED STATES, BY CONSTRUCTING HOOVER DAM, APPROPRIATED THE "SURPLUS" UNAPPORTIONED BY THE COLORADO RIVER COMPACT?

Section 5 of the Boulder Canyon Project Act directs that no person shall have the right to use water stored by Hoover Dam except by contract with the Secretary of the Interior.

The question here is whether the United States, by construction of Hoover Dam, has appropriated the surplus waters of the Colorado River System as against all seven States and may lawfully dispose of their use by contract. The United

States was held indispensable in *Arizona* v. *California,* 298 U. S. 558, 571-72 (1936), because "a decree could not be framed without the adjudication of the superior rights asserted by the United States." One of the "superior rights" so asserted was thus described by this Court, after tabulating the California contracts: (p. 570.)

> "Without more detailed statement of the facts disclosed, it is evident that the United States, by congressional legislation and by acts of its officers which that legislation authorizes, has undertaken, in the asserted exercise of its authority to control navigation, to impound, and control the disposition of, the surplus water in the river not already appropriated."*

Cf. *Arizona* v. *California,* 283 U. S. 423, 456-58, (1931); *Ashwander* v. *Tennessee Valley Authority,* 297 U. S. 288, 328-30 (1935); *United States* v. *Appalachian Power Co.,* 311 U. S. 377, 423-24, 426 (1940); *United States* v. *Chandler Dunbar Co.,* 229 U. S. 53, 72, 73 (1913); *United States* v. *San Francisco,* 310 U. S. 16, 29, 30 (1940); *Alabama* v. *Texas,* 347 U. S. 272, 273 (1954).

The Colorado River Compact does not allocate this "surplus", leaving that to a later compact.

---

* In *Nebraska* v. *Wyoming,* 325 U. S. 589, 629-631, 639-640 (1945), Government contracts under the Warren Act (36 STAT. 925) for delivery of water stored by federal projects were recognized and excepted from the final apportionment of "natural flow" among the States.

(Art. III (f), (g).) But such a later compact would require anew the consent of Congress. (Constitution, Art. I, Sec. 10.) Thus such an appropriation by the United States of surplus which is explicitly excluded from the effect of the present compact, if valid now, cannot be divested without the consent of Congress to a suppositional new compact, and the Government's right is good until so divested. Cf. *United States* v. *River Rouge Improvement Co.*, 269 U. S. 411, 420 (1926). The United States denies that "all" its rights are subject to the present compact. (Petition, Par. XXXIV, p. 34.) Cf. *Hinderlider* v. *LaPlata River and Cherry Creek Ditch Co.*, 304 U. S. 92, 109 (1938). If not "all", then which ones?

III. FEDERAL TREATY CLAIMS ARE CLEARLY "AGAINST THE RIVER", NOT MERELY AGAINST "LOWER BASIN WATERS"

Article 10 of the Mexican Water Treaty (Treaty Series 994) guarantees Mexico 1,500,000 acre-feet per annum "of the waters of the Colorado River, from any and all sources". Senate Reservation "(c)" to that Treaty withholds power from the Secretary of State and the International Boundary and Water Commission "directly or indirectly to alter or control the distribution of water to users within the territorial limits of any of the individual States," but it omits the Secretary of the Interior from the Prohibition. This omission was deliberate, to enable the Secretary of the Interior to operate all federal dams *in all seven States* so as to perform

the guaranty to Mexico. An amendment to include that officer in the prohibition was rejected for that very reason. See Senate debate on consent to ratification: 91 CONG. REC. 3373-81, (April 16, 1945, 79th Cong., 1st Sess.). The protocol of November 14, 1944, to the Treaty is in accord. (Treaty Series 994.) Cf. *Missouri* v. *Holland,* 252 U. S. 416, 434 (1920).

The treaty burden, in terms, rests upon the whole system, not the Lower Basin. Article III(c) of the Compact, Article 10 of the Treaty, say so.

The Government's Petition of Intervention (Par. XIII, p. 12, Par. XXVIII, p. 24) does not limit its treaty claims to "Lower Basin waters"; it denies that these rights are subject to the Colorado River Compact. (Par. XXXIV, p. 34.) California's answer to that petition (Par. 44 (b) (2), p. 51) alleges that the federal treaty claims are against all seven States of the Colorado River Basin, not merely against the Lower Basin. Does the United States assert otherwise?

IV. THE FEDERAL REQUIREMENTS FOR FLOOD CONTROL AND NAVIGATION, LIKE THOSE FOR THE MEXICAN WATER TREATY, ARE "AGAINST THE RIVER", NOT MERELY AGAINST "LOWER BASIN WATERS"

The federal navigation and flood control servitudes, like that imposed by the Treaty, cut across the Compact, indifferent to its division of the System into Basins.

As to navigation and flood control, Congress, in the Boulder Canyon Project Act (Act of December 21, 1948, 45 Stat. 1057) directed that the reservoir created by Hoover Dam "shall be used: First, for river regulation, improvement of navigation, and flood control; second, for irrigation and domestic uses and satisfaction of present perfected rights in pursuance of Article VIII of said Colorado River Compact; and third, for power." (Sec. 6) This Court has already held that this "*specific statement of primary purpose in the act governs the general references to the compact.*" *Arizona* v. *California,* 283 U. S. 423, 456 (1931). (Emphasis supplied)

There is thus no division into Upper Basin and "Lower Basin waters" so far as paramount federal powers are concerned. As between those powers and one State or seven, "This is not a controversy between equals." *Sanitary District of Chicago* v. *United States,* 266 U. S. 405, 425 (1925). See *Oklahoma ex rel. Phillips* v. *Guy F. Atkinson Co.,* 313 U.S. 508, 512, 525-26 (1941); *United States* v. *Appalachian Electric Power Co.,* 311 U.S. 377, 426-27 (1940).

The Government claims the right to utilize the full capacity (38,000,000 acre-feet) of all its reservoirs for *all* federal purposes. (Petition, Par. XXX, p. 25; Appendix I, p. 43.) The power claimed and exercised (millions of acre-feet may be released from Hoover Dam to the Gulf under the flood control mandate: see 33 C.F.R. § 208.80

requiring 5,350,000 acre-feet of vacant capacity in Lake Mead to be available by January 1 of each year) is the power to withhold from use, or release to the ocean and destroy, the *corpus* of the water. It has nothing to do with the *consumptive use* of water, as apportioned by the Compact. Compare *Sanitary District of Chicago* v. *United States,* 266 U. S. 405, 425, 426 (1925), and *Wisconsin* v. *Illinois,* 278 U. S. 367, 415 (1929), with *United States* v. *Gerlach Live Stock Co.,* 339 U. S. 725, 737 (1950). It is more like the guaranty of the corpus of 1,500,000 acre-feet per year made to Mexico by Article 10 of the Treaty. (Treaty Series 994.)

California's answer to the Government's Petition of Intervention (Par. 44 (b) (4) p. 52) alleges that the Government's claims in the interests of flood control and navigation are against all seven States. The seven are on an equal footing with respect to paramount federal powers. *United States* v. *Texas,* 339 U. S. 707, 715-17, 719, 720 (1950); *United States* v. *Louisiana,* 339 U. S. 699 (1950); *United States* v. *California,* 332 U. S. 19, 31 (1947). Does the United States here contend otherwise?

Is the Colorado, alone of all the river systems of the country, one in which the adjudication of the rights of the United States for treaty, navigation and flood control functions can be restricted to the River's "Lower Basin waters," in consequence of the consent of Congress to an interstate compact?

Does the United States now so limit the plenary powers in aid of navigation and flood control which it asserted, and sustained, "without conforming to the police regulations of a state," in *Arizona* v. *California,* 283 U. S. 423, 451 (1931)? Nothing in its pleadings here so suggests. The Government, it can be predicted, will contend here, as it has done successfully before, that its constitutional functions cannot be limited by the legislation of any State, *e.g. Federal Power Commission* v. *Oregon,* 349 U. S. 435, 445 (1955); *First Iowa Hydro-Electric Coop.* v. *Federal Power Commission,* 328 U. S. 152, 181, 182 (1946); *United States* v. *Appalachian Electric Power Co.,* 311 U. S. 377, 404, 405, 426, 427 (1940); *Washington Dept. of Game and Fish* v. *Federal Power Commission* 207 F. 2d 391, 395, 396 (9th Cir. 1953), *cert. denied* 347 U.S. 936 (1954), nor by any concert of States by Compact, *Pennsylvania* v. *Wheeling and Belmont Bridge Co.,* 18 How. 421, 433 (U.S. 1856); *South Carolina* v. *Georgia,* 93 U. S. 4, 8, 9 (1876), and that by consenting to the Compact the Congress has not enthroned it as a federal statute, *Arizona* v. *California,* 283 U. S. 423, 456 (1931). Cf. *Hinderlider* v. *LaPlata River and Cherry Creek Ditch Co.,* 304 U. S. 92, 109 (1938).

Piecemeal litigation involving great water systems and many states, with delayed fuses on federal issues, is not in the interest of anyone.

CONCLUSION

The Court properly denied the Government's motion of October 20, 1955, "For determination of questions of law," including some of those above stated. But this does not solve the problem. When the United States intervened, this became, as to the federal claims, a suit by the United States against the States. *Oklahoma* v. *Texas,* 258 U. S. 574, 581 (1922). The Government, in fairness to the States it has sued, ought to tell the Court, instead of asking to be told, whether its own claims are "against the river" (a possibility which it suggests), or against only "Lower Basin waters" (the Court's expression in the decision of December 12, 1955). The question of whether seven States or five are necessary parties turns on the answer. The lack of that answer is "leaving the controversy in such a condition that its final termination may be wholly inconsistent with equity and good conscience." *Shields* v. *Barrow,* 17 How. 130, 139 (1855). The provisions of Supreme Court Rule 58 (3), providing for a reply to a petition for rehearing if directed by the Court, afford an appropriate channel for obtaining it. The question of the source and extent of the Government's water rights on the Colorado is one of the gravest questions in the case. All seven States are necessary parties to the decree which decides what Federal rights exist, determines their magnitude and whether they are subject to the Compact, and distributes the burden which they impose.

The Government's silence, although doubtless based upon a desire to remain neutral as between the contending States, places the Court, the Special Master, and these defendants in an intolerable position, because the Government is an affirmative claimant, asserting rights adverse to those of the States, and far exceeding theirs. As to its own claims, it cannot be neutral. Are the federal claims "against the river" or against only "Lower Basin waters"?

CERTIFICATE REQUIRED BY RULE 58

This petition is presented in good faith, and not for delay.

STATE OF NEVADA,

Intervener.

COMPLAINT AND ANSWER IN INTERVENTION BY THE STATE OF UTAH

Pursuant to the order of the United States Supreme Court, dated December 12, 1955, to the effect that the State of Utah and the State of New Mexico should be joined

as parties in the above cause in their respective capacities as States of the Lower Basin, the State of Utah does hereby plead as follows:

I.

The State of Utah is a signatory State of the Colorado River Compact dated November 24, 1922, and a member State of the Lower Basin thereunder, and is entitled to a share of the waters allocated to the Lower Basin by the said Colorado River Compact. Specifically, Articles III(a) and III(b) of said Compact apportion to the Lower Basin the exclusive beneficial consumptive use of 8,500,000 acre feet of water per annum. The State of Utah alleges that it has the right to the beneficial consumptive use of the waters thus apportioned under Articles III(a) and III(b) of said Compact to the extent of 175,000 acre feet per annum for present and future agricultural and domestic uses.

II.

Due to its physical location as a State of the Lower Basin, the State of Utah cannot feasibly or economically utilize any of the water flowing in the main stream of the Colorado River. For economic and geographic reasons, the only waters from the Colorado River System available to the State of Utah for present and future use in the Lower Basin are found in the Virgin River, Kanab Creek and Johnson Creek, and the tributaries of these streams. By reason of the unavailability of any other waters to it in the Lower Basin, the State of Utah is and should be entitled to a priority of use of the waters from the above designated streams in the aforesaid amount of 175,000 acre feet per annum. The respective areas in the State of Utah located in the Lower

Basin, and the amount of water necessary for the present and future development thereof are as follows:

Virgin River and Adjacent Areas

Depletions by presently irrigated areas after full water supply is available (22,857 acres)	65,625 acre feet
Depletions by irrigation of new lands with full water supply (23,534 acres)	70,852 acre feet
Depletions by miscellaneous uses (domestic, evaporation, industrial)	23,350 acre feet
	159,827 acre feet

Kanab Creek and Johnson Creek Areas

Depletions by presently irrigated areas under full water supply (5,338 acres)	15,173 acre feet
Total	175,000 acre feet

III.

Article III(f) of the Colorado River Compact provides for further "equitable apportionment of the beneficial uses of the waters of the Colorado River System unapportioned by paragraphs (a), (b) and (c) * * * at any time after October first, 1963, if and when either Basin shall have reached its total beneficial consumptive use as set out in paragraphs (a) and (b)." The State of Utah alleges that it has a right to an equitable share of these presently unapportioned waters, if and when a further apportionment is made under Article III(f) of said Compact.

IV.

With respect to certain questions raised by the pleadings of the parties on file herein, the State of Utah alleges as follows:

1. Is the State of Arizona a member of the Colorado River Compact? The State of Utah alleges that the State of Arizona effectively ratified said Compact on February 24, 1944, and thereby the State of Arizona became a member of said Compact and entitled to the rights conferred therein and subject also to the obligations therein imposed. The State of Utah also alleges that the State of California likewise is subject to said Compact, as well as to the obligations imposed by the California Limitation Act of 1929.

2. How is beneficial consumptive use under the Compact to be measured? The State of Utah alleges that beneficial consumptive use of the waters apportioned to the Lower Basin should be measured by the same method as adopted for the Upper Basin in the Upper Colorado River Basin Compact, to wit: By the inflow-outflow method in terms of the man-made depletion of the virgin flow at specified points along the main stream.

3. How shall evaporation losses from Lower Basin reservoirs be charged? The State of Utah alleges that evaporation losses shall be charged against the apportionment of water made to each state in the same proportion as the consumptive use of water delivered from storage reservoirs and used in each state bears to the total consumptive use in the Lower Basin of water delivered from storage reservoirs.

4. Is the water referred to in Article III(b) of the Colorado River Compact apportioned or unapportioned

water? The State of Utah alleges that the water referred to in Article III(b) of the said Compact is apportioned water and the beneficial consumptive use thereof is subject to apportionment between the States of the Lower Basin.

V.

To the extent that the foregoing allegations in Paragraphs I, II, III, and IV hereof conflict with or are inconsistent with the allegations contained in the several pleadings of the parties already on file herein, the State of Utah denies each and all such allegations. With respect to the other allegations of the several pleadings of the parties on file herein, the State of Utah neither admits nor denies such allegations, but reserves the right to take such position thereon as its interest in this suit may make apparent as the trial of the case proceeds.

WHEREFORE, the State of Utah respectfully prays:

1. That the respective rights of the States of Arizona, California, Nevada, Utah, New Mexico, and of the United States of America in and to the use of the waters of the Colorado River in the Lower Basin be adjudicated, determined and set at rest.

2. That the right of the State of Utah in and to the beneficial consumptive use of 175,000 acre feet per annum of the water apportioned to the Lower Basin by Articles III(a) and III(b) of the Colorado River Compact be confirmed in the State of Utah in perpetuity.

3. That the State of Utah be decreed the right to its equitable share in and to the beneficial consumptive use of

any waters which may be apportioned under Article III(f) of the Colorado River Compact.

4. That the State of Utah have such other and further relief as the Court may deem proper, also that the State of Utah be granted leave to amend or supplement this complaint and answer as its interests may appear as the trial of the case proceeds.

DATED this 10th day of February, 1956.

E. R. CALLISTER,
Attorney General of Utah,

DENNIS McCARTHY,
Special Assistant
Attorney General.

Answer of California Defendants to Complaint and Answer in Intervention by the State of Utah

Defendants State of California, Palo Verde Irrigation District, Imperial Irrigation District, Coachella Valley County Water District, The Metropolitan Water District of Southern California, City of Los Angeles, City of San Diego, and County of San Diego, by their duly authorized attorneys, jointly Answer

the Complaint and Answer in Intervention by the State of Utah as follows:

Incorporation of Appendixes by Reference

1.

Defendants refer to their "Appendixes to the Answer" to Arizona's Bill of Complaint, and incorporate those Appendixes by reference as a part of this Answer to the Complaint and Answer in Intervention by the State of Utah, as though the same were here set out at length.

FIRST AFFIRMATIVE DEFENSE

Defendants Have the Right to the Beneficial Consumptive Use in California of 5,362,000 Acre-Feet Per Annum of Waters of the Colorado River System Under the Colorado River Compact, the Boulder Canyon Project Act, the Statutory Compact Between the United States and California, and the Contracts of the Secretary of the Interior Executed Pursuant Thereto

2.

The Defendants incorporate by reference, as though here fully stated at length, as a part of this Answer to the Complaint and Answer in Intervention by the State of Utah, all of the allegations of the First Affirmative Defense of their Answer to the State of Arizona, and of the First Affirmative Defense of their Answer to the Petition of Intervention of the United States.

SECOND AFFIRMATIVE DEFENSE

Defendants Have Appropriative Rights, Recognized by the Boulder Canyon Project Act and Protected by the Statutory Compact Between the United States and California, to the Beneficial Consumptive Use in California of Not Less Than 5,362,000 Acre-Feet of Colorado River System Water Per Annum, Senior to the Claims Made by Utah

3.

Incorporation by Reference

The defendants incorporate by reference, as though here fully stated at length, as a part of this Answer to the Complaint and Answer in Intervention by the State of Utah, all of the allegations of the Second Affirmative Defense contained in the Answer of the defendants to the Petition of Intervention of the United States.

4.

All of the appropriations of defendants above alleged are senior in time and right to all claims of Utah for the beneficial consumptive use of waters of the Colorado River System, except for certain beneficial consumptive uses which may have been initiated in Utah prior to one or more of the dates of the initiation of defendants' appropriative rights. The exact quantities of such uses are unknown to the defendants, but upon information and belief, defendants allege that the quantities are not sufficient to interfere with the fulfillment of the appropriative rights of the defendants as such rights are recognized by the Boulder Canyon Project Act and Statutory Compact between the United States and California.

TRAVERSE

5.

Answering paragraph I of said Complaint and Answer, deny all of the allegations except as expressly admitted herein. Allege that the State of Utah is a party to the six-state Colorado River Compact which became operative as a result of reciprocal legislation among the States of California, Colorado, Nevada, New Mexico, Utah and Wyoming and congressional consent thereto in the Boulder Canyon Project Act, all as proclaimed effective by the President of the United States June 25, 1929, 46 Stat. 3000. Allege that the quantities of water to which Utah may be entitled to use have not been determined in any manner.

6.

Answering paragraph II, deny all of the allegations contained in said paragraph not expressly admitted herein. Admit that Utah cannot utilize any of the water flowing in the main stream of the Colorado River in its Lower Basin area, for the reason that Utah has no physical access to such water.

7.

Answering paragraph III, defendants deny all of the allegations contained in said paragraph not expressly admitted herein. Admit that Article III(f) of the Colorado River Compact contains, among other provisions, those quoted.

8.

Answering paragraph IV, deny all of the allegations contained in said paragraph not expressly admitted

herein. Admit that the State of California is subject to the California Limitation Act of 1929, except that California's obligation under that Act did not survive the ratification by Arizona of the Colorado River Compact in 1944 if that ratification was legally effective. Admit that the use of the water referred to in Article III(b) of the Colorado River Compact is subject to division among the States of Arizona, California, Nevada, New Mexico and Utah, and allege that, in the absence of a compact among said states, rights therein are established by appropriation, or, with respect to water stored under the Boulder Canyon Project Act, by contract with the Secretary of the Interior. Deny that the issues are adequately or accurately stated in said paragraph IV, and allege that the issues in controversy are summarized in Exhibit "A" attached hereto, and incorporated by reference as though fully stated herein.

9.

Defendants deny all allegations contained in the Complaint and Answer of the State of Utah not specifically admitted herein, or which are at variance with the defendants' other pleadings in this suit.

PRAYER

WHEREFORE, defendants pray:

1. That the rights and interests of defendants as against all parties to this cause be adjudged and decreed as alleged in their Answer to the Bill of Complaint of Arizona, their Answers to the Petitions of Intervention of the United States and Nevada, and this Answer to Utah.

2. That the Court grant to the defendants such other and further relief as to the Court may seem meet and proper.

The defendants respectfully pray leave to amend this Answer if amendment should hereafter become appropriate or necessary in the course of the proceedings in this cause.

Respectfully submitted,

For the State of California

EXHIBIT A

Summary of the Controversy

The pleadings filed by Arizona, Nevada, the United States and California, to date, disclose complex questions of fact and law, many of which are interrelated. The summary of principal questions presented below is divided into four parts: (I) the quantities of water in controversy; (II) the ultimate issues, from the standpoint of the respective prayers; (III) a tabulation of factual issues; and (IV) the issues of interpretation of the basic documents involved. Under this division, certain questions reappear and to this extent reflect the interlocking nature of the problem.

I. The Quantities of Water in Controversy

The United States seeks to quiet title to rights to the use of water, consumptive and otherwise, "as against the parties to this cause," for federal purposes, in unstated amounts.

Arizona seeks to quiet title to the beneficial consumptive use of 3,800,000 acre-feet per annum of the waters of the Colorado River System (measured by "man-made depletion of the virgin flow of the main stream") and to enjoin California's right to permanently use any water in excess of approximately 3,800,000 acre-feet per annum (measured by "diversions less returns to the river"), that being the effect of (1) reducing 4,400,000 acre-feet of III(a) water by reservoir losses, and (2) denying California any permanent right to use excess or surplus waters.

California asserts a right to the beneficial consumptive use in California of 5,362,000 acre-feet per annum of the waters of the Colorado River System (measured by "diversions less returns to the river") under contracts with the United States, comprising 4,400,000 acre-feet of the waters apportioned by Article III(a) of the Colo-

rado River Compact and 962,000 acre-feet per annum of the excess or surplus waters unapportioned by the Compact, including in such excess or surplus the "increase of use" permitted to the Lower Basin by Article III(b) of the Compact.

Nevada seeks to quiet title to 539,100 acre-feet per annum (measured in part by both methods) of the beneficial consumptive uses apportioned by Article III(a) of the Colorado River Compact, and to not less than a total of 900,000 acre-feet from all classes of water.

As the States differ in their definition of "beneficial consumptive use," their claims require restatement in terms of a common denominator in order to evaluate their effects. Thus:

The quantity to which Arizona seeks to quiet title, 3,800,000 acre-feet per annum, measured by the method she urges, "depletion of the virgin flow of the main stream occasioned by the activities of man," is equivalent to more than 5,000,000 acre-feet measured by consumption at the site of use, or "diversions less returns to the river," the standard established by the Boulder Canyon Project Act and asserted by California. The difference is due primarily to the fact that under Arizona's interpretation, the Compact deals with the virgin flow in the main stream only and that the use of water "salvaged by man" is not charged as a beneficial consumptive use, whereas under California's interpretation the Compact deals with the waters of the entire river system and such salvage is so charged.

Conversely, the aggregate of the California contracts, 5,362,000 acre-feet per annum, measured by "diversions less returns to the river," is equivalent to only about 4,500,000 acre-feet measured by "man-made depletion" (without charge for salvaged water). If Arizona's prayer should be granted, California's rights would be reduced to about 3,800,000 acre-feet per annum, measured by "diver-

sions less returns to the river," or to about 3,000,000 acre-feet measured in terms of "depletion of the virgin flow of the main stream."

The impact of Nevada's claims on those of the other states is not readily evaluated.

II. Ultimate Issues

The ultimate issues, in the sense of the results sought by each party, may be grouped as follows:

The United States.

Does the United States have rights, "as against the parties to this cause, to the use of water in the Colorado River and its tributaries" in the following categories?

(1) for consumptive use of all projects in the Lower Basin, which it asserts independently of any rights claimed by the States in which such projects are located;

(2) to fulfill its obligations arising from international treaties and conventions; but this involves, with respect to the burden of the Mexican Water Treaty, the obligations as between the States of the Upper Division and the States of the Lower Division under Articles III(c) and III(d) of the Colorado River Compact, and involves also the effect of the so-called "escape clause" of Article 10 of that Treaty, which allows reduction in the guaranteed deliveries to Mexico, in the event of extraordinary drought, in the same proportion as consumptive uses in the United States are reduced, "consumptive uses" being defined in Article 1 of the Treaty;

(3) to fulfill all its contracts for the delivery of water and electric power, *i.e.*, with or in Arizona, California, and Nevada; but it alleges that the water available is not sufficient to satisfy all these obligations;

(4) to fulfill the Government's obligations to Indians and Indian Tribes; but this involves not only the questions of the magnitude and priorities of these claims but the questions of whether or not they are chargeable under the Colorado River Compact to the Basin and State in which such uses are made, what the obligation of the Upper Division States may be to release water for use by Indians in the Lower Basin, and what rights the United States may have to withhold water in reservoirs in the Upper Basin for use by Indians in both Basins;

(5) to protect its interests in fish and wildlife, flood control and navigation; but such rights as it may have for these purposes may require the impounding and release of water from reservoirs in both Basins, and not merely reservoirs bordering or within Arizona and California, and again involves the question of accounting under the Compact; and

(6) for use of the National Park Service, Bureau of Land Management, and Forest Service; but if the United States has claims "as against the parties to this cause" for these functions, such claims apply to all the waters of the Colorado River System in both Basins.

The adjudication of these claims of the United States requires consideration and resolution of: questions of fact, referred to later; the power of the United States to impound and dispose of water independently of rights derived from the States; the extent of its obligations under treaties and contracts; the impact and effect of its treaties upon rights of domestic water users; how its claims to the use of water shall be measured; the location, magnitude and priorities of Indian claims, and claims for other alleged federal purposes; the extent to which its rights and obligations are controlled by the Colorado River Compact; and the extent to which its claims may be exereised *in futuro* in derogation of intervening rights and uses.

Arizona.

Is Arizona entitled to a decree:

(1) Quieting title to 2,800,000 acre-feet per annum of the beneficial consumptive uses apportioned to the Lower Basin by Article III(a) of the Colorado River Compact, substantially all to be taken from the main stream, and measured in terms of man-made depletion of the virgin flow of the main stream?

(2) Quieting title to all of the 1,000,000 acre-feet per annum by which the Lower Basin is permitted to "increase its use" by Article III(b) of the Colorado River Compact (notwithstanding the decision of this Court in *Arizona* v. *California et al.*, 292 U.S. 341 (1934)), to the exclusion of the other States of the Lower Basin, all to be taken from the waters flowing in the Gila River, and to be measured in terms of man-made depletion of the virgin flow of the main stream?

(3) Reducing California's right to the uses apportioned by Article III(a) of the Colorado River Compact to approximately 3,800,000 acre-feet per annum, in consequence of reservoir losses?

(4) Enjoining California's right to receive and permanently use under its government contracts 962,000 acre-feet per annum, or any part thereof, in excess of 4,400,000 acre-feet per annum?

The determination of Arizona's claims involves: the questions of fact, later referred to; the standing of Arizona to seek a declaratory decree quieting title to a "block" of water for projects not yet constructed or authorized (about 1,600,000 acre-feet per annum of the 2,800,000 claimed from the main stream); the source of title to Arizona's claims to 2,800,000 acre-feet of III(a) water and 1,000,000 acre-feet of III(b) water; the status of the uses on the Gila; the measurement of uses thereof and of the main stream; whether Arizona's status is

that of a party to the Colorado River Compact or that of a third party beneficiary of the Statutory Compact between the United States and California, and if so, whether Arizona is bound by the interpretations placed thereon by the principal parties thereto in its formulation and administration; and the validity and effect of Arizona's water delivery contract with the United States.

Most of the questions posed by Arizona's claims revolve around the issue of whether the Gila River shall be treated as a part of the Colorado River System for all purposes, or shall receive special treatment in respect of (1) the identification of uses thereon with the waters referred to in Article III(b); (2) the corollary exemption of "rights which may now exist" on the Gila from any charge under Article III(a); and (3) the devaluation of the charge for beneficial consumptive uses from the quantity which is in fact consumed on the Gila (alleged by California to be about 2,000,000 acre-feet per annum) to the lesser quantity represented by the resulting depletion in the virgin flow of the main stream (alleged by Arizona to be about 1,000,000 acre-feet per annum).

California.

Are the contracts between the United States and the defendant public agencies of California for the storage and delivery of water valid and enforceable? Inasmuch as the contracts are, in terms, for permanent service but subject to the Colorado River Compact, the Boulder Canyon Project Act and the California Limitation Act, the issue is whether these enactments, considered together as a Statutory Compact established by reciprocal legislation, authorize and permit the Secretary of the Interior to presently contract for the storage and delivery for permanent beneficial consumptive use in California, of 4,400,000 acre-feet per annum of the waters apportioned by Article III(a) of the Colorado River Com-

pact plus one-half of the excess or surplus waters unapportioned by the Compact, including in such excess or surplus the "increase of use" permitted to the Lower Basin by Article III(b) of the Compact. The aggregate of these contracted quantities, subject to physical availability of the amounts of excess or surplus waters, which vary from year to year, is 5,362,000 acre-feet per annum.

The determination of California's claims involves: the questions of fact, later referred to; the extent to which rights have vested in both the United States and California under the Statutory Compact; whether Arizona is estopped by her previous conduct from asserting her present position; whether the limitation is net of reservoir losses; how California's uses shall be measured; whether California is chargeable with the use of salvaged water; the effect of California's appropriations, in their relation to the expressions "rights which may now exist" and "present perfected rights" in the Compact and Project Act; the definition of the Project Act term, "excess or surplus waters unapportioned by" the Colorado River Compact; the availability of such waters for permanent service; the intent of Congress with respect to the waters referred to in Article III(b); and the relation between California's contracts and the later agreements which the Secretary of the Interior has entered into with others.

Nevada.

Is Nevada entitled to a decree:

(1) Quieting title to 539,100 acre feet per annum of the beneficial consumptive uses apportioned to the Lower Basin by Article III(a) of the Colorado River Compact?

(2) Reserving for a future agreement the disposition of the use of the 1,000,000 acre-feet referred to in Article III(b) of the Colorado River Compact, and preserving to Nevada an equitable share thereof?

(3) Assuring Nevada the ultimate beneficial consumptive use of not less than 900,000 acre-feet per annum from all classes of water?

The determination of Nevada's claims requires the consideration and resolution of: the questions of fact later referred to; the questions of interpretation previously mentioned; the question of whether Nevada's share of III(a) waters has been determined or limited to 300,000 acre-feet per annum; whether, as to stored waters, Nevada may claim any quantity in excess of her contracts with the United States; and the source of title to her claims to 539,100 acre-feet per annum of III(a) water and not less than 900,000 acre-feet per annum from all sources.

Interests of Other States.

There remains the question whether the claims of the United States, Arizona, California, and Nevada can be effectively determined without concurrently determining the rights and obligations of Utah and New Mexico with respect to the waters of the Lower Basin, and the rights and obligations of those states and Colorado and Wyoming with respect to other waters of the Colorado River System, to the extent that they are affected by the issues in controversy here.

In more detail, these "ultimate issues" depend upon the resolution of the following questions of fact and of the interpretation of the Colorado River Compact, the Boulder Canyon Project Act, the Statutory Compact between the United States and California, and the Mexican Water Treaty.

III. Factual Issues

There are substantial issues of fact, raised by the pleadings to date. These include, but are not limited to, determination of:

(1) the investments and obligations undertaken by the parties in the construction of works and in the performance of their contracts with the United States, and the investments and obligations undertaken by the United States in reliance upon such contracts;

(2) the location, magnitude and priorities of the water rights necessary to enable the United States to perform its obligations to Indians and Indian tribes pursuant to Article VII of the Compact;

(3) the requirements of the United States for (a) flood control, (b) navigation, (c) fish and wild life, and (d) the other claims which it makes;

(4) the quantities of water physically available for beneficial consumptive use in the Lower Basin, assuming full use by the Upper Basin of its Compact apportionment, full regulation of the supply available to the Lower Basin, and full performance of the Mexican Water Treaty;

(5) the uses, present and potential, on the main stream and on each tributary, determined as of the place of use, as California contends is the proper method, and the effect of those uses in terms of man-made depletion of the virgin flow of the main stream, as Arizona contends is the proper method;

(6) the quantities of water "salvaged" by the activities of man, on the main stream and on the tributaries;

(7) reservoir losses, present and potential, gross and net;

(8) appropriative rights, priorities, and uses thereunder, on the main stream and tributaries;

(9) the extent and place of use of "rights which may now exist" and which, under Article III(a) of the Compact, are to be charged as uses of water apportioned by Article III(a), and of "rights which may now exist" in

California, within the meaning of Section 4(a) of the Project Act; and

(10) the extent and place of use of "present perfected rights" protected by Article VIII of the Compact and directed by the Boulder Canyon Project Act to be satisfied in the operation and management of the Project.

IV. The Issues of Interpretation of the Colorado River Compact, the Boulder Canyon Project Act, the Statutory Compact, and the Mexican Water Treaty

Questions relating primarily to Article III(a) of the Colorado River Compact include the following: Whether the Colorado River Compact deals only with the main stream or treats with Colorado River System waters wherever they may be found; whether the uses apportioned by Article III(a) to the Lower Basin are to be taken only from "water present in the main stream and flowing at Lee Ferry," as Arizona contends, or from the tributaries as well, as California and Nevada contend; whether the 7,500,000 acre-feet referred to in Article III(a) is related to the 75,000,000 acre-feet referred to in Article III(d), as Arizona contends, or whether the latter figure includes excess or surplus waters unapportioned by the Compact, as California contends; by what process Arizona claims to have acquired an apportionment of 2,800,000 acre-feet of III(a) water, to be taken from the main stream; whether the apportionment of 7,500,000 acre-feet "per annum" is a statement of a maximum, or of an average, and, if the latter, over what period of years; the definition and measurement of "beneficial consumptive use"; the accounting for water added to and withdrawn from storage on the main stream and tributaries; whether the use of water salvaged by man on the main stream and tributaries is to be charged under the Compact; the definition of "rights which may now exist," which are to be included in charges to water apportioned by Article III(a) and their magnitude on the main stream and tributaries; the

date to which this last expression refers; whether, in the absence of a compact among the Lower Basin States, the division of water among them is to be affected by appropriative rights, *i. e.*, "rights which may now exist"; whether Indian rights, and other federal claims to consumptive use, are included within that expression and are to be charged under the Compact; whether reservoir losses are chargeable as beneficial consumptive uses, and if so, their classification under the Compact and their relation to other uses.

Questions relating primarily to Article III(b) of the Colorado River Compact include the following: The questions relating to the definition of "beneficial consumptive use" and "per annum" previously stated in connection with Article III(a); whether the "increase of use" permitted to the Lower Basin by Article III(b) is an apportionment in perpetuity as in Article III(a), as Arizona contends, or a license to acquire rights by appropriation and contracts under the Project Act in excess or surplus water unapportioned by the Compact, as California contends; whether this right to increased use is identified solely with the water found flowing in the Gila River, as Arizona contends, or is identified with the first 1,000,000 acre-feet of increased use (above 7,500,000) per annum throughout the Lower Basin, as California and Nevada contend; whether this right is available to all five States of the Lower Basin, or to Arizona alone, as she contends (notwithstanding the decision of this court in *Arizona* v. *California et al.*, 292 U.S. 341 (1934)); the status of uses in New Mexico on the Gila; the status of uses on other tributaries; and to what degree reservoir losses are chargeable to this increase of use. Reference to the relation of the Mexican Treaty burden to the uses under Article III(b) appears below in connection with Article III(c).

Questions relating primarily to Article III(c) of the Colorado River Compact include the following: Whether

the waters to be supplied Mexico are "apportioned" thereby (this bears upon the determination of the meaning of the expression "excess or surplus waters unapportioned by" the Colorado River Compact, appearing in the Boulder Canyon Project Act, *infra*); whether, if the quantities in excess of those specified in Articles III(a) and III(b) are insufficient to supply the deliveries to Mexico, the burden, with respect to the Lower Basin, falls first upon the uses referred to in Article III(b), as California contends, or upon those referred to in Article III(a), as Arizona contends; and the relation of the "escape clause" in Article 10 of the Treaty, which permits reduction in deliveries to Mexico in case of extraordinary drought in proportion to the reduction in consumptive uses in the United States. The relation of Article III(c) to Articles III(d) and III(a), with respect to the obligations of the Upper Division States, is referred to below in connection with Article III(d).

Questions relating primarily to Article III(d) of the Colorado River Compact include the following: As a corollary to one of the questions stated with reference to Article III(a), whether the 75,000,000 acre-feet referred to in Article III(d) is related to the 7,500,000 acre-feet apportioned by Article III(a) to the Lower Basin, or whether the 75,000,000 acre-feet include excess or surplus waters available for delivery to Mexico or use in the Lower Basin; the resulting effect on the obligation of the States of the Upper Division stated in Article III(c) to furnish additional water to meet the deficiency if surplus above the quantities specified in Articles III(a) and III(b) is insufficient to supply Mexico; and whether the Lower Basin is entitled to demand release of this 75,000,000 acre-feet notwithstanding the consequent inability of the Upper Basin to make beneficial consumptive use of 7,500,000 acre-feet per annum.

Questions relating primarily to Article III(e) of the Colorado River Compact include the following: Whether,

if excess or surplus waters are appropriated (or contracted for) in the Lower Basin, their release from storage in the Upper Basin may be required; whether, if Indian uses are not subject to the Colorado River Compact, the United States may require release of water from reservoirs in the Upper Basin to satisfy them, in addition to the water which the States of the Upper Division are required to release in performance of Articles III(c) and III(d) of the Compact; so also with respect to the other federal claims asserted by the United States, "as against the parties to this cause," for use of water in the Lower Basin.

Questions relating primarily to Articles III(f) and III(g) of the Colorado River Compact include the following: Whether the provisions in these articles with reference to a compact to be made after October 1, 1963, are permissive or mandatory; whether, in the light of the Statutory Compact, these provisions preclude the acquisition of rights in excess or surplus waters by appropriation and by contract with the United States in the interim, subject only to further apportionment as between Basins by such a future compact; and whether, in the event of competing interstate claims to such excess or surplus waters, in the absence of a compact apportioning them, priority of appropriation, including contracts with the United States, controls.

Questions relating to Article VII of the Colorado River Compact include the following: Whether uses by Indians are subject to the Colorado River Compact; whether Indian uses are chargeable under the Compact to the Basin and the State in which they are situate; if not, whether they are prior and superior to the apportionments made by the Compact, or are in competition with appropriations of others which are subject to the Compact; the location, magnitude, and asserted priority of Indian claims; their effect upon the quantities available to non-Indian users under Articles III(a), III(b), etc.; their effect on the distribution of the Mexican Treaty burden;

and their effect on the obligations of the States of the Upper Division under Articles III(c) and III(d).

Questions relating primarily to Article VIII of the Colorado River Compact include the following: The date to which the expression "present perfected rights" relates, *i.e.*, 1922, 1929, or some other date; the definition of said term; whether such definition is to be determined under the law of the State under which the right arose; whether the assurance against impairment extends to quality as well as quantity; the extent of these rights in each State; their relation to the expression "rights which may now exist," as used in Article III(a) of the Compact and Section 4(a) of the Project Act; and the impact of reservoir losses when "present perfected rights" attach to, and are satisfied from stored waters, pursuant to the direction in Article VIII.

Questions relating primarily to the Boulder Canyon Project Act and the resulting Statutory Compact between the United States and California include the following: Whether the alternative consent given in the Project Act to a Seven-State or Six-State Compact became final on June 25, 1929, in establishing the latter; whether Arizona could, or did, effectively ratify a Seven-State Compact thereafter; if so, whether the Statutory Compact authorized by the Project Act as a corollary to a Six-State Compact remains in effect; if it does, whether Arizona can claim the benefits of both; whether the Statutory Compact authorized contracts to be made with the California defendants for the permanent service (in addition to 4,400,000 acre-feet of III(a) waters) of one-half of the excess or surplus waters unapportioned by the Compact for use in California; whether it included therein the waters referred to in Article III(b), or precluded California from use of such waters; whether the "excess or surplus," of which California may use one-half, is to be reckoned before or after deduction of the quantity required to be delivered to Mexico; the effect on California's

right to "excess or surplus" of a future compact apportioning such waters; whether the limitation "for use in California" is net of reservoir losses, or is subject to further reduction in consequence of such losses; whether the definition of consumptive uses applicable to California is applicable to Arizona, and vice versa; whether California is free to make use of salvaged waters without charge under the Compact or the Limitation Act; the effect of California's appropriations; the meaning and effect of the reference to "rights which may now exist" in Section 4(a) of the Project Act; the extent of California's "present perfected rights" as referred to in Section 6 of the Project Act; whether by the Project Act, or otherwise, the shares of Nevada or Arizona in the waters of the Colorado River System have been determined; and the construction and effect of the water delivery contracts held by those States.

Interrogatories Addressed to the State of Utah by the California Defendants

To: Hon. E. R. Callister
Attorney General of Utah
Salt Lake City, Utah

The defendants, State of California, Palo Verde Irrigation District, Imperial Irrigation District, Coachella Valley County Water District, The Metropolitan Water

District of Southern California, City of Los Angeles, City of San Diego, and County of San Diego, request that the State of Utah, by an officer or agent thereof, answer, in accordance with Rule 9(2) of the Rules of the Supreme Court of the United States and Rule 33 of the Federal Rules of Civil Procedure, the following interrogatories, the requirement of oath being waived:

A. Utah Projects

A-1. Is the claim to 175,000 acre-feet per annum of beneficial consumptive use claimed in paragraph II of the Utah Complaint and Answer based upon appropriations heretofore made? If so, by what appropriators, on what dates and in what quantities?

A-2. Of the 175,000 acre-feet per annum of beneficial consumptive use claimed in paragraph II, please state how much has been in fact used in each of the past ten years. If the period given is other than a calendar year, please specify when the year begins.

A-3. Please list and locate on a map the existing projects and the planned future projects, whether or not now under construction, for which any part of the beneficial consumptive use claimed in paragraph II is claimed.

A-4. Please state when Utah asserts that the full quantities of water claimed for beneficial consumptive use in Utah will be put to use.

A-5. Please state what is meant by "full water supply" as that phrase is used in paragraph II, and state what works must be completed or what conditions must be met to provide such a supply.

B. Beneficial Consumptive Use

B-1. Reference is made to paragraph II of the Utah Complaint and Answer in Intervention. Are the claims for 175,000 acre-feet of beneficial consumptive use on the

Virgin River, Kanab Creek and Johnson Creek areas measured in accordance with the method referred to in paragraph IV(2) of the Utah Complaint and Answer?

B-2. If the answer to interrogatory B-1 is "no," please specify and describe the method used in measuring the claims there referred to.

B-3. Reference is made to paragraph IV(2) of the Utah Complaint and Answer in Intervention: Please describe and locate on a map the "specified points along the main stream," at which the claimed beneficial consumptive use in each State in the Lower Basin is to be measured.

B-4. Please state by what criteria the points described in interrogatory B-3, if any, were selected.

B-5. Please describe the "inflow-outflow method" referred to in paragraph IV(2), and how it is applied to determine beneficial consumptive use of each State in the Lower Basin.

C. Indian and *Other* Federal Uses

Reference is made to paragraph II of the Utah Complaint and Answer in Intervention:

C-1. Do the claims for 175,000 acre-feet of beneficial consumptive use per annum include water for Indian lands?

C-2. Please state how much water is presently being consumptively used each year on Indian lands within Lower Basin areas of Utah.

C-3. Do the claims for 175,000 acre-feet per annum include the use of water for other federal purposes, including the National Park Service, Forest Service, Bureau of Land Management, fish and wildlife refuges?

D. Compact Questions

D-1. How much of the 175,000 acre-feet per annum of beneficial consumptive use claimed in paragraph II is

claimed from Article III(a) uses? How much from Article III(b) uses?

D-2. What criteria determines whether specific uses claimed by Utah are chargeable to Article III(a) or to Article III(b) uses under the Colorado River Compact?

D-3. What "rights which may now exist," as that phrase is used in Article III(a) of the Colorado River Compact, does Utah claim in the Lower Basin as of 1922? As of 1929? What "present perfected rights," as that phrase is used in Article VIII of the Colorado River Compact does Utah claim in the Lower Basin as of 1922? As of 1929?

It is requested that answers to the foregoing interrogatories be addressed to Edmund G. Brown, Attorney General of California, Attention: Gilbert F. Nelson, Assistant Attorney General, 909 South Broadway, Los Angeles 15, California.

Dated: February 28, 1956.

Respectfully,

APPEARANCE AND STATEMENT IN BEHALF OF NEW MEXICO OF ITS CLAIM OF INTEREST IN AND TO LOWER BASIN WATERS

RICHARD H. ROBINSON
Attorney General of New Mexico

FRED E. WILSON
Special Assistant Attorney General

IN THE

Supreme Court of the United States

OCTOBER TERM, 1955

No. 10 ORIGINAL

STATE OF ARIZONA, *Complainant,*

vs.

STATE OF CALIFORNIA, et al., *Defendants.*

APPEARANCE AND STATEMENT IN BEHALF OF NEW MEXICO OF ITS CLAIM OF INTEREST IN AND TO LOWER BASIN WATERS

I.

Pursuant to the Order of the Supreme Court dated December 12, 1955, New Mexico enters its appearance herein as a party, solely in its capacity as one of the Lower Basin States as defined in the Colorado River Compact of 1922.

II.

Its appearance is made by authority of its Attorney General, concurred in by its Governor and the New Mexico Interstate Stream Commission. The Interstate Stream Commission is an agency of the state, created by the legislature with power to protect, conserve, and develop the waters and stream systems of the state, including the power to institute in the name of the State of New Mexico any and all legal proceedings as in its judgment are necessary to carry out its duties and powers.

III.

New Mexico as a sovereign state is a party to the Colorado River Compact dated November 24, 1922, and one of the states of the Lower Basin, as defined in Article II (g) and Articles III (a) and III (b) of said compact, and is entitled to its share of the beneficial consumptive use of the waters allocated to the Lower Basin by said compact.

IV.

The various statements as to geographical and historical background of the Colorado River system, and the various documents referred to as constituting the "Law of the River" made by the parties and intervenors herein are sufficiently accurate and complete for the use of the Court in determining the issues herein. Therefore, no formal admissions or denials by New Mexico in reference thereto are deemed necessary.

The documents referred to as constituting the "Law of the River" are as follows:

1. The Colorado River Compact of 1922 (Exhibit A, Arizona Complaint).
2. The Boulder Canyon Project Act of May 28, 1928 (45 Stat. 1057; Appendix 2, Calif. Answer).
3. California Limitation Act.
4. Various contracts with the United States for delivery of water from Lake Meade.
5. The Treaty with the Republic of Mexico.

V.

New Mexico does not have sufficient information or knowledge to form a belief as to the legal justification for the claims made by Arizona, California, and Nevada to the use

of specific quantities of water allocated by the Colorado River Compact of 1922 to the Lower Basin States, and therefore, denies that said states are entitled to the quantities claimed in their pleadings. Alleges that all claims made by each of the three states of the Lower Division (Arizona, California, and Nevada), are subject to the interests of New Mexico and Utah to be determined by this Court in this proceeding, based upon the terms of the Colorado River Compact. Alleges that since the signing of the Colorado River Compact at Santa Fe, New Mexico, November 24, 1922, by all seven states of the Colorado River Basin, nothing has transpired or occurred to lessen or destroy the legal right of New Mexico to have determined and apportioned to it, as a sovereign state, by this Court a fair, equitable and reasonable share of the apportionment made by the compact to the states of the Lower Basin, as well as its right to future apportionments to be made under the provisions of the compact. New Mexico recognizes that by Article VII of the Compact nothing in the Compact shall be construed as affecting the obligations of the United States of America to Indian Tribes. Alleges that there is no controversy between New Mexico and the United States either as guardian of the Indians or otherwise, relative to their respective rights to the use of the water allocated by the compact to the Lower Basin states.

VI.

New Mexico further states:

1. It admits, as alleged by all the parties hereto including intervenors, that the Colorado River Compact did not apportion to the individual states of the Lower Basin the right to the beneficial consumptive use of any specific quantity of water, but contemplated that such apportionment to each state of the Lower Basin should be made by compact or

negotiation; that because of the long standing controversy between Arizona and California, which has existed since 1922, no such division or apportionment has been made.

2. Due to its geographical position among the states of the Lower Basin, New Mexico cannot under present conceptions of economics and feasibility obtain any water from the main stem of the Colorado or through contracts with the United States from Lake Meade; its only source of supply is from the Gila and Little Colorado River basins, both of which rivers, or their tributaries, rise in New Mexico and flow into and across portions of Arizona and empty into the Colorado River below Lee Ferry.

3. That any apportionment made by decree of this Court which will be of any practical benefit to New Mexico must come from the natural stream flow of the Gila and Little Colorado Rivers and their tributaries within the boundaries of the State of New Mexico; Arizona is in a position geographically to make use of main stem water of the Colorado River and water impounded in Lake Meade, and is the only state other than New Mexico which is in any position geographically to make use of Gila River waters. (By paragraphs 13, 17, and 29 of the Arizona complaint claim is made only to the right to the use of Gila River waters within the boundaries of the State of Arizona.)

VII.

At the present time the irrigated acreage in New Mexico making beneficial consumptive use of Colorado River water is approximately 20,900 acres, including Indian and non-Indian uses, 9,500 acres of which are within the basin of the Little Colorado River and 11,400 acres within the Gila River basin within the State of New Mexico. Plans are being made for the irrigation of approximately 7,000 acres of additional land in the two basins (Indian and non-Indian),

and there are at least 50,000 acres of additional land that could be irrigated if a water supply were available. In addition to the foregoing, there is need for at least 50,000 acre-feet of water for municipal and industrial purposes in the region. The area involved includes McKinley, Valencia, Catron, Hidalgo, and Grant Counties which have extensive mining operations including oil, gas, uranium, copper, and other minerals; that New Mexico has been prevented from making beneficial use of greater quantities of water because of the long-standing controversy between Arizona and California, the uncertainty of the extent of its interest in the allocations made to the Lower Basin (Articles III (a) and III (b) of the Colorado River Compact), and from the lack of storage facilities. The natural flow of the Gila River and its tributaries and the Little Colorado and its tributaries, which at the New Mexico-Arizona boundary is on the average of approximately 275,600 acre-feet, varies greatly and does not conform to the seasonal demand of actual requirements. In most years the total annual flow is adequate to meet the present needs of the area in New Mexico if necessary storage facilities are constructed. However, the greater part of the annual flow occurs in the winter when the irrigation demand is less. When the demand is greatest in the summer the stream flow is deficient and many areas experience seasonal water shortages. Due to the erratic flow of the river and the lack of regulatory storage, considerable damage is done by floods to the lands presently in cultivation.

VIII.

New Mexico claims that her legal interest in and to the waters apportioned by the Colorado River Compact to the Lower Basin states should be determined by the Court to be as follows: In order to enable New Mexico to make beneficial consumptive use within the state of a portion of

the waters apportioned in perpetuity to the Lower Basin states by the Colorado River Compact (Articles III (a) and III (b), signed at Santa Fe, New Mexico, November 24, 1922, New Mexico shall have free and unrestricted use of all waters originating within the drainage basins of the Gila River and its tributaries, the Little Colorado River and its tributaries, within the boundaries of the State of New Mexico, with the right to divert, store and beneficially consume the same. All existing rights within the state to the use of all such waters for any beneficial purpose shall be protected and remain unimpaired (See New Mexico Constitution, Article XVI). In addition to the foregoing, New Mexico shall retain its right to participate in any further apportionment in conformity with the Colorado River Compact.

IX.

The above apportionment should be made to New Mexico as a sovereign state, regardless of whether the Court determines that Arizona is entitled to the claims made by her to the use of Gila River waters within the boundaries of Arizona, or whether California prevails in establishing her claim, and without regard to what the determination is as to the other issues relating to the method of measuring beneficial consumptive use, evaporation losses, and whether III (b) water refers exclusively to the Gila River or not. New Mexico alleges that the apportionments made in the final decree to each of the states of the Lower Basin under the doctrine of *Hinderlider vs. La Plata (304 U. S. 92)* will become public waters of the individual state for the benefit of the individual water users within the boundaries of each state; that under the doctrine of said case, and of *Nebraska vs. Wyoming (325 U. S. 589,627)*, the relative rights of individual water users within each state as to priorities

and uses should be determined in accordance with the laws of each respective state and satisfied from the total quantity of water apportioned by the final decree to each state.

X.

With respect to certain legal questions involved primarily in the issues made by the pleadings between Arizona and California, the State of New Mexico alleges:

1. That the above questions are

(a) Is the State of Arizona a party to the Colorado River Compact?

(b) How is beneficial consumptive use under the compact to be measured?

(c) How shall evaporation losses from the Lower Basin reservoirs be charged?

(d) Is the water referred to in Article III (b) of the compact apportioned or unapportioned water?

2. That however the issues among the other parties hereto are determined by the final decree herein, New Mexico has the right to the beneficial consumptive use of a sufficient quantity of water per annum to supply any rights which existed in 1922 or which may now exist within the state, and to satisfy the future uses set forth in paragraph VII hereof.

3. While the right of New Mexico to have apportioned to it as a sovereign state, by the decree of this Court, its share of the use of the waters allocated by Article III (a) and Article III (b) of the compact is unaffected by a determination of the foregoing issues primarily between Arizona and California, New Mexico alleges that it believes the true meaning and intent of the compact in reference to said questions is as follows:

(1) The State of Arizona is a party to the Colorado River Compact.

(2) Beneficial consumptive use, as used in Articles III (a) and III (b) of the compact, should be measured in terms of stream depletion; that the compact contains no definition of beneficial consumptive use, nor does it define how such beneficial consumptive use shall be measured.

(3) As heretofore alleged, New Mexico is not in a position geographically to use any water from reservoirs presently in existence in the Lower Basin; that a reasonable interpretation of the compact would be that losses of water in and from reservoirs located in the Lower Basin of the Colorado River should be charged against the apportionment to those states which use water from said reservoirs, in the same proportion as the consumptive use of water in the state against which the charge is made currently bears to the total consumptive use of water in the Lower Basin made by states using water from reservoirs in the lower basin of the Colorado River.

(4) The water referred to in Article III (b) of the Colorado River Compact is apportioned water, and is included within the 8,500,000 acre-feet of beneficial consumptive use per annum for the benefit of and apportioned to all of the states of the Lower Basin.

WHEREFORE, the State of New Mexico prays:

1. That the respective rights of the States of California, Arizona, Nevada, Utah, and New Mexico, and the United States of America, in and to the beneficial consumptive use of the waters of the Colorado River in the Lower Basin included and referred to by Articles III (a), III (b), and III (f) of the compact, be adjudicated and determined in terms of acre-feet, or based upon a percentage of the total amount available.

2. That the right of the state of New Mexico in and to the annual beneficial consumptive use of waters of the Colo-

rado River below Lee Ferry, be determined to be that portion of the allocation to the Lower Basin States allocated by Articles III (a) and III (b) of the Colorado River Compact equal to the amount of such waters originating within the boundaries of the State of New Mexico, in terms of acre-feet, or in terms of the percentage that such water so originating within the boundaries of the state bears to the total amount allocated to the Lower Basin states annually and available for beneficial consumptive use.

3. That the State of New Mexico be decreed to have the right to its share in and to the beneficial consumptive use of waters which may be apportioned under Article III (f) of the Colorado River Compact, in accordance with its terms.

4. That the State of New Mexico be granted such other and further relief as to the Court may seem proper; that the State of New Mexico be granted leave to amend and supplement this pleading as its interest may appear.

Answer of California Defendants to Appearance and Statement in Behalf of New Mexico of Its Claim of Interest in and to Lower Basin Waters

---

Defendants State of California, Palo Verde Irrigation District, Imperial Irrigation District, Coachella

Valley County Water District, The Metropolitan Water District of Southern California, City of Los Angeles, City of San Diego, and County of San Diego, by their duly authorized attorneys, jointly answer the Appearance and Statement in Behalf of New Mexico of Its Claim of Interest in and to Lower Basin Waters.

Incorporation of Appendixes by Reference

1.

Defendants refer to their "Appendixes to the Answer" to Arizona's Bill of Complaint, and incorporate those Appendixes by reference as a part of this Answer to the Appearance and Statement in Behalf of New Mexico of Its Claim of Interest in and to Lower Basin Waters, as though the same were here set out at length.

FIRST AFFIRMATIVE DEFENSE

Defendants Have the Right to the Beneficial Consumptive Use in California of 5,362,000 Acre-Feet Per Annum of Waters of the Colorado River System Under the Colorado River Compact, the Boulder Canyon Project Act, the Statutory Compact Between the United States and California, and the Contracts of the Secretary of the Interior Executed Pursuant Thereto

2.

The defendants incorporate by reference, as though here fully stated at length, as a part of this Answer to the Appearance and Statement in Behalf of New Mexico of Its Claim of Interest in and to Lower Basin Waters, all of the allegations of the First Affirmative Defense of their Answer to the State of Arizona, and of the First Affirmative Defense of their Answer to the Petition of Intervention of the United States.

SECOND AFFIRMATIVE DEFENSE

Defendants Have Appropriative Rights, Recognized by the Boulder Canyon Project Act and Protected by the Statutory Compact Between the United States and California, to the Beneficial Consumptive Use in California of Not Less Than 5,362,000 Acre-Feet of Colorado River System Water Per Annum, Senior to the Claims Made by New Mexico

3.

Incorporation by Reference

The defendants incorporate by reference, as though here fully stated at length, as a part of this Answer to the Appearance and Statement in Behalf of New Mexico of Its Claim of Interest in and to Lower Basin Waters, all of the allegations of the Second Affirmative Defense contained in the Answer of the defendants to the Petition of Intervention of the United States.

4.

All of the appropriations of defendants above alleged are senior in time and right to all claims of New Mexico for the beneficial consumptive use of waters of the Colorado River System, except for certain beneficial consumptive uses which may have been initiated in New Mexico prior to one or more of the dates of the initiation of defendants' appropriative rights. The exact quantities of such uses are unknown to the defendants, but upon information and belief, defendants allege that the quantities are not sufficient to interfere with the fulfillment of the appropriative rights of the defendants as such rights are recognized by the Boulder Canyon Project Act and Statutory Compact between the United States and California.

TRAVERSE

5.

The allegations of paragraphs I and II of said Appearance and Statement do not appear to require answer by the California defendants.

6.

Answering paragraph III, deny all of the allegations contained in said paragraph except as expressly admitted herein. Allege that the State of New Mexico is a party to the six-state Colorado River Compact which became operative as a result of reciprocal legislation among the States of California, Colorado, Nevada, New Mexico, Utah and Wyoming and congressional consent thereto in the Boulder Canyon Project Act, all as proclaimed effective by the President of the United States June 25, 1929, 46 Stat. 3000. Allege that the quantities of water of the Colorado River System which New Mexico may be entitled to use have not been determined in any manner.

7.

Answering paragraph IV, admit that the documents therein listed constitute a part of the "Law of the River," but deny that the list is complete.

8.

Answering paragraph V, deny all of the allegations contained in said paragraph, insofar as answer may be required.

9.

Answering paragraph VI, deny all of the allegations contained in said paragraph not expressly admitted herein. Admit that the Colorado River Compact did

not apportion rights to the use of water to individual States. Admit that its geographical position prevents New Mexico from using water from the main stream of the Colorado River or through contracts for the delivery of water stored in Lake Mead.

10.

Answering paragraph VII, deny, based on lack of information or belief, all of the allegations contained in said paragraph, and refer to the Interrogatories addressed to the State of New Mexico and served herewith, which Interrogatories demand disclosure of particulars concerning certain of said allegations.

11.

Answering paragraph VIII, deny that Article III(b) of the Colorado River Compact apportioned in perpetuity the use of water by the Lower Basin States. Deny, based on lack of information or belief, all of the other allegations contained in said paragraph, and refer to the Interrogatories addressed to the State of New Mexico and served herewith, which Interrogatories demand disclosure of particulars concerning certain of said allegations.

12.

Answering paragraph IX, deny all of the allegations contained in said paragraph not expressly admitted herein. Admit that the relative rights of individual water users within each State should be determined in accordance with the laws of each respective State and satisfied from the total quantity of water the use of which may be permitted to each State by the final decree in this suit.

13.

Answering paragraph X, deny all of the allegations contained in said paragraph not expressly admitted herein. Deny that the issues are adequately or accurately stated in said paragraph X, and allege that the issues in controversy are summarized in Exhibit "A" hereto annexed and incorporated by reference as though fully stated herein. Admit that the Colorado River Compact contains no definition of beneficial consumptive use, nor of how beneficial consumptive use shall be measured.

14.

Defendants deny all allegations contained in the Appearance and Statement in Behalf of New Mexico of Its Claim of Interest in and to Lower Basin Waters not specifically admitted herein, or which are at variance with the defendants' other pleadings in this suit.

PRAYER

WHEREFORE, defendants pray:

1. That the rights and interests of defendants as against all parties to this cause be adjudged and decreed as alleged in their Answer to the Bill of Complaint of Arizona, their Answers to the Petitions of Intervention of the United States and Nevada, their Answer to the Complaint and Answer of Utah, and this Answer to New Mexico.

2. That the Court grant to the defendants such other and further relief as to the Court may seem meet and proper.

The defendants respectfully pray leave to amend this Answer if amendment should hereafter become appropriate or necessary in the course of the proceedings in this cause.

Respectfully submitted,

For the State of California

EXHIBIT A

Summary of the Controversy

The pleadings filed by Arizona, Nevada, the United States and California, to date, disclose complex questions of fact and law, many of which are interrelated. The summary of principal questions presented below is divided into four parts: (I) the quantities of water in controversy; (II) the ultimate issues, from the standpoint of the respective prayers; (III) a tabulation of factual issues; and (IV) the issues of interpretation of the basic documents involved. Under this division, certain questions reappear and to this extent reflect the interlocking nature of the problem.

I. The Quantities of Water in Controversy

The United States seeks to quiet title to rights to the use of water, consumptive and otherwise, "as against the parties to this cause," for federal purposes, in unstated amounts.

Arizona seeks to quiet title to the beneficial consumptive use of 3,800,000 acre-feet per annum of the waters of the Colorado River System (measured by "man-made depletion of the virgin flow of the main stream") and to enjoin California's right to permanently use any water in excess of approximately 3,800,000 acre-feet per annum (measured by "diversions less returns to the river"), that being the effect of (1) reducing 4,400,000 acre-feet of III(a) water by reservoir losses, and (2) denying California any permanent right to use excess or surplus waters.

California asserts a right to the beneficial consumptive use in California of 5,362,000 acre-feet per annum of the waters of the Colorado River System (measured by "diversions less returns to the river") under contracts with the United States, comprising 4,400,000 acre-feet of the waters apportioned by Article III(a) of the Colo-

rado River Compact and 962,000 acre-feet per annum of the excess or surplus waters unapportioned by the Compact, including in such excess or surplus the "increase of use" permitted to the Lower Basin by Article III(b) of the Compact.

Nevada seeks to quiet title to 539,100 acre-feet per annum (measured in part by both methods) of the beneficial consumptive uses apportioned by Article III(a) of the Colorado River Compact, and to not less than a total of 900,000 acre-feet from all classes of water.

As the States differ in their definition of "beneficial consumptive use," their claims require restatement in terms of a common denominator in order to evaluate their effects. Thus:

The quantity to which Arizona seeks to quiet title, 3,800,000 acre-feet per annum, measured by the method she urges, "depletion of the virgin flow of the main stream occasioned by the activities of man," is equivalent to more than 5,000,000 acre-feet measured by consumption at the site of use, or "diversions less returns to the river," the standard established by the Boulder Canyon Project Act and asserted by California. The difference is due primarily to the fact that under Arizona's interpretation, the Compact deals with the virgin flow in the main stream only and that the use of water "salvaged by man" is not charged as a beneficial consumptive use, whereas under California's interpretation the Compact deals with the waters of the entire river system and such salvage is so charged.

Conversely, the aggregate of the California contracts, 5,362,000 acre-feet per annum, measured by "diversions less returns to the river," is equivalent to only about 4,500,000 acre-feet measured by "man-made depletion" (without charge for salvaged water). If Arizona's prayer should be granted, California's rights would be reduced to about 3,800,000 acre-feet per annum, measured by "diver-

sions less returns to the river," or to about 3,000,000 acre-feet measured in terms of "depletion of the virgin flow of the main stream."

The impact of Nevada's claims on those of the other states is not readily evaluated.

II. Ultimate Issues

The ultimate issues, in the sense of the results sought by each party, may be grouped as follows:

The United States.

Does the United States have rights, "as against the parties to this cause, to the use of water in the Colorado River and its tributaries" in the following categories?

(1) for consumptive use of all projects in the Lower Basin, which it asserts independently of any rights claimed by the States in which such projects are located;

(2) to fulfill its obligations arising from international treaties and conventions; but this involves, with respect to the burden of the Mexican Water Treaty, the obligations as between the States of the Upper Division and the States of the Lower Division under Articles III(c) and III(d) of the Colorado River Compact, and involves also the effect of the so-called "escape clause" of Article 10 of that Treaty, which allows reduction in the guaranteed deliveries to Mexico, in the event of extraordinary drought, in the same proportion as consumptive uses in the United States are reduced, "consumptive uses" being defined in Article 1 of the Treaty;

(3) to fulfill all its contracts for the delivery of water and electric power, *i.e.*, with or in Arizona, California, and Nevada; but it alleges that the water available is not sufficient to satisfy all these obligations;

(4) to fulfill the Government's obligations to Indians and Indian Tribes; but this involves not only the questions of the magnitude and priorities of these claims but the questions of whether or not they are chargeable under the Colorado River Compact to the Basin and State in which such uses are made, what the obligation of the Upper Division States may be to release water for use by Indians in the Lower Basin, and what rights the United States may have to withhold water in reservoirs in the Upper Basin for use by Indians in both Basins;

(5) to protect its interests in fish and wildlife, flood control and navigation; but such rights as it may have for these purposes may require the impounding and release of water from reservoirs in both Basins, and not merely reservoirs bordering or within Arizona and California, and again involves the question of accounting under the Compact; and

(6) for use of the National Park Service, Bureau of Land Management, and Forest Service; but if the United States has claims "as against the parties to this cause" for these functions, such claims apply to all the waters of the Colorado River System in both Basins.

The adjudication of these claims of the United States requires consideration and resolution of: questions of fact, referred to later; the power of the United States to impound and dispose of water independently of rights derived from the States; the extent of its obligations under treaties and contracts; the impact and effect of its treaties upon rights of domestic water users; how its claims to the use of water shall be measured; the location, magnitude and priorities of Indian claims, and claims for other alleged federal purposes; the extent to which its rights and obligations are controlled by the Colorado River Compact; and the extent to which its claims may be exercised *in futuro* in derogation of intervening rights and uses.

Arizona.

Is Arizona entitled to a decree:

(1) Quieting title to 2,800,000 acre-feet per annum of the beneficial consumptive uses apportioned to the Lower Basin by Article III(a) of the Colorado River Compact, substantially all to be taken from the main stream, and measured in terms of man-made depletion of the virgin flow of the main stream?

(2) Quieting title to all of the 1,000,000 acre-feet per annum by which the Lower Basin is permitted to "increase its use" by Article III(b) of the Colorado River Compact (notwithstanding the decision of this Court in *Arizona* v. *California, et al.*, 292 U.S. 341 (1934)), to the exclusion of the other States of the Lower Basin, all to be taken from the waters flowing in the Gila River, and to be measured in terms of man-made depletion of the virgin flow of the main stream?

(3) Reducing California's right to the uses apportioned by Article III(a) of the Colorado River Compact to approximately 3,800,000 acre-feet per annum, in consequence of reservoir losses?

(4) Enjoining California's right to receive and permanently use under its Government contracts 962,000 acre-feet per annum, or any part thereof, in excess of 4,400,000 acre-feet per annum?

The determination of Arizona's claims involves: the questions of fact, later referred to; the standing of Arizona to seek a declaratory decree quieting title to a "block" of water for projects not yet constructed or authorized (about 1,600,000 acre-feet per annum of the 2,800,000 claimed from the main stream); the source of title to Arizona's claims to 2,800,000 acre-feet of III(a) water and 1,000,000 acre-feet of III(b) water; the status of the uses on the Gila; the measurement of uses thereof and of the main stream; whether Arizona's status is

that of a party to the Colorado River Compact or that of a third party beneficiary of the Statutory Compact between the United States and California, and if so, whether Arizona is bound by the interpretations placed thereon by the principal parties thereto in its formulation and administration; and the validity and effect of Arizona's water delivery contract with the United States.

Most of the questions posed by Arizona's claims revolve around the issue of whether the Gila River shall be treated as a part of the Colorado River System for all purposes, or shall receive special treatment in respect of (1) the identification of uses thereon with the waters referred to in Article III(b); (2) the corollary exemption of "rights which may now exist" on the Gila from any charge under Article III(a); and (3) the devaluation of the charge for beneficial consumptive uses from the quantity which is in fact consumed on the Gila (alleged by California to be about 2,000,000 acre-feet per annum) to the lesser quantity represented by the resulting depletion in the virgin flow of the main stream (alleged by Arizona to be about 1,000,000 acre-feet per annum).

California.

Are the contracts between the United States and the defendant public agencies of California for the storage and delivery of water valid and enforceable? Inasmuch as the contracts are, in terms, for permanent service but subject to the Colorado River Compact, the Boulder Canyon Project Act and the California Limitation Act, the issue is whether these enactments, considered together as a Statutory Compact established by reciprocal legislation, authorize and permit the Secretary of the Interior to presently contract for the storage and delivery for permanent beneficial consumptive use in California, of 4,400,000 acre-feet per annum of the waters apportioned by Article III(a) of the Colorado River Com-

pact plus one-half of the excess or surplus waters unapportioned by the Compact, including in such excess or surplus the "increase of use" permitted to the Lower Basin by Article III(b) of the Compact. The aggregate of these contracted quantities, subject to physical availability of the amounts of excess or surplus waters, which vary from year to year, is 5,362,000 acre-feet per annum.

The determination of California's claims involves: the questions of fact, later referred to; the extent to which rights have vested in both the United States and California under the Statutory Compact; whether Arizona is estopped by her previous conduct from asserting her present position; whether the limitation is net of reservoir losses; how California's uses shall be measured; whether California is chargeable with the use of salvaged water; the effect of California's appropriations, in their relation to the expressions "rights which may now exist" and "present perfected rights" in the Compact and Project Act; the definition of the Project Act term, "excess or surplus waters unapportioned by" the Colorado River Compact; the availability of such waters for permanent service; the intent of Congress with respect to the waters referred to in Article III(b); and the relation between California's contracts and the later agreements which the Secretary of the Interior has entered into with others.

Nevada.

Is Nevada entitled to a decree:

(1) Quieting title to 539,100 acre-feet per annum of the beneficial consumptive uses apportioned to the Lower Basin by Article III(a) of the Colorado River Compact?

(2) Reserving for a future agreement the disposition of the use of the 1,000,000 acre-feet referred to in Article III(b) of the Colorado River Compact, and preserving to Nevada an equitable share thereof?

(3) Assuring Nevada the ultimate beneficial consumptive use of not less than 900,000 acre-feet per annum from all classes of water?

The determination of Nevada's claims requires the consideration and resolution of: the questions of fact later referred to; the questions of interpretation previously mentioned; the question of whether Nevada's share of III(a) waters has been determined or limited to 300,000 acre-feet per annum; whether, as to stored waters, Nevada may claim any quantity in excess of her contracts with the United States; and the source of title to her claims to 539,100 acre-feet per annum of III(a) water and not less than 900,000 acre-feet per annum from all sources.

Interests of Other States.

There remains the question whether the claims of the United States, Arizona, California, and Nevada can be effectively determined without concurrently determining the rights and obligations of Utah and New Mexico with respect to the waters of the Lower Basin, and the rights and obligations of those states and Colorado and Wyoming with respect to other waters of the Colorado River System, to the extent that they are affected by the issues in controversy here.

In more detail, these "ultimate issues" depend upon the resolution of the following questions of fact and of the interpretation of the Colorado River Compact, the Boulder Canyon Project Act, the Statutory Compact between the United States and California, and the Mexican Water Treaty.

III. Factual Issues

There are substantial issues of fact, raised by the pleadings to date. These include, but are not limited to, determination of:

(1) the investments and obligations undertaken by the parties in the construction of works and in the performance of their contracts with the United States, and the investments and obligations undertaken by the United States in reliance upon such contracts;

(2) the location, magnitude and priorities of the water rights necessary to enable the United States to perform its obligations to Indians and Indian Tribes pursuant to Article VII of the Compact;

(3) the requirements of the United States for (a) flood control, (b) navigation, (c) fish and wildlife, and (d) the other claims which it makes;

(4) the quantities of water physically available for beneficial consumptive use in the Lower Basin, assuming full use by the Upper Basin of its Compact apportionment, full regulation of the supply available to the Lower Basin, and full performance of the Mexican Water Treaty;

(5) the uses, present and potential, on the main stream and on each tributary, determined as of the place of use, as California contends is the proper method, and the effect of those uses in terms of man-made depletion of the virgin flow of the main stream, as Arizona contends is the proper method;

(6) the quantities of water "salvaged" by the activities of man, on the main stream and on the tributaries;

(7) reservoir losses, present and potential, gross and net;

(8) appropriative rights, priorities, and uses thereunder, on the main stream and tributaries;

(9) the extent and place of use of "rights which may now exist" and which, under Article III(a) of the Compact, are to be charged as uses of water apportioned by Article III(a), and of "rights which may now exist" in

California, within the meaning of Section 4(a) of the Project Act; and

(10) the extent and place of use of "present perfected rights" protected by Article VIII of the Compact and directed by the Boulder Canyon Project Act to be satisfied in the operation and management of the Project.

IV. The Issues of Interpretation of the Colorado River Compact, the Boulder Canyon Project Act, the Statutory Compact, and the Mexican Water Treaty

Questions relating primarily to Article III(a) of the Colorado River Compact include the following: Whether the Colorado River Compact deals only with the main stream or treats with Colorado River System waters wherever they may be found; whether the uses apportioned by Article III(a) to the Lower Basin are to be taken only from "water present in the main stream and flowing at Lee Ferry," as Arizona contends, or from the tributaries as well, as California and Nevada contend; whether the 7,500,000 acre-feet referred to in Article III(a) is related to the 75,000,000 acre-feet referred to in Article III(d), as Arizona contends, or whether the latter figure includes excess or surplus waters unapportioned by the Compact, as California contends; by what process Arizona claims to have acquired an apportionment of 2,800,000 acre-feet of III(a) water, to be taken from the main stream; whether the apportionment of 7,500,000 acre-feet "per annum" is a statement of a maximum, or of an average, and, if the latter, over what period of years; the definition and measurement of "beneficial consumptive use"; the accounting for water added to and withdrawn from storage on the main stream and tributaries; whether the use of water salvaged by man on the main stream and tributaries is to be charged under the Compact; the definition of "rights which may now exist," which are to be included in charges to water apportioned by Article III(a) and their magnitude on the main stream and tributaries; the

date to which this last expression refers; whether, in the absence of a compact among the Lower Basin States, the division of water among them is to be affected by appropriative rights, *i. e.*, "rights which may now exist"; whether Indian rights, and other federal claims to consumptive use, are included within that expression and are to be charged under the Compact; whether reservoir losses are chargeable as beneficial consumptive uses, and if so, their classification under the Compact and their relation to other uses.

Questions relating primarily to Article III(b) of the Colorado River Compact include the following: The questions relating to the definition of "beneficial consumptive use" and "per annum" previously stated in connection with Article III(a); whether the "increase of use" permitted to the Lower Basin by Article III(b) is an apportionment in perpetuity as in Article III(a), as Arizona contends, or a license to acquire rights by appropriation and contracts under the Project Act in excess or surplus water unapportioned by the Compact, as California contends; whether this right to increased use is identified solely with the water found flowing in the Gila River, as Arizona contends, or is identified with the first 1,000,000 acre-feet of increased use (above 7,500,000) per annum throughout the Lower Basin, as California and Nevada contend; whether this right is available to all five States of the Lower Basin, or to Arizona alone, as she contends (notwithstanding the decision of this court in *Arizona* v. *California, et al.*, 292 U.S. 341 (1934)); the status of uses in New Mexico on the Gila; the status of uses on other tributaries; and to what degree reservoir losses are chargeable to this increase of use. Reference to the relation of the Mexican Treaty burden to the uses under Article III(b) appears below in connection with Article III(c).

Questions relating primarily to Article III(c) of the Colorado River Compact include the following: Whether

the waters to be supplied Mexico are "apportioned" thereby (this bears upon the determination of the meaning of the expression "excess or surplus waters unapportioned by" the Colorado River Compact, appearing in the Boulder Canyon Project Act, *infra*); whether, if the quantities in excess of those specified in Articles III(a) and III(b) are insufficient to supply the deliveries to Mexico, the burden, with respect to the Lower Basin, falls first upon the uses referred to in Article III(b), as California contends, or upon those referred to in Article III(a), as Arizona contends; and the relation of the "escape clause" in Article 10 of the Treaty, which permits reduction in deliveries to Mexico in case of extraordinary drought in proportion to the reduction in consumptive uses in the United States. The relation of Article III(c) to Articles III(d) and III(a), with respect to the obligations of the Upper Division States, is referred to below in connection with Article III(d).

Questions relating primarily to Article III(d) of the Colorado River Compact include the following: As a corollary to one of the questions stated with reference to Article III(a), whether the 75,000,000 acre-feet referred to in Article III(d) is related to the 7,500,000 acre-feet apportioned by Article III(a) to the Lower Basin, or whether the 75,000,000 acre-feet include excess or surplus waters available for delivery to Mexico or use in the Lower Basin; the resulting effect on the obligation of the States of the Upper Division stated in Article III(c) to furnish additional water to meet the deficiency if surplus above the quantities specified in Articles III(a) and III(b) is insufficient to supply Mexico; and whether the Lower Basin is entitled to demand release of this 75,000,000 acre-feet notwithstanding the consequent inability of the Upper Basin to make beneficial consumptive use of 7,500,000 acre-feet per annum.

Questions relating primarily to Article III(e) of the Colorado River Compact include the following: Whether,

if excess or surplus waters are appropriated (or contracted for) in the Lower Basin, their release from storage in the Upper Basin may be required; whether, if Indian uses are not subject to the Colorado River Compact, the United States may require release of water from reservoirs in the Upper Basin to satisfy them, in addition to the water which the States of the Upper Division are required to release in performance of Articles III(c) and III(d) of the Compact; so also with respect to the other federal claims asserted by the United States "as against the parties to this cause," for use of water in the Lower Basin.

Questions relating primarily to Articles III(f) and III(g) of the Colorado River Compact include the following: Whether the provisions in these articles with reference to a compact to be made after October 1, 1963, are permissive or mandatory; whether, in the light of the Statutory Compact, these provisions preclude the acquisition of rights in excess or surplus waters by appropriation and by contract with the United States in the interim, subject only to further apportionment as between Basins by such a future compact; and whether, in the event of competing interstate claims to such excess or surplus waters, in the absence of a compact apportioning them, priority of appropriation, including contracts with the United States, controls.

Questions relating to Article VII of the Colorado River Compact include the following: Whether uses by Indians are subject to the Colorado River Compact; whether Indian uses are chargeable under the Compact to the Basin and the State in which they are situate; if not, whether they are prior and superior to the apportionments made by the Compact, or are in competition with appropriations of others which are subject to the Compact; the location, magnitude, and asserted priority of Indian claims; their effect upon the quantities available to non-Indian users under Articles III(a), III(b), etc.; their effect on the distribution of the Mexican Treaty burden;

and their effect on the obligations of the States of the Upper Division under Articles III(c) and III(d).

Questions relating primarily to Article VIII of the Colorado River Compact include the following: The date to which the expression "present perfected rights" relates, *i.e.*, 1922, 1929, or some other date; the definition of said term; whether such definition is to be determined under the law of the State under which the right arose; whether the assurance against impairment extends to quality as well as quantity; the extent of these rights in each State; their relation to the expression "rights which may now exist," as used in Article III(a) of the Compact and Section 4(a) of the Project Act; and the impact of reservoir losses when "present perfected rights" attach to, and are satisfied from stored waters, pursuant to the direction in Article VIII.

Questions relating primarily to the Boulder Canyon Project Act and the resulting Statutory Compact between the United States and California include the following: Whether the alternative consent given in the Project Act to a Seven-State or Six-State Compact became final on June 25, 1929, in establishing the latter; whether Arizona could, or did, effectively ratify a Seven-State Compact thereafter; if so, whether the Statutory Compact authorized by the Project Act as a corollary to a Six-State Compact remains in effect; if it does, whether Arizona can claim the benefits of both; whether the Statutory Compact authorized contracts to be made with the California defendants for the permanent service (in addition to 4,400,000 acre-feet of III(a) waters) of one-half of the excess or surplus waters unapportioned by the Compact for use in California; whether it included therein the waters referred to in Article III(b), or precluded California from use of such waters; whether the "excess or surplus," of which California may use one-half, is to be reckoned before or after deduction of the quantity required to be delivered to Mexico; the effect on California's

right to "excess or surplus" of a future compact apportioning such waters; whether the limitation "for use in California" is net of reservoir losses, or is subject to further reduction in consequence of such losses; whether the definition of consumptive uses applicable to California is applicable to Arizona, and vice versa; whether California is free to make use of salvaged waters without charge under the Compact or the Limitation Act; the effect of California's appropriations; the meaning and effect of the reference to "rights which may now exist" in Section 4(a) of the Project Act; the extent of California's "present perfected rights" as referred to in Section 6 of the Project Act; whether by the Project Act, or otherwise, the shares of Nevada or Arizona in the waters of the Colorado River System have been determined; and the construction and effect of the water delivery contracts held by those States.

Interrogatories Addressed to the State of New Mexico by the California Defendants

To: Honorable Richard H. Robinson
Attorney General of New Mexico
Santa Fe, New Mexico

The defendants, State of California, Palo Verde Irrigation District, Imperial Irrigation District, Coachella Valley County Water District, The Metropolitan Water District of Southern California, City of Los Angeles, City of San

Diego, and County of San Diego, request that the State of New Mexico, by an officer or agent thereof, answer, in accordance with Rule 9(2) of the Rules of the Supreme Court of the United States and Rule 33 of the Federal Rules of Civil Procedure, the following interrogatories, the requirement of oath being waived:

1. Please locate on a map the 20,900 irrigated acres referred to in paragraph VII of the Appearance and Statement in Behalf of New Mexico of Its Claim of Interest in and to Lower Basin Waters (hereinafter referred to as "New Mexico Statement").

2. Please state, in acre-feet per annum, the quantities of beneficial consumptive use claimed for the 20,900 irrigated acres referred to in Interrogatory 1, indicating the definition or method of measurement of beneficial consumptive use employed in the calculation.

3. Please give the quantities of beneficial consumptive use for each of the last ten years on the 20,900 irrigated acres referred to in Interrogatory 1. If the period given is other than a calendar year, please specify when such year begins.

4. Please locate on a map the "approximately 7,000 acres of additional land" which, as alleged in paragraph VII of the New Mexico Statement, plans are being made to irrigate.

5. Please state, in acre-feet per annum, the quantities of beneficial consumptive use claimed for the 7,000 acres of land referred to in Interrogatory 4, indicating the definition or method of measurement employed in the answer.

6. Please locate on a map the 50,000 acres of additional land referred to in paragraph VII of the New Mexico Statement that it is stated could be irrigated if a water supply were available.

7. Please state, in acre-feet per annum, the quantities of beneficial consumptive use claimed for the 50,000 acres of land referred to in Interrogatory 6, and indicate the definition or method of measurement employed in the calculation.

8. Please state whether the "50,000 acre-feet of water for muncipal and industrial purposes" referred to in paragraph VII of the New Mexico Statement is a figure based on alleged needs for each year or for some other period, and whether the figure refers to diversions or beneficial consumptive use. If beneficial consumptive use, what definition or method of measurement was used in the calculation? If the 50,000 acre-feet referred to is not beneficial consumptive use, please state this portion of the claim in terms of beneficial consumptive use indicating what definition or method of measurement is employed in the calculation.

9. Please provide citations to engineering reports or other descriptions of the projects or works contemplated for the irrigation of 7,000 additional acres referred to in paragraph VII of the New Mexico Statement, and if possible, please provide copies.

10. Please state whether the acreages referred to in paragraph VII include roads, canals and farmsteads.

11. Please state, in acre-feet per annum of beneficial consumptive use, the aggregate of the "existing rights within the state" which paragraph VIII of the New Mexico Statement says shall be "protected and remain unimpaired," specifying the definition or method of measurement of beneficial consumptive use employed in the calculation.

12. Please state, in acre-feet per annum, the quantities of beneficial consumptive use to which paragraph X, subparagraph 2, asserts a right under each of the following categories:

(a) "Rights which existed in 1922";

(b) Rights "which may now exist within the state";

(c) Rights to satisfy "future uses" described in paragraph VII.

Specify the definition or method of measurement of beneficial consumptive use employed in each calculation.

13. What "rights which may now exist" within the meaning of Article III(a) of the Colorado River Compact does New Mexico claim as of 1922? As of 1929? What "present perfected rights" as that phrase is used in Article VIII of the Colorado River Compact does New Mexico claim in the Lower Basin as of 1922? As of 1929?

14. Are the rights claimed by New Mexico based upon appropriations heretofore made? If so, by what appropriators, on what dates and in what quantities?

15. What quantity of the claims referred to in the answer to parts (a), (b), and (c), respectively, of Interrogatory 12 are asserted against Lower Basin uses under Article III(a) of the Colorado River Compact? What quantity against Article III(b) uses?

16. What criteria is it alleged determine whether specific uses claimed by New Mexico are chargeable to Article III(a) or to Article III(b) uses under the Colorado River Compact?

17. Of the 275,600 acre-feet referred to in paragraph VII of the New Mexico Statement as the average of the natural flow of the Gila River and its tributaries and the Little Colorado River and its tributaries at the New Mexico-Arizona boundary, please specify the figure attributed to the Gila, to the Little Colorado, and to each tributary, respectively, naming the tributaries referred to.

18. What period of time was used in calculating the "average of approximately 275,600 acre-feet," referred to in paragraph VII of the New Mexico Statement?

19. Please state what is meant by "natural flow" in paragraph VII of the New Mexico Statement and how its quantity is determined.

20. Does New Mexico claim the right to put to beneficial consumptive use all the 275,600 acre-feet referred to in paragraph VII?

21. Reference is made to paragraph 2 of the New Mexico prayer which asks "That the right of the state of New Mexico in and to the annual beneficial consumptive use of waters of the Colorado River below Lee Ferry, be determined to be that portion of the allocation to the Lower Basin States allocated by Articles III(a) and III(b) of the Colorado River Compact equal to the amount of such waters originating within the boundaries of the State of New Mexico, in terms of acre-feet, or in terms of the percentage that such waters so originating within the boundaries of the state bears to the total amount allocated to the Lower Basin states annually and available for beneficial consumptive use."

(a) What is the quantity of "such waters originating within the boundaries of the State of New Mexico, in terms of acre-feet," for each year for which records are available?

(b) What is the quantity of "such water originating within the boundaries of the State of New Mexico . . . in terms of the percentage that such water so originating within the boundaries of the state bears to the total amount alloeated to the Lower Basin states annually and available for beneficial consumptive use" for each year for which records are available?

22. Reference is made to paragraph X-3(2) of the New Mexico Statement to the effect that "beneficial consumptive use, as used in Articles III(a) and III(b) of the compact, should be measured in terms of stream depletion." Please define what is meant by "stream depletion," state what physical data are nceessary for this method of measure-

ment, and state at what point or points stream depletion is to be measured with respect to each State in the Lower Basin.

23. Please state how many of the acres for which water is claimed in paragraph VII are Indian lands with particular reference to the following:

(a) The 9,500 acres stated to be within the basin of the Little Colorado River.

(b) The 11,400 acres stated to be within the Gila River basin within New Mexico.

(c) The 7,000 acres of additional land in the two basins.

(d) The 50,000 acres of additional land that could be irrigated if a water supply were available.

24. Please state how much water is presently being consumptively used each year on Indian lands within Lower Basin areas of New Mexico.

25. Please locate on a map the Indian lands within the Lower Basin areas of New Mexico on which water is now being consumptively used.

26. Do the New Mexico claims include the use of water for federal purposes other than Indian uses, including the National Park Service, Forest Service, Bureau of Land Management, fish and wildlife refuges?

27. If the answer to Interrogatory 26 is yes, please state the location and quantities of such use.

It is requested that answers to the foregoing interrogatories be addressed to Edmund G. Brown, Attorney General of California, Attention: Gilbert F. Nelson, Assistant Attorney General, 909 South Broadway, Los Angeles 15, California.

Dated: March 14, 1956.

Respectfully,

For the State of California

ANSWER OF THE STATE OF NEVADA TO COMPLAINT AND ANSWER IN INTERVENTION BY THE STATE OF UTAH

COMES NOW the intervening State of Nevada in response to the Complaint and Answer in Intervention of the State of Utah, and admits, denies and alleges as follows:

I

Answering paragraph II of said Complaint and Answer, Nevada states it has not sufficient knowledge or information upon which to

base a belief and therefore denies that the State of Utah is and/or should be entitled to a priority of the present and future beneficial consumptive use of the waters in the Lower Basin found in the Virgin River, Kanab Creek and Johnson Creek to the extent and amount of 175,000 acre-feet.

II

Answering subdivision No. 2, paragraph IV of said Complaint and Answer, Nevada denies that the beneficial consumptive use of the waters apportioned to the Lower Basin should be measured by the inflow-outflow method adopted for the Upper Basin in the Upper Colorado River Basin Compact, i. e., in terms of man-made depletion of the virgin flow at specified points along the main stream, and in connection with this said denial, Nevada alleges that the commonly and well-recognized measure of beneficial consumptive use in the Western States, including Nevada, is the measured diversion from the source less the measured return flow thereof to said source, and that the only exception thereto is where wasting streams due to channel losses occasioned by evaporation and transpiration, a portion of said losses were converted to beneficial use by the activities of man through the impounding, pumping and diversion of said waters upstream from the area wherein the major losses by evaporation and transpiration took place, then the measure of beneficial use is by the main stream depletion theory. Nevada, in subdivision No. 2, paragraph XVIII of its Petition in Intervention has heretofore so alleged.

WHEREFORE, the State of Nevada reiterates its Prayer set forth in its Petition in Intervention.

RESPONSE OF STATE OF ARIZONA TO COMPLAINT AND ANSWER BY THE STATE OF UTAH

The State of Arizona, by its duly authorized attorneys, respectfully submits its response to the Complaint and Answer of the State of Utah, as follows:

I.

Arizona admits all of the allegations therein contained save and except those allegations or parts thereof hereinafter specifically denied.

II.

Arizona denies that the State of Utah has or should be entitled to a priority for use of the waters of the Virgin River, Kanab Creek or Johnson Creek.

III.

Arizona denies that the State of Utah has the right to the beneficial consumptive use of the waters apportioned to the Lower Basin by the Colorado River Compact to the extent of 175,000 acre-feet per annum for present and future agricultural and domestic uses; alleges that the State of Utah is entitled to the use of no more than 52,100 acre-feet per annum, in the aggregate, of said waters for said purposes, measured in terms of depletion of the main stream; alleges that there are established uses by the States of Arizona and Nevada of the waters of the Virgin River and Kanab Creek; and alleges that additional use of the waters of said streams by the State of Utah cannot exceed such amount as will permit continued uses established by the State of Arizona.

WHEREFORE, the State of Arizona prays that the decree entered herein contain, among other appropriate provisions, provision limiting the rights of the State of Utah in and to the beneficial consumptive use of the waters of the Virgin River, Kanab Creek and Johnson Creek to not more than 52,100 acre-feet per annum in the aggregate, measured in terms of depletion of the main stream; and that said uses in the State of Utah be decreed not to have priority over the rights of the

State of Arizona in and to the consumptive use of the waters of said river and creeks.

RESPONSE OF STATE OF ARIZONA TO APPEARANCE AND STATEMENT OF NEW MEXICO.

The State of Arizona, by its duly authorized attorneys, respectfully submits its response to the Appearance and Statement in behalf of New Mexico as follows:

I.

Arizona admits all of the allegations of Paragraphs I to VI, inclusive, of said statement.

II.

Arizona denies the allegations of the first sentence of Paragraph VII of said statement and alleges that not more than 18,550 acres are irrigated in New Mexico by waters of the Colorado River System; alleges that Arizona is without knowledge or information sufficient to form a belief as to the truth of the allegations of the second, third and fourth sentences of Paragraph VII of said statement.

Arizona admits that the allegations of the fifth sentence of said Paragraph VII are substantially correct.

Arizona admits the remaining allegations of said Paragraph VII, but alleges that no storage facilities can legally be constructed on either the Gila or Little Colorado Rivers or their tributaries in New Mexico which interfere with or obstruct established downstream uses in Arizona.

III.

Arizona denies the allegations of Paragraph VIII of said statement except the allegations of the last sentence thereof, which allegations Arizona admits.

IV.

Arizona denies the allegations of the first sentence of Paragraph IX of said statement and admits the allegations of the second sentence of said paragraph.

V.

Arizona admits that the questions set forth in subparagraph 1 of Paragraph X of said statement are the basic issues to be determined in this litigation.

Arizona admits that, as alleged in subparagraph 2 of said Paragraph X, New Mexico has the right to the beneficial consumptive use of a sufficient quantity of Lower Basin waters per annum to supply any rights which existed in 1922 and alleges that any rights in New Mexico, to the use of waters of the Gila River

and its tributaries are governed and controlled by that certain decree entitled "Globe Equity 59", dated June 29, 1935, in the United States District Court for the District of Arizona.

Arizona admits the allegations of subparagraph 3 of Paragraph X and alleges that beneficial consumptive use is required to be measured in terms of main stream depletion and further alleges that, under the provisions of the Boulder Canyon Project Act and the California Limitation Act, the State of California is precluded from claiming any portion of the waters referred to in Article III(b) of the Compact.

WHEREFORE, Arizona prays that the decree entered herein shall contain, among other appropriate provisions, provision:

1. Limiting uses by New Mexico of the waters of the Little Colorado and its tributaries to such uses as will not interfere with or obstruct uses being made in or planned by Arizona of the waters of said stream and its tributaries; and

2. Limiting uses by New Mexico of the waters of the Gila River and its tributaries in accordance with that certain decree entitled Globe Equity 59, dated June 29, 1935, and further limiting such uses to uses such as will not interfere with or obstruct uses being made in or planned by Arizona of the waters of said stream and its tributaries.

ANSWER OF THE STATE OF NEVADA TO THE APPEARANCE AND STATEMENT IN BEHALF OF NEW MEXICO OF ITS CLAIM OF INTEREST IN AND TO LOWER BASIN WATERS

COMES NOW the intervening State of Nevada in answer to the Appearance and Statement of the intervening State of New Mexico, and admits, denies and alleges, as follows:

I

Answering paragraph IV of said Statement, Nevada denies that

"various contracts with the United States for delivery of water from Lake Mead" constitutes the "Law of the River" or any part thereof.

II

Answering paragraph VIII of said Statement, Nevada denies that New Mexico shall have free and unrestricted beneficial consumptive use of all waters originating within the drainage basins of the Gila River and its tributaries and the Little Colorado and its tributaries within the boundaries of said State, and in this connection Nevada alleges that said waters within said drainage basins are waters that constitute a portion of the waters lying and being situate in the Lower Basin of the Colorado River Stream System as defined in Article II(f) of the Colorado River Compact, the beneficial consumptive use of which was and is apportioned to the entire Lower Basin in and by the provisions of Article III thereof, with no apportionment of said waters and/or the beneficial consumptive use thereof being made to any individual State signatory to said Compact. Nevada further alleges that said waters are a part of the common fund of the waters that drain into the Colorado River Stream System below Lee Ferry and are therefore subject to the provisions of the said Compact with respect to the equitable apportionment thereof.

III

(a) Answering subparagraph 3(2) of paragraph X, page 8 of said Statement, Nevada denies that beneficial consumptive use, as used in Article III(a) and III(b) of the Compact, should be measured in terms of stream depletion, in that and for the reason that the well-recognized rule of measurement of beneficial consumptive use of water in the Western States is the measured diversion from the source less the measured return flow thereof to the source, and that the stream depletion measurement is an exception to the return flow measurement to be used only upon wasting streams where major channel losses of water are brought about by evaporation and transpiration, but which a portion of such losses are converted to beneficial uses by the activities of man by impounding, pumping and

diversion of the waters upstream from the area wherein said losses took place—all as alleged in subparagraph 2 of paragraph XVIII, Petition of Intervention of Nevada.

(b) Answering subparagraph 3(3) of paragraph X, page 8 of said Statement, Nevada reiterates the allegations of subparagraph 3 of paragraph XVIII of its Petition in Intervention "that evaporation losses of water from storage reservoirs on the main stream of the Colorado River in the Lower Basin are first chargeable out of excess or surplus water and that such evaporation losses are not chargeable against Article III(a) or III(b) waters unless and until all such available excess or surplus water is exhausted in any given year."

Nevada reiterates the prayer of its Petition in Intervention.

MOTION FOR LEAVE TO FILE REPRESENTATION OF INTEREST BY THE COLORADO RIVER INDIAN TRIBES OF THE COLORADO RIVER INDIAN RESERVATION, ARIZONA AND CALIFORNIA; GILA RIVER PIMA-MARICOPA INDIAN COMMUNITY, ARIZONA; HUALAPAI INDIAN TRIBE OF THE HUALAPAI RESERVATION, ARIZONA; NAVAJO TRIBE OF INDIANS OF THE NAVAJO RESERVATION, ARIZONA AND NEW MEXICO; SALT RIVER PIMA-MARICOPA INDIAN COMMUNITY OF THE SALT RIVER RESERVATION, ARIZONA; THE SAN CARLOS APACHE TRIBE, ARIZONA AND THE FORT McDOWELL MOHAVE-APACHE INDIAN COMMUNITY OF THE FORT McDOWELL RESERVATION, ARIZONA.

The petitioners herein move for leave to file the accompanying representation of interest. In support of this motion petitioners show as follows:

1. The petitioners are American Indian Tribes with a total population of about 85,000, each with a tribal organization recognized by the Secretary of the Interior as authorized to represent its Tribe.

2. Each of the Tribes resides within the lower Colorado River Basin and is the beneficial owner of lands and the

right to the use of water within the basin. The right to their respective shares of these waters is vital to the continued existence of the members of the Tribes and to the future development of a stable economy on their reservations.

3. This case presents for adjudication the relative rights of the parties-litigant and of petitioners and other Indian wards of the United States to divert waters from the lower Colorado River Basin.

4. Justice and fair play require that a determination be made as to whether the Attorney General of the United States is representing conflicting interests in this case, and if so, whether the interests of petitioners are adequately and properly represented.

5. There is doubt as to whether petitioners may file as amicus curiae since they are real parties in interest as beneficial owners of an undetermined portion of the water rights at stake.

6. There is doubt as to whether petitioners may intervene as separate parties since their interests are committed to adjudication by the intervention of the United States and in any event petitioners are without available funds or means for preparing and participating in this case.

7. Under Rule 9 of this Court, the Federal Rules of Civil Procedure are applicable as a guide in original actions. The procedure here followed by petitioners would be the

procedure utilized to apprise a district court of a comparable situation.

Respectfully submitted,

Z. SIMPSON COX,
Luhrs Tower,

REPRESENTATION OF INTEREST BY THE COLORADO RIVER INDIAN TRIBES OF THE COLORADO RIVER INDIAN RESERVATION, ARIZONA AND CALIFORNIA; GILA RIVER PIMA-MARICOPA INDIAN COMMUNITY, ARIZONA; HUALAPAI INDIAN TRIBE OF THE HUALAPAI RESERVATION, ARIZONA; NAVAJO TRIBE OF INDIANS OF THE NAVAJO RESERVATION, ARIZONA AND NEW MEXICO; SALT RIVER PIMA-MARICOPA INDIAN COMMUNITY OF THE SALT RIVER RESERVATION, ARIZONA; THE SAN CARLOS APACHE TRIBE, ARIZONA AND THE FORT MCDOWELL MOHAVE-APACHE INDIAN COMMUNITY OF THE FORT MCDOWELL RESERVATION, ARIZONA.

---

1. The petitioners are American Indian Tribes with a total population of about 85,000, each with a tribal organization recognized by the Secretary of the Interior as authorized to represent its Tribe.

2. Each of the Tribes resides within the lower Colorado River Basin and is the beneficial owner of lands and the right to the use of water within the basin. The right to their respective shares of these waters is vital to the continued existence of the members of the Tribes and to the future development of a stable economy on their reservations.

3. This case presents for adjudication the relative rights

of the parties-litigant and of petitioners and other Indian wards of the United States to divert waters from the lower Colorado River Basin. The Indian rights in the water stem from treaties with Indian tribes, executive action, the creation of Indian reservations and various Acts of Congress. *Winters* v. *United States,* 207 U. S. 564, 576-577; *United States v. Walker River Irr. Dist.,* 104 F. 2d 334, 336 (C.A. 9, 1939); *Cohen, Felix S., Handbook of Federal Indian Law,* pp. 316-319 (1945).

4. The United States has intervened in this case and has placed the rights of petitioners in issue. As a result petitioners are precluded from asserting their rights in their own names and on their own behalf. They have no control over the course of the suit, no voice in its direction and no right or opportunity to participate in the formation or trial of the issues. The United States controls their interests in issue. It can waive or compromise their rights, fail to prosecute them in full or in part, allow them to go by default, or fail to assert essential contentions. *Heckman* v. *United States,* 224 U. S. 413, 445-446; *Pueblo of Picuris in State of New Mexico* v. *Abeyta,* 50 F. 2d 12, 13-14 (C.A. 10, 1931).

5. The petitioners present to the Court the question of whether their interests can be properly or adequately represented by the Attorney General of the United States if the interests of the United States, as a sovereign proprietor and contractor are in direct conflict with the interests of the petitioners. Thus the United States has numerous contractual obligations to deliver Colorado River water to various water and irrigation districts and projects, and to the States of Nevada and Arizona. It has contracted to sell electricity (Petition of Intervention, Pars. XII-XXIV). In addition it has an international treaty obligation to de-

liver annually 1,500,000 acre feet of Colorado River water to Mexico (*Ibid.*, Par. XIII).

The proprietary rights and contract commitments of the United States on the one hand and the beneficial rights of the Indians on the other are in competition with each other for the same water. Since there is not sufficient water to meet the demands of all parties, priorities and allocations will be adjudicated. The Attorney General has undertaken to represent both antagonistic interests of the United States and these petitioners, competitors for the same water, and his obligations force him to sit on both sides of the counsel table at the same time.

6. The dual and conflicting nature of the Attorney General's position in this case is emphasized by his obligation to defend the United States before the Indian Claims Commission and the Court of Claims in suits brought by Indian tribes seeking compensation for loss of water rights. The law established in this case may provide a clear basis for recovery or a complete defense in such claims cases of Indian tribes. Proper advocacy in this case would compel the Attorney General to vigorously prosecute the full rights of petitioners. But if he does so, the Attorney General may be providing the basis for recovery in Indian claims cases in which he is obliged to defend the United States. The conflict seems evident.

7. Petitioners' concern motivating this representation has not been lessened by the proceedings and actions in this case. The following is illustrative:

(a) On December 31, 1952 the United States moved this Court for leave to intervene and in support of its motion advanced the interests of petitioners as a major ground for intervention. The United States referred to the Colorado River Compact, a document basic to the rights of the par-

ties and advised this Court as follows (Motion for leave to intervene, Par. XII):

> * * * Thus there is excluded from the operation of the compact the rights of the United States to divert or to have diverted water from the Colorado River and its tributaries on behalf of the Indians. There is annually diverted for or by the Indians from the Colorado River and its tributaries in the Lower Basin in excess of 750,000 acre-feet and there are asserted, in the ultimate, claims to a greater amount.

In its brief in support of the motion for leave to intervene the United States stated (p. 32) "* * * large claims are asserted on behalf of the Indians whose rights are excluded from the operation of the Colorado River Compact; * * *".

(b) On November 2, 1953 pursuant to the Court's order of January 19, 1953, the United States filed its petition of intervention with the Clerk of this Court. The petition in unmistakable terms asserted the "prior and superior" rights of the Indians. It declared (Par. XXVII, p. 23):

> The United States of America asserts that the rights to the use of water claimed on behalf of the Indians and Indian Tribes as set forth in this Petition are prior and superior to the rights to the use of water claimed by the parties to this cause in the Colorado River and its tributaries in the Lower Basin of that stream.

Four days later, apparently following heated protests by parties-litigant opposing the Attorney General's assertion of the Indians' claims, the Attorney General, without order of this Court and by means unknown to us, physically withdrew the Government's petition of intervention from the Clerk's office. On December 8, 1953, without order of

this Court authorizing amendment, the Attorney General substituted a revised petition of intervention as if it were the initial filing. This extraordinary procedural lapse supplied the means for omitting the critical language quoted above pleading the "prior and superior" rights of the Indians. It permitted the United States to make a radical shift in position without the embarrassment of setting forth the reasons for the change as part of an application for leave to amend. A copy of an article written by Luther A. Huston and published in the *New York Times* of November 16, 1953, describing this unusual procedure is printed in the Appendix, *infra*.

(c) At the pre-trial conference before the Special Master on April 10-13, 1956, almost two and one-half years after the Government's petition of intervention was filed, the United States declared that it still was not ready to define its position on Indian claims either from the standpoint of law or facts. (Transcript, pre-trial proceedings, April 10, 1956, pp. 18, 23-26, 34-35). The Government's attitude was akin to that of a passive bystander, with the clear inference that it desired an inactive role in this case. Thus the Assistant Attorney General in charge urged (*Ibid*, p. 39):

> The United States would like to be last, and we will only ask the questions we feel the States have not covered, if that will be permitted.

It seems to petitioners that such an attitude cannot be reconciled with an intent to present and protect the Indians' full rights. An advocate for the Indians would have no difficulty in unequivocally asserting the prior and superior rights justified by law, set out in the petition of intervention initially filed with this Court and withdrawn and

amended without permission. (See paragraph No. 7a, *supra.*)

(e) The transcript of the pre-trial proceedings reveals a complete failure on the part of the United States to state affirmatively any intention to present and advocate the petitioners' full rights. The Master's efforts to ascertain the Government's position were met with avoidance and pleas of lack of understanding (e.g. *passim*, Tr. 173-204). The failure of the Attorney General to assert petitioners' full rights raises serious doubt as to whether those rights will be effectively prosecuted by the Attorney General.

8. Petitioners probably have no standing separately to sue and in any event are without available funds to prepare a project case of this magnitude. The United States has committed petitioners' rights to adjudication but all decisions concerning the prosecution or abandonment of their rights are made by the Attorney General without reference to or consultation with petitioners. The ultimate responsibility for rendering a just and correct decree rests with this Court. Justice and fair dealing require that petitioners' rights should not be subordinated to conflicting interests through lack of independent advocacy.

Wherefore, petitioners pray as follows:

1. That cognizance be taken of this representation in view of the helpless position in which these petitioners find themselves;

2. That the Attorney General be called upon to explain his unauthorized amendment of the petition of intervention;

3. That the Special Master be instructed as follows:

a. To determine whether a conflict exists between the Indian interests and the interests of the United States apart from those of the Indians;

b. To determine whether the Indian interests are, or can be adequately represented by the Attorney General of the United States; and

c. To recommend whether the interests of justice and fair dealing require separate and independent counsel for the Indians.

WEST BESET AGAIN BY INDIAN TROUBLE

Gets Government to Withdraw Colorado River Brief Putting Tribes' Water Rights First

By LUTHER A. HUSTON

Special to THE NEW YORK TIMES.

WASHINGTON, Nov. 15—Indian trouble has developed again in the West and this time it was not the Indians but the Great White Father who started it.

Pow-wows are under way in some of Washington's most impressive wigwams in an effort to settle it and the pipe of peace eventually may be smoked in the Supreme Court.

It is a complicated situation that involves the fight between Arizona and California over the use of the waters of the Colorado River, a controversy that has been raging for more than three decades. The Department of Justice brought the Indians into it.

Despite a disinclination on the part of the Justice Department to talk about it, officials revealed today that pressures from Governors of some Western states induced the department to withdraw a brief it had filed in the Supreme Court, a step rarely taken, and agree to reexamine an issue it had put forward as a major ground for intervening in a suit now pending in the high court.

On Nov. 2 the Justice Department filed a brief with the clerk of the Supreme Court as an intervenor in a suit brought by the State of Arizona against the State of California and other defendants. Quietly, late in the afternoon of Friday, Nov. 6, the brief was withdrawn.

At that time, it is understood, it had not been distributed to any of the Supreme Court Justices.

States' Rights Held Subordinate

The controversial part of the brief asserted that the rights of the Indians and Indian tribes in the Colorado River basin to the use of the waters of the river and its tributaries "are prior and superior" to the water-delivery rights of other citizens under the Colorado River compact.

The Justice Department's position was that the Indians have priority to take what water they want when they want it, regardless of the share of the states.

Arizona contends that the Indians must share, the same as white citizens, in the total allotment of the lower basin. Under this interpretation, Arizona, which has more Indians and more reservations than California, would have to give up more water to Indian uses than would its sister state.

California, according to Mr. Ely, does not join in the protest against the claim asserted by the Department of Justice on behalf of the Indians to "prior and superior" water delivery rights. Mr. Ely said that his state would like to have the matter litigated before the Supreme Court. He contends that the question cannot be settled by stipulation, as Arizona has proposed in the conferences now going on.

The United States should be a party in interest to the Arizona-California litigation, Mr. Ely asserts, because of its responsibility to the Indians, its vast expenditures in constructing Boulder Dam, which impounds the waters allotted to the states, and other works necessary to the operation of the project.

The Supreme Court was correct, Mr. Ely asserted, in allowing the Justice Department to intervene in the Arizona-California suit, but the Justice Department was wrong in asserting that the rights of the Indians were "prior and superior" to the water-delivery rights of other citizens under the Colorado compact.

Commitment Is Denied

Mr. Rankin has told attorneys representing Arizona and California that the Justice Department was under no commitment to amend the brief. He is said to have agreed, however, to re-examine the question with an eye to a possible stipulation that would clarify the extent of Indian rights as against those of the states involved.

A Justice Department spokesman said that a new brief would be filed. Conferences at the legal level were going on, he said. Whether or not there would be later conferences between Herbert Brownell Jr., the Attorney General, and some of the Governors who joined in the protest had not been determined.

Northcutt Ely, an Assistant Attorney General of California, who maintains offices here and handles the interests of that state in the Colorado River water controversy, said that what the Federal Government was doing was asserting a first mortgage on behalf of the Indians on water that already had been apportioned between the states under the Colorado River Compact to which Congress had given approval.

If the position taken by the Government should be maintained, and sustained by court decrees, Mr. Ely said, the interstate compact under which California had spent more than half a billion dollars to develop water projects would "be busted."

Arizona filed its suit on Aug. 28 against California and seven municipal or public corporations that have participated, under the laws of California, in the development of reclamation, electric power and other projects undertaken under the Colorado River Compact. In use of the Colorado River's water is a long one. The river rises in Colorado, near the crest of the Continental Divide, 9,000 feet above sea level. It flows 1,293 miles, draining, with its tributaries, parts of the states of Arizona, California, Colorado, Nevada, New Mexico, Utah and Wyoming.

The river traverses a semi-arid region containing about 240,000 square miles. It finds the sea in the Gulf of California, seventy-five miles below the border between the United States and Mexico.

Canyon Separates Lands

The lands to which water of the river may be beneficially applied are separated by nearly 1,000 miles of canyon, and the states above this canyon are in what is known as the upper basin; those below it in the lower basin. The dividing line is at Lee Ferry, twenty-three miles below the Utah-Arizona border.

More than fifty years ago it was discovered that the claims of rights to use water in the lower basin exceeded the amount of water available. So there might be an equitable distribution of the available water, the Colorado River Compact was signed in November, 1922, by California, Arizona, Colorado, Nevada, New Mexico, Utah and Wyoming.

The compact became effective June 25, 1929, by act of Congress and by Presidential proclamation, although Arizona had not ratified it at the time. Although water was allotted to Arizona under the compact, the state did not ratify the agreement until 1944.

The compact appointed in perpetuity to the states of the upper basin 7,500,000 acre feet of water and to the states of the lower basin an equal amount. It was provided, however, that the lower basin had the right to increase its beneficial consumptive use of water by 1,000,000 acre feet annually.

Right t oWater Limited

When Congress passed the Boulder Canyon Project Act, it required California to adopt a state law limiting its right to water delivery from the Colorado to the number of acre feet specified in the compact, Arizona contends that this means the 4,400,000 acre feet that constituted the basic allottment made under the lower basin compact and does not apply to the 1,000,000 additional acre feet the lower basin received the right to use annually.

Arizona, which is the only other state in the lower basin, declares that all of the 1,000,000 acre feet should be given to her.

The Indians come into the picture under a clause in the Colorado Compact that says:

"Nothing in this compact shall be constituted as affecting the obligations of the United States of America to Indian tribes."

The various Indian reservations and projects in Arizona and California are at present using, according to the Justice Department brief, 747,170 acre feet of water from the Colorado River system. The Government asserted that this use ultimately will increase to 1,747,000 acre feet.

This presents a two-fold problem, according to Mr. Ely. The first is whether the Indians have a priority to take whatever water they want whether they fell like it. The second is whether the water claimed by the Indians is to come out of the amounts allotted to the lower basin or whether the Indians can just take their share in as they want it and let Arizona and California divide what is left.

California Position Outlined

The position taken by the Justice Department in its brief is that the Indians have priority to take what water they want when they want it, regardless of the share of the states.

Britain Has 82,000 Pubs

LONDON, Nov. 15 (AP)—The Government's "annual abstract of statistics," published today, says this country has 82,000 pubs. Last year these pubs sold about nine gallons of beer per head to the 50,000,000 population.

Tribes' Water Rights First

By LUTHER A. HUSTON

Special to THE NEW YORK TIMES.

WASHINGTON, Nov. 15—Indian trouble has developed again in the West and this time it was not the Indians but the Great White Father who started it.

Pow-wows are under way in some of Washington's most impressive wigwams in an effort to settle it and the pipe of peace eventually may be smoked in the Supreme Court.

It is a complicated situation that involves the fight between Arizona and California over the use of the waters of the Colorado River, a controversy that has been raging for more than three decades. The Department of Justice brought the Indians into it.

Despite a disinclination on the part of the Justice Department to talk about it, officials revealed today that pressures from Governors of some Western states induced the department to withdraw a brief it had filed in the Supreme Court, a step rarely taken, and agree to reexamine an issue it had put forward as a major ground for intervening in a suit now pending in the high court.

On Nov. 2 the Justice Department filed a brief with the clerk of the Supreme Court as an intervenor in a suit brought by the State of Arizona against the State of California and other defendants. Quietly, late in the afternoon of Friday, Nov. 6, the brief was withdrawn.

At that time, it is understood, it had not been distributed to any of the Supreme Court Justices.

States' Rights Held Subordinate

The controversial part of the brief asserted that the rights of the Indians and Indian tribes in the Colorado River basin to the use of the waters of the river and its tributaries "are prior and superior" to the rights of Arizona, California or the other states in the basin. This was a position never before taken, attorneys said, in all the long history of the development of the prevailing system of distribution of the waters of the river among the states.

Eleven Governors of Western states were in conference at Albuquerque, N. M., when news of the Justice Department's assertion of the paramount claims of the Indians reached that region.

Gov. Howard Pyle of Arizona, according to officials here, told the Governors that the interests of his state would be vitally affected [illegible] of the executive adjudications division, and other high officials of the department. On the basis of the protests of the Western Governors as conveyed by Mr. Breitenstein, the brief was withdrawn.

Commitment Is Denied

Mr. Rankin has told attorneys representing Arizona and California that the Justice Department was under no commitment to amend the brief. He is said to have agreed, however, to re-examine the question with an eye to a possible stipulation that would clarify the extent of Indian rights as against those of the states involved.

A Justice Department spokesman said that a new brief would be filed. Conferences at the legal level were going on, he said. Whether or not there would be later conferences between Herbert Brownell Jr., the Attorney General, and some of the Governors who joined in the protest had not been determined.

Northcutt Ely, an Assistant Attorney General of California, who maintains offices here and handles the interests of that state in the Colorado River water controversy, said that what the Federal Government was doing was asserting a first mortgage on behalf of the Indians on water that already had been apportioned between the states under the Colorado River Compact to which Congress had given approval.

If the position taken by the Government should be maintained, and sustained by court decrees, Mr. Ely said, the interstate compact under which California had spent more than half a billion dollars to develop water projects would "be busted."

Arizona filed its suit on Aug. 28 against California and seven municipal or public corporations that have participated, under the laws of California, in the development of reclamation, electric power and other projects undertaken under the Colorado River Compact. In substance, Arizona asks the Supreme Court to declare it entitled to 3,280,000 acre feet of water and limit California to 4,400,000 acre feet. This would add 500,000 acre feet to what Arizona gets now and take away 500,000 acre feet from California.

An acre foot is sufficient water to fill a prism the size of an acre of land to a depth of one foot.

Arizona also raised the question of the validity of California's water delivery contracts under laws passed by the California Legislature.

The story of the fight over the river traverses a semi-arid region containing about 240,000 square miles. It finds the sea in the Gulf of California, seventy-five miles below the border between the United States and Mexico.

Canyon Separates Lands

The lands to which water of the river may be beneficially applied are separated by nearly 1,000 miles of canyon, and the states above this canyon are in what is known as the upper basin; those below it in the lower basin. The dividing line is at Lee Ferry, twenty-three miles below the Utah-Arizona border.

More than fifty years ago it was discovered that the claims of rights to use water in the lower basin exceeded the amount of water available. So there might be an equitable distribution of the available water, the Colorado River Compact was signed in November, 1922, by California, Arizona, Colorado, Nevada, New Mexico, Utah and Wyoming.

The compact became effective June 25, 1929, by act of Congress [illegible] basin an equal amount. It was provided, however, that the lower basin had the right to increase its beneficial consumptive use of water by 1,000,000 acre feet annually.

Right t oWater Limited

When Congress passed the Boulder Canyon Project Act, it required California to adopt a state law limiting its right to water delivery from the Colorado to the number of acre feet specified in the compact, Arizona contends that this means the 4,400,000 acre feet that constituted the basic allottment made under the lower basin compact and does not apply to the 1,000,000 additional acre feet the lower basin received the right to use annually.

Arizona, which is the only other state in the lower basin, declares that all of the 1,000,000 acre feet should be given to her.

The Indians come into the picture under a clause in the Colorado Compact that says:

"Nothing in this compact shall be constituted as affecting the ob- [illegible] 1,141,000 acre feet.

This presents a two-fold problem, according to Mr. Ely. The first is whether the Indians have a priority to take whatever water they want whether they fell like it. The second is whether the water claimed by the Indians is to come out of the amounts allotted to the lower basin or whether the Indians can just take their share in as they want it and let Arizona and California divide what is left.

California Position Outlined

The position taken by the Justice Department in its brief is that the Indians have priority to take what water they want when they want it, regardless of the share of the states.

California contends that the Indians must share, the same as white citizens, in the total allotment of the lower basin. Under this interpretation, Arizona, which has more Indians and more reservations than California, would have to give up more water to Indian uses than would its sister state.

California, according to Mr. Ely, [illegible] going on.

The United States should be a party in interest to the Arizona-California litigation, Mr. Ely asserts, because of its responsibility to the Indians, its vast expenditures in constructing Boulder Dam, which impounds the waters allotted to the states, and other works necessary to the operation of the project.

The Supreme Court was correct, Mr. Ely asserted, in allowing the Justice Department to intervene in the Arizona-California suit, but the Justice Department was wrong in asserting that the rights of the Indians were "prior and superior" to the water-delivery rights of other citizens under the Colorado compact.

Britain Has 82,000 Pubs

LONDON, Nov. 15 (AP)—The Government's "annual abstract of statistics," published today, says this country has 82,000 pubs. Last year these pubs sold about nine gallons of beer per head to the 50,000,000 population.

STATE OF ARIZONA, COMPLAINANT

v.

STATE OF CALIFORNIA; PALO VERDE IRRIGATION DISTRICT; IMPERIAL IRRIGATION DISTRICT; COACHELLA VALLEY COUNTY WATER DISTRICT; METROPOLITAN WATER DISTRICT OF SOUTHERN CALIFORNIA; CITY OF LOS ANGELES, CALIFORNIA; CITY OF SAN DIEGO, CALIFORNIA; AND COUNTY OF SAN DIEGO, CALIFORNIA, DEFENDANTS

UNITED STATES OF AMERICA, INTERVENOR

RESPONSE BY UNITED STATES OF AMERICA, INTERVENOR, TO MOTION FOR LEAVE TO FILE REPRESENTATION OF INTEREST AND REPRESENTATION OF INTEREST BY THE COLORADO RIVER INDIAN TRIBES OF THE COLORADO RIVER INDIAN RESERVATION, ARIZONA AND CALIFORNIA; GILA RIVER PIMA-MARICOPA INDIAN COMMUNITY, ARIZONA; HUALAPAI INDIAN TRIBE OF THE HUALAPAI RESERVATION, ARIZONA; NAVAJO TRIBE OF INDIANS OF THE NAVAJO RESERVATION, ARIZONA AND NEW MEXICO; SALT RIVER PIMA-MARICOPA INDIAN COMMUNITY OF THE SALT RIVER RESERVATION, ARIZONA; THE SAN CARLOS APACHE TRIBE, ARIZONA; AND THE FORT McDOWELL MOHAVE-APACHE INDIAN COMMUNITY OF THE FORT McDOWELL RESERVATION, ARIZONA[1]

I

The United States is authorized by law and committed by tradition to represent the Indians and In-

[1] The untimeliness of the "Motion for Leave to File * * *" is apparent from the fact that it has been presented more than 2½ years after the filing of the Petition of Intervention by the United States and well after the commencement of the trial before the Special Master.

dian tribes in litigation affecting their property rights. Such representation is an established aspect of the plenary power to manage the affairs of Indians assumed by Congress and approved by the Courts under several constitutional provisions.[2] *Worcester* v. *Georgia,* 6 Pet. 515; *United States* v. *Kagama,* 118 U. S. 375; *United States* v. *Ramsey,* 271 U. S. 467. "The power existing in Congress to administer upon and guard the tribal property, and the power being political and administrative in its nature, the manner of its exercise is a question within the province of the legislative branch to determine, and is not one for the courts." *Cherokee Nation* v. *Hitchcock,* 187 U. S. 294, 308; *Lone Wolf* v. *Hitchcock,* 187 U. S. 553, 565; *Tiger* v. *Western Investment Co.,* 221 U. S. 286, 311.

Congress has generally delegated to the Secretary of the Interior the management of Indian property and to the Attorney General the conduct of litigation affecting that property. Thus, as to the authority of the Secretary of the Interior, it was said in *United States* v. *Anglin & Stevenson,* 145 F. 2d 622, 628–629 (C. A. 10), certiorari denied, 324 U. S. 844:

---

[2] The Constitution grants to Congress authority over commerce with Indian tribes (Art. 1, sec. 8, cl. 3), expenditures for the general welfare (Art. 1, sec. 8, cl. 1), property of the United States (Art 4, sec. 3, cl. 2), treaties (Art. 2, sec. 2, cl. 2), the waging of war (Art. 1, sec. 8, cl. 11) and the admission of new states and the terms of such admission (Art. 4, sec. 3, cl. 1). The power of Congress extends from the control of the use of the lands (e. g., grazing, Act of June 18, 1934, sec. 6, 48 Stat. 984, 986, 25 U. S. C. 466), through the grant of adverse interests in the lands (*Nadeau* v. *Union Pacific R. R. Co.*, 253 U. S. 442), to the sale and removal of the Indians' interests (*Lone Wolf* v. *Hitchcock*, 187 U. S. 553).

> We do not forget that historically and traditionally the Secretary of the Interior has been selected as the executive arm of the Government to execute the declared Congressional policy with the Indians. As such, he and his subordinates have the responsibility of discharging the obligation of the Government to its Indian wards, and in that respect, he is given wide discretionary powers to deal with the individual Indians who are dependent upon the Government for tutelage and protection. [Cases omitted.] In the discharge of these duties, he acts as supervisor, agent, guardian, and trustee of the Indian and his property, whether in the nature of lands or restricted funds. While exercising the powers and duties imposed by law, he is clothed with sovereign immunity, and ordinarily is not amenable to judicial processes or bound by judicial decrees absent legislative consent. * * * It is not the judicial function to administer the affairs of incompetent Indians, and courts should be at pains not to invade the trust or encroach upon the prerogative which has been traditionally assigned to the Secretary.

The authority of the Attorney General to control litigation affecting Indian property is equally broad. This is, of course, necessary in order to effectuate the foregoing responsibility of the Secretary of the Interior. It is provided in 28 U. S. C. 507 (b) that "The Attorney General shall have supervision over all litigation to which the United States or any agency thereof is a party * * *."[3] That means that "the

[3] "In all States and Territories where there are reservations or allotted Indians the United States district attorney shall repre-

full responsibility and control are imposed directly upon him as the head of the Department of Justice." *United States* v. *Winston,* 170 U. S. 522, 525. "If the United States is entitled to institute an action on its own behalf and on behalf of the Indians, the Indians cannot determine the course of the suit or settle it contrary to the position of the Government." Cohen, *Handbook of Federal Indian Law* (1942), p. 370; *Conner* v. *Cornell,* 32 F. 2d 581, 584–585 (C. A. 8); *McGugin* v. *United States,* 109 F. 2d 94 (C. A. 10); *White* v. *Sinclair Prairie Oil Co.,* 139 F. 2d 103, 106–107 (C. A. 10); *United States* v. *Adamic,* 54 F. Supp. 221, 223 (W. D. N. Y.)

This Court announced the complete control of the United States over Indian litigation in *Heckman* v. *United States,* 224 U. S. 413, wherein the United States sued to set aside conveyances of allotted lands by restricted Indians, as follows (pp. 444–446):

> It is further urged that there is a defect of parties, on account of the absence of the Indian grantors. It is said that they are the owners of the lands and hence sustain such a relation to the controversy that final decree cannot be made without affecting their interest. *Shields* v. *Barrow,* 17 How. 130, 139; *Williams* v. *Bankhead,* 19 Wall. 563.

---

sent them in all suits at law and in equity." Act of March 3, 1893, 27 Stat. 631, 25 U. S. C. 175. See also Act of June 22, 1870, 16 Stat. 164, as amended September 3, 1954, 68 Stat. 1229, 5 U. S. C. 306; Executive Order No. 6166 of June 10, 1933 (Reorganization of Executive Agencies), Section 5, 5 U. S. C. following Section 132; Reorganization Plan No. 2 of May 14, 1950, 64 Stat. 1261, as amended July 5, 1952, 66 Stat. 121, 5 U. S. C. following Section 291.

The argument necessarily proceeds upon the assumption that the representation of these Indians by the United States is of an incomplete or inadequate character; that although the United States, by virtue of the guardianship it has retained, is prosecuting this suit for the purpose of enforcing the restrictions Congress has imposed, and of thus securing possession to the Indians, their presence as parties to the suit is essential to their protection. This position is wholly untenable. There can be no more complete representation than that on the part of the United States in acting on behalf of these dependents—whom Congress, with respect to the restricted lands, has not yet released from tutelage. Its efficacy does not depend upon the Indian's acquiescence. It does not rest upon convention, nor is it circumscribed by rules which govern private relations. It is a representation which traces its source to the plenary control of Congress in legislating for the protection of the Indians under its care, and it recognizes no limitations that are inconsistent with the discharge of the national duty.

When the United States instituted this suit, it undertook to represent, and did represent, the Indian grantors whose conveyances it sought to cancel. It was not necessary to make these grantors parties, for the Government was in court on their behalf. Their presence as parties could not add to, or detract from, the effect of the proceedings to determine the violation of the restrictions and the consequent invalidity of the conveyances. As by the act of Congress they were precluded from alienating

> their lands, they were likewise precluded from taking any position in the legal proceedings instituted by the Government to enforce the restrictions which would render such proceedings ineffectual or give support to the prohibited acts. The cause could not be dismissed upon their consent; they could not compromise it; nor could they assume any attitude with respect to their interest which would derogate from its complete representation by the United States.
>
> * * * * *
>
> And when the United States itself undertakes to represent the allottees of lands under restriction and brings suit to cancel prohibited transfers, such action necessarily precludes the prosecution by the allottees of any other suit for a similar purpose relating to the same property.

The United States, acting through the Attorney General, "may in cases brought by restricted Indians, when it is served with notice, enter its appearance and take over the general management of the case without consulting such Indians * * *." *Sadler* v. *Public National Bank & Trust Co. of New York,* 172 F. 2d 870, 874 (C. A. 10); *Mars* v. *McDougal,* 40 F. 2d 247 (C. A. 10), certiorari denied, 282 U. S. 850. In *Pueblo of Picuris in State of New Mexico* v. *Abeyta,* 50 F. 2d 12 (C. A. 10), the Indians sought to present contentions of their own in litigation instituted by the United States to quiet title to land in their behalf. The court refused to permit this, stating (p. 14):

> The statutory power of the United States to initiate actions for the Pueblo Indians necessarily involves the power to control such litigation. If the private attorneys of the pueblo could dictate the averments of the bill, or could prevail in questions of judgment in the introduction of evidence, there would be no substance to the guardianship of the United States over the Indians. There cannot be a divided authority in the conduct of litigation; divided authority results in hopeless confusion.

It is plain, therefore, that the United States has full and exclusive authority to control the presentation of the Indians' interests in the instant case. The Attorney General, acting for the United States, has undertaken to present those interests. It "is to be presumed" that "the United States will be governed by such considerations of justice as will control a Christian people in their treatment of an ignorant and dependent race." *Missouri, Kansas & Texas Ry. Co.* v. *Roberts,* 152 U. S. 114, 117.[4]

Thus the granting of movants' request for "separate and independent counsel" would require that the Attorney General abdicate the responsibility clearly

[4] There is no substance to the intimations by the movants (pp. 7–9, 10) that the Attorney General will not fully protect their rights. The amendment of the petition of intervention was not "unauthorized", as alleged. Rule 9 of this Court provides that the Federal Rules of Civil Procedure are applicable as a guide in original actions. Rule 15 (a), F. R. C. P., allows a party to "amend his pleading once as a matter of course at any time before a responsive pleading is served." The phrasing of the petition and the request to proceed last at the trial are no indication of an intention not to protect fully the rights of the Indians.

laid upon him by law and tradition to represent the Indians in litigation affecting their property rights.

II

But there is another compelling reason why the movants' request cannot be granted. For the Indians to present their own case (or cases) at the trial by "separate and independent" counsel would not only result in unseemly confusion and conflict[5] but would require the legislative consent of the States of Arizona and California, because the sovereign immunity of states extends against Indian tribes. *Cherokee Nation* v. *Georgia,* 5 Pet. 1; *Lane* v. *Pueblo of Santa Rosa,* 249 U. S. 110. Movants themselves admit this, in effect, by their statement that "There is doubt as to whether petitioners may intervene as

[5] The motion does not and cannot establish that movants are *all* the Indians whose rights may be affected by this litigation. Only the Attorney General can represent *all* Indian rights. Additionally, no basis is either suggested or imaginable upon which the Master could, without extensive testimony, determine (as prayed) "whether a conflict exists between the Indian interest and the interests of the United States apart from those of the Indians." Indeed, it is quite likely that there may be, in some respects, conflicts between the movants themselves. It is by no means unusual for the Attorney General to represent possibly conflicting interests. This is inherent in the very nature of much Government litigation. Thus, within a particular case, the position of the Bureau of Reclamation of the Department of the Interior may be in actual or apparent conflict with the Forest Service of the Department of Agriculture, or with the obligations of the United States under an international treaty, or with the Corps of Engineers of the Department of the Army. But it is essential to orderly government and judicial procedure that there shall be one and only one law officer—the Attorney General—representing, in ultimate responsibility, all the interests of the United States in all of their various and relative aspects.

separate parties. * * *'" Accordingly, in the face of this clear legal obstacle to the consideration of movants' request, the Attorney General has no choice, as a matter of law, but to continue upon the course already taken. The responsibilities of his office compel him to supervise and control the presentation of all interests of the United States in this litigation. These responsibilities he has properly undertaken to discharge pursuant to the petition of intervention by the United States.

CONCLUSION

For the reasons stated, the terms of reference to the Master should not be expanded to comply with the prayer of the movants and the motion should be denied.

Respectfully submitted,

HERBERT BROWNELL, Jr.
Attorney General.

PART ONE

I. Introductory Statement of the Case

The record of this action is another chapter in the long history of controversy relating to the Colorado River. Suit was initiated by Arizona on August 13, 1952, by filing a motion for leave to file a bill of complaint against the State of California and seven public agencies of the State.[1] On January 19, 1953, the motion, unopposed, was granted.[2]

The complaint invoked the original jurisdiction of the Court under Article III, Section 2, Clause 2 of the Constitution. It alleged that pursuant to the Colorado River Compact[3] and the Boulder Canyon Project Act[4] Arizona was entitled annually to a certain quantity of water from the Colorado River System. It further alleged that various claims asserted by the defendants adversely affected the rights asserted by Arizona and that unless and until such rights were confirmed various existing projects in Arizona could not be operated at present levels and prospective projects could not be financed and constructed. Arizona requested, *inter alia,* that her title to the annual beneficial consumptive use of 3,800,000 acre-feet[5] of water of the Colorado River System be forever confirmed, that title of the State of California to the annual beneficial consumptive use of Colorado River System water be forever fixed at and

[5]An acre-foot of water is water sufficient to cover an acre of land to a depth of one foot. It is approximately 325,850 gallons. Ariz. Ex. 1000, p. 17 (Pre-Trial Order).

limited to 4,400,000 acre-feet, and that the defendants be forever enjoined from asserting claims inconsistent with Arizona's title so confirmed.

California answered, denying some of the allegations, and pleading several affirmative defenses. The United States, pursuant to leave granted, intervened.[5a] Nevada too obtained leave to intervene.[6]

After pleadings were exchanged among the parties, the Court, on June 1, 1954, appointed George I. Haight, Esq., of Chicago, Illinois, as Special Master. The Order directed him to find the facts specially and state separately his conclusions of law thereon, and to submit them to the Court together with a draft of a recommended decree.[7]

Thereafter, California moved to have Colorado, New Mexico, Utah and Wyoming joined as necessary parties. The Court, following receipt of a report from the Special Master pursuant to a reference,[8] denied the motion to join Colorado and Wyoming and granted the motion to join Utah and New Mexico only to the extent of their capacity as Lower Basin states.[9]

Thereupon, Utah filed a pleading called a "Complaint and Answer" and New Mexico filed an "Appearance and Statement." The last pleading herein was filed by Nevada on March 19, 1956. On August 13, 1958, Arizona offered amended pleadings. A detailed catalogue of all the pleadings and preliminary motions is set forth in Appendix 1.

On October 10, 1955, the undersigned was appointed Special Master *vice* George I. Haight, deceased, with instructions to proceed under the original order of reference.[10]

After pre-trial conferences a pre-trial order was entered by the Special Master, on the stipulation and consent of all

[10] 350 U. S. 812 (1955).

the parties, which regulated the proceedings in several particulars. On June 14, 1956, in the United States Courthouse at San Francisco, California, the trial was begun.

In the course thereof, 106 witnesses were heard. The transcript of their testimony occupies about 22,500 pages. Thousands of exhibits were received in evidence. In addition, during a recess, depositions were taken at Silver City, New Mexico and at Reserve, New Mexico, at which 234 witnesses were heard. The deposition transcripts consist of 3,742 pages.

The trial was concluded on August 28, 1958. Thereafter, briefs, reply briefs and rebuttal briefs were exchanged among the parties, together with proposed findings of fact and conclusions of law.[11] On July 1, 1959, the matter was finally submitted for consideration.

As the action progressed it became clear that the pleadings were of little use in formulating the issues to be tried. Seeking to define the controversies among the parties more sharply, I requested them to file Statements of Position to clarify their respective contentions. While these were of some assistance, it is fair to say that many of the issues for decision did not emerge until final briefs were submitted.

On May 5, 1960, a Draft Report was circulated among the parties pursuant to the pre-trial order. All of the parties except Utah submitted comments on the Draft Report,[11a] and some replies to these comments were received. On motion by California, three days of oral argument were held in New York City on the Draft Report and the recommended decree. California also made several motions to

---

[11]Proposed findings and conclusions and brief materials were received as follows: from Arizona 426 pages; California 2,179 pages; Nevada 394 pages; New Mexico 356 pages; United States 471 pages; Utah 36 pages—a total of 3,862 pages.

[11a]Comments on the Draft Report were received as follows: from Arizona 26 pages; California 144 pages; Nevada 26 pages; New Mexico 41 pages; United States 18 pages; Metropolitan Water District 17 pages—a total of 272 pages.

re-open the trial and take additional evidence; these motions have been denied. New Mexico moved to re-open the trial and take additional evidence on the present use of water from the Gila River System; this motion has since become moot.

As ultimately submitted, the action really presents a number of different but related controversies among the parties. First, there is the mainstream controversy, involving as parties Arizona, California and Nevada. Arizona claims the right to use 2.8 million acre-feet of water in the Colorado River plus half of "surplus." This claim is based on what Arizona conceives to be a mandatory division of water made by Congress in the second paragraph of Section 4(a) of the Boulder Canyon Project Act. Existing projects in Arizona consume somewhat less than half of this amount of water. Arizona expects to use most of the presently uncommitted water which she claims for a new project, called the Central Arizona Project, to provide water for irrigation in a large portion of central Arizona.

California, on the other hand, claims that existing mainstream projects exhaust the safe annual yield (*i.e.*, the dependable supply) of water in the Colorado River and that, accordingly, there is no supply available for new projects in Arizona.

California argues for an allocation to Arizona of approximately 3 million acre-feet of water from all sources in the Lower Basin, both mainstream and tributaries. Under California's method of system-wide accounting, Arizona's share of the total Lower Basin apportionment would be in large part exhausted by her uses on the Gila River System, and California would be free to use most of the water available in the mainstream.

Perhaps the most crucial issue in the case arises from these conflicting views, an issue that is summarized by this

question: Is the application of the Project Act limited to the mainstream of the Colorado River or does it apply to the entire River System in the Lower Basin, that is to both mainstream and tributaries? Other important questions are at issue between the two states, such as the interpretation, operative effect and validity of several sections of the Colorado River Compact, the Boulder Canyon Project Act and the water delivery contract between the United States and Arizona. At issue also is the effectiveness of Arizona's purported ratification of the Compact and the applicability of principles such as priority of appropriation and equitable apportionment.

Nevada, the other state which utilizes water from the mainstream, takes still a third approach. She does not regard the Project Act or the water delivery contracts made by the Secretary of the Interior as controlling rights to water. Rather, she views this action as a traditional suit for an equitable apportionment, in which she claims the right to approximately 500,000 acre-feet of water, based on needs projected to the year 2000.

A second major controversy involves claims to tributary water by the states in which diversions from the tributaries occur. The important tributaries involved in this controversy are:

(1) The Gila River System, over which New Mexico and Arizona are in conflict;

(2) The Little Colorado River System, contested by the same two states; and

(3) The Virgin River System, the waters of which are claimed by Utah, Arizona and Nevada.

As to all three stream systems, the upstream states pray for "confirmation" of existing uses and an apportionment of water to be reserved for future uses.

PART ONE

Another major controversy involves a dispute between mainstream and tributary states over water in the tributaries. The genesis of the conflict lies, of course, in the fact that uses on the tributaries diminish the mainstream supply.

Superimposed on all of these interstate controversies are the claims of the United States as against all of the states. The United States claims power to regulate and control the uses of Colorado River water pursuant to the Project Act and by reason of its ownership and control of Hoover Dam and the mainstream works below. The United States also claims that it has reserved the use of water for the benefit of some 25 Indian Reservations and dozens of other federal establishments located throughout the 132,000 square miles of the Lower Basin.

This summary description of the various controversies involved in this case indicates that the action is far from being the traditional equitable apportionment suit in which the Court is called upon to apportion water in a single river among two or three states. Nor is it comparable to other interstate litigation in the original jurisdiction that presents for decision a single, relatively narrow issue, such as the proper location of a boundary.[12] On the contrary, this action is a complex of interstate lawsuits, the resolution of which depends upon the interpretation and application of the Federal Constitution, treaties, statutes, contracts and decisional law, as well as a variety of state law. Its determination will inevitably have a profound effect upon a great and rapidly developing territory, considerably larger in area and population than many nations, and containing political subdivisions therein as diverse and distant as Phoenix and Los Angeles or Las Vegas and the Imperial Valley.

[12] In passing, it might be noticed that two of the minor issues in this case are raised by boundary disputes.

II. Prior Litigation

The present case is the fifth interstate suit affecting the Colorado River, although it is the first in which evidence has been taken. The four prior suits were as follows:

(1) On October 13, 1930, Arizona instituted an action against the Secretary of the Interior and the States of California, Colorado, Nevada, New Mexico, Utah and Wyoming to enjoin construction of Hoover Dam and the All-American Canal as well as to enjoin performance of contracts for the delivery of stored water. In addition, the bill of complaint sought to have the Boulder Canyon Project Act and the Colorado River Compact declared unconstitutional. The Court, per Mr. Justice Brandeis, held, *inter alia,* that the Compact and Project Act were constitutional, that the River is a navigable stream and that the Secretary could construct the dam authorized by Section 1 of the Project Act. The bill was dismissed without prejudice to a future action for relief in the event that the dam was so operated as to interfere with Arizona's rights.[13]

(2) On February 14, 1934, Arizona moved for leave to file a bill to perpetuate the testimony of the negotiators of the Colorado River Compact. The parties named were the other six states of the Colorado River Basin, the California public agencies which are defendants in the present action and the Secretary of the Interior. A unanimous Court, speaking through Mr. Justice Brandeis, denied the application.[14] One of the alternate grounds for decision was the incompetence of the evidence sought to be perpetuated. It was held that oral statements of negotiators of a treaty or compact not communicated to the ratifying body were not admissible to establish meaning.[15]

[14]Arizona v. California, 292 U. S. 341 (1934).
[15]292 U. S., at 359-360.

(3) On January 14, 1935, the United States sued to enjoin Arizona's interference with construction of Parker Dam, Arizona having threatened to use military force to prevent work on the dam. The Court, per Mr. Justice Butler, dismissed the complaint on the ground that there was no showing that the Secretary of the Interior was authorized to construct the dam.[16] Subsequently, Congress, by Act of August 30, 1935, specifically authorized erection of Parker Dam for the purpose, *inter alia*, of improving navigation.[17]

(4) In November 1935, Arizona filed a petition for leave to file a bill of complaint against California, Colorado, Nevada, New Mexico, Utah and Wyoming praying for a judicial apportionment of the unappropriated water of the Colorado River. The Court, per Mr. Justice Stone, denied the petition on the ground that the United States was an indispensable party.[18] Specifically left undecided was the question whether an equitable division of the unappropriated water of the River could be decreed in a suit in which the United States was a party.[19]

III. Geography of the Colorado River Basin

The Colorado River is a stream of continental proportions. From its headwaters in the high peaks of north central Colorado to its mouth in the Gulf of California it runs a course of approximately 1,300 miles. During its journey to the sea it travels within or on the boundaries of five states and one foreign nation, as follows: through western Colorado, 245 miles; across Utah, 285 miles; through Arizona, 295 miles; on the Arizona-Nevada boundary, 145 miles; on the Arizona-California boundary, 235 miles; on the Arizona-Mexico boundary, 16-20 miles; and within Mexico, 75 miles.[20]

Within the United States the River System drains an area of 242,000 square miles or one-twelfth of the continental United States exclusive of Alaska. This drainage basin is approximately 900 miles long and varies in width from about 300 miles in the northerly section to about 500 miles in the southerly section. It is bounded on the north and east by the Continental Divide, on the west by the Wasatch Range and other divides, and by minor divides on the south and southwest. Within this drainage basin are portions of Wyoming, Colorado, Utah, New Mexico, Arizona, Nevada and California.[21]

The following table shows the relationship of each of these states to the Basin.[22]

---

[20] Ariz. Ex. 1000, p. 9.
[21] Ariz. Ex. 1000, p. 7.
[22] Ariz. Ex. 1000, p. 8.

State	State's Total Square Miles	Square Miles Within Drainage Basin	Per cent of State's Total Area in Drainage Basin	Per cent of Drainage Basin in State	State's Square Miles in Lower Basin Drainage Area	Per cent of State's Total Area in Lower Basin Drainage Area	Per cent of Lower Basin Drainage Area in State
Arizona	113,909	107,242	94.1	44.3	100,306	88.5	75.8
California	158,693	3,599	2.3	1.5	3,599	2.3	2.7
Nevada	110,540	13,922	12.6	5.8	13,922	12.6	10.5
New Mexico	121,666	20,538	16.9	8.5	10,892	9.0	8.2
Utah	84,916	40,824	48.1	16.9	3,659	4.3	2.8
Colorado	104,247	38,501	36.9	15.9	none	none	none
Wyoming	97,914	17,210	17.6	7.1	none	none	none

Major tributary systems exist in every Basin state except California. The most important of these systems are: the Green in Utah, Colorado and Wyoming; the Gunnison in Colorado; the Dolores in Colorado and Utah; the San Juan in Utah, Colorado, New Mexico and Arizona; Johnson and Kanab Creeks in Utah and Arizona; the Little Colorado in Arizona and New Mexico; the Bill Williams in Arizona; the Gila in Arizona and New Mexico; and the Virgin in Nevada, Utah and Arizona. Of these, Johnson and Kanab Creeks, the Little Colorado, the Bill Williams, the Gila and the Virgin are within the Lower Basin of the Colorado River.[23] The Little Colorado River, which drains 26,930 square miles, Kanab Creek, which drains 2,200 square miles, and the Virgin River, which drains 11,000 square miles, all flow into the main Colorado River above Hoover Dam.[24] Both the Bill Williams, which drains 5,400 square miles, and the Gila, which drains 57,800 square miles, flow into the River below Hoover Dam.[25]

A canyon section, approximately 1,000 miles long in southern Utah and northern Arizona permits a convenient division of the Basin into two parts, an Upper Basin and a Lower Basin. The Colorado River Compact defines the Upper Basin as the parts of the Basin "within and from which waters naturally drain into the Colorado River System above Lee Ferry," and the Lower Basin as that part of the Basin "within and from which waters naturally drain into the Colorado River System below Lee Ferry." Lee Ferry is defined as a point on the mainstream of the Colorado River one mile below the mouth of the Paria River.[26]

[23]Ariz. Ex. 1000, p. 9.
[24]Ariz. Ex. 1000, p. 11.
[25]Ariz. Ex. 1000, pp. 11-12.
[26]Colorado River Compact, Art. II.

The Upper Basin is comprised largely of the Great Colorado Plateau, a region of high elevations, high mountains and narrow valleys.[27] The Lower Basin is comprised primarily of basin and range province, a region of lower elevations, containing a series of northwest trending mountain ranges, intervening basins and desert.[28] The natural geographic dividing line between the plateau province and the basin and range province is the Mogollon Rim, a series of escarpments running from the head of Lake Mead in an easterly direction to the Continental Divide.[29] Lee Ferry is located in an area where the great cliffs of the upper plateau begin to spread out and where erosion from the Paria River has tended to level the topography.[30] From Lee Ferry to Hoover Dam, the Lower Basin is characterized by canyons, cliffs and deep gorges cut by the River. From Hoover Dam south, elevations decline, and the River runs into desert areas. On the west side of the River, the terrain remains rough and a chain of rocky desert mountains extends from the Dam to the international border.[31] Intermittent flat areas occur, suitable for habitation and agriculture.[32] One of these is the Palo Verde Valley,[33] which is 30 miles long and 5 to 8 miles wide, and in which is located the defendant Palo Verde Irrigation District.[34] On the east side of the River lies the basin and range province, the basins or valleys of which are suitable for habitation and agriculture if water is available.

West of the River and north of the international boundary, in the State of California, lies the Salton Basin. The

drainage area of this great basin is 7,500 square miles, 1,000 of which are in Mexico.[35] While not part of the natural drainage area of the Colorado River, this basin is proximate thereto and parts of it are irrigated therefrom. The Salton Basin is a great saucer-like depression with elevations near sea level at its outer rim and dropping below sea level towards the center.[36] The low point of the Basin is 273½ feet below sea level,[37] and the lowest portion of the Basin, now filled with water, is called the Salton Sea.[38] In 1956 the water level in the Sea was approximately 234 feet below sea level.[39] The Salton Basin is separated on the east from the Colorado River and Basin by a chain of desert mountains and sand hills running to the international border. The southernmost range is called the Chocolate Mountains. Within the Salton Basin, the natural drainage is into the Salton Sea.[40]

In both the Lower and Upper Basins, because of the prevailing arid and semi-arid conditions, most kinds of agriculture can be successfully practiced only by means of irrigation.[41] However, there are significant geographical and climatic contrasts between the two Basins. Above the canyon section the Colorado River Basin lies at relatively high elevations in contrast to the comparatively low elevations below the canyon section. Thus, in the Upper Basin the growing season is relatively short, 90-120 days; in the Lower Basin the growing season is much longer, lasting in many places throughout the year.[42] The extreme aridity of climate and the long growing season in the Lower Basin

make the annual water consumption per irrigated acre relatively high. Throughout the Basin, considerable quantities of water are lost by evaporation and transpiration but these losses are greater in the Lower Basin than in the Upper.[43]

The geology of portions of the Lower Basin may be briefly described. Within the range and basin province are found groundwater basins, which are merely valleys between the ranges of mountains. Over a period of time these valleys, which are rock-walled and rock-bottomed, were filled with alluvial fill washed in from surrounding mountains and carried in by streams. The alluvium formed strata capable of holding water. Most of the basins were subject to downfaulting so that one end of the basin is lower than the other. Underground water therefore flows from the upper end to the lower end, and out of the basin, except in the case of closed basins in which the lower end is sealed off. Some water remains in the strata in the upper end of basins, held there between sand grains by capillary attraction, and water is added by recharge. The quality of the ground water in various basins differs materially.[44]

[43]Ariz. Ex. 1000, p. 15.
[44]Tr. 1216-1222 (Turner).

IV. History of the Colorado River

In large portions of the Lower Basin true desert conditions prevail and, without the resources of the Colorado River System, human life could not be maintained in these areas. Certainly settled habitation would become impossible. There is archaeological evidence that some 2,000 years ago irrigation canals were built and maintained by the ancient Hohokam tribe in the Salt River Valley in the vicinity of present-day Phoenix, Arizona. Indians practiced irrigation in this vicinity before and during the period of exploration of this region of the southwest by white men.[45]

The region of California in which large scale use of the Colorado River for irrigation purposes was first made was the Imperial Valley, located in the Salton Basin, just west of the Colorado River at the international boundary, and outside the natural drainage basin of the River. In 1876 the Bergland Survey was made to ascertain the feasibility of irrigating the Valley by diversions from the Colorado River.[46] Water was first brought into the valley by the California Development Company [hereinafter C. D. C.], a New Jersey corporation formed in 1896 by C. R. Rockwood and his associates.[47] Because it was found that a canal would have to traverse Mexican territory in order to irrigate the Valley with River water, *La Sociedad de Irrigacion y Terrenos de la Baja California, S. A.* [hereinafter *La Sociedad*], a Mexican corporation, was formed to hold title to the land, canal and works in Mexico. The stock of *La Sociedad* was held by the directors of C. D. C.[48] 1901 saw

the first Colorado River water brought to the Imperial Valley.[49]

Today it is perfectly clear that the viability of numerous communities in the Lower Basin is conditioned on and limited by the availability of Colorado River System waters.

It is thus manifest that in the Lower Basin the water of the Colorado River System is "more than an amenity"; it is more than a "treasure."[50] It is indispensable to life; no substitute for it has yet been invented or envisaged. Even under ordinary circumstances it is natural that grave conflicts should develop over the rationing of such a precious supply. But the circumstances of the past quarter century have not been ordinary. They were such as to intensify the competition for water by every class of demand. The southwest has witnessed an explosive growth of population and industry, accompanied by a sharp rise in every index of prosperity as the accompanying tables indicate.

POPULATION GROWTH[51]

State	1945	1955	Growth	Per Cent Gain
Arizona	594,000	980,000	386,000	65.0%
California	9,344,000	13,032,000	3,688,000	39.5%
Nevada	149,000	225,000	76,000	51.0%

GROWTH OF MANUFACTURING EMPLOYMENT[52]

GROWTH OF PERSONAL INCOME[54]

State	1945	1955	Growth	Per Cent Gain
Arizona	$ 654,000,000	$ 1,468,000,000	$ 814,000,000	124.5%
California	15,194,000,000	27,026,000,000	11,832,000,000	77.8%
Nevada	233,000,000	507,000,000	274,000,000	117.6%

GROWTH OF BANK DEPOSITS[55]

State	1945	1955	Growth	Per Cent Gain
Arizona	$ 372,721,000	$ 762,799,000	$ 390,078,000	104.7%
California	13,255,770,000	19,532,281,000	6,276,511,000	47.3%
Nevada	156,368,000	290,622,000	134,254,000	85.9%

It is universally recognized that this rapid development is pressing hard against the ceilings imposed by the availability of water from the Colorado River System.

This circumstance united with another to accentuate the intensity of the competition for this life-giving water. Since 1930 the Colorado River has been in drought. Whether this drought cycle has come to an end has been a subject of some debate. It is noteworthy that since 1922 estimates of the Colorado River's capacity have steadily been revised downward.[56]

[55]Source: Ariz. Ex. 134; Calif. Ex. 528.

[56]*Compare* Herbert Hoover's estimate that it would take 75 years before the Compact apportionment of 16,000,000 acre-feet would be fully appropriated (Special Master's Ex. No. 4, The Hoover Dam Documents, appendix 205, p. A32) *with* the following: (1) the Compact negotiators assumed a System supply of approximately 21 million acre-feet (*Id.*, at p. A36); (2) in Arizona v. California, 283 U. S. 423 (1931), the Arizona complaint indicated a total River supply of 18 million acre-feet; (3) in Arizona v. California, 298 U. S. 558 (1936), Arizona's complaint alleged an average annual undepleted flow at Imperial Dam of 16,840,000 acre-feet and further alleged that at that time 9,720,000 acre-feet were still unappropriated; and (4) in the present litigation, both Arizona and California have agreed that the average annual undepleted or virgin flow of the Colorado River at Lee Ferry is approximately 15,200,000 acre-feet. (Ariz. Ex. 366; Calif. Proposed Finding 5C:102)

A shrinking supply accompanied by an increasing demand have thus conspired to generate a very bitter law suit indeed.

A few brief remarks should now be made about the behavior of the River itself. It has not been well behaved. Its flows have been uneven and unpredictable, varying in historic times from a recorded flow measured at Lee Ferry of 4,396,400 acre-feet in 1934 to 22,003,000 acre-feet in 1907.[57] Before it was harnessed the River was given to violent floods causing great damage. It did not always stay on course.[58] Approximately 500 years ago most of the Salton Basin was filled with water from the Colorado River in one of its many breaks to the west. The body of water so formed was known as Lake Cahuilla. The River then broke east and emptied into the Gulf of California. Thus deprived of its source of replenishment Lake Cahuilla dried up, leaving great areas of silt deposit. At its largest the lake was 30 to 35 miles wide, 110 miles long, 300 feet deep and covered 1,400,000 acres.[59]

In 1905, following floods on the Colorado and Gila Rivers, the River again abandoned its bed and course to the Gulf of California and made its way swiftly over a steeper grade to the Salton Sink in Southern California threatening the whole Imperial Valley with destruction.[60] This disaster followed certain changes made in the diversion points of the C. D. C.[61] The break was closed temporarily in November, 1906, but in December the River broke loose again, causing additional flooding of the Valley.[62] Serious

damage to the Mexican canal and works was sustained. The western portion of the Imperial Valley was threatened with destruction. Through funds, equipment, labor and materials supplied by the Southern Pacific Railroad Company, whose tracks were in danger, the break was closed and the flow of the River re-diverted to the Gulf of California.[63] Remaining behind, in the Salton Basin, was the Salton Sea.

The C. D. C., in addition to becoming heavily indebted to the Southern Pacific as a result of the 1906 floods, was also obligated to the Title Insurance and Trust Company for money loaned in 1900 to finance construction of irrigation works and secured by a deed of trust on all C. D. C. property.[64] Moreover, the New Liverpool Salt Company, which in the late 1890's had established a salt works on the north end of the Salton Sink,[65] recovered a substantial judgment for the negligent destruction of its works.[66] Subsequently, the Mexican property of C. D. C. was sold at an execution sale pursuant to a judgment obtained by the Southern Pacific. The purchaser at the execution sale was *La Compania de Terrenos y Aquas de la Baja California, S. A.*, a Mexican corporation formed by the Railroad specifically for this purpose.[67] Thereafter, when the Title Insurance and Trust Company sought to foreclose its lien, the assets of C. D. C. were sold by the receiver, W. H. Holabird,[68] to the Southern Pacific and the claims of prior creditors were paid off.[69]

[69]Calif. Ex. 149.

In 1911 the Imperial Irrigation District was formed to acquire the assets formerly held by C. D. C. and in 1916 all such assets were purchased from the Southern Pacific, except Mexican agricultural lands.[70]

The River broke westward again in 1909. Over a period of years thereafter, a system of levees was erected within Mexico which was paid for by landowners in the Imperial Valley through the Imperial Irrigation District, and by the United States. Approximately six million dollars were spent.[71] A highly qualified witness expressed the opinion that if these efforts to control the River had not been made it would have broken permanently into the Salton Basin.[72]

In another respect was the River ill behaved. It carried vast quantities of silt, estimated as being proportionately 17 times that of the Mississippi River.[73] The silt was brought down from the highlands and deposited on the irrigated lands below, clogging canals and works.

Considering the vast drainage area, the supply of water brought down into the Lower Basin is less than might be expected. The loss of water is explained by the very high rate of evaporation and by heavy channel losses on both the mainstream and tributaries as these waters traverse the hot desert lands of the Lower Basin.[74]

The erratic flows of the River, its propensity to violent and destructive floods, its high silt content, the desire for a gravity canal located wholly on American soil to serve the Imperial Valley, and other factors brought about a realization that a reservoir with large storage capacity on the mainstream of the Colorado River would have sub-

stantial beneficial effects.[75] Congress thereupon passed the Kinkaid Act of May 18, 1920,[76] which directed the Secretary of the Interior to make a study of certain of the River's problems. The Fall-Davis Report,[77] submitted to Congress in February 1922, is a result of that legislation. Some of its relevant portions are recited in the footnote.[78]

---

[75]See Department of the Interior, Report of The All-American Canal Board 22-29 (July 22, 1919), Calif. Ex. 185.

[76]41 Stat. 600.

[77]Sen. Doc. 142, 67th Cong., 2d Sess. (1922), Ariz. Ex. 45.

[78]The Report opens with the following statement:

> "The control of the floods and development of the resources of the Colorado River are peculiarly national problems for several good reasons:
>
> 1. The Colorado River is international.
> 2. The stream and many of its tributaries are interstate.
> 3. It is a navigable river.
> 4. Its waters may be made to serve large areas of public lands naturally desert in character.
> 5. Its problems are of such magnitude as to be beyond the reach of other than national solution." Ariz. Ex. 45 p. 1.

The recommendations of the Report were as follows:

> "1. It is recommended that through suitable legislation the United States undertake the construction with Government funds of a high-line canal from Laguna dam to the Imperial Valley, to be reimbursed by the lands benefited.
>
> 2. It is recommended that the public lands that can be reclaimed by such works be reserved for settlement by ex-service men under conditions securing actual settlement and cultivation.
>
> 3. It is recommended that through suitable legislation the United States undertake the construction with Government funds of a reservoir at or near Boulder Canyon on the lower Colorado River to be reimbursed by the revenues from leasing the power privileges incident thereto.
>
> 4. It is recommended that any State interested in this development shall have the right at its election to contribute an equitable part of the cost of the construction of the reservoir and receive for its contribution a proportionate share of power at cost to be determined by the Secretary of the Interior.
>
> 5. It is recommended that the Secretary of the Interior be empowered after full hearing of all concerned to allot the vari-

Despite general recognition of the need for a storage reservoir to regulate and control the River there was a political obstacle in the path of such a project. The Upper Basin states, Colorado, New Mexico, Utah and Wyoming, were apprehensive that construction of storage facilities on the mainstream would permit a rapid expansion of irrigation and other uses in the Lower Basin and form the basis for claims of appropriative rights in the water, which would preclude its availability for the more slowly developing needs of the Upper Basin.[79] The doctrine of prior appropriation governed water rights at the time, as it does now, in all Basin states except California, and there it was, and is, significant.[80]

To relieve the apprehension of the Upper Basin, the affected states requested and the Congress passed the Act

---

ous applicants their due proportion of the power privileges and to allocate the cost and benefits of a high-line canal.

6. It is recommended that every development hereafter authorized to be undertaken on the Colorado River by Federal Government or otherwise be required in both construction and operation to give priority of right and use:

First. To river regulation and flood control.

Second. To use of storage water for irrigation.

Third. To development of power."

of August 19, 1921, whereby consent was given to the Basin states to negotiate and enter into a compact.[81] The text of that act appears in the footnote.[82] Its purpose was:

---

[81] 42 Stat. 171.

[82] "[Sec. 1. Preamble—Apportionment of waters—Federal representative to be appointed—Expenses—Approval.]—Whereas the Colorado River and its several tributaries rise within and flow through or form the boundaries between the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming; and

"Whereas the territory included within the drainage area of the said stream and its tributaries is largely arid and in small part irrigated, and the present and future development necessities and general welfare of each of said States and of the United States require the further use of the waters of said streams for irrigation and other beneficial purposes, and that future litigation and conflict respecting the use and distribution of said waters should be avoided and settled by compact between said States; and

"Whereas the said States, by appropriate legislation, have authorized the governors thereof to appoint commissioners to represent said States for the purpose of entering into a compact or agreement between said States respecting the future utilization and disposition of the waters of the Colorado River and of the streams tributary thereto; and

"Whereas the governors of said several States have named and appointed their respective commissioners for the purposes aforesaid, and have presented their resolution to the President of the United States requesting the appointment of a representative on behalf of the United States to participate in said negotiations and to represent the interests of the United States: Now, therefore,

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That consent of Congress is hereby given to the States of Arizona, California, Colorado, Nevada, New Mexico, Utah and Wyoming to negotiate and enter into a compact or agreement not later than January 1, 1923, providing for an equitable division and apportionment among said States of the water supply of the Colorado River and of the streams tributary thereto, upon condition that a suitable person, who shall be appointed by the President of the United States, shall participate in said negotiations, as the representative of and for the protection of the interests of the United States, and shall make report to Congress of the proceedings and of any compact or agreement entered into, and the sum of $10,000, or so much thereof as may be necessary, is hereby authorized to be appropriated to pay the salary and expenses of the representative of the United States appointed hereunder: *Provided,* That any such compact or agreement shall not be binding or obliga-

> "to permit the States of Arizona, California, Colorado, Nevada, New Mexico, Utah and Wyoming to enter into an agreement for the equitable division and apportionment of the water supply of the Colorado River. The necessity for this grows out of the possibility of conflict in the diversion and use of the waters of the Colorado River in the various States through which the river and its tributaries flow. Without an agreement between the States interested respecting the division and apportionment of the waters for irrigation purposes, conflicts as to the amount of water which may be diverted on the various portions of the river and its tributaries, without interference with diversion and use elsewhere, are certain to occur and to lead to expensive litigation, in the meanwhile holding up and preventing development. Most irrigation projects on the Colorado River and its tributaries involve large expenditures, and complete or even considerably further development cannot be had or secured without an agreement under which development can be carried on without conflict and litigation."[83]

Commissioners were duly appointed and on November 24, 1922, after extensive meetings, agreement was reached in Santa Fe, New Mexico, among the Compact commissioners representing the seven states of the Colorado River Basin. The representative of the United States, Mr. Herbert Hoover, signed the agreement to indicate his approval. The agreement so reached is the Colorado River Compact. It was promptly ratified by the legislatures of all the signatory states except Arizona.[84] In 1925 these six states

---

tory upon any of the parties thereto unless and until the same shall have been approved by the legislature of each of said States and by the Congress of the United States." (42 Stat. 171)

[83]H. R. Rep. No. 191, 67th Cong., 1st Sess. (1921).

[84]Special Master's Ex. No. 4, The Hoover Dam Documents, appendices 215-220, Ariz. Exs. 16, 18, 20, 22, 24.

waived the Compact requirement for seven-state approval and ratified the same to become effective upon approval by at least six of the states and consent of the United States.[85] Utah's 1925 act of ratification was repealed in 1927.[86]

By Section 13 of the Act of December 21, 1928,[87] commonly known as the Boulder Canyon Project Act, Congress gave its consent to the Colorado River Compact, waiving the Compact's requirement of seven-state approval, and provided that "this approval shall become effective when the State of California and at least five of the other states mentioned, shall have approved or may hereafter approve said Compact as aforesaid and shall consent to such waiver, as herein provided." Section 4(a) of the Act provides that the Act should not take effect and no authority should be exercised thereunder unless and until (1) all of the States of Arizona, California, Colorado, Nevada, New Mexico, Utah and Wyoming had ratified the Compact, or (2) if all of said states failed to ratify the Compact within six months from the passage of the Act, until the same should be ratified by six of such states, including California, and California should agree to certain limitations upon the aggregate annual consumptive use (diversions less returns to the River) of water of and from the Colorado River for use in the State of California.

Ratification by Arizona did not occur within the six-month period specified in Section 4(a) of the Project Act. By an act of March 4, 1929,[88] the State of California again waived the Compact's requirement of seven-state approval and provided that the Compact should become binding and

[86]Act of January 19, 1927 (Utah Laws 1927, p. 1).

[87]45 Stat. 1057.

[88]Special Master's Ex. No. 4, The Hoover Dam Documents, appendix 227, Ariz. Ex. 13.

obligatory upon the State of California when at least six of the signatory states should likewise have waived the requirement of seven-state approval and ratified the same without such approval and the United States should have consented thereto. By a separate act of the same date California agreed to the limitation upon aggregate annual consumptive use of Colorado River water for use in California required by Section 4(a) of the Project Act.[89]

By act of March 6, 1929, the State of Utah again waived the Compact's requirement of seven-state approval and agreed that the Compact should become binding upon Utah upon approval by at least six of the states and consent by the United States.[90]

Six states, including California, having ratified the Compact and having waived seven-state ratification, the President of the United States on June 25, 1929, issued Public Proclamation No. 1882,[91] the text of which is as follows:

> "Pursuant to the provisions of section 4(a) of the Boulder Canyon project act approved December 21, 1928 (45 Stat. 1057), it is hereby declared by public proclamation:
>
> "(a) That the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming have not ratified the Colorado River Compact mentioned in section 13(a) of said act of December 21, 1928, within six months from the date of the passage and approval of said act.
>
> "(b) That the States of California, Colorado, Nevada, New Mexico, Utah and Wyoming have ratified said compact and have consented to waive

[90]Ariz. Ex. 23.

[91]46 Stat. 3000, Ariz. Ex. 3.

the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and that each of the States last named has approved said compact without condition, except that of six-State approval as prescribed in Section 13(a) of said act of December 21, 1928.

"(c) That the State of California has in all things met the requirements set out in the first paragraph of section 4(a) of said act of December 21, 1928, necessary to render said act effective on six-State approval of said compact.

"(d) All prescribed conditions having been fulfilled, the said Boulder Canyon project act approved December 21, 1928, is hereby declared to be effective this date."

Almost 15 years later the State of Arizona enacted a statute which purported unconditionally to approve, ratify, and confirm the Colorado River Compact.[92]

Between 1922 and 1927 three attempts were made to secure legislation authorizing the construction of a dam in the canyon section of the Colorado River and a canal (the All-American Canal) running wholly within the United States from the River to the Imperial Valley. These attempts were reflected in three Swing-Johnson bills.[93] The fourth attempt was successful[94] and became the Boulder Canyon Project Act of December 21, 1928.[95] Construction of the dam authorized by the Project Act was commenced in 1930 and completed in 1935. Originally named Boulder Dam, it is now known as Hoover Dam.

[94]H. R. 5773 and S. 728, 70th Cong., 1st Sess. (1927).

[95]45 Stat. 1057.

Between 1930 and 1934 the Secretary of the Interior, on behalf of the United States, contracted with the defendants Palo Verde Irrigation District,[96] Imperial Irrigation District, Coachella Valley County Water District, Metropolitan Water District of Southern California and the City of San Diego for the delivery of the water to be stored in Lake Mead, subject to the availability thereof for use in California under the Compact and Project Act.[97]

In response to a request from the Secretary of the Interior,[98] these California agencies entered into an agreement dated August 18, 1931, commonly known as the Seven-party Agreement which fixes the relative priorities, as among the signatories, to California's share of water from the mainstream of the Colorado River.[99] The terms of this agreement were recommended by the Division of Water Resources of the State of California, and the Secretary of the Interior incorporated the intrastate priorities stated therein in general regulations promulgated on September 28, 1931, relating to contracts for the storage and delivery of mainstream water impounded by Hoover Dam.[1] There is no contract between the United States and the State of California itself.

By contracts with Nevada dated March 30, 1942, and January 3, 1944, the United States agreed to deliver certain quantities of water to Nevada from storage in Lake Mead, subject to the availability thereof for use in Nevada under the Compact and Project Act.[2]

---

[96]The text of this contract, which is representative of the California contracts, appears in Appendix 8.

[97]Ariz. Exs. 33, 34, 36-40.

[98]Calif. Ex. 1810.

[99]Ariz. Ex. 27. The Seven-party Agreement is reprinted as part of the Palo Verde Water Delivery Contract, Appendix 8.

[1]Calif. Ex. 1811.

[2]Special Master's Ex. No. 4, The Hoover Dam Documents, appendices 1018-1019, Ariz. Exs. 43, 44. The text of these contracts appears in Appendices 6 and 7.

By contract dated February 9, 1944, and effective February 24, 1944, the United States agreed to deliver certain quantities of water from storage in Lake Mead for use in Arizona, subject to the availability thereof for use in Arizona under the Compact and Project Act.[3]

Utah and New Mexico have no contracts with the United States for the delivery of Lake Mead water and, indeed, such water cannot be feasibly utilized in either of those states.

The prospect of a treaty between the United States and Mexico with respect to Colorado River water, which was envisioned in the Colorado River Compact, became a reality on February 3, 1944, when such a treaty was executed.[4] By its terms, the treaty became effective on November 8, 1945, after the Senate ratified it with eleven reservations. It guarantees delivery to Mexico "from any and all sources" of one and one-half million acre-feet of water per annum in the limitrophe section of the Colorado River at the United States-Mexican boundary. Under certain circumstances, these deliveries may be increased or diminished.[5]

In 1948 the Upper Colorado River Basin Compact among Arizona, Colorado, New Mexico, Utah and Wyoming was signed by representatives of those states, and after ratification by the respective legislatures, was approved by Congress in 1949.[6] This compact provided for the division of the waters of the Colorado River System in the Upper Basin among the Upper Basin States. No such compact has ever been made apportioning water of the Lower Basin.

[3]Special Master's Ex. No. 4, The Hoover Dam Documents, appendix 1016, Ariz. Ex. 32. The text of this contract appears in Appendix 5.

[4]59 Stat. 1219 (1945), Ariz. Ex. 4.

[5]Ariz. Ex. 4, art. 10.

[6]Special Master's Ex. No. 4, The Hoover Dam Documents, appendix 231, Ariz. Ex. 2.

Following the execution of the contract between the United States and the State of Arizona, and Arizona's "ratification" of the Colorado River Compact,[7] the Bureau of Reclamation in cooperation with Arizona began investigation of a project, identified as the Central Arizona Project, designed to bring supplemental water from the mainstream of the Colorado River to a portion of the central Arizona area. The Commissioner of Reclamation submitted his report to the Secretary of the Interior on March 20, 1948, and on September 16, 1948, the Secretary of the Interior transmitted the report to Congress for its information and action.[8] The following is a quotation from the Secretary's letter of transmittal.

> "The project has engineering feasibility and the proposed reimbursable costs probably can be repaid in 78 years under the plan outlined. . . .
>
> "The showing in the report of the availability of a substantial quantity of Colorado River water for diversion to Central Arizona for irrigation and other purposes is based upon the assumption that the claims of the State of Arizona to this water are valid. It should be noted, however, as the regional director and the Commissioner of Reclamation pointed out, that the State of California has challenged the validity of Arizona's claims. If the contentions of the State of Arizona are correct, there is an ample water supply for this project. If the contentions of California are correct, there will be no dependable water supply available from the Colorado River for this diversion. While the necessary water supply is physically available at the present time in the Colorado River, the importance of the questions raised by the divergent views and claims of the States is apparent. The Bureau of Reclamation and the De-

[7]Ariz. Ex. 10.

[8]H. R. Doc. No. 136, 81st Cong., 1st Sess. (1949), Ariz. Exs. 65, 65A, 70.

partment of the Interior cannot authoritatively resolve this conflict. It can be resolved only by agreement among the States, by court action, or by an agency having jurisdiction.[9]

During the 79th, 80th, 81st and 82nd Congresses, Arizona sought congressional authorization for the construction of the Central Arizona Project by the Bureau of Reclamation. While some of her proposals passed the Senate, none passed the House.[10] On April 18, 1951, the Committee on Interior and Insular Affairs of the House of Representatives adopted a resolution that consideration of bills relating to the Central Arizona Project "be postponed until such time as use of the water in the lower Colorado River Basin is either adjudicated or binding or mutual agreement as to the use of the water is reached by the States of the lower Colorado River Basin."[11] About a year later, this action was instituted by Arizona.

V. Major Works in the Lower Basin

Helpful to an understanding of the problems raised by this controversy is an awareness of the existence and function of the various works affecting the flow of water in the Lower Basin of the Colorado River System.

A. Mainstream Works

1. *Hoover Dam.* This is the principal structure in the Lower Basin, impounding the waters of the Colorado River to form Lake Mead. The reservoir has an active or usable storage capacity of about 27,200,000 acre-feet, a maximum length of 115 miles, a maximum width of 8 miles, and, at elevation 1229, a maximum surface area of 162,700 acres. Hoover Dam is situated in Black Canyon on the main channel of the Colorado River, 330 miles above the Mexican border. The middle of the channel at the site of the dam is the common boundary between the States of Arizona and Nevada.

It is the world's highest dam: a concrete arch, gravity type structure having a height of 726.4 feet and a hydraulic height of 575.8 feet. Two side-channel spillways, with a capacity of 400,000 cubic feet per second [hereinafter "c.f.s"],[12] have been constructed in connection with the dam. The outlet works have a capacity of 91,000 c.f.s. and the power plant discharge (17 turbines) is 30,560 c.f.s. The rating of the generators presently installed, including two small station-service units, is 1,249,800 kw.; ultimately the generator rating installation will be 1,354,300 kw.

Construction of Hoover Dam was initiated on September 17, 1930, and water was first impounded on February 1,

[12]One cubic foot of water is approximately 7.48 gallons. One c.f.s. flow is approximately 1.983 acre-feet per day or 646,317 gallons per day. Ariz. Ex. 1000, p. 17.

1935. Power was first generated on September 11, 1936. Title to the dam is in the United States and it is operated and maintained by the Department of the Interior.[13]

2. *Davis Dam.* This dam implements regulation of releases at Hoover Dam into the seasonal pattern required by downstream irrigation and domestic users. It is located 67 miles below Hoover Dam on the main channel of the Colorado River, directly west of Kingman, Arizona. The middle of the channel at the dam site constitutes the common boundary between Arizona and Nevada. Its reservoir, Lake Mohave, is 67 miles in length, has a total usable capacity of 1,820,000 acre-feet, and at elevation 647 has a surface area of 28,500 acres.

Davis Dam, with a height of 200 feet and a hydraulic height of 138 feet, is an earth and rock fill structure and has a bypass channel on the Arizona side for the spillway, outlets and power plant. The spillway capacity, at elevation 647, is 192,000 c.f.s. and the outlet capacity is 60,000 c.f.s. The five unit generating facilities have a total installed capacity of 225,000 kw.

Construction of the dam was initiated on July 29, 1942, water was first impounded on January 17, 1950, and power was first generated on January 12, 1951. Title to Davis Dam is held by the United States and it is operated and maintained by the Department of the Interior.[14]

3. *Parker Dam.* This structure, located on the main channel of the Colorado River below the mouth of the Bill Williams River, 17 miles above Parker, Arizona, and 155 miles below Hoover Dam, is the diversion point for the Colorado River Aqueduct of the Metropolitan Water District of Southern California. It also regulates the flow

[13]Ariz. Ex. 1000, pp. 18-19.
[14]Ariz. Ex. 1000, pp. 19-20.

of the Bill Williams in excess of local uses in Arizona. The middle of the channel at its site is the common boundary between Arizona and California. Its reservoir, Lake Havasu, has a surface area of 25,100 acres at elevation 450 and its original unsilted storage capacity was 717,000 acre-feet. Lake Havasu is the source of water pumped to the Southern California coastal plain for municipal, industrial and, in limited quantities, for agricultural purposes.

Parker Dam, with a structural height of 320 feet and a hydraulic height of 75 feet, is a concrete variable-radius arch structure with power plant intakes and penstocks through the abutments on the California end. The overflow spillway is controlled by five regulating gates and a power plant with four 30,000 kw. units has been constructed.

Construction of Parker Dam was initiated on October 1, 1934, water was first impounded on June 29, 1938, and the first power was generated on December 13, 1942. The Metropolitan Water District paid substantially all of the cost of Parker Dam and rights of way therefor, and one half the cost of Parker Power Plant. The aggregate cost to the District for these purposes was $14,883,732.[15] Title to the dam is held by the United States and operations are conducted by the Department of the Interior. The Metropolitan Water District receives approximately fifty per cent of the power generated, for use on the Colorado River Aqueduct.[16]

4. *Headgate Rock Dam.* Located 170 miles below Hoover Dam and 15 miles below Parker Dam on the main channel of the Colorado River, this dam, with a structural height of 115 feet, provides no appreciable storage capacity

---

[15]Calif. Ex. 477, at p. 4; Calif. Ex. 483; Tr. 9669 (McKinlay).
[16]Ariz. Ex. 1000, pp. 20-21.

but is the diversion point for the Colorado River Indian Reservation in Arizona.

It is owned by the United States and is operated by the Department of the Interior, Bureau of Indian Affairs.[17]

5. *Palo Verde Weir.* This diversion point for the Palo Verde Irrigation District is a temporary rock-filled structure located on the Colorado River 212 miles below Hoover Dam and 42 miles below Headgate Rock Dam. It was constructed at the expense of the United States in 1944 and 1945 and provides no substantial storage capacity.

In authorizing the erection of a permanent dam on or near this site by Act of August 31, 1954,[18] the Congress required the Palo Verde Irrigation District to contribute a share of the cost of construction.[19]

6. *Imperial Dam.* Situated on the main channel of the Colorado River 303 miles below Hoover Dam, about 90 miles below Palo Verde Weir and 18 miles above Yuma, Arizona, this structure is the diversion point for the All-American Canal, the Yuma Project and the Gila Project in Arizona. The middle of the channel at the site of the dam constitutes the common boundary between Arizona and California.

Imperial Dam is a slab and buttress type concrete structure with a structural height of 31 feet at the overflow sections and a hydraulic height of 23 feet. At elevation 191 the overflow spillway has a capacity of 180,000 c.f.s. Extensive desilting works have been provided. The dam provides no appreciable storage capacity.

It was dedicated in October, 1938, but active operations were not instituted for some time thereafter. Title to Im-

---

[17]Ariz. Ex. 1000, p. 21.
[18]68 Stat. 1045.
[19]Ariz. Ex. 1000, pp. 21-22.

perial Dam is in the United States and it is operated and maintained by the Department of the Interior.[20]

7. *Laguna Dam.* This structure is located on the main channel of the Colorado River 308 miles below Hoover Dam, 5 miles below Imperial Dam and approximately 13 miles above Yuma, Arizona. It was formerly used as the diversion point for the Yuma and Gila Reclamation Projects. The middle of the channel at its site is the common boundary between Arizona and California.

Laguna Dam is a rock-filled weir with a concrete surface. Its structural height is 43 feet and its hydraulic height is 10 feet. It provides no appreciable storage capacity.

Construction was initiated on July 19, 1905, and water was first diverted on March 14, 1910. Although the major portion of the construction cost of $1,600,000 has been repaid to the United States by the defendants Coachella Valley County Water District, Imperial Irrigation District and the City of San Diego, title is in the United States and it is operated and maintained by the Department of the Interior.[21]

8. *Morelos Dam.* Located just below Pilot Knob, between Arizona and Mexico, in the limitrophe section of the River, this structure was built under the Mexican water treaty and acts as a diversion point for Mexican works.[22] It provides no appreciable storage capacity.

9. *All-American Canal System.* The canal has its headworks at the California end of Imperial Dam.[23] These headworks discharge Colorado River water into a concrete

---

[20]Tr. 2361-2365, 7767-7768 (Steenbergen) (Dowd); Ariz. Ex. 1000, p. 22.

[21]Ariz. Ex. 1000, pp. 22-23.

[22]Tr. 590, 7852-7853 (Akin) (Dowd).

[23]Tr. 584 (Akin).

lined channel approximately 360 feet in width which is divided into four channels directing water into desilting basins.[24] The initial capacity of the All-American Canal is 15,155 c.f.s (approximately 30,062 acre-feet per day) and it has a width of 232 feet at normal water surface, a bottom width of 160 feet and a depth of 21 feet.[25]

Its initial capacity remains unchanged for a distance of 14.7 miles to Siphon Drop at which point 2,000 c.f.s. can be delivered to the Yuma Project through the Siphon Drop Power Plant. From that point to Pilot Knob, approximately 6 miles distant, the capacity of the All-American Canal is 13,155 c.f.s. At Pilot Knob, the water may be discharged into the Colorado River through the Pilot Knob Wasteway. Pursuant to section 7 of the Boulder Canyon Project Act and Imperial's 1932 contract, Imperial is given the right to develop the hydroelectric power on the canal below Syphon Drop, including Pilot Knob. Pursuant to the 1952 supplement to this contract, Mexican Treaty water and other water which would otherwise pass over Imperial Dam may be diverted by the District through the All-American Canal to Pilot Knob, and there dropped through Pilot Knob Power Plant back to the Colorado River in the United States. From Pilot Knob, for a distance of 15.5 miles to Drop No. 1, the takeout point of the Coachella Canal, the All-American Canal has a capacity of 10,155 c.f.s. Continuing west, parallel to the Mexican border, for approximately 44 miles the canal gradually reduces in capacity from 7,755 c.f.s. to 2,655 c.f.s.[26]

Construction was initiated by the United States in August, 1934, and the first significant use of the canal was made in 1940.[27] Costs of construction have been allocated

---

[24]Tr. 7771 (Dowd).
[25]Calif. Ex. 214.
[26]*Ibid.*
[27]Tr. 7767, 7774 (Dowd).

among the several irrigation districts and projects which utilize the facilities.[28] The canal is operated largely by the Imperial Irrigation District. However, the Coachella Valley County Water District operates the Coachella Canal from 6A Check to its terminal point, and the United States operates Imperial Dam, the California Sluiceway, and the Yuma Project turnouts from the canal.[29]

10. *Coachella Canal.* After turning out from the All-American Canal at Drop No. 1, the Coachella Canal proceeds in a northwesterly direction. At the turnout, the canal, which at this point is unlined, has an initial capacity of 2,500 c.f.s.[30] Of this capacity, 1,500 c.f.s. are for Coachella, and 1,000 c.f.s. are for Imperial for irrigation of lands therefrom from Drop No. 1 to 6A Check, a distance of 49 miles. The initial capacity at 6A Check is 1,500 c.f.s.[31] Further on, in the Coachella Valley County Water District, the canal is lined with concrete and has a capacity of 1,300 c.f.s. which is gradually reduced to 425 c.f.s. at its terminal point.[32] The total length of the Coachella Canal is 123 miles.[33] It is operated and maintained from Drop No. 1 to 6A Check by Imperial, with Coachella assuming and paying a proportionate part of the expense thereof. From 6A Check to its terminal point, the Coachella Canal is operated and maintained exclusively by Coachella at its sole expense. Construction on the Coachella Canal was initiated in 1938 and it was completed in 1948.[34]

11. *Colorado River Aqueduct.* This aqueduct diverts water through headworks situated at Parker Dam.[35] It is

242 miles long, with a designed carrying capacity of 1,605 c.f.s. and an estimated actual carrying capacity of 1,800 c.f.s.[36] It carries Colorado River water to the Metropolitan Water District of Southern California, the City of San Diego and the San Diego County Water Authority.[37] Both the County of San Diego and the San Diego County Water Authority receive this water through the San Diego Aqueduct which turns out from the Colorado River Aqueduct.[38]

Construction was initiated in 1932 and water was first delivered in 1941.[39] The Colorado River Aqueduct was financed, and title is held, by the Metropolitan Water District of Southern California which operates and maintains it.[40]

B. Gila River System Works

1. *Coolidge Dam.* Situated on the Gila River, 26 miles southeast of Globe, Arizona, this reinforced concrete multiple dome structure has a height of 250 feet and creates a reservoir with a capacity of 1,267,447 acre-feet. The water so impounded is utilized to irrigate lands of the Gila River Indian Reservation and privately owned lands adjacent thereto. In addition, the Dam has a generating capacity of 10,000 kw. Construction was completed in 1928 and title is held by the United States.[41]

2. *Ashurst-Hayden Dam.* Performing a purely diversionary function, this diversion point for the San Carlos Project is located on the Gila River approximately 10 miles east of Florence, Arizona.[42]

---

[36]Tr. 9530-9531, 9590 (Elder). This translates into approximately 3,570 acre-feet per day, or 1,303,050 acre-feet per year.

[42]*Ibid.*

3. *Buckeye Dam.* This dam is situated on the Gila just below the confluence of the Agua Fria and Gila Rivers, at the lower end of the Salt River Project. It diverts the return flow re-entering the River below the upstream diversion structures.[43]

4. *Painted Rock Dam.* Located on the Gila River, slightly below Gila Bend, Arizona, this structure is designed for flood control in the lower Gila valley and in Mexico.[44]

5. *Roosevelt Dam.* This rubble masonry, arch gravity type dam, with a structural height of 280 feet and a hydraulic height of 225 feet, is situated on the Salt River 30 miles northwest of Globe, Arizona. The overflow spillways at both abutments have a capacity of 150,000 c.f.s. and a seven unit power plant with a generating capacity of 15,400 kw. is situated at the toe of the dam. Roosevelt Reservoir impounds 1,398,430 acre-feet of water and the waters so impounded are utilized to irrigate the Salt River Project. Construction of Roosevelt Dam was initiated in March 1904, water was first impounded in May 1909 and power was first generated on August 1, 1909.[45]

6. *Horse Mesa Dam.* Located on the Salt River 43 miles northeast of Phoenix, Arizona, this concrete variable-radius arch type dam has a structural height of 300 feet and a hydraulic height of 266 feet. Its reservoir, with a capacity of 245,138 acre-feet, is utilized to irrigate the Salt River Project. Over fall spillways at both abutments have a capacity of 150,000 c. f. s. and a 30,000 kw. power plant is located at the toe of the dam.

---

[43]Tr. 603-604 (Akin).
[44]Tr. 617-618 (Akin).
[45]Ariz. Ex. 1000, pp. 23-24.

Construction was begun in August, 1924, and water was first impounded on May 27, 1927. Although built by the Salt River Valley Water Users' Association, title is in the United States.[46]

7. Mormon Flat Dam. Situated on the Salt River 37 miles northeast of Phoenix, Arizona, this concrete variable-radius arch type dam has a structural height of 224 feet and a hydraulic height of 142 feet. Its reservoir, with a capacity of 57,852 acre-feet, is utilized to irrigate the Salt River Project. The dam has an open channel spillway with a capacity of 150,000 c.f.s. and a 7,000 kw. power plant has been constructed at its toe.

Construction was initiated in February 1923, water was first impounded on January 13, 1925, and the first power was generated on May 19, 1926. Built by the Salt River Valley Water Users' Association, title is held by the United States.[47]

8. *Stewart Mountain Dam.* This concrete variable-radius arch type dam, with a structural height of 207 feet and a hydraulic height of 116 feet, is located on the Salt River 29 miles northeast of Phoenix, Arizona. Its reservoir, with a capacity of 69,765 acre-feet, provides irrigation water for the Salt River Project. The dam has a power plant with a capacity of 10,400 kw. and its open channel spillway has a capacity of 150,000 c.f.s.

Construction was initiated on October 1, 1928, water was first impounded on February 22, 1930, and power was first generated on March 8, 1930. Title to the dam, which was built by the Salt River Valley Water Users' Association, is held by the United States.[48]

[47]Ariz. Ex. 1000, pp. 24-25.
[48]Ariz. Ex. 1000, p. 25.

9. *Granite Reef Diversion Dam.* This structure is located on the Salt River 22 miles east of Phoenix, Arizona. It is a concrete weir with a structural height of 29 feet and a hydraulic height of 18 feet.[49]

10. *Cave Creek Dam.* Situated on Cave Creek, a tributary of the Salt River, 20 miles north of Phoenix, Arizona, this concrete multiple arch dam, with a structural height of 109 feet and a hydraulic height of 57 feet, creates a reservoir with a capacity of 11,000 acre-feet. Cave Creek Dam is used primarily for flood control, but waters impounded thereby are utilized to irrigate the Salt River Project.

Construction by the Salt River Valley Water Users' Association was initiated on February 16, 1922, and water was first impounded on March 4, 1923. Title is held by the United States.[50]

11. *Horseshoe Dam.* Situated on the Verde River 55 miles northeast of Phoenix, Arizona, this earth and rock fill type dam has a structural height of 194 feet, a hydraulic height of 145 feet and a spillway capacity of 250,000 c.f.s. Its reservoir, with a capacity of 142,800 acre-feet, impounds waters which are utilized to irrigate the Salt River Project and for municipal purposes in the City of Phoenix.

Construction was initiated on November 30, 1943, and water was first impounded on November 16, 1945. Horseshoe Dam was built by the Phelps-Dodge Corporation under a cooperative agreement with the United States and the Salt River Valley Water Users' Association. Title is held by the United States.[51]

[50]Ariz. Ex. 1000, pp. 25-26.
[51]Ariz. Ex. 1000, pp. 26-27.

12. *Bartlett Dam.* Located on the Verde River 36 miles northeast of Phoenix, Arizona, this concrete multiple arch type dam has a structural height of 287 feet, a hydraulic height of 188 feet and an open channel spillway with a capacity of 175,000 c.f.s. Its reservoir has a capacity of 179,480 acre-feet and waters impounded therein are utilized to irrigate the Salt River Project and Salt River Indian Reservation.

Construction was initiated on August 12, 1936, and water was first impounded on February 5, 1939.[52]

13. *Carl Pleasant Dam.* Situated on the Agua Fria River about 30 miles northwest of Phoenix, Arizona, this concrete multiple arch dam impounds the waters forming Lake Pleasant.[53] The dam was built by, and serves, Maricopa County Municipal Conservation District No. 1. Water was first impounded in 1928.[54]

C. Operation of Works on the Mainstream—River Control

The Office of River Control of the Bureau of Reclamation, located at Boulder City, Nevada, is responsible for release of water, river control and reservoir co-ordination on the Colorado River from Hoover Dam to the international boundary. Acting under the Boulder Canyon Project Act, the Office of River Control releases water from reservoirs on the mainstream according to the following priorities: First, flood control; second, irrigation and domestic uses; third, power.

---

[52]Ariz. Ex. 1000, p. 26.

[53]The capacity of this reservoir appears to be a subject of dispute. At least two estimates have been given; one of 178,000 acre-feet (Ariz. Ex. 1000, p. 27) and another of 164,000 acre-feet (Tr. 1635-1636 [Raymc]).

[54]Ariz. Ex. 1000, p. 27

Flood control storage space varies during the year. In general, storage space is made available for anticipated floods by releasing water in accordance with the expected inflow at any given time.

Water for irrigation and domestic uses is ordered by the water user agencies. While there may be minor variations of practice from one water user to another, typically, the procedure is as follows. On Wednesday of any given week, the agency orders the daily quantity of water needed for the week beginning on the following Monday. When the water orders have been received, the Office of River Control totals them and then schedules the rate of release per day for the following week. This schedule must be put into effect over the weekend, for it takes 72 hours for water at Parker Dam to reach Imperial Dam. Records are kept of the amount of water ordered and the amount of water actually taken by each water user.

In addition to scheduling water releases for domestic and irrigation users in the United States, water is released for sluicing at Imperial Dam and to service the Mexican water treaty. Mexico is entitled to receive from 1,500,000 to 1,700,000 acre-feet annually depending upon the supply of water. The Mexican order is given one year in advance for delivery on a month by month basis. The monthly order can be changed upon thirty days' notice. Davis Dam is used for making water releases pursuant to the Mexican order.

The last priority for water releases is for generation of power. Prior to June 1, 1955, water in excess of that needed for irrigation and domestic uses was released for power purposes. However, as of that date this practice was discontinued and, as a result, only 62½ per cent of firm energy was delivered during that year.[55]

---

[55]Tr. 823-895, 938 (Stanley).

VI. Irrigation Projects and Districts, Indian Reservations and Other Water Users in the Lower Basin

A. Arizona

1. *Salt River Project.* This project, which lies on both sides of the Salt River east of its confluence with the Gila River in central Arizona, is capable of serving 240,000 acres of land. Approximately 200,000 acres were under cultivation in 1955 and portions of the remaining acreage constitute town sites and residential property which are furnished water for domestic uses.[56] The northern portion of the Project, which includes the City of Phoenix, is bounded on the west by the Agua Fria River and on the east by the Arizona Canal. The southern portion is bounded on the south by the Gila Indian Reservation and on the east by the Roosevelt Water Conservation District.[57] The major dams serving the Project are Granite Reef Diversion Dam, Stewart Mountain Dam, Horse Mesa Dam, Mormon Flat Dam and Roosevelt Dam—all on the Salt River; Bartlett Dam and Horseshoe Dam on the Verde River; and a flood control dam on Cave Creek.[58]

The Project is operated by two agencies with a complex interrelation never fully explained in the evidence. It was initiated by the Bureau of Reclamation which conducted operations until 1917 when the Salt River Valley Water Users' Association, organized under Arizona law in 1903, assumed control. Subsequently a district was incorporated as a political subdivision of the State of Arizona; the officers and directors of the district and association are identical.[59]

---

[56]Tr. 1806-1807 (Corbell).

[57]See Ariz. Ex. 140.

[58]Tr. 1763-1767 (Corbell). See also pp. 40-43, *supra.*

[59]Tr. 1770-1772, 1756-1757, 1815-1818 (Corbell).

Water supply is derived from both surface and underground sources. For the period 1945-1955 approximately 64% of the supply came from surface sources and 36% from pumping.[60] The Project makes storage water available to its members each year, quantity depending upon supply. From 1952 to 1955 members were allotted three acre-feet per acre.[61] Payment of assessments for project obligations entitled each member to two acre-feet per acre and, upon payment of an additional charge, the member could secure an additional acre-foot.[62] Some of the water used by the Project is subject to a water rights decree administered by a commissioner.[63]

The problem of an adequate water supply has become a serious one. Surface supply has been reduced by drought and by decreasing runoff caused by changed conditions in the watershed. Fire prevention activities have resulted in increased growth of phreatophytic plants which consume water otherwise available for irrigation and domestic uses.[64] As a result of the reduction in surface and ground water supplies, the water table has declined, and in 1955 the static water table reached a depth of 117 feet.[65] These declining water levels have increased pumping costs and necessitated expenditures for deepening wells.[66]

2. *Roosevelt Irrigation District.* Located directly west of the Salt River Project and bounded on the east by the Agua Fria River, on the west by the Hassayampa River and

[63]Tr. 1866-1867 (Corbell).
[64]Tr. 2042-2048 (McMullin).
[65]Tr. 1995 (McMullin).
[66]Tr. 2013-2014 (McMullin).

on the south by the Buckeye Water Conservation and Drainage District, this project serves 38,000 acres, all of which are irrigable.[67]

The Roosevelt Irrigation District, because of the complete dearth of available surface water, depends solely on underground water. This water is supplied by 101 wells, 46 of which are located within the District and 55 of which are located within the Salt River Project.[68] Those located within the Salt River Project were purchased at a time when water-logged land was a problem in that project. By agreement, Roosevelt is limited in its pumping from these wells to 145,000 acre-feet per year on an average for a five year period and annual increases cannot exceed 10,000 acre-feet. There is no restriction on drawdown.[69] Thus, it is apparent that the amount of irrigation in the Salt River Project directly affects the water supply of Roosevelt. Water levels have remained stable in the Roosevelt Irrigation District but the water table of the wells located in the Salt River Project has declined substantially.[70]

3. *Maricopa County Municipal Water Conservation District No. 1.* Commonly known as the Beardsley District, Maricopa County Municipal Water Conservation District No. 1 is located in Maricopa County, Arizona, and is bounded on the east by the Agua Fria River and the City of Phoenix, on the west by the White Tank Mountains and on the south by the Roosevelt Irrigation District. The District was organized under Arizona law in 1925 to serve 40,000 acres but the service area was reduced to 35,000

---

[69]Tr. 1732-1733, 1741 (Van Denburgh).

[70]Tr. 1745-1746 (Van Denburgh).

acres in 1946.[71] In 1955 26,000 acres were under cultivation and 9,000 lay fallow primarily for lack of water.[72]

Water supply is derived from surface and underground sources. The source of surface water is the Agua Fria River which is dammed by Carl Pleasant Dam to form a storage reservoir called Lake Pleasant.[73] One and one-half miles downstream is a diversion dam from which the District's main canal takes out. This canal, which is 34 miles long and is lined for approximately one-half of its length, runs along the west side of the Project. There are 120 miles of laterals in the distribution system. Pump water is supplied by wells, 60 of which were in operation in 1955.[74]

The District has been troubled by a decreasing supply of surface water and a declining water table. In 1955 the average pump lift for the 60 wells in operation was 419 feet. In addition, the static water level declined from 172 feet in 1940 to 329 feet in 1955.[75]

4. *San Carlos Project.* This project lies on both sides of the Gila River in Pinal County, Arizona, southeast of Phoenix and the Salt River Project. Although planned to serve 50,000 acres exclusively within the Gila River Indian Reservation, the Project was later expanded to include an additional 50,000 acres of non-Indian land because of financial considerations. Three agencies operate the facilities of the Project: the Indian Tribal Council operates distribution works on Indian lands; the San Carlos Irrigation and Drainage District operates facilities on non-Indian lands; and the Bureau of Indian Affairs operates facilities, such as dams and main canals, serving both types of land.[76] The

[76]Tr. 1485-1487, 1489 (Gookin).

full 100,000 acres which the Project was designed to serve have never been under irrigation in any one year. While irrigated acreage varies from year to year, depending upon water supply, the average annual irrigated acreage from 1934 to 1955 was 63,000 acres.[77]

The main works of the Project are Coolidge and Ashurst-Hayden Dams.[78] Coolidge Dam, which is located on the Gila River below its confluence with the San Carlos River, creates the San Carlos Reservoir which has a designed capacity of 1,285,000 acre-feet. This reservoir has never been more than two-thirds full. Ashurst-Hayden Dam is 63 miles further downstream and is a purely diversionary structure serving the Project's canals. Situated within the boundaries of the Project and utilized to catch flash flood waters, excess flows from Ashurst-Hayden Dam, and to regulate canal flow is Picacho Reservoir with a capacity of 18,000 acre-feet.[79]

Water supply is derived from both surface and underground waters.[80] From 1934 to 1955 average annual surface diversions were 187,000 acre-feet. In addition, approximately 99,000 acre-feet were pumped. Thus, about 35% of the water supply comes from ground water.[81] From total supply, the farmers have received 3 to 3½ acre-feet per acre for irrigation. The remainder is lost in transit in the canal system.[82] The Gila River is the primary source of surface water, although summer floods in the San Pedro River occasionally furnish some irrigation water. Pump water comes from wells operated by the Project, 108 of which were active in 1956. Natural flow surface

water in the Gila River and water stored by Coolidge Dam are subject to, and are administered under, a water rights decree.[83]

The San Carlos Project has been troubled by a shortage of surface water and declining water tables. If present agricultural and water supply conditions persist, some acreage will be forced out of cultivation and the project will eventually stabilize at 50,000 acres under annual cultivation.[84]

5. *Yuma Area.* Several Bureau of Reclamation irrigation projects and an irrigation district are operated on the Arizona side of the Colorado River in the vicinity of Yuma, Arizona. One of these is the Yuma Project, the Valley Division of which is located in Arizona and the Reservation Division in California. The largest of the projects, the Gila Project, has three irrigation units: North Gila Valley Irrigation District; Wellton-Mohawk Irrigation and Drainage District; and Yuma-Mesa Irrigation and Drainage District. Lying between the North Gila Valley and Yuma-Mesa units are privately irrigated lands known as South Gila Valley. Unit B Irrigation and Drainage District is the last of the projects in this area. At one time its lands were within the Yuma Project and it is still referred to as the Yuma Auxiliary Project. All of the surface water for these projects comes from the mainstream of the Colorado River.[85]

(a) *Yuma Project– Valley Division.* The lands within the Valley Division are located south of Yuma, Arizona, and

[83]Tr. 1497-1501 (Gookin). Water rights are administered under the so-called "Gila River Decree" rendered in United States v. Gila Valley Irrigation District, et al. (Globe Equity No. 59) (D. Ariz. 1935), Ariz. Exs. 103, 300.

[84]Tr. 1539, 1562 (Gookin).

[85]Tr. 2196-2198 (Steenbergen).

run along the east side of the Colorado River to the Mexican Border.[86] Approximately 50,000 acres are served. Water from the Colorado River is diverted for this project at the west end of Imperial Dam through the All-American Canal. Before Imperial Dam was built, diversions had been made at Laguna Dam. Fifteen miles from Imperial the water is turned through Siphon Drop and passes under the Colorado River. On the east side of the River it is turned into the Yuma Project's main canal. This canal is divided into two channels, one running on the east side and the other on the west side of the Project, to the international border. Since 1951 the Yuma County Water Users' Association has been responsible for water deliveries to the Project lands.[87]

(b) *Gila Project.* The common works for the three units of this project are: Imperial Dam, the desilting basin at the east end of the dam and the Gila Gravity Canal, which takes out from the east end[88] and which was constructed between 1936 and 1938.[89] The canal, which has a capacity of 2,200 c.f.s.,[90] runs generally in a southerly direction from Imperial Dam, crosses the Gila River by siphon, and divides into ranches, one running south to Yuma-Mesa and then on to Unit B Irrigation District, and one running east along the Gila River to Wellton-Mohawk.[91] The three units of the Project are:

(i) *North Gila Valley Irrigation District.* This project, the lands of which lie along the east side of the Colorado River just north of its confluence with the Gila River, is

designed to serve 7,000 acres. It receives waters from the Gila Gravity Canal at a turnout with a 150 c.f.s. capacity.[92]

(ii) *Wellton-Mohawk Irrigation and Drainage District.* Located east of the North Gila Project along both sides of the Gila River, this project is designed to serve 75,000 acres[93] although only 30,000 acres were irrigated in 1955.[94] It receives its water from the Gila Gravity Canal at a turnout with a capacity of 1,300 c.f.s. From this turnout the Wellton-Mohawk Canal runs east and southeast, using three pumping plants to lift the water. The last pumping plant lifts the water into the Mohawk Canal, which at this point has a capacity of 900 c.f.s. The District has approximately 300 miles of canal system most of which is lined.[95]

(iii) *Yuma-Mesa Irrigation and Drainage District.* This project, which is now constructed to serve approximately 20,000 acres,[96] is located south of the North Gila Valley Project and east of the Yuma Project. The 14,566 acres irrigated in 1955 had never been irrigated prior to organization of the Project.[97] The Project receives its water from the Gila Gravity Canal at the Yuma-Mesa Pumping Plant which lifts the water 52 feet on to the mesa. The plant has a capacity of 700 c.f.s. and the Mesa Canal has a capacity of 620 c.f.s. The canal network is concrete lined and operates as a closed system.[98]

(c) *Unit B Irrigation and Drainage District.* Also known as the Yuma Auxiliary Project, this district is sit-

uated between the Yuma Project on the west and the Yuma-Mesa Project on the east. It is designed to serve 3,305 acres. Water is received from the Gila Gravity Canal via the Yuma-Mesa Canal System at the north end of the Project. The District's main canal has an initial capacity of 100 c.f.s. and the closed canal system is partially lined.[99]

(d) *South Gila Valley.* Also known as the Yuma Irrigation District, this organized irrigation project is located between the North Gila Valley and Yuma-Mesa Projects. This district, which is not presently operated as a federal reclamation project, includes approximately 10,000 acres. This acreage is irrigated by private pumping and by Colorado River water obtained under Warren Act contracts.[1] The land so serviced is within the authorized limits of the Gila Project.[2]

B. California

1. *Imperial Irrigation District.* Formed in 1911, at which time it included 513,000 acres, this district lies in the Salton Basin and its southern boundary is the international boundary.[3] Until 1922 deliveries of water were made by the District to mutual water companies on a wholesale basis.[4] Beginning in 1922, however, the District took over the operations of the mutual companies and delivered water on a retail basis directly to the farmer.[5] As of 1956,

In addition to the projects described above, there are other irrigated lands in Arizona, either organized into districts or privately operated, which were mentioned incidentally in the testimony but which were never the subject of full presentation. Among these are Buckeye, Arlington, Queen Creek, and the Roosevelt Water Conservation District.

[3]Tr. 6468-6469, 6473-6474, 7474-7475 (Dowd).

[4]Tr. 7486 (Dowd).

[5]Tr. 7542, 7558 (Dowd).

there were 905,560 acres within the District[6] and ultimate gross area is expected to be nearly 1,000,000 acres[7]. 474,555 acres were irrigated in 1955.[8]

The area encompassed by the District is arid. It has an average annual rainfall of three inches and there has been less than one-half inch of rain in some years. The mean annual temperature is 72 degrees and 110 days a year, on the average, have maximum temperatures of over 100 degrees. The sole source of irrigation water has been the Colorado River. Availability of underground water for irrigation purposes is in dispute.[9]

Water deliveries from the Colorado River to the Imperial Valley were first made at the turn of the century[10] and, over the years, several diversion points in both the United States and Mexico were employed. In 1907 water was first diverted at Hanlon Heading into the Alamo Canal, which lay partly in Mexico and entered the United States near Mexicali.[11] In 1918 a new diversion point, Rockwood Gate, went into operation upstream from Hanlon Heading and remained the primary diversion point until the All-American Canal was constructed.[12] Construction of the canal was commenced in 1934. However, because of difficulties in the operation of Imperial Dam, which was

[11]Tr. 6917 (Dowd).

[12]Tr. 7491, 7799 (Dowd).

dedicated in 1938 and which is the diversion point for the canal, service through the All-American Canal was delayed until 1940 and full service did not occur until February 1942. After this date no further deliveries were made through the Mexican works.[13]

The main works serving the Imperial Irrigation District in 1955 were: Imperial Dam; All-American Canal; Siphon Drop Turnout, the delivery point for the Yuma Project; Pilot Knob Check, Power Plant and Wasteway;[14] Drop No. 1, the turnout for the Coachella Canal; Drop No. 2 and Power Plant; East Highline Canal; and Westside Main Canal.[15]

Diversions through the All-American Canal for the period 1951-1955 averaged 5,232,000 acre-feet per year.[16] On the average, 3,836,000 acre-feet were annually diverted for Imperial Irrigation District and Coachella Valley County Water District and 1,396,000 acre-feet were diverted for the Yuma Project.[17] Deducting canal losses and diversions to Coachella, the total diversion for Imperial Irrigation District at Drop No. 1 on the All-American Canal averaged 3,129,000 acre-feet per year.[18]

2. *Coachella Valley County Water District.* Located in the Salton Basin northwest of the Salton Sea, Coachella Valley lies partly in Riverside County and partly in Imperial County, California. The Valley is surrounded on all sides save the south by mountains and is approximately

---

[16]Tr. 8096 (Dowd).

[17]Tr. 8103 (Dowd).

[18]Calif. Ex. 268; see Tr. 8089-8107 (Dowd).

50 miles long, one mile wide at the north end and eleven to twelve miles wide in the center.[19] The soil is fertile, light, sandy loam. The Valley enjoys low humidity helpful to agriculture, but its average rainfall of three inches per year falls mostly in cloudbursts harmful to growing crops.[20] Crops raised in the Valley include citrus fruits, grapes, specialty crops[21] and dates.[22] In fact, Coachella Valley is the only locality in the United States where dates are grown commercially.[23] As of 1956 double cropping was practiced on approximately 20% of the land.[24]

Total gross acreage within the District is 267,620 acres. The gross area of the Coachella Service Area, a division of the District, is 161,153 acres and the net area to be irrigated from the Colorado River is approximately 137,900 acres.[25] At the time of trial all irrigation occurred within Improvement District No. 1, the gross acreage of which is 135,275 acres,[26] although only 53,026 acres of this land were actually irrigated in 1955.[27] Approximately 10,500 unirrigated acres in Improvement District No. 1 are Indian lands which can be served by the system should laterals be installed.[28]

Ground water is present in the Valley and almost all farmsteads have private wells for domestic use. The sole

[28]Tr. 8397 (Weeks).

supply of water for the District as a distributor of water, however, is the Colorado River, and most irrigation is done with water from this source.[29]

The Coachella District is served by the Coachella Branch of the All-American Canal. The Coachella Canal, which was completed in 1947 and 1948, runs in a generally northwesterly direction to the end of Improvement District No. 1 where it swings around the north end of the Valley and follows a southwesterly direction for a short distance.[30] It turns out of the All-American Canal at Drop No. 1, and between Drop No. 1 and Check 6-A the canal is unlined and is shared by both Coachella and Imperial. At Check 6-A complete responsibility for operation and maintenance is assumed by Coachella.[31] For 37 miles after Check 6-A the canal remains unlined but the final 37 miles have been lined with concrete.[32] A settling basin for the removal of debris that accumulates in the unlined portion has been constructed where the canal enters Improvement District No. 1.[33] Beyond this point, on the east side of the canal, levees and detention basins protect the canal from intrusion of storm water.[34]

Distribution of water from the canal is made by an underground closed system of pipelines of which there are 470 miles in Improvement District No. 1. In addition, a high pressure lateral takes water from the canal and traverses the Valley to deliver water to the Oasis Area,

which contains approximately 9,000 acres. Water deliveries to the farmer are measured by meter at each farm turnout.[35] In general, water is distributed by a gravity system, but in a few areas it is pumped to higher elevations.[36] It is the practice in the District, and thought to be a necessity, to deliver water to farmers on demand.[37]

The District's drainage system must account for storm water, discharge from farms and other waste water. Coachella Valley Storm Water Channel is an extension of White Water River and runs through the central part of the District into the Salton Sea. It carries both flood and drainage waters.[38] Open drains and an underground closed system emptying into the Salton Sea constitute the balance of the drainage system. Approximately 25% to 30% of the proposed underground closed drainage system was competed at the time of trial.[39]

3. *Palo Verde Irrigation District.* Palo Verde Valley, in which the defendant Palo Verde Irrigation District is located, is geographically part of a larger valley which also includes the Cibola Valley. Palo Verde Valley lies west of the Colorado River approximately midway between Parker and Imperial Dams[40] and is about 30 miles long and six miles wide. Its principal city is Blythe.[41] On January 1, 1956, there were 103,707 acres of land in the Valley and 17,459 acres on the Mesa within the District[42] Crop reports for 1956 show 72,200 acres under cultiva-

tion in that year and a crop value of $20,000,000 exclusive of livestock.[43]

The irrigation history of the Valley goes back to some time before the turn of the century. One witness observed irrigation in the Valley in 1908 and ground conditions indicated to him that irrigation had been practiced at an earlier date.[44] In 1908, when the population of the Valley was approximately 1,100, irrigation water was obtained by direct diversions from the Colorado River, pumping ground water and diversions from sloughs regularly flooded by river overflows.[45] The construction of Laguna Dam aggravated two recurring problems: annual flooding, which was worsened by water backing up above Laguna Dam; and a rising water table, which caused serious drainage problems.[46] Moreover, construction of dams upstream reduced the level of the Colorado River, causing difficulty with the diversion works.[47]

The primary water supply for irrigation in the District is the mainstream of the Colorado River, although two areas on the Palo Verde Mesa are irrigated by wells.[48] Colorado River water is obtained by orders placed by the District with the Office of River Control, Bureau of Reclamation.[49]

The principal diversion work serving the District is Palo Verde Weir, a temporary diversion structure on the Colorado River.[50] Erected in 1944 and 1945, the Weir was made necessary by the lowering of the River's surface due

to scouring attributable to construction of upstream dams. It is maintained by the District and the Bureau of Reclamation. The intake at the Weir is a reinforced concrete structure with a capacity of 2100 c. f. s. or more, depending on the height of the River's water surface.[51] The District's main canal takes out at the Weir and carries the water to a settling basin.[52] From the settling basin the water is distributed through 280 miles of canals and laterals and approximately 400 miles of privately owned and maintained ditches. Distribution is effected partly by gravity and partly by pumping canal water to higher elevations. The canal and lateral system is unlined.[53] Drainage from the District is to the Colorado River at a point about eight miles south of the Riverside-Imperial County line. There are approximately 120 miles of drains, very few of which are tiled.[54]

4. *Yuma Project—Reservation Division.* Located wholly within the State of California, this portion of the Yuma Project is located north of, and across the Colorado River from, Yuma, Arizona.[55] Although not a party to this litigation, evidence was nonetheless presented on its behalf by the State of California. Total acreage in the general area of the Reservation Division—the area between the All-American Canal and the Colorado River—is roughly 28,000 acres. At the time of trial approximately 15,700 acres were under the Reservation Division water distribution system. Of this amount, 8,200 acres were Indian land and 7,500 acres non-Indian land. Some land within the Division is irrigated by well water and other lands, although irrigable,

are not served at all. Irrigable acreage under distribution system in 1957 was 14,610 acres.[56] The net area actually irrigated in 1956 was 9,460 acres.[56a]

The Reservation Division receives its surface irrigation water from the Colorado River by means of the All-American Canal. Prior to the construction of this canal, diversions were made at Laguna Dam through the Yuma Main Canal.[57]

The principal works of the water distribution system are a network of canals and laterals taking out from the All-American Canal.[58] In 1957 the wholly unlined distribution system comprised 76.5 miles of canals and laterals.[59] Operation and maintenance are conducted by the Bureau of Reclamation which delivers water to the farmers' headgates.[60]

5. *Metropolitan Water District.* The Metropolitan Water District is located on the coastal plain of Southern California, which is outside the drainage area of the Colorado River. Water is brought into the District from the River by means of trans-mountain diversions.[61] The principal mountain ranges east of the general coastal plain area are the Santa Monica, San Bernardino, San Jacinto, Santa Ana and Laguna Mountains. There is no range of mountains on the coast in Southern California, however, and this factor accounts in part for the tremendous population growth in the area.[62]

[62]Tr. 9404-9406 (Morris).

Seventy per cent of the rainfall in the southern coastal plain occurs during January, February and March and 70% of the run-off occurs in these months and the month of April. Average annual rainfall at Los Angeles is 15 inches and at San Diego it is 10 inches. Precipitation in the upper valleys to the east increases to 15 to 20 inches per annum and annual rainfall in the mountainous areas may be 30 to 40 inches or more. There are, however, great fluctuations from year to year in the rainfall of the area. Indeed, there have been years when Los Angeles has received less than five inches of rain.[63]

A number of streams rise in the mountains to the east of Los Angeles and flow southerly and westerly to the Pacific Ocean. The Los Angeles River System rises in the San Gabriel Mountains and flows out of the San Fernando Valley through the narrows near Elysian Park and thence to the Ocean. The San Gabriel River drains the area north of the San Gabriel Valley, runs through the Valley and then divides, one branch discharging into the sea at Alamitos Bay and the other flowing into the Los Angeles River which discharges at Long Beach, California. The stream with the largest drainage area in the coastal plain is the Santa Ana River, which drains the San Bernardino Mountains and a portion of the San Gabriel Mountains and flows through the Santa Ana Canyon and thence to the Ocean near Newport.[64]

The major ground water basins in the southern California coastal basin are the Orange County and central basin (divided into an easterly and westerly portion, respectively, by the county line between Orange and Los Angeles Counties), and westerly of this basin, the west basin. As water is pumped from these basins, the water level falls

[63]Tr. 9407-9408 (Morris).
[64]Tr. 9417-9419 (Morris).

below sea level, and the ground water tends to slope downward inland away from the ocean. As a result, salt water intrudes into the basin and moves inland so that portions of these basins nearest the ocean have already been lost. In order to protect the basins, Colorado River water is spread on the ground and percolates to the ground water where it helps to raise the elevation of the ground water table so that the barrier against the salt water intrusion is maintained.[65]

A number of works have been constructed to conserve and store water in the southern coastal plain. Approximately sixty storage reservoirs have been built in the four counties of Los Angeles, San Bernardino, Orange and Riverside, the total storage capacity of which is roughly 620,000 acre-feet. The area is not well suited to the erection of storage reservoirs because of the lack of satisfactory dam sites and because of the friable quality of the mountains which permits substantial accumulation of debris.[66]

The local water supply of the southern coastal plain has been augmented by importation of water from other areas. The first of these trans-basin diversions came with completion in 1913 of construction on the Owens Valley Aqueduct which transports water 240 miles from the Owens River to Los Angeles. Prior to that year the Los Angeles River was virtually the sole source of supply for the City of Los Angeles.[67] The Owens River diversion proved to be inadequate because there was less water in the Owens River than had been expected and because the Los Angeles population became greater than had been anticipated. The water shortage was met by pumping ground water in the Owens Valley Basin, the City of Los Angeles having purchased

---

[66]Tr. 9421-9422 (Morris).

[67]Tr. 9425 (Morris). For a full description of the Owens River Project see Tr. 9427 *et seq.*

nearly 300,000 acres of land in the basin in order to guarantee its supply of ground water. In addition, Los Angeles extended the Owens Valley Aqueduct into the Mono Basin and took water therefrom through Owens Valley into the City. The local supply in Los Angeles, added to the supply made available by the Owens Valley and Mono Basin diversions, provided an adequate supply for approximately 2,000,000 persons.[68] In 1928 it became apparent that this water supply was no longer adequate and the Metropolitan Water District was formed to obtain a greater supply.[69]

The area of the District, which in 1957 was approximately 3,000 square miles, has expanded steadily and is expected to expand still further in the future. It embraces the territory from a point north of Los Angeles to the Mexican border south of San Diego and includes cities and other municipal corporations lying along the southern coastal plain of California. As of 1957 the following entities were members of the District: in Los Angeles County—Beverly Hills, Burbank, Compton, Glendale, Los Angeles, Long Beach, Pasadena, Santa Monica, San Marino, Torrance, West Basin Municipal Water District, Pomona Valley Municipal Water District, Foothill Municipal Water District, Central Basin Municipal Water District; in Orange County—Anaheim, Fullerton, Santa Ana, Coastal Municipal Water District, Orange County Municipal Water District; in San Diego County—San Diego County Water Authority; in Riverside County—Eastern Municipal Water District, Western Municipal Water District; and in San Bernadino County—Chino Basin Municipal Water District.[70] The Metropolitan Water District acts exclusively as a wholesaler of water, which it

---

[69]Tr. 9494-9504 (Elder).
[70]See Calif. Ex. 447.

delivers to these constituent members who in turn act as retailers to the consumer.[71]

The principal works serving the Metropolitan Water District are Parker Dam, the Colorado River Aqueduct, Lake Mathews and the distribution system below Lake Mathews.

Parker Dam has been described earlier.[72] Its most important functions from the point of view of the District are: removal of silt to permit pumping of water through the aqueduct to the coastal plain; raising the water level of the Colorado River and thus decreasing the lift necessary to bring water to the aqueduct; and generation of part of the power required to pump the water through the aqueduct. The Metropolitan Water District receives approximately 50% of the electrical energy generated at Parker Dam and all of the power so received, as well as power received from Hoover Dam, is used to lift water through the aqueduct.[73]

Preliminary plans for construction of the Colorado River Aqueduct commenced in 1923 when the chief engineer of the Los Angeles Water and Power Department traveled to the Colorado River for the purpose of locating a suitable diversion point for an aqueduct to carry water to Los Angeles. The early surveying of possible routes and diversion points, which began in 1923, was attended by extreme hardship due to the nature and climate of the country through which the aqueduct was to pass.[74] Enginering and surveying work on the proposed route took place from 1923 to 1933 during which time 50 to 250 men were continually employed on the project.[75]

[74]Tr. 9451-9457 (Parratt).

[75]Tr. 9467 (Parratt).

The Colorado River Aqueduct was completed in 1940 and the first actual delivery of water occurred in June, 1941. The 18-month lapse between completion and delivery was attributable to the filling of the reservoirs.[76] The aqueduct as finally constructed diverts water at Lake Havasu, the reservoir created by Parker Dam. Water passes through an intake pump lift of 295 feet at the lake and flows two miles west to the Gene Wash Pump Lift which has an approximate lift of 296 feet. The aqueduct then proceeds 60 miles to the Iron Mountain Pump Lift of 140 feet, thence by gravity, through tunnels and canals, to the Eagle Mountain Pump Lift, which raises the water 440 feet, and finally to the Hayfield Pump Lift of 441 feet. Thus, the total lift of the Colorado River Aqueduct is approximately 1,612 feet. From the Hayfield Pump Lift to the end of the aqueduct water travels by gravity.[77]

Ninety-eight per cent of the length of the aqueduct lies on a right of way obtained from the Federal Government and 2% traverses private land. Its nominal designed capacity is 1,605 c.f.s. but its actual carrying capacity is only 93% of that, or roughly 1,500 c.f.s. The 7% difference is accounted for by operational shutdowns, inspections, cleanups and repairs. As of 1957 actual carrying capacity with the pumps then installed on the aqueduct was 1,000 c.f.s. However, at that time additional pumps were being installed to increase the capacity.[78]

There are a number of small reservoirs and wasteways along the route of the aqueduct. The Gene Wash Reservoir, used for canal regulation to avoid wasting water, is two miles from the Colorado River and has a usable active

---

[76]Tr. 9535 (Elder).

[77]Tr. 9527-9528 (Elder); see Calif. Ex. 449.

[78]Tr. 9528-9531 (Elder). For a detailed description of the Aqueduct see Calif. Ex. 455.

capacity of 3,000 acre-feet.[79] Cooper Basin Reservoir has a capacity of 20,000 acre-feet.[80] The aqueduct's wasteways are used for emergencies such as emptying the canal because of a drowning or desert rainstorm. It has been estimated that in recent years losses have never exceeded 50 acre-feet annually.[81]

In addition to reservoirs and wasteways, there are a series of so-called inverted siphons along the aqueduct. These inverted siphons are pipes that dip below the hydraulic gradient of the aqueduct system so that the water is under sufficient pressure to be pushed down one side of a hill and up the side of another. The term "siphon" is inappropriate since these pipes produce no siphonic action at all.[82]

Except for a one-mile section at the east end of Lake Mathews where water is gained by percolation, the entire aqueduct is lined.[83]

Lake Mathews serves as a storage reservoir at the end of the aqueduct and performs two functions: it regulates the fairly uniform inflow in order to supply peak demands occurring in July and August; and it also provides an emergency supply. Lake Mathews is never permitted to have less than 50,000 acre-feet of storage so that a reserve always exists in case of major disaster such as earthquake or fire. The present storage capacity of Lake Mathews is 103,000 acre-feet. The District plans to double this capacity in the near future.[84]

Distribution of Colorado River water brought into the southern coastal plain at Lake Mathews is effected

entirely by a closed pipeline system operated primarily by gravity. From Lake Mathews a pipeline known as the Upper Feeder follows a northerly course to Fontana, California, at which point it turns west through Ontario and Pomona to the Laverne Softening and Filtration Plant where it divides. From Laverne the main line proceeds northwesterly and westerly through Pasadena, Burbank, Glendale, Beverly Hills and Santa Monica. Just west of Pasadena this line divides again and the other branch takes a southerly direction terminating at the Palos Verdes Reservoir. The other pipeline taking out at the Laverne Softening and Filtration Plant proceeds south to service the main cities of Orange County.[85] The capacity of the Laverne plant is 200,000,000 gallons per day (approximately 614 acre-feet) and water is treated to render it more suitable for industrial and domestic use.[86]

The water distribution system below Lake Mathews includes a number of small regulatory and storage reservoirs. The Orange County Reservoir, which has a capacity of 200 acre-feet, is chiefly used to regulate the flow of the pipeline carrying water from Lake Mathews by equalizing the difference between supply and demand occurring during night and day, summer and winter. The Corona Del Mar Reservoir at the south end of the Orange County pipeline is a small regulatory reservoir designed to prevent waste at the terminus of the pipeline. Morris Dam Reservoir has a capacity of about 35,000 acre-feet which is held solely for emergency use in case of major catastrophe. It is not filled with Colorado River water and under ordinary circumstances neither supplements nor diminishes the supply in the distribution system. The Palos Verdes Reservoir is another regulatory reservoir at the end of one branch of the

---

[85]Tr. 9566-9567 (Elder); see Calif. Ex. 447.
[86]Tr. 9574 (Elder).

pipeline and is designed to prevent waste resulting from uneven supply and demand. Finally, Garvey Reservoir in the Monterey Hills just east of the center of Los Angeles has a capacity of 1,500 acre-feet and is used for regulatory and emergency purposes in the downtown area of metropolitan Los Angeles and in the Harper area of Long Beach.[87]

As of 1957 the distribution system of the Metropolitan Water District was not complete; many portions were still under construction and still others were being planned. It has been estimated that the ultimate construction would be finished in 1960.[88]

As noted previously, water supply for the members of the District comes from local sources and from the Owens River, the Mono Basin and the Colorado River. It is clear that the greatest part of the Colorado River water is used for industrial, municipal and domestic purposes.[89] It has been estimated that only 15% of water from the River is used for irrigation.[90] Total diversions from the River to the Colorado River Aqueduct in 1956 were 481,493 acre-feet.[91]

6. *San Diego County Water Authority.* San Diego County is situated on a plateau which begins near the coastline and which rises slightly until it reaches the foothills of a range of mountains whence it rises steeply to a point approximately 40 miles from the coast. At the highest point of this ridge of mountains drainage is to the east into the Imperial Valley. Most of the County's habitable land is found in a belt that begins at the coast and extends 20 or 25 miles inland; further east the terrain is rough. Rainfall

in the County is erratic, varying from 4½ to 26 inches annually.[92]

The San Diego County Water Authority was incorporated in 1944. In 1956 it had 17 member agencies, an area of 678.6 square miles and a population of 754,500. In 1946 the Authority became a member of the Metropolitan Water District by annexation. The Authority obtains water from two sources: local supply and the Colorado River. Approximately 75% of all water used comes from the River and, in 1956, 115,094 acre-feet were received from this source.[93] There are no undeveloped sources of local water in the San Diego area that can be economically exploited and, therefore, present and projected water requirements can be satisfied only by imported water.[94]

Colorado River water reaches the San Diego County Water Authority through the Colorado River Aqueduct and the San Diego Aqueduct. The Colorado River Aqeduct has been described above[95] The San Diego Aqueduct consists of two installations or barrels; the first barrel was installed from 1945 to 1947 and the second in 1954. Both barrels take out of the Colorado River Aqueduct at the San Jacinto Tunnel and follow a southerly course terminating at the San Vicente Reservoir in San Diego County. The capacity of both barrels is 180 c.f.s. at Rainbow, California, and 165 c.f.s. at the terminal point. There are no pumping plants on the aqueduct; water flows by gravity from the Colorado River Aqueduct at San Jacinto to the San Vicente Reservoir. In general, the terrain over which the aqueduct runs is hilly and this factor necessitated the construction of a number of tunnels through which the conduit passes. Title to the aqueduct remains in the United

States but is presently being purchased by the Authority under a lease-purchase contract. The northerly portion of the aqueduct lying between the San Jacinto take-out and the San Louis Rey River was financed and is operated by the Metropolitan Water District; the portion of the aqueduct south thereof is operated by the San Diego County Water Authority.[96]

Important reservoirs in the system include the San Jacinto Reservoir and the San Vicente Reservoir. The former, which is located two miles below the take-out of the San Diego Aqueduct, has a storage capacity of 1,800 acre-feet and acts as a balancing reservoir between the Colorado River and San Diego Aqueducts. San Vicente Reservoir has a capacity of 90,230 acre-feet and stores water for use in the County.[97]

C. Nevada

1. *Virgin River Drainage Basin.* Irrigation is practiced along the Virgin River in the vicinity of Littlefield, Arizona and Mesquite and Bunkerville, Nevada. In 1954, approximately 2,800 acres in Nevada were irrigated by Virgin River water.[98] During the low flow of the Virgin River from May to October, river flow is derived primarily from saline springs just north of Littlefield and this water has an extremely high salt content—2,500 parts per 1,000,000.[99] Because of the poor quality of the water during these months farmers have found it necessary to use Virgin River water during other parts of the year for leaching purposes.[1]

---

[96]See Calif. Ex. 523.
[97]Tr. 9678-9680 (Beerman); see Calif. Ex. 523.
[98]Tr. 16221 (Shamberger).
[99]Tr. 16209-16210, 16368 (Shamberger).
[1]Tr. 16954-16956 (Shamberger).

Main diversions for use in Nevada are made through the Mesquite and Bunkerville Canals; in 1954, 18,100 acre-feet were diverted through the former and 10,530 acre-feet through the latter.[2] The large amount of these diversions, which approximate 10 acre-feet per acre annually, it attributed to the poor quality of the water diverted during much of the year.[3] Some of the waters of the Virgin River used in Nevada are allocated under judicial decrees;[4] decreed rights, together with other established rights, cover 22,430.3 acre-feet of water and 2,834.59 acres of land.[5]

2. *Muddy River Drainage Basin.* The Muddy River drains approximately 1,650 square miles, excluding the drainage area of Meadow Valley Wash. Its permanent flow originates in a series of springs located eleven or twelve miles above Glendale, Nevada. These springs provide a uniform monthly flow which averages approximately 34,000 acre-feet per year. There is no permanent flow above the springs. The water quality is fairly good, containing approximately 700 parts of dissolved solids per 1,000,000.[6] In 1954 roughly 5,240 acres in Nevada were irrigated from the Muddy River. Of this amount, 1,860 acres were irrigated in the Upper Moapa Valley, 3,030 acres in the Lower Moapa Valley and 350 acres in the Overton Wildlife Management Area.[7] Some of the waters of the Muddy River are subject to a court decree.[8]

3. *Meadow Valley Wash.* A dry creek tributary of the Muddy River, Meadow Valley Wash drains an area

[2]Nev. Ex. 6.
[3]Tr. 16885-16886 (Shamberger).
[4]See Nev. Ex. 7.
[5]Tr. 16224 (Shamberger).
[6]Tr. 16231-16232 (Shamberger).
[7]Tr. 16237 (Shamberger).
[8]Nev. Ex. 14.

of 2,540 square miles. Its flow originates in springs but the water is either consumed or lost prior to its reaching the lower reaches of the Wash.[9] Approximately 5,000 acres in the area known as Upper Meadow Valley Wash were under irrigation in 1958 but no acreage was irrigated in the Lower Meadow Valley Wash.[10] In the opinion of the state engineer, the use of water for irrigation on the Upper Meadow Valley Wash has no effect on stream flow conditions in the channel of the Meadow Valley Wash at Glendale or on the amount of water that ultimately reaches the Muddy River because of the great losses that occur in the lower reaches of the Wash.[11] There is no decree adjudicating water rights on the Meadow Valley Wash or its tributaries.[12]

4. *Las Vegas Valley.* Las Vegas Valley runs in a northwesterly-southeasterly direction and is bounded on the west by the Spring Mountains, on the northeast by portions of the Desert, Sheet and Las Vegas Ranges, on the east by Franklin Mountain and on the south by the River Mountains and the northern extremities of the McCullough Range. The Valley embraces approximately 400 square miles.[13] Situated in its center is the principal residential and trading area of Southern Nevada—the City of Las Vegas. Covering an approximate area of 24 square miles the City had a population of 48,500 on January 1, 1956. Other important municipalities in the Valley are North Las Vegas, with an area of 6.25 square miles and a population of 12,900 in 1956, and Henderson, 12 miles southeast of Las Vegas and adjacent to converted war production plants, with an area of 13 square miles and a population of 14,000 in 1956.

[11]Tr. 16287-16288 (Shamberger).
[12]Tr. 16256 (Shamberger).
[13]Tr. 16295-16296 (Shamberger).

In addition, there are several military and defense establishments in the vicinity of Las Vegas.[14]

As of July 1956, approximately 130,000 acres in the Valley were privately owned. The remaining land in the Valley was part of the public domain, some 86,000 acres of which were classified by the Bureau of Land Management as open for small home sites. Since 1956 a number of these home sites have been taken up.[15]

Until recently the primary source of water for most of Las Vegas Valley has been ground water. Since 1945 the ground water supply has been greatly overdrawn. Although estimated average annual replenishment of ground water in the Valley is 27,000 acre-feet,[16] estimated withdrawals were 31,700 acre-feet in 1946, 36,700 acre-feet in 1950, 43,150 acre-feet in 1955 and 47,000 acre-feet in 1956.[17] Pumping of underground supply is regulated in Las Vegas Valley and issuance of well permits has been restricted.[18]

Pursuant to 1947 legislation, the Las Vegas Water District was formed to obtain water from Lake Mead and to provide an expanded water service. In 1956 a total of 21,700 acre-feet of water was pumped from Lake Mead through the Basic Management Industries' pipeline. Of this amount, 1,769 acre-feet were delivered to the Las Vegas County Water District's distribution system. In the same year a total of 68,700 acre-feet of water was used in the Valley.[19]

5. *Boulder City.* Boulder City is located in Nevada, southwest of Hoover Dam. Its water supply is from Lake

[19]Tr. 16327-16333 (Shamberger).

Mead and, in 1953, 2,400 acre-feet were pumped into the City from that source. The pump lift between the Lake and the City is approximately 1,300 feet.[20]

6. *Miscellaneous Small Areas in Nevada.* These areas are presently undeveloped. However, they are briefly described below in order to complete the picture of actual and potential Nevada water uses.

(a) *Eldorado Valley.* This valley is located to the south and west of Boulder City, Nevada. The State of Nevada is presently negotiating for the purchase of these lands from the United States. Approximately 30,000 acres are suitable for home sites and roughly 19,000 acres can be commercially irrigated. There is no local water supply; water for this area would have to come from Lake Mead.[21]

(b) *Apex Dry Lake Valley.* Situated about 15 miles northeast of Las Vegas, Nevada, this valley embraces between 100,000 and 150,000 acres of land.[22]

(c) *California Wash Area.* This land adjoins the Apex Dry Lake Valley on the north and extends to the Muddy River. Owned by the United States, it contains approximately 77,000 acres below Contour 2300. Water from Apex Valley would flow by gravity into this area.[23]

(d) *Mormon Mesa Area.* This area is located northeast of Glendale, Nevada, between Glendale and Mesquite. Nevada hopes to apply Lake Mead water here to develop irrigated farmland and small home sites.[24]

D. New Mexico

Approximately 10,900 square miles of New Mexico territory lie within the Lower Colorado River Basin, of which roughly 830 square miles lie within a closed basin in the Carrizo area. Thus, about 10,000 square miles in New Mexico are drained by the Lower Colorado River System. This represents almost one-twelfth of the total area of the State. This part of the Lower Basin lies along the western border of New Mexico, measures approximately 312 miles from north to south and has a maximum width east to west of 72 miles.[25] It is divided into two sub-basins: the Little Colorado River sub-basin on the north; and the Gila River sub-basin on the south.

The Little Colorado River sub-basin contains about 4,200 square miles. Its northern portion is characterized by low mesas, desert cliffs and dry washes. Its southern portion is covered by recent lava flows except in the vicinity of the Gallo Mountains where older lava flows predominate. The principal tributaries of the Little Colorado River in New Mexico are Black and Carrizo Creeks, Rio Puerco and the Zuni River.[26]

The Gila River sub-basin contains approximately 5,800 square miles. It is generally characterized by high mountains, deep canyons and small open valleys. In addition, its southernmost portion is desert-type country. The principal streams of this sub-basin are the Gila River and its tributaries—the San Francisco River and San Simon Creek. The primary sources of water supply for the mainstream of the Gila in New Mexico are several high mountain ranges with elevations up to 10,000 feet.[27]

---

[25]Tr. 17264 (Hale).
[26]Tr. 17265-17268 (Hale).
[27]*Ibid.*

A more detailed description of the various areas of the Lower Basin in New Mexico is best effected by separate treatment of the drainage areas of each of the seven principal streams tributary to the Colorado River.[28]

1. *Area 1—Black Creek.* The drainage area of the streams located here, Black Creek and Todilto Wash, is 229 square miles. Area 1 is partly mountainous and Black Creek flows from mountains into rolling, mountain-valley country with elevations of 6,000 to 8,837 feet. Mean average temperature is 48.1 degrees, mean annual precipitation is 12.74 inches and the summer frost-free period is 130 days. The principal occupation in Area 1 is farming and cattle and sheep ranching; there is only one community of any size—the small town of Crystal.[29]

2. *Area 2—Rio Puerco.* The only important stream in this area, Rio Puerco, is fed by numerous dry washes and its flow depends primarily upon occasional rainfall. Its drainage area is 1,083 square miles. The terrain is rolling, dry, hill and cliff country with elevations ranging from 6,000 to 8,837 feet. Mean annual temperature is 50 degrees, annual average precipitation is 13.99 inches and the frost-free period is 153 days. The only substantial city in the area is Gallup, New Mexico, with a population of 11,500.[30]

3. *Area 3—Zuni.* The principal streams here are Atarque Creek and the Rio Pescado and Rio Nutria which form the Zuni River. These streams, which in certain reaches are spring fed, form on the western slope of the Zuni Mountains and flow in a southwesterly direction. After flowing from the mountains they traverse a high, rolling

---

[28]See Tr. 17263 (Hale); N. M. Ex. 400.
[29]Tr. 17269-17270 (Hale).
[30]Tr. 17271-17272 (Hale).

plateau. Elevations run from 6,000 to 8,600 feet. Their drainage area is 1,075 square miles. Mean annual temperature in the area is 50 degrees, mean annual precipitation is 12.65 inches and the average frost-free period is 151 days. The principal community is the town of Zuni, with a population of 3,000. In general, the economy is based on cattle and sheep ranching and some irrigation farming. In addition, Indians from the Zuni Reservation manufacture jewelry.[31]

4. *Area 4—Carrizo.* Major streams in this area are the Carrizo, Largo and Agua Fria Creeks which have a drainage area of 1,815 square miles. The land is high rolling plateau country similar to that in Area 3 (Zuni) except for lava flows and a closed basin of 830 square miles in the area. Elevations range from 6,000 to 9,200 feet. Mean annual temperature is 47 degrees, precipitation is 12.76 inches and the frost-free period is 116 days. Quemado, located in the center of the area, is the largest community, with an approximate population of 250. The area's economy is based primarily on lumbering and cattle and sheep ranching.[32]

5. *Area 5—San Francisco.* There are a number of streams in this area, including the San Francisco River and Center Fire, Apache, Tularosa, Mogollon, Mineral, Deep and Mule Creeks. Their drainage area is 1,917 square miles. The area consists of high, mountainous terrain with some sloping hills and valleys. In the Luna area, at elevation 7,050, mean annual temperature is 46 degrees, mean annual precipitation is 16.35 inches and the frost-free period is 94 days. In the lower elevations of Area 5, in the vicinity of Glenwood, elevation is 4,717 feet, mean annual tempera-

[31]Tr. 17273-17274 (Hale).
[32]Tr. 17274-17275 (Hale).

ture is 58 degrees, mean annual precipitation is 17.05 inches and the frost-free period is 168 days. Towns are small; the largest is Reserve, New Mexico, with a population of approximately 500. Stock raising, farming, lumbering and a few recreational enterprises constitute the basis of the economy.[33]

6. *Area 6—Gila.* Of the many streams in this area the most important is the upper reach of the main Gila River. The total drainage in Area 6 is 3,363 square miles. The Gila rises in high mountains, flows through narrow valleys for about 70 miles, traverses Cliff Valley and then flows through intermittent canyons to the Virden Valley at the state line. Elevations range from 3,800 to 10,778 feet. At Cliff Valley elevation is 4,800 feet, mean annual temperature is 56 degrees, mean annual precipitation is 15.12 inches and the frost-free period is 158 days. In addition to Cliff-Gila, population 400, the other center of population in the area is Virden with a population of less than 1,000. Other towns nearby, but outside the basin, are Silver City, population 8,500, and Lordsburg, population 4,000. The area is serviced by railroads and highways and the primary occupations of its inhabitants are mining, cattle raising and irrigation farming.[34]

7. *Area 7—San Simon.* The San Simon Creek in this area is an ill-defined stream draining only 383 square miles. The drainage area is a dish-shaped valley between two mountain ranges and Rodeo is its one village. Mean annual temperature is 55.5 degrees, mean annual precipitation is 18.52 inches and the frost-free period is 178 days.[35]

E. United States

1. *Indian Reservations—Little Colorado River Area.*

(a) *Navajo Reservation.* Located in the northeast corner of Arizona, the northwest corner of New Mexico and the southeast corner of Utah, this Reservation contains approximately 14,000,000 acres of land. It is an area of very high plateaus, flat-top mesas, inaccessible buttes and deep canyons. Because of this topography, about 1,500,000 acres are inaccessible even to livestock. Elevations range from approximately 2,800 feet at the mouth of the Little Colorado River to 9,000 feet along the drainage divide between the San Juan and Little Colorado Rivers. The climate is very dry, vegetation is sparse and the winters are long and extremely cold, some temperatures dropping as low as 30 degrees below zero. Summer temperatures are also extreme, ranging upwards to 100 degrees. Average annual rainfall over the whole Reservation is about eight inches, most of which falls in torrential summer rains.[36]

The Navajo Indians do not live in villages. Because of the poor range conditions and intermittent arable areas they are scattered over the Reservation and, in some cases, they lead a semi-nomadic existence, moving where water is available for farming and stock raising. The Navajo economy is based largely on subsistence farming, stock raising and seasonal labor off the Reservation. In addition, some of these Indians earn supplemental income as rug weavers and silversmiths.[37]

The Navajo tribe is increasing at the rate of 2.5% per year, and so has doubled within the last thirty years.[38] The population of the Reservation itself is unclear. In 1956, 82,000 Indians were listed on the tribal rolls but 6,000 of

[36]Tr. 12633-12635 (Head).
[37]Tr. 12635-12636 (Head).
[38]Tr. 12636 (Head).

these lived on the Hopi Reservation and others lived off any reservation.[39] Since 1952, it has been the policy of the Bureau of Indian Affairs to relocate some members of the Navajo tribe and approximately 1,000 Indians have been annually relocated in other areas of the United States, some being absorbed by private economy.[40]

A statutory rehabilitation program for the Navajo and Hopi Indians, enacted by Congress in 1950[41] and administered by the Bureau of Indian Affairs, is known as "The Hopi-Navajo Long Range Program" and authorizes expenditure of $88,000,000 for the development of the Hopi and Navajo Reservations. Expenditures of $9,000,000 were authorized for the development of irrigation on the Reservations and, as of 1957, approximately $4,000,000 had been spent. In administering the Long Range Program attempts have been made to improve soil conditions and to institute a moisture conservation program. In furtherance of these ends, water spreading has been used and stock watering ponds and detention dams have been constructed. In addition, range reseeding has been practiced as well as contouring and brush control. Income from oil and gas lease bonuses and rentals and from royalties on uranium mining has been spent by the Navajo tribe in furtherance of the program. The tribe has deposited about $50,000,000 with the United States, most of which is income from oil and gas leases.[42]

Irrigation water for lands in the Navajo Reservation lying in the Lower Colorado River Basin is derived from springs, seeps and small, permanent and intermittent stream flows. Many small storage reservoirs and diversion structures have been constructed together with appurtenant

[42]Tr. 12657-12661, 12668-12668A, 12692 (Head).

canals for distribution. Apparently, irrigation on the Reservation is conducted by means of many small irrigation units, each with its separate source of supply.[43]

(b) *Hopi Reservation.* The Hopi Reservation is situated in the northeast portion of Arizona within the exterior boundaries of the Navajo Reservation and includes approximately 2,500,000 acres. Its topography and climate are similar to that of the Navajo Reservation. The Hopi Indians live in a number of small villages most of which are located on high mesas, although in recent years some of the younger Hopis have built homes in the valleys.[44]

Hopi population has grown at a moderate pace and, as of 1957, approximately 5,000 Indians were living on the Reservation. In general, there has been little movement away from the Reservation. Hopi economy is basically agricultural although some income is derived from trading, silver work and other handicraft.[45] As indicated above, the Hopi Reservation is included within the Hopi-Navajo Long Range Program. Irrigation systems in the Reservation are similar to those in the Navajo Reservation.[46]

(c) *Zuni Reservation.* Located in the State of New Mexico, on the boundary line between New Mexico and Arizona, the Zuni Indian Reservation is approximately thirty-two miles south of Gallup, New Mexico. It has an approximate area of 404,000 acres. Elevations in this high plateau country range from 5,900 to nearly 7,000 feet, and high mesas and small valleys spread throughout the Reservation create a broken terrain. Climate is extreme in each season and winter temperatures fall as low as 20

---

[43]See Tr. 12815-12856 (Keesee). See also U. S. Exs. 276-295.
[44]Tr. 12640-12642 (Head).
[45]Tr. 12642-12643 (Head).
[46]See Tr. 12795-12814 (Keesee). See also U. S. Exs. 293, 413-421.

degrees below zero. Average rainfall is twelve inches annually, most of which falls within the months of July and August. Most of the Zunis live in small villages or in the Zuni Pueblo and during the farming season they move out to the irrigation projects.[47]

The population of the tribe, which has increased by about 1,000 in twenty years, is approximately 3,000 Indians, most of whom live on the Reservation. Although these Indians engage in silver work and seasonal labor off the Reservation, their economy is primarily based on subsistence farming and stock raising.[48]

Water for irrigation of Reservation land is obtained from the Zuni, Nutria and Pescado Rivers as well as from springs located throughout the Reservation. The irrigation system comprises a number of separate irrigation units which are serviced by various small diversion dams, reservoirs and canal distribution networks.[49]

2. *Indian Reservations—On or Near the Colorado River.*

(a) *Kaibab Reservation.* Inhabited by the Kaibab band of the Paiute Indians, this Reservation, with an approximate area of 120,000 acres, is located just south of, and adjacent to, the northern border of the State of Arizona, about half way between Lee Ferry and the northwest corner of Arizona. The Reservation, lying north of the Grand Canyon, has desert-type terrain. The population of the Kaibab tribe is approximately 100, but the number actually living on the Reservation is not in evidence. Gardening and wage earning in nearby towns constitute the basis of the economy.[50]

---

[47]Tr. 12628-12630 (Head).
[48]Tr. 12631-12632 (Head).
[49]Tr. 12775-12793 (Keesee). See also U. S. Exs. 119-147.
[50]Tr. 13760-13761 (Haverland).

Irrigation water for Reservation land is obtained from Moccasin Springs and a stream known as Two Mile Wash.[51] Water from these sources is diverted into several small storage reservoirs and, when enough has accumulated, it is distributed through a system of laterals.[52]

(b) *Havasupai Reservation.* Covering an approximate area of 3,000 acres, this Reservation is located south of the Kaibab Reservation and the Grand Canyon. A portion of its lands is situated at the bottom of the Canyon. The terrain is extremely rugged, desert-type country. No evidence was introduced as to the number of Indians living on the Reservation. The tribe has a population of approximately 250. Tribal economy consists of subsistence gardening in the bottom of the Grand Canyon and wage earning in surrounding communities.[53]

Water for irrigation purposes is diverted from Cataract Creek or Havasu Creek. Two diversion dams serve the two main canals of the distribution system.[54]

(c) *Hualapai Reservation.* The Hualapai Indian Reservation in Arizona consists of three sections, the largest of which abuts on the Colorado River and extends south to the town of Peach Springs, Arizona. The second section, known as the Hualapai School Reserve, is located directly south of the largest section. Finally, the Hualapai Indian Reserve is situated further south on the Big Sandy River. Total combined area is approximately 1,000,000 acres, most of which has a very arid climate and a desert-valley-type of topography. It is unclear how many of the 700 Hualapai Indians live on the Reservation. Although there are a few

---

[51]Tr. 14455-14456 (Fortier).
[52]Tr. 14005-14006 (Rupkey). See also U. S. Exs. 604-614.

[54]Tr. 14011 (Rupkey). See also U. S. Exs. 704-717.

business enterprises, Hualapai economy is based primarily on the raising of livestock.[55]

Irrigation water for lands in the Big Sandy area comes from the Big Sandy River and Trout Creek. Water for the other areas comes from springs and wells and is distributed through a system of pipes and laterals.[56]

(d) *Moapa Reservation.* Situated in the southern portion of Nevada 40 to 50 miles northeast of Las Vegas, this Reservation contains about 1,200 acres—most of which are located in the bottom of a valley with desert-type topography. The Reservation is inhabited by the Moapa band of the Paiute Indians whose total population in 1957 was approximately 100. The actual number residing on the Reservation is unclear.[57] Moapa economy consists of subsistence gardening and wage earning in nearby towns.[58] Practically all irrigable land in the Moapa Indian Reservation has been leased to non-Indians.[59]

(e) *Fort Mohave Reservation.* This Reservation is situated in the States of Arizona, California and Nevada in the general area of their common borders. Embracing approximately 38,000 acres, the Reservation's climate and topography are that of an arid desert valley. The total number of the Fort Mohave tribe living on the Reservation is unknown. The tribe's total population in 1957 was approximately 450. The majority of these Indians work for the Santa Fe Railroad in the town of Needles, California.[60]

Irrigation on this Reservation is negligible. Plans have been proposed for a modern irrigation system using both

---

[60]Tr. 13764-13787, 14069 (Haverland) (Rupkey).

surface water from the Colorado River and underground sources.[61]

(f) *Chemehuevi Reservation.* The Chemehuevi Indian Reservation is situated in an arid desert valley area in California, on the west bank of the Colorado River between Parker Dam and the Fort Mohave Indian Reservation. Its total area is approximately 28,000 acres. There are no Indians presently inhabiting the reservation.[62] Tribal population in 1957 approximated 300 Indians.[63]

As of 1957, irrigation was not practiced on the Reservation. However, the Bureau of Indian Affairs has tentatively planned to introduce irrigation systems on the Reservation.[64]

(g) *Colorado River Reservation.* This Reservation, situated on both sides of the Colorado River in Arizona and California, is bounded on the south by Ehrenburg, Arizona. Its approximately 260,000 acres, which extend to the mesas and mountains on the east and northwest, are primarily arid desert valley country. The inhabitants of the Reservation, the Colorado River Indian tribes, have an agricultural economy.[65] It is estimated that 1,100 or 1,200 of the 1957 tribal population of approximately 1,300 live on the Reservation.[66]

Irrigation water for the Arizona portion is diverted from the Colorado River at the northern part of the Reservation. The diversion dam, called Headgate Rock Dam, has been described at pages 34-35, *supra.* It creates a lake

---

[63]Tr. 13765 (Haverland).

[64]Tr. 14023-14031 (Rupkey). See also U. S. Exs. 516, 1204-1205.

[65]Tr. 13765-13766 (Haverland).

[66]Tr. 13792-13793 (Haverland).

which is used for recreational purposes. There is no power plant. Depth of the water in the canal intake is considerably less than the depth of the River so that only top water flows into the diversion works, thus minimizing the silt problem. The dam was completed in 1941 at a cost of approximately $5,000,000. The main canal for this part of the Reservation takes out at the diversion works and proceeds westerly and southwesterly, entering the valley just west of the town of Parker, Arizona. Its total length is approximately 17 miles and it has a capacity of 2,100 c.f.s. at the heading. The canal, which is partially lined, ends in a wasteway. Complete lining of the canal has been planned and the resulting increased capacity will be able to serve approximately 105,000 acres. Water is regulated by a complex distribution and drainage system.[67]

Construction of several irrigation systems on the California side of the Colorado River Indian Reservation has been planned,[68] and some surveying has been completed.[69] It is estimated that over 70,000 acres in the Reservation have been leased to non-Indians.[70]

(h) *Yuma Reservation.* The Yuma Reservation is located in California across the Colorado River from Yuma, Arizona. It also includes the so-called "Yuma Homesteads" situated south and west of Yuma, in Arizona. Its total area, including the "Yuma Homesteads" is approximately 9,000 acres. The topography is typical Colorado River desert land and the climate is arid. The Reservation is inhabited by the Quecham Indians. As of 1957, about 900 of the estimated

---

[67]Tr. 13981-14001 (Rupkey).

[68]Tr. 14054-14055 (Rupkey); see U. S. Exs. 558, 562.

[69]Tr. 14127 (Rupkey).

[70]Tr. 13776 (Haverland); see U. S. Ex. 568. See also U. S. Exs. 507-558. Leasing of lands on Indian Reservations is governed by 69 Stat. 539 (1955), U. S. Ex. 564; and 69 Stat. 725 (1955), U. S. Ex. 565.

total tribal population of 1200 lived on the Reservation. Most of these Indians are engaged in agriculture or wage earning.[71]

Irrigation water for these Indian lands was first diverted from the Colorado River at Laguna Dam. When Imperial Dam and the All-American Canal were completed, however, the Reservation was served by these facilities. Water delivered from the River is distributed through a system of canals and laterals.[72]

(i) *Cocopah Reservation.* The Cocopah Reservation is composed of two tracts of land located southwest of Yuma in Arizona. Total approximate area is 500 acres and the climate of this typical Colorado River Valley land is arid. The number of the Cocopah Indian tribe living on the Reservation is unclear. The 1957 tribal population was about 90 Indians. Primary sources of income are agriculture and wage earning.[73]

Both tracts of the Cocopah Reservation receive irrigation water from the Colorado River through the facilities of the Valley Division of the Yuma Project. One tract receives water from the Valley Division's east main canal and the other tract receives water from the west main canal. Reservation laterals distribute water directly to the irrigated lands.[74]

3. *Indian Reservations—Central Arizona Area.*

(a) *Gila Bend Reservation.* Situated on the Gila River about 40 miles southwest of Phoenix, Arizona, this Reserva-

tion has an approximate area of 10,000 acres of arid desert valley land and is inhabited by members of the Papago tribe. In 1957, approximately 250 of the total tribal population of 7,500 lived on the Reservation and sustained themselves by working for the railroad serving the area.[75]

Originally, irrigation water was diverted from the Gila River and distributed through the Papago Canal and Indian Lateral. Because of decreasing flows in the Gila these works were discontinued and wells were drilled to provide most of the water supply. Underground water so obtained is distributed through a system of laterals.[76]

(b) *Papago Reservation.* Located in the south central part of Arizona adjoining the Mexican border, this Reservation comprises roughly 2,800,000 acres. Approximately one-half of the Reservation, the northern portion, lies within the Colorado River Basin.[77] The Reservation's climate is arid and it lies in a desert area with rocky, rugged hills on the edge of the valley. It is inhabited by the Papago Indians, some 6,700 of whom live on the Reservation. Their economy is based primarily on cattle raising and wage earnings.[78]

Irrigation water for these Indian lands is provided primarily by wells. Water is discharged into a reservoir or directly into the distribution system which is composed of laterals and partially lined canals.[79]

(c) *San Xavier Reservation.* This Reservation is located on the southwestern edge of the City of Tucson and contains about 71,000 acres. In 1957, it was inhabited

[77]See Tr. 14540; U. S. Ex. 100.
[78]Tr. 14641-14642 (Haverland).
[79]Tr. 14717-14718 (Rupkey). See also U. S. Exs. 1504-1517.

by 500 to 550 Papago Indians. Its climate and topography are similar to that of the Papago Reservation. These Indians have an agricultural and wage earning economy.[80]

Formerly, irrigation water was obtained from three sources; wells, infiltration galleries, and the Santa Cruz River. Because of flood damage and erratic river flow the diversion dam and canal on the Santa Cruz are no longer in use. Additional wells were drilled to compensate for the diminished surface supply and for the declining water table which rendered the infiltration galleries inoperative.[81]

(d) *Gila River Reservation.* The Gila River Reservation, which includes two small irrigation districts and the Indian lands of the San Carlos Project, is situated approximately 20 miles south of Phoenix, in Arizona, and contains about 370,000 acres of land. Its topography and climate are typical of southwest desert country. In 1957, it was inhabited by approximately 5,700 members of the Pima and Maricopa Indian tribes. Their economy is based upon agriculture and wage earning.[82]

The irrigation system of the Gila Crossing District of the Gila River Reservation includes two diversion dams on the Gila River. Declining surface flow has rendered them almost inoperative, however, and wells have been drilled to compensate for the loss of supply. Well water is distributed through a system of ditches. The Maricopa District of the Reservation has for some time obtained its irrigation water exclusively from wells. A network of ditches serves as a distribution system.[83]

---

[80]Tr. 14642-14643 (Haverland).

[81]Tr. 14723-14725 (Rupkey). See also U. S. Exs. 258, 512, 1702-1724.

[82]Tr. 14644 (Haverland).

[83]Tr. 14727-14733 (Rupkey).

(e) *Ak Chin-Maricopa Reservation.* This Reservation is located in Arizona at the southwest corner of the Gila River Reservation and contains approximately 21,000 acres of land. In 1957, it was inhabited by some 140 members of the Ak Chin-Maricopa tribe whose economy is primarily based on agriculture and wage earning.[84] Portions of the Reservation are irrigated by well water distributed through laterals. Other portions are irrigated, in part at least, from surface water which is partially derived from desert runoff and surplus water from irrigation on non-Indian lands.[85]

(f) *San Carlos Reservation.* The 1,600,000 acres of this Reservation lie in eastern Arizona between the Gila and Salt Rivers. Its eastern portion is quite mountainous, its northern portion also has relatively high elevations and its southern portion is low elevation desert land. Climate is hot and arid. The inhabitants are of the San Carlos-Apache tribe whose population in 1957 was approximately 4,500. Their economy consists of stock raising, agriculture and wage earning.[86]

Irrigation water for these Indian lands is primarily obtained from wells which discharge into a distribution system of laterals and pipelines. Two ditches with headings at the San Carlos River provide some surface water.[87]

(g) *Salt River Reservation.* The Salt River Reservation is located in Arizona about 10 miles east of the City of Phoenix on both sides of the Salt River. Its area is approximately 47,000 acres and topography and climate are typical of the Salt River Valley. It is inhabited by members of the Pima and Maricopa Indian tribes. Their

---

[84]Tr. 14644-14645 (Haverland).

[85]Tr. 14720-14721 (Rupkey). See also U. S. Exs. 1604-1614.

[86]Tr. 14645-14646 (Haverland).

[87]Tr. 14758-14759 (Rupkey). See also U. S. Exs. 2023-2047.

combined population in 1957 was approximately 1500. The economy is based on agriculture and wage earning.[88]

Irrigation water is obtained from surface and underground sources. The primary source of water is the Salt River from which water is diverted to flow by gravity to the Reservation. The Arizona and South Canals of the Salt River Valley Water Users' Association, which take out at Granite Reef Diversion Dam, bring Salt River water to the edge of the Reservation where pipes and concrete conduits conduct the water on to Indian lands to be distributed through laterals.[89]

(h) *Fort McDowell Reservation.* Located in Arizona along both sides of the Verde River, this Reservation abuts on the northeast corner of the Salt River Indian Reservation and contains about 25,000 acres. Its eastern and western sides are hilly but the central portion lies in the Verde Valley. It is inhabited by the Fort McDowell-Mohave-Apache tribe which numbered approximately 300 in 1957. Their economy is based on stock raising, agriculture and wage earning.[90]

Irrigation water is diverted from the Verde River and conducted to the Indian land by two ditches. At one time, four ditches served the area but flooding destroyed the headings of two of them and they are no longer in use. Consequently the area in the southern portion of the Reservation on each side of the River is not used.[91]

(i) *Camp Verde Reservation.* The Camp Verde Indian Reservation is located in Arizona approximately 40 miles east of Prescott and contains about 500 acres of land.

---

[88]Tr. 14646 (Haverland).

[89]Tr. 14768-14770 (Rupkey). See also U. S. Exs. 2109-2119.

[90]Tr. 14646-14647 (Haverland).

[91]Tr. 14775-14776A (Rupkey). See also U. S. Exs. 2206-2210.

Although situated in the Verde Valley, its topography is that of arid desert country. It is inhabited by the Yavapai-Apache tribe, the 1957 population of which approximated 650. Tribal economy is based on agriculture and some wage earning.[92]

The Verde River is the primary source of irrigation water supply. Two ditches conduct water to various turnouts which discharge water into a system of laterals.[93]

(j) *Fort Apache Reservation.* Situated in east central Arizona north of the Salt River, this Reservation contains 1,660,000 acres of land. Its eastern portion is a heavily timbered area of high elevations and both the eastern and northern portions enjoy a temperate climate and good rainfall. The Salt River portion is desert and the climate is arid. The Reservation is inhabited by the White Mountain-Apache tribe, the 1957 population of which was approximately 4,000. This Indian economy is diversified: it includes timber operations, stock raising and subsistence agriculture.[94]

Several ditches and headings divert irrigation water from the North Fork of the White River and from Diamond Creek. Some portions of the Reservation receive North Fork water which is pumped by a pumping plant located on the west bank of the River. The White Mountain section of the Reservation obtains irrigation water through a series of ditches taking out of the East Fork of the White River.[95]

Despite objections by the Salt River Valley Water Users' Association and a lawsuit pending at the time of the hearings in this case, a dam has recently been constructed within

the Fort Apache Indian Reservation which creates the Smith Park Reservoir. It is used for recreational purposes. The dam was constructed with tribal funds with the approval of the Secretary of the Interior. Its capacity is 5,000 acre-feet.[96] Recreation potential of the Reservation is great, particularly along the White River. Indeed, the area is currently popular with vacationers and increased facilities are planned for the future.[97]

4. *Indian Reservations—Coachella Valley.* There are three small Indian Reservations in the Coachella Valley: the Cabazon Reservation, located near Indio, California; the Augustine Reservation; and the Torres-Martinez Reservation. The whole of the Cabazon and Augustine Reservations and part of the Torres-Martinez Reservation are within Coachella Valley Improvement District No. 1. In 1957, the Cabazon tribe listed 17 to 20 Indians on the tribal rolls, the Augustine tribe listed 5; and the Torres-Martinez tribe included approximately 250 Indians. Although these Indians did not, as of 1957, receive water from the Coachella Valley Water District, the District's distribution system is capable of serving the Indian land should proper laterals be installed. It is anticipated that some or all of these lands will be be furnished water in the future.[98]

5. *Fish and Wildlife Service.* Wildlife refuges maintained by the United States are operated for the protection of migratory birds and mammals, for recreation and for the prevention of crop depredations on adjoining farm land. Three of these exist in the Lower Colorado River Basin.[99]

[99]Tr. 15656-15657 (Taylor); see U. S. Ex. 2613.

(a) *Havasu Lake National Wildlife Refuge.* This Refuge is the largest in the Lower Colorado River Basin; it extends along both sides of the Colorado River from Needles, California to Parker Dam. The Bureau of Reclamation is channelizing the River in this area and when channelization is complete the natural marsh areas which have served as wildlife refuges will have been destroyed. The Fish and Wildlife Service has formulated a plan to substitute controlled marsh and irrigated land for areas drained by the channelization program.[1]

(b) *Imperial National Wildlife Refuge.* Situated along the Colorado River from a point south of Imperial Dam to the Cibola Valley to the north, this Refuge contains approximately 4,000 acres. The channelization program of the Bureau of Reclamation will also affect this Refuge and substitute marsh areas are planned by the Fish and Wildlife Service. These plans include the development of substitute food plots. Some 35 food plot areas have been selected which range from 20 to 300 acres in size. The plots will be leveled and irrigated and crops will be grown.[2]

(c) *Salton Sea National Wildlife Refuge.* This Refuge was established in 1930 and includes public and leased private lands.[3] It is operated primarily to prevent depredation in the Imperial Valley. This is accomplished by putting approximately 4,000 acres a year to grain which is available for migratory birds just prior to or during the harvesting season on adjacent farm lands. Water for this purpose is purchased from the Imperial Irrigation District.[4]

6. *National Parks, Monuments, and Recreation Areas.* There are twenty-one National Parks and Monuments located within the Lower Colorado River Basin.[5] Local water supplies are used for recreation, stock and wildlife watering, various domestic uses, power and, occasionally, for irrigation.[6] Because of the number of National Parks and Monuments and because of the relatively small amount of water used by them, detailed discussion of their water supply and uses is not set forth herein.

7. *National Forests.* There are eleven National Forests in the Lower Colorado River Basin.[7] They were established for the following purposes: (1) the protection of watersheds and the maintenance of natural flow in streams below the sheds; (2) production of timber; (3) production of forage for domestic animals; (4) protection and propagation of wildlife; and (5) recreation for the general public. Water is used for recreation, domestic purposes, irrigation and stock watering.[8]

8. *Bureau of Land Management.* The Bureau of Land Management is the United States agency in charge of public lands. It has instituted livestock grazing and water spreading programs on public lands. The latter activity is designed to increase the production of forage and to prevent erosion. Flood flows in normally dry washes are diverted and applied as irrigation water to the range. The application of this water increases the growth of forage and prevents erosion by discouraging the concentration of cattle at watering holes.[9]

F. Utah

The portion of the Lower Basin located in Utah lies in the extreme southwest corner of the State in part or all of four counties: Washington, Iron, Kane, and Garfield. This area is situated at the conjunction of the Colorado plateau country and the basin and range province of Nevada. In the lower parts, near the town of St. George, elevations are about 2,500 feet while in the higher portions elevations rise to 10,000 feet. On the upside and to the east of the Hurricane Fault, which runs through the Toquerville-Hurricane area, lies a high plateau. Drainage from this plateau is through narrow, deep, canyon-like channels. Population of the Utah portion of the Lower Basin exceeds 12,000. The principal city is St. George and other towns include Hurricane and Kanab.[10]

The principal streams and drainage basins in the area are: Johnson Creek, which flows into Kanab Creek in Arizona; Kanab Creek; the Virgin River System, which includes the Santa Clara River; and Beaver Dam Wash, which flows into the Virgin River in Arizona.[11] Irrigation was first practiced in the area in the middle of the 19th Century by Mormon colonists.[12]

The main reservoir on the Santa Clara River is Baker Reservoir, which has a capacity of 1,150 acre-feet.[13] The principal diversions on this stream are made from Windsor Dam through the Upper Santa Clara Bench Canal and the Santa Clara Fields Canal. Other smaller canals serve additional acreage along the River. The only trans-basin diversion in the region diverts part of the headwaters of the Santa Clara to the Great Basin area.[14]

---

[11]Tr. 17814-17816 (Bingham).
[12]Tr. 17827 (Criddle).
[13]Tr. 17922-17923 (Bingham).
[14]Tr. 17819-17821 (Bingham); see Utah Ex. 8.

Kolob Reservoir, capacity 5,586 acre-feet, is located northeast of the town of Virgin on a tributary of the Virgin River. Diversions from the River are made by: St. George and Washington Fields Diversion Dam and Canal, serving lands near St. George; La Verkin Canal, serving lands in the vicinity of the Town of La Verkin; and Hurricane Canal, serving lands south and west of the Town of Hurricane. Further to the east the Kanab Canal diverts from Kanab Creek to serve lands south of the Town of Kanab.[15]

Some of the waters of the Santa Clara River, the main Virgin River, Leeds or Quail Creek and Kanarra Creek are subject to court decrees.[16] There are no decrees affecting Johnson and Kanab Creeks.[17]

The Bureau of Reclamation has twice reported on a proposed Dixie Project in the Utah portion of the Lower Colorado River Basin. Neither of these reports, dated 1949 and 1953 respectively, had been approved by the Commissioner of Reclamation at the close of hearings in this case. The essential difference between the two is that the latter is designed to serve less land with fewer works. The proposed project is planned to serve the Hurricane Division on the Virgin River and the Santa Clara Division on the Santa Clara River. In addition, the Dixie Project would make possible a trans-basin diversion from Kolob Reservoir to the Cedar City area by providing a substitute water supply.[18]

VII. Mainstream Supply

During the course of the hearings in this case evidence was introduced of estimates of future supply of mainstream water which will be available for consumptive use in the Lower Basin. Arizona and the United States take the position that it is neither necessary nor useful to attempt to predict the future Lower Basin supply in order to adjudicate this case. California, on the other hand, urges that supply should be estimated and this estimate used as the basis for decision. Nevada has also presented an estimate of future supply.

I have concluded that a prediction of the future supply of Lower Basin mainstream water would be irrelevant to the legal issues involved in this case, and, moreover, would not be sufficiently accurate to shed light on any equitable considerations which might bear on the decision. Thus no attempt is made to predict future supply in this Report.

A. The Future Supply of Mainstream Water in the Lower Basin is Irrelevant to the Legal Issues in This Case

As will be developed in Part Two of this Report, Congress and the Secretary of the Interior have established a formula for the apportionment of mainstream water among the three states of the Lower Basin with geographic access to the Colorado River; namely, Arizona, California and Nevada.[19] This formula allocates certain percentages of the available supply in any given year to each of the three states. Since the formula is not derived from supply and since it operates on whatever the supply happens to be in any given year, there is no need to predict future supply in order to determine how that supply is to be

[19]This apportionment does not apply to water diverted upstream from Lake Mead. See pp. 183, 225-228, *infra*.

apportioned. In other words, the recommended decree states exactly how water is to be divided among the three states in the future, and it provides for any supply situation which may develop. Thus it is unnecessary to predict future supply conditions in order to adjudicate this case.

California emphasizes that the Supreme Court, in several earlier equitable apportionment cases, has based its decision on an estimate of future supply.[20] She argues that the same procedure should be followed in this case. But in those cases, unlike this case, the Supreme Court did not have a flexible formula, established by Congress and the Secretary of the Interior, which could be used to apportion whatever water supply happened to be available in any particular year in the future. Future supply was estimated in those cases, even though, as the Court specifically recognized, the estimates would necessarily be inaccurate, because the Court considered a finding as to supply useful to its decision. Because a flexible formula authorized by Congress and effectuated by the Secretary of the Interior controls this case, the Report does not estimate a supposedly static total supply and allocate fixed amounts of it to each state. Whether the Court itself could have established a flexible formula as an equitable matter to control the interstate apportionment in those prior cases is of no concern here. This case involves a statutory, not an equitable, apportionment and that statutory apportionment applies irrespective of supply. Given the very erratic flow of the Colorado River, which makes it highly unlikely that the supply of water available for consumption each year will be constant, see pages 107-109, 116-118, *infra*, a percentage allocation not dependent on a fixed supply is more

---

[20] *Nebraska* v. *Wyoming*, 325 U. S. 589 (1945); *Wyoming* v. *Colorado*, 259 U. S. 419 (1922).

practicable to apply than a mass allocation based on a supposedly fixed future supply.

The only other suggestion advanced by California to support its contention that a prediction of future supply is relevant to the legal issues in this case is that such a prediction might shed light on the Congressional intention embodied in the Boulder Canyon Project Act. California argues that Congress intended Los Angeles to receive a substantial amount of water from the Colorado River and that the interpretation of the Project Act suggested in this Report is incorrect because, when applied to the future supply of water as estimated by California, it does not provide any mainstream water for Los Angeles. But the supply of water which will actually be available in the future for any state or any project does not provide the slightest insight into the intention of Congress when it passed the act in 1928. Obviously the relevant factor in determining Congressional intention is the supply of mainstream water which Congress thought would be available at the time it enacted the Project Act, not the supply which will in fact be available after 1960. Thus, assuming hypothetically the validity of California's argument that Congress intended Los Angeles to receive a substantial amount of Colorado River water which she would not receive under the interpretation of the Project Act proposed in the Report, this would not cast doubt on the proposed statutory interpretation if Los Angeles would have received the water which Congress intended had the supply conditions which Congress anticipated in 1928 actually prevailed. The Court could not rewrite the Project Act to compensate for an erroneous congressional estimate of water supply. And, for all of the uncertainty over the actual supply of water in the Colorado River, one thing that is clear is that the estimates of supply in 1928 were uniformly and substan-

tially larger than even the most optimistic estimates made today.[21]

B. It is Impossible to Predict Future Mainstream Supply Accurately Enough to Shed Light on the Equities in This Case

California contends that the record in this case supports a finding of fact that the "safe annual yield or dependable supply of water available for mainstream projects in the Lower Basin is probably not less than 5,400,000 nor more than 5,850,000 acre-feet per annum."[22] She contends that application of the apportionment formula recommended in this Report to this supply of water would seriously curtail existing uses of mainstream water in California and might eliminate all diversions by the Metropolitan Water District, which serves Los Angeles and other cities on the Southern California coastal plain.[23]

While legally irrelevant, such a result, if at all probable, would arouse the gravest apprehension. However, the record in this case gives no indication that the "chaotic disaster"[24] which California fears will, or is likely to, materialize. Her dire predictions appear to be unfounded.

---

[21]See p. 17, note 56, *supra*. The Colorado River has been in a drought period since 1930. There is a dispute among the experts as to whether this period has now ended.

[22]Cal. Proposed Finding of Fact 5B:101(4).

[23]Metropolitan, under Sections 8 and 9 of the Seven-party Agreement among California water users, may be able to claim some of California's allotment as against other users in the state with a senior priority, but this does not derogate from the validity of California's argument that some existing projects would have to suffer curtailment of their present supply.

[24]Calif. Comment on the Draft Report, p. 20.

1. *The evidence will not support a sufficiently accurate prediction of future supply to determine the effect of the recommended decree on existing uses in California*

The evidence in this case simply does not permit a prediction of future Lower Basin supply with that refined degree of accuracy necessary to show whether existing California uses can be satisfied from the percentage of future supply apportioned to California. On the contrary, the mass of evidence which has been presented shows only that the science of hydrology is not capable of sustaining a prediction accurate enough to shed light on this question.

California contends that future Lower Basin mainstream supply will not exceed 5,850,000 acre-feet per annum and that the proposed apportionment to California will result in severe curtailment of her existing uses. Since California deducts evaporation and channel losses to arrive at her estimate of 5,850,000 acre-feet, this quantity seems to refer to water available for diversion at the various diversion works along the mainstream. Even assuming that such a supply would result in this curtailment,[25] a supply sufficient to satisfy 7,667,770 acre-feet per annum

[25]The supply of available water in the Colorado River has in the past been substantially larger than the demand for it; in short, every project received all the water it requested. In such circumstances it is not surprising that a great deal of water has been wasted, as is apparent, for example, from the very large unused runoff each year into the Salton Sea. Undoubtedly when and if water becomes scarce in this area, its use will be regulated much more efficiently than at present. It appears that such practices as lining canals, reducing over-ordering of water, re-using runoff water, reducing evaporation, and improving channels can be instituted in the future and will effect a substantial reduction in the amount of water needed to satisfy existing California uses. It is impossible to determine exactly how much more efficiently water will be used if the present condition of abundance turns into one of shortage, but it is clear that savings will be such that California's existing uses could be satisfied by substantially less water than is presently diverted.

of consumptive uses in the Lower Basin would fulfill all of California's existing uses.[26] Although it is impossible to determine exactly how much of a supply at the diversion gates is necessary to satisfy 7,667,770 acre-feet of consumptive uses, it will be approximately this same figure, *i.e.*, 7,667,770 acre-feet of supply. This is so because consumptive use is defined as water diverted less return flow to the River which can be used by another project in the Lower Basin or in satisfaction of the Mexican Treaty. See pp. 185-187, 225, *infra*. Since consumptive use is all water diverted less return flow, and return flow becomes available for consumption once it returns to the mainstream, supply and consumptive use will be approximately equal.

This means that a difference in the annual supply of less than two million acre-feet per annum (7,667,770 minus 5,850,000) will mean the difference, even under California's reasoning, between complete satisfaction of all of California's existing uses and serious curtailment of those uses. This simply does not leave enough of a margin of error to make a prediction of future supply useful. On the basis of the evidence received in this case, I cannot determine with any confidence whether the future annual supply will be more or less than 7,667,770 acre-feet.

Accurate determination of future supply in a stream system is difficult in any case,[27] and is especially so in the case of the Colorado River. The reasons are not hard to discover. Determination of future supply is

---

[26]According to the evidence presented in this case, existing California projects presently consume 4,483,885 acre-feet of water per annum from the mainstream. See page 128, *infra*. This means, under the apportionment formula proposed in this Report, that a total supply of mainstream water sufficient to satisfy 7,667,770 acre-feet of consumptive uses in the Lower Basin per annum would satisfy all of California's present uses.

[27]See Nebraska v. Wyoming, 325 U.S. 589, 593, 598-599, 604-605 (1945).

at best a prediction—an estimate based on the past. The reliability of the estimate is, of course, conditioned upon the accuracy of the historical data and upon the probability that the past will to a substantial degree repeat itself.

With regard to the historical data, there is the difficulty of measuring stream flow,[28] which always involves a degree of inaccuracy.[29] The reason for the inaccuracy becomes apparent when one considers the measurement process. Stream flow at any particular gauging point is determined by a series of measurements and calculations which involve engineering judgment. It is necessary to determine the cross-sectional area of the stream at the gauging point and to obtain the velocity of the flow for a given stage (*i.e.*, surface level of water) at that point. Some gauging stations have a continuous stage recorder, which gives a continuous measurement of the fluctuating stream level, but others do not. When stages are measured infrequently, some error is necessarily introduced. The calculation of the cross-sectional area depends on the width, depth and contour of the stream bed. Securing of these data involves some uncertainty, partly because of the fact that the cross-sectional area is unstable, since it changes with sedimentation and scouring. Even the determination of flow velocity by current meters is inexact, because of variations in readings depending upon the depth of the meter below the water surface. The United States

---

[28]For example, Ariz. Ex. 64 (House Document 419, 80th Cong.) at p. 283 states:

> "Throughout the Gila River Basin the securing of streamflow records is made difficult by violent floods, shifting channels, and sand and silt. Except in the Phoenix area, where extensive irrigation development has been made, there are no reliable long-time records of the Gila River and its tributaries."

[29]Tr. 4285 (Tipton). The witness also said that even delivery of water through a pipe to municipal water users cannot be measured with complete accuracy.

Geological Survey, which maintains and publishes records of stream flow data, rates its records from excellent (error of 5% or less) to poor (error in excess of 15%).[30]

Determination of diminution of supply resulting from reservoir evaporation loss entails similar inexactitude. Without detailing the methods of measuring reservoir evaporation loss, it is sufficient to say that the process is also one of estimate and calculation, with attendant inaccuracies. One witness characterized the often-used land pan method as reliable only to the extent of "general application on an annual basis."[31] Determining channel losses presents similar problems.

In addition, there is the problem of incomplete stream flow records. Historical flow records suffer not only from the infirmities just described but also from the fact that they often are derived, not from actual measurements on the stream, but from correlations with flows of other streams. In some instances, records were never kept or were lost. In such cases it is common to estimate flows by correlating such records of the stream that do exist with longer records of "adjacent" streams thought to have a relationship to the one in question.[32]

Prediction of future supply depends upon repetition of past conditions in future years. In making these estimates, experts select some portion of the historical record which they expect will recur. But the experts do not agree on which portion of the record to select. Certainly

---

[30]Tr. 3836-3845 (Dugan). At the time Mr. Dugan gave his testimony, he was Assistant Chief Development Engineer of the United States Bureau of Reclamation.

[31]Tr. 3914 (Dugan). For a full description of methods used to calculate evaporation losses on Lake Mead, see Tr. 3907-3915A (Dugan).

[32]Tr. 4286 (Tipton). For a detailed account of the technique of correlating two streams, see Tr. 5456-5486 (Dugan).

the period chosen as "representative" determines in large measure the ultimate conclusion regarding supply. In this case, at least four different periods were put forth as the proper standard for analysis. Arizona and California chose the period 1909-1956;[33] Nevada selected 1930-1956.[34] In addition, the periods of 1914-1956[35] and 1922-1956[36] were suggested as appropriate for study. Such disagreement indicates the difficulty in arriving at any reliable conclusion as to which period will be repeated, if any.

The disagreement over the proper period for study is actually merely a reflection of the fundamental difficulty in determining supply of the Basin, namely, the erratic character of the rivers therein. In all of the representative periods selected, there were, from year to year, extreme variations in flow. The tables reproduced at the end of this section show, for example, a flow at Lee Ferry in 1953 of 8,805,000 acre-feet, less than half that of the previous year. Such an erratic supply pattern makes it extremely difficult to predict, even within a very broad range of accuracy, the supply which will be available in any particular year.

In order to overcome the uncertainty of predicting yearly supply, the experts predicted the average annual supply for various periods and assumed that this average would be the actual yearly supply for the period. There is no doubt that Hoover Dam was designed and may be used, to some extent, to translate an uneven yearly inflow into Lake Mead into stable yearly releases of water from Lake Mead. But there is a definite limit on the effectiveness of the dam in this regard. The evaporation losses on stored water in the Lower Basin are substantial, see pp. 124-125, *infra*, and, of

[33]See Ariz. Exs. 352, 353; Calif. Proposed Finding 5E:101.
[34]See Nev. Proposed Finding XXIX; Nev. Brief, p. 130.
[35]Tr. 21275-21278, 21282-21285, 21331 (Riter).
[36]Tr. 21755-21759 (Hill).

course, the more water that is stored in Lake Mead the more that evaporates. Also, a reservoir must be operated at below its full capacity so that it can be used to impound excessive unexpected flows which may occur in any particular year and thus prevent flooding. Because of considerations such as these Hoover Dam cannot be used to even out fluctuating yearly flows over any considerable period of time.

For example, assume, hypothetically, that the average inflow into Lake Mead over a fifty year period could be predicted as 10,000,000 acre-feet per year. In a year in which 17,000,000 acre-feet flowed into the Lake, only 10,000,000 would be released and the remainder stored to offset future dry years if the purpose was to establish an actual yearly outflow equal to the average yearly inflow during the fifty year period. However, if the reservoir were almost full, prudence would require that more than 10,000,000 acre-feet be released so that the dam could be used to impound any unusually heavy inflows which might occur in the succeeding few years.

In a converse situation, if only 8,000,000 acre-feet flowed into Lake Mead in one year, 10,000,000 acre-feet would still have to be released in order to maintain a yearly outflow equal to average inflow. However, if the reservoir were low, it might be wise to release only 8,000,000 acre-feet so as to reserve a supply for the next few years in case the drought conditions worsened.

The point is that it is unrealistic to take the average yearly inflow into Lake Mead for a thirty or fifty year period and assume that this, less evaporation losses, will in fact be the actual yearly supply released from Lake Mead. Even if the average for the last fifty years were repeated over the next fifty years, which itself is uncertain, nothing supports the conclusion that the yearly average would or could be translated into actual yearly releases.

It might be that over a short period of less than ten years Hoover Dam could be operated flexibly enough to translate the total inflow into an average yearly release. But it is most unlikely that this can be done over a longer period. And the fact is that it is almost as difficult to predict the average flow into Lake Mead for any ten-year period as it is to predict the flow into the Lake for any particular year, for the average flows for ten year periods during the recorded history of the Colorado River have been as erratic and unpredictable as the yearly flows. For example, the ten-year cumulative flow at Lee Ferry for the period 1941-1950 was 130,473,700 acre-feet. Five years later, the cumulative flow for the period 1946-1955 was only 111,401,200 acre-feet.[37] The difference in the *average annual* flow between the two periods is nearly 2,000,000 acre-feet. Even greater variations occur if ten or more consecutive years of record are used as a basis for averaging yearly supply. The following table illustrates the variations in flow depending upon the period selected.

COLORADO RIVER AT LEE FERRY[38]

Stream Flow in Acre-Feet

Period	10 Years	20 Years	30 Years
1899-1908	144,870,000		
1909-1918	165,873,700	310,743,700	464,360,200
1919-1928	153,616,500		
1929-1938	117,328,400	270,944,900	
1939-1948	121,532,800	238,088,700	355,417,100
1949-1958	116,555,900		

[37]See note 14, p. 146, Part Two, *infra.*

[38]Source: Ariz. Exs. 77B, table A, p. 25, 197; Calif. Ex. 5582A. Arizona Exhibit 77B is commonly called the White Book Supplement. It is a water supply study of the Lower Colorado River Basin by the Bureau of Reclamation, covering the period 1946-1951. The White Book itself (Ariz. Ex. 77) covered the period 1914-1945.

These figures demonstrate that whatever period is selected, the flows of such period have not been repeated in a later comparable period. There is no basis for assuming that flows of any of these periods will be repeated in a comparable period in the future.

Lastly, Lower Basin supply is affected by Upper Basin uses. Increased Upper Basin uses will diminish the Lower Basin supply except as the Upper Basin is limited by Article III of the Compact. Yet no one can say with certainty what increase may occur in Upper Basin uses or at what time.

In support of her prediction of future mainstream supply in the Lower Basin, California relies on two studies which were received in evidence. One, by Thomas M. Stetson, a California witness, concluded that future Lower Basin mainstream supply will be 6,175,000 acre-feet per annum.[38a] The other, by John R. Erickson, an Arizona witness, predicted a future supply of 6,100,000 acre-feet per annum.[39] The apparent concurrence of the Arizona and California witnesses is deceptive, however. Far from supporting California's position, these studies demonstrate that predictions of future supply are necessarily based on so many significant but unknowable factors that they cannot be accurate enough to be helpful in this case.

Both the Erickson and the Stetson studies are based on a number of assumptions which the witnesses made, either on the instruction of counsel or for some other reason, without any attempt to justify the assumptions and, indeed, without ever stating that they agreed with the assumptions. While each one of these assumptions has a significant effect on the ultimate supply prediction in each

---

[38a]Calif. Ex. 2216-A; Tr. 21836 (Stetson).
[39]Tr. 18913-15 (Erickson).

study, no probative evidence was presented to demonstrate that any of the assumptions were correct.

First of all, both Erickson and Stetson based their predictions on the expected repetition of the succession of the annual virgin flows of the Colorado River at Lee Ferry during the period 1909-1956. It is highly unlikely that future yearly flows will even approximately repeat the 1909-1956 pattern. As previously noted, Hoover Dam may, to some extent, permit the translation of unequal yearly inflows into relatively equal yearly releases. But, because of the limits on its storage capacity, the large evaporation losses on stored water, demands of flood control and river regulation and other factors, Hoover Dam has limited utility in this regard. Unless the general pattern of supply conditions on which the studies were based repeats itself in the future, the studies cannot provide a useful guide to future supply. However, as I have pointed out, there is no evidence to indicate that the virgin flow during the period studied, even assuming its accuracy, will repeat itself in the future.

A second and controlling assumption made in the Erickson and Stetson studies on which California relies is that the Upper Basin will deplete the virgin flow at Lee Ferry by between 6,500,000 and 6,800,000 acre-feet per annum. Yet there is nothing to indicate that the Upper Basin depletions, which have never exceeded 2,200,000 acre-feet per annum measured at Lee Ferry,[40] will expand to anywhere near 6,500,000 acre-feet. Again, the witnesses assumed this amount of depletion on instruction from counsel; they did not express the opinion that it would occur. In sharp conflict with this assumption is the estimate expressed in

---

[40]The approximate Upper Basin depletion is shown by comparing the historic flow with the virgin flow figures at Lee Ferry in the tables printed at the end of this section. See also Ariz. Ex. 197.

the Report of the Senate Committee which studied the Colorado River Storage Project and potential reservoir construction in the Upper Basin. That Report estimates that future Upper Basin consumptive use will not exceed 4,800,000 acre-feet per annum (depletion of the flow at Lee Ferry would be less), even if the extensive storage capacity envisaged but not as yet authorized for the Upper Basin were eventually constructed.[41]

Other unsupported assumptions on which the Erickson and Stetson studies are based include the manner in which the reservoirs will be operated by the United States in the future,[42] and the extent of the delivery obligation imposed on the states of the Upper Division under Article III(c) of the Colorado River Compact.[43]

The very great significance of each of these assumptions to the prediction of future supply is demonstrated

---

[41]Senate Report No. 128, 84th Cong., 1st Sess. (1955), p. 4. See also House Report No. 1087, 84th Cong., 1st Sess. (1955), p. 6.

After the close of oral argument on the Draft Report, California moved to re-open the trial for the taking of evidence on the expected future depletion of the Colorado River at Lee Ferry by the Upper Basin. None of the other parties supports this motion. It is clear that the extent of such future depletion will depend primarily on the action of Congress in authorizing new projects in the Upper Basin, see pp. 114-115, *infra*. It would not prove useful to take evidence on this issue. The only probative evidence as to what action Congress may take in the future is the reports of congressional committees such as the ones referred to in this footnote and other official congressional documents. It is not necessary to conduct a trial to enable the Special Master or the Supreme Court to take cognizance of such documents. Moreover, it would not be expedient to make a finding as to what Congress may or may not do in the future. Therefore, California's motion is denied.

[42]The smaller the amount of water which is kept in storage in a reservoir, the less that is lost to evaporation and spillage, but the greater becomes the risk of inadequate storage to meet future needs. It is impossible to determine how the United States will strike a balance between these competing considerations in the operation of the Colorado River reservoirs in the future.

[43]In the absence of the Upper Basin states this delivery obligation cannot be determined in this case.

by the Erickson study itself. The study on which California relies,[44] which shows the future Lower Basin mainstream supply to be 6,100,000 acre-feet per annum, is only one of a series prepared by Mr. Erickson. His other studies varied certain of the assumptions, such as Upper Basin storage and the interpretation of Article III(c) of the Colorado River Compact. One of these other studies showed future supply to be 6,500,000 acre-feet per annum;[45] another showed it to be 7,400,000 acre-feet per annum.[46] And none of the Erickson studies assumed an Upper Basin depletion at Lee Ferry of less than 6,200,000 acre-feet per annum despite a maximum depletion to date of only 2,200,000 acre-feet and the Senate Committee prediction of less than 4,800,000 acre-feet.

2. *Existing California Uses Cannot Be Jeopardized Except by Congressional Action*

In discussing equities, California's contention that existing uses in that state will be curtailed under the apportionment proposed in this Report must be put in perspective. Her contention involves an assumption that Arizona and Nevada will be using all of the water apportioned to them and that the Upper Basin depletion of the flow at Lee Ferry will increase to more than 5,000,000 acre-feet per annum.[47] Even accepting the correctness of all of the other assumptions on which California's estimate of a future annual supply of 6,100,000 acre-feet is based,

---

[44]This study is detailed in the Transcript at pp. 18913-18915.

[45]This study is detailed in the Transcript at pp. 18812-18819.

[46]This study is detailed in Ariz. Ex. 366.

[47]A depletion of the Lee Ferry flow of 5,000,000 acre-feet per annum instead of the depletions assumed in the Erickson and Stetson studies would mean a supply of water for the Lower Basin above what those studies predict of approximately 1,500,000 acre-feet per annum.

there is no possibility whatsoever that existing California uses might be curtailed, until these increased uses actually occur.

At the present time Arizona and Nevada are capable of utilizing only a small part of their apportionments, and the Upper Basin depletion at Lee Ferry is less than 2,200,000 acre-feet per annum. It will require construction of enormous new projects for Arizona and Nevada to fully consume their apportionments. Similarly, many new projects will have to be constructed in the Upper Basin before the flow at Lee Ferry can be depleted to such an extent that California projects would be endangered. Undoubtedly, it will be many decades before all such construction can be authorized, financed and completed. It is impossible to foretell how supply conditions may have changed or what new advances in the conservation or even production of water may have been developed by the time this occurs.

Moreover, if ever the equities between California's existing uses and new uses in the Colorado River Basin have to be resolved, it will be for Congress to resolve them. No new projects, whether in the Lower or Upper Basin, which would affect Lower Basin mainstream supply can be constructed in the Colorado River Basin without Congressional action or acquiescence. Rivers and Harbors Act, 33 U. S. C. §§ 401 *et seq.* See *United States* v. *Arizona,* 295 U. S. 174 (1935); *United States* v. *Rio Grande Irrigation Co.,* 174 U. S. 890 (1899); *Oklahoma* v. *Atkinson,* 313 U. S. 508 (1941); *United States* v. *Grand River Dam Authority,* No. 503-Oct. Term, 1959; *Wisconsin* v. *Illinois,* 278 U. S. 367, 411 (1929); *United States* v. *Republic Steel Corp.,* No. 56-Oct. Term, 1959. Furthermore, as a practical matter, it is virtually impossible to finance such projects without the help of Congress.

No new mainstream projects have been authorized by Congress in Arizona or Nevada, and California herself

recognizes that the Upper Basin depletion at Lee Ferry will not exceed, under existing and presently authorized projects, 3,840,000 acre-feet per annum.[48] Thus unless Congress authorizes new projects, even on California's own assumptions, her existing uses cannot be endangered. It is for Congress to determine the limits of new construction in the Basin and thus the extent to which California's existing uses risk curtailment.

3. *Conclusion*

On the basis of all of the evidence and argument presented in this case, I am convinced that California's apprehension of "chaotic disaster" resulting from the recommended decree is unfounded. Existing California uses are in no danger of curtailment unless and until many vast new projects, some of which are not even contemplated at this time, are approved by Congress and constructed. And even if these projects are eventually constructed, there may well be enough water apportioned to California to satisfy the scale of her existing uses, although greater efficiency may be required. This being the case, there is no justification for California's argument that the legal conclusions discussed in Part Two should be modified because of equitable considerations.

C. Tables

For the convenience of the Court, I append on the following pages several tables showing the erratic flows of streams in the Lower Basin and the annual losses from reservoir evaporation and other causes.

VIII. Present Uses on the Mainstream

The tables printed hereafter show the scale of uses of water from the Colorado River in the Lower Basin as of the taking of evidence in this action. These tables would be most helpful if they showed the use of Colorado River water in Arizona, California and Nevada measured in terms of consumptive use (diversions from the mainstream less return flow thereto), since the recommended decree apportions water in those terms. The figures for California and Nevada are given in terms of consumptive use. However, the evidence presented as to uses in Arizona is in terms of diversions which cannot, on this record, be translated into consumptive use. Substantially all the Arizona uses (other than uses on Indian Reservations) occur in the general vicinity of Imperial Dam and are supplied with water diverted by that dam. Figures are available for total diversions.[62] No figures are available, however, for return flow. The Arizona witness who testified regarding these uses said on cross-examination that he had no knowledge of the magnitude of return flow.[63] However, on re-direct examination, the witness estimated return flow from drains to be approximately 150,000 acre-feet.[64] Apparently, even this figure does not purport to be the total return flow from water diverted for use in Arizona at Imperial Dam.

California's method of calculating consumptive use of these Arizona projects is no more helpful. For example, for Wellton-Mohawk, she takes the figure for irrigated acreage from Arizona Exhibit 186. She then applies a consumptive use rate of 3.76 acre-feet per acre. This figure was derived "by dividing minimum project consumptive use requirements . . . of 282,100 acre-feet by 75,000" acres of

---

[62]See Ariz. Ex. 186.
[63]Tr. 2376, 2403-2407, 2412-2413, 2525-2534 (Steenbergen).
[64]Tr. 2621-2623 (Steenbergen).

land.[65] These figures depend upon engineering estimates, and are adjusted for certain omissions.[66] No testimony supports the proposed consumptive use figure of 3.76 acre-feet per acre. Even assuming the consumptive use figure of 3.76 acre-feet per acre to be correct, it does not purport to measure consumptive use in terms of diversions less return flow to the mainstream.

Therefore the Arizona figures are given in terms of gross diversions.

APPROXIMATE DIVERSIONS OF MAINSTREAM WATER IN ARIZONA

User	Amount (Acre-Fee)	Year
Yuma Project—Valley Division Yuma Auxiliary Project (Unit B)[67]	330,130	1955
Gila Project[68] (plus deliveries to Special use and Warren Act contractors)[69]	578,860	1955
City of Yuma[70]	7,650	1955
Colorado River Indian Reservation[71]	322,500	1955
Total	1,239,140	

[65]See Calif. Proposed Finding 4D:108, note 5.

[66]See Calif. Proposed Finding 4D:106, notes 3-4.

[67]Ariz. Ex. 186.

[68]*Ibid.*

[69]Tr. 2611 (Steenbergen).

[70]Ariz. Ex. 190, table 1.

[71]U. S. Ex. 575. This exhibit contains an incomplete statement of return flow in the amount of 119,600 acre-feet. Thus, maximum consumptive use would be 202,900 acre-feet. Irrigation from the mainstream on the other two Indian reservations in Arizona, Ft. Mohave and Cocopah, is negligible. U. S. Ex. 1319 shows only 23 acres irrigated on the Ft. Mohave Reservation. For the Cocopah Reservation, U. S. Ex. 1009 shows a computed diversion requirement of 1,890 acre-feet for net irrigated acreage of 300 acres. It does not appear from the evidence when, if ever, this amount of mainstream water was actually applied to the land. See Tr. 14483; 14505-14506; 14508 (Criddle).

APPROXIMATE CONSUMPTIVE USE OF MAINSTREAM WATER IN CALIFORNIA

User	Amount of Consumptive Use (Acre-Feet)	Year
All-American Canal Project[72] ..... (Coachella and Imperial Districts)	3,662,000	1955
Metropolitan Water District[73]	481,493	1956
Palo Verde Irrigation District[74]	296,000	1957
Yuma Project—Reservation Division[75]	36,392	1955
Miscellaneous[76]	8,000	1957
Total	4,483,885	

APPROXIMATE CONSUMPTIVE USE OF MAINSTREAM WATER IN NEVADA

User	Amount of Consumptive Use (Acre-Feet)	Year
Boulder City[77]	2,750	1956
Others[78]	21,700	1956
Total	24,450	

[72]Calif. Ex. 275 shows diversions for Imperial and Coachella in 1955 of 3,642,000 acre-feet. Added to this is 20,000 acre-feet of losses chargeable to the districts. See Calif. Ex. 279.

[73]Ariz. Ex. 429. Counsel stated at Tr. 19968 that the Metropolitan diversion for 1957 was 584,000 acre-feet and this was not challenged.

[74]This figure is claimed in Calif. Proposed Finding 4C:102(2) and is based on the consumptive use per acre in 1955, derived from Calif. Ex. 356, multiplied by the irrigated acres in 1957, which increased from 1955. Irrigated acreage in 1957 was approximately 74,000 acres. Tr. 8772. The figure is computed, actual diversion being much greater. California contends that all water diverted by Palo Verde returns to the river except for that consumptively used and that the computed figure accurately represents consumptive use. I have accepted the contention for present purposes.

[75]This figure is also computed and the contention is that the remainder of the water used returns to the River. The figure is taken from Calif. Ex. 376.

[76]Calif. Proposed Finding 4C:110—unspecified non-contractual uses.

[77]U. S. Ex. 35.

[78]Nev. Ex. 502; Tr. 16329.

PART TWO

PART TWO

I. Jurisdiction and Justiciability

None of the parties in this case questions the jurisdiction of the Supreme Court either over the parties or over the subject matter of the controversies which concern the mainstream of the Colorado River. Moreover, either explicitly or implicitly, all of the parties concede that it is appropriate for the Supreme Court to exercise its jurisdiction and adjudicate these mainstream controversies at this time. I agree with the parties that the Supreme Court has jurisdiction over the mainstream controversies which ought to be exercised in this case.[1]

The judicial power of the United States is extended by Article III, Section 2, of the Constitution to "all Cases . . . arising under this Constitution, the Laws of the United States . . . to Controversies to which the United States shall be a party . . . [and] to Controversies between two or more States. . . . In all Cases . . . in which a State shall be Party, the supreme Court shall have original Jurisdiction." It is settled beyond dispute that, under these provisions, a case such as the present one among several states and the United States over the use of water flowing in an interstate stream is within the original jurisdiction of the Supreme Court. *E.g., Colorado* v. *Kansas,* 320 U. S. 383 (1943); *Kansas* v. *Colorado,* 206 U. S. 46 (1907); *Kansas* v. *Colorado,* 185 U. S. 125 (1902); *Missouri* v. *Illinois,* 180 U. S. 208 (1901).

It is also well settled, however, that the Supreme Court will not exercise its original jurisdiction in suits between

---

[1] I have concluded, however, that it would not be appropriate to adjudicate in this litigation controversies among the parties over the tributaries of the Colorado River in the Lower Basin, except for the controversies which concern the Gila River System. The reasons for these conclusions are explained *infra,* at pages 318-321, 323-325.

sovereign states unless there are compelling reasons for doing so. The Court has often reiterated the strict standard which must be met before it will adjudicate an interstate controversy. Thus in *New York* v. *New Jersey,* 256 U. S. 296, 309 (1921), the Court stated:

> "Before this court can be moved to exercise its extraordinary power under the Constitution to control the conduct of one State at the suit of another, the threatened invasion of rights must be of serious magnitude and it must be established by clear and convincing evidence."

See also *Colorado* v. *Kansas,* 320 U. S. 383 (1943); *Washington* v. *Oregon,* 297 U. S. 517, 522 (1936); *Arizona* v. *California,* 283 U. S. 423 (1931).

There are compelling reasons which justify an adjudication of the various claims presented in this case to water flowing in the Colorado River. On September 16, 1948, the Secretary of the Interior transmitted to the Congress a report from the Bureau of Reclamation which concluded that a proposed Central Arizona Project, designed to transport water from the Colorado River to an area in central Arizona, was feasible from both an engineering and a financial point of view. However, the Secretary's letter of transmittal warned that if Arizona's claims to mainstream water were not well founded, as was contended by California, then "there will be no dependable water supply available from the Colorado River for this diversion."[2] As previously noted, *supra,* pages 30-31, Arizona sought congressional authorization for this Central Arizona Project during the 79th, 80th, 81st and 82nd Congresses. Although some of Arizona's proposals were adopted by the Senate, none of them passed the House, and,

---

[2]Ariz. Ex. 70.

on April 18, 1951, the House Committee on Interior and Insular Affairs adopted a resolution that consideration of bills relating to the Central Arizona Project "be postponed until such time as use of the water in the lower Colorado River Basin is either adjudicated or binding or mutual agreement as to the use of the water is reached by the States of the lower Colorado River Basin."[3] About a year later Arizona instituted the present law suit.

It is apparent from these circumstances that Arizona will not be able to develop the Central Arizona Project without an adjudication by the Supreme Court as to the rights of the several parties to the water in the mainstream of the Colorado River. Congress has indicated it will not authorize construction of the Project until rights to mainstream water are adjudicated; nor can it be financed privately until such rights are fully established. In short, Arizona's utilization of the mainstream water which she argues has been apportioned to her in the Boulder Canyon Project Act is being frustrated by the conflicting claims of the other parties to this suit. This is reason enough for the Supreme Court to exercise its original jurisdiction. If the Supreme Court does not exercise its jurisdiction in this case on the ground that Arizona is not presently in a position to divert the water which she claims, Arizona will be faced with a dilemma: Congress will not authorize the Central Arizona Project until Arizona's right to mainstream water is determined, and the Supreme Court will not determine Arizona's right to the water until Congress authorizes the Project.

Moreover, without the Central Arizona or a similar project, Arizona will not be able to fully utilize the water

---

[3] *Hearings on H. R. 1500 and H. R. 1501 Before the Committee on Interior and Insular Affairs, House of Representatives,* 82nd Cong., 1st Sess., pt. 2, pp. 739, 740-756 (1951).

which she claims has been set aside for her in the mainstream. Indeed, Arizona claims that California is already using some of the water to which Arizona is entitled. By increasing the water uses of existing facilities, California will be able to increase substantially her uses of this claimed water in the future. On the other hand, Arizona cannot use the water she claims without the construction of new facilities and she cannot develop new facilities unless her rights in the water are first established. Thus, refusal of the Supreme Court to adjudicate Arizona's rights in the mainstream water will, as a practical matter, have the effect of a decision in favor of California since Arizona will not be able to utilize the disputed water and California will. If Arizona's interpretation of the Boulder Canyon Project Act, which the United States substantially agrees with, is correct, and if California has *de facto* taken part of the water which was forever apportioned to Arizona, then Arizona can remedy the situation only by suit in the Supreme Court.

The circumstances related above are merely illustrative of conditions generally prevalent in regard to the Colorado River in the Lower Basin. The Basin has experienced a veritable population explosion in the past thirty years, accompanied by a comparable development in industry and agriculture.[4] Water uses have expanded rapidly; but the point has now been reached where increased use of water from the Colorado River is being frustrated by a bitter dispute as to the legal availability of such water for use in the several states. That dispute is now before the Court. There appears to be sufficient mainstream water available to satisfy the scale of present uses and enough to satisfy some degree of expansion. But, despite a present unsatis-

[4]A more detailed description of the conditions in the Lower Basin, summarized in this section of the Report, will be found in Part One.

fied demand for water in the Lower Basin, it is impossible to develop further uses of the water because of the cloud on its legal availability.

Because of the topography and geography of the region, Colorado River water can feasibly and economically be utilized only by the construction of great projects consisting of dams, pumping facilities, desilting basins, canals and other works, the cost of which is enormous. Needless to say, such projects cannot be financed unless there is assurance that water will be not only physically, but legally available for their operation. No such assurance of the legal availability of mainstream water for use in any particular state can today be given. This uncertainty can be removed only by an interstate compact or by the adjudication of the Supreme Court. Congress, in the Boulder Canyon Project Act, encouraged Arizona, California and Nevada to agree to a compact apportioning mainstream water among them, and even suggested a division which it approved in advance. For over thirty years, however, these states have been unable to agree. Time has not cooled the controversy among them, and it seems very unlikely that they will be able to agree in the foreseeable future.

Thus, adjudication of the present action is indispensable to a determination of the legal availability of mainstream water in the Lower Basin. It is an inescapable fact that unless this controversy among the three states and the United States is adjudicated, the full utilization of the Colorado River will be indefinitely delayed. Such a result would frustrate the purposes of Congress in authorizing the construction of Hoover Dam and would seriously hinder development of the entire area.

In addition, the Supreme Court's jurisdiction ought to be exercised in this case for another, related reason. There are a number of existing projects in the Lower Basin for

which plans have been developed calling for the increased use of mainstream water. These projects are already constructed, have irrigable but presently unirrigated lands within their service areas, and, at least some of them, already have delivery contracts with the Secretary of the Interior which provide for enough water to satisfy increased uses if such water is legally available under the interstate apportionment. No further governmental authorization and little additional financing is necessary to enable these projects to increase their mainstream uses. For example, the Imperial Irrigation District embraced 905,568 acres in 1956, of which only approximately 475,000 were irrigated. The District plans to irrigate a substantial part of these unirrigated lands primarily through existing facilities and pursuant to its existing water delivery contracts.[5] Similarly, the Coachella Valley County Water District and Palo Verde Irrigation District presently contain unirrigated land which can be irrigated largely through existing facilities and pursuant to existing delivery contracts.[6] Moreover, as of the close of the evidence in this case, the Metropolitan Water District planned a substantial increase in its diversions of mainstream water, under an existing water delivery contract. Arizona, however, argues that California is presently consuming more than its apportionment of mainstream water under the Project Act, and that existing uses in California should be limited and increased uses forever enjoined. Certainly Arizona's claim should be adjudicated so that the California agencies can make intelligent plans for their future development and operation.

Increased uses of mainstream water would also be rapidly developed in Arizona if the question of legal availability were resolved in her favor, although, as stated above,

---

[5]Tr. 8216-8217 (Dowd); Calif. Exs. 275, 285.
[6]Calif. Ex. 318; Tr. 8771-8772 (Tabor); Calif. Ex. 356.

the full amount of the water she claims could not be utilized without a large new project. For example, the United States plans to contract for the delivery of mainstream water pursuant to the federal reclamation laws to the South Gila Valley near Yuma, Arizona. This area, serviced by the Yuma Irrigation District, is presently within the authorized limits of the Gila Reclamation Project. Additional congressional authorization and an appreciable expansion of existing works would not be necessary in order to develop new water uses in the South Gila Valley. California, however, argues that additional diversions of mainstream water for use in the State of Arizona are forbidden by the Colorado River Compact, the Boulder Canyon Project Act and principles of priority of appropriation. As in the case of the California projects, there is a natural reluctance to develop the land when there is a danger that users may be legally barred from applying water to its irrigation.

Manifestly, then, the various claims to mainstream water urged by the parties to this litigation ought to be decided by the Supreme Court so as to remove this controversy as the major obstacle to full development of the Lower Basin of the Colorado River.

II. Arizona's Motion for Leave to File Amended Pleadings

One question of pleading has survived the hearing. On August 13, 1958, shortly before conclusion of the hearing, Arizona moved before the Special Master for leave to file: (1) an amended bill of complaint; (2) an amended reply to the answers of the California defendants; (3) an amended answer to Nevada's petition of intervention; (4) an amended response to the appearance and statement of New Mexico; and (5) an amended response to Utah's complaint and answer in intervention. In short, Arizona desired leave to file substitute pleadings with respect to all parties except the United States.

This motion was opposed by California, Nevada, New Mexico and Utah.[7] The Solicitor General's view that the Special Master "probably does not have jurisdiction to finally rule on a motion to amend the original petition" was reported on his behalf by government counsel.[8] Arizona expressly disavowed any desire to offer any additional proof in support of its amended pleadings.

It is unnecessary to pass on the question of power raised by the view attributed to the Solicitor General. Since Arizona would not be prejudiced by rejection of the proposed amendments, it is unnecessary to receive them. Close inspection reveals that the proposed changes are intended to accomplish two purposes: (1) to conform the pleadings to the proof; and (2) to state legal theories different from those espoused in the original pleadings.

The first objective is superfluous. In a litigation of this character it would be strange to hold the parties strictly to their pleadings. See *Kansas* v. *Colorado,* 185 U. S. 125 (1902), wherein the Court said:

[7]Tr. 22557-22582.
[8]Tr. 22582-22583.

> ". . . we are unwilling, in this case, to proceed on the mere technical admission made by the demurrer. Nor do we regard it as necessary, whatever imperfections a close analysis of the pending bill may disclose, to compel its amendment at this stage of the litigation."[9]

The second objective is likewise superfluous. The relevant legal principles govern the decision in the light of the facts established, regardless of the law pleaded by the parties.

---

[9]185 U. S., at 147. See also United States v. Louisiana, 363 U. S. 1, 84 (1960); United States v. Texas, 339 U. S. 707, 715 (1950).

III. The Claims of the States to Water in the Mainstream of the Colorado River

I have concluded that the claims of Arizona, California and Nevada to water from Lake Mead and from the mainstream of the Colorado River below Hoover Dam are governed by the Boulder Canyon Project Act, 45 Stat. 1057 (1929), the California Limitation Act, Act of March 4, 1929, and the several water delivery contracts which the Secretary of the Interior has made pursuant to the authority vested in him by Section 5 of the Project Act. The Colorado River Compact, the doctrine of equitable apportionment, and the law of appropriation are all irrelevant to the allocation of such water among the three states.

A. The Colorado River Compact

Extensive argument was had on the origin, purposes and meaning of the Colorado River Compact. Some of the parties labored under the conviction that prolonged and faithful exegesis of the text of this historic instrument would somehow yield a solution to the problems of this litigation. The sentiment which promoted this line of thinking seemed to rise from a profound faith that the Compact, venerated for its great contribution to the growth of the Southwest, would in some unexpected manner come to the aid of the disputing states. Reflection has not confirmed these hopes. The Compact does not answer any of the vital questions which must be answered in the disposition of this suit. The Compact contributes some light on the supply of mainstream water, insofar as it regulates the extent to which the River may be depleted by the Upper Basin. Beyond that the Compact has no utility in the adjudication of this case.

The Colorado River Compact represents an accommodation of the conflicting interests of Upper and Lower Basins for the mutual benefit of both. The Lower Basin, especially California, was interested in reaching agreement over water rights among all the states in the entire River Basin so that congressional action could be obtained authorizing a dam on the Colorado River to control floods and to assure a constant supply of water (Ariz. Exs. 48, 51-53). Congress had expressed an interest in the problems of the Imperial Valley, Kincaid Act, 41 Stat. 600 (1920), and was aware of the flood control problems of the area (Fall-Davis Report, Ariz. Ex. 45). The Upper Basin, sympathetic as it may have been with the Lower Basin in its problems downstream, was nevertheless concerned lest construction of such a dam permit the Lower Basin to obtain a disproportionate amount of the water in the River by operation of the law of prior appropriation (Ariz. Exs. 49, 51). An agreement among the affected states could afford protection against this likely development. Thus, both the Upper and Lower Basins had an incentive to enter into a compact to achieve their respective desires (See Ariz. Ex. 51).

The main bone of contention between the two Basins was the division of water. It was foreseen that, once the River was regulated, the Lower Basin would develop more rapidly than the Upper Basin. The problem of the Compact commissioners, therefore, was to safeguard the Upper Basin against this rapid development with its threat of vesting in the Lower Basin appropriative rights enforcible against the Upper Basin, and at the same time to allow sufficient water to the Lower Basin to ensure development there (Ariz. Exs. 49, 55).

This brief history explains why the provisions of the Compact are addressed solely to the relations of basin to basin and not of state to state (See Ariz. Exs. 51, 55). Any

interpretation of the Compact must be confined by this limiting factor. And from this it also follows that the Compact offers no solution to this controversy among states with respect to their Lower Basin interests.[10]

The text of the Compact makes it abundantly clear that inter-basin, not interstate, relations were the subject matter of agreement. Article II of the Compact divides the entire Colorado River Basin into Upper and Lower Basins, and Article III(a) and (b) apportions the use of water between the two Basins and not among states. This apportionment is accomplished by establishing a ceiling on the quantity of water which may be appropriated[11] in each Basin as against the other. Although Article III(a) and (b) is not expressed in terms of appropriative rights, this is the purport of that Article. For example, it is clear that the Lower Basin may utilize and consume more than the 8,500,000 acre-feet of water per annum apportioned to it by subdivisions (a) and (b) of Article III of the Compact, if the water is actually available, but against the Upper Basin it can acquire appropriative rights to no greater quantity than is sufficient to satisfy a consumptive use of that magnitude. This becomes clear from the historical background of the Compact. Throughout the Colorado River Basin, when the Compact was negotiated, the law of prior appropriation governed acquisition of water rights. In 1922, before the opening of the Sante Fe meetings of the Compact commissioners, the Supreme Court had applied the law of prior appropria-

---

[10]The extent to which the Compact governs this litigation by reason of references thereto in the Project Act and the water delivery contracts is discussed *infra*.

[11]"To appropriate water means to take and divert a specified quantity thereof and put it to beneficial use in accordance with the laws of the state where such water is found, and, by so doing, to acquire under such laws, a vested right to take and divert from the same source, and to use and consume the same quantity of water annually, forever subject only to the right of prior appropriations." Arizona v. California, 283 U. S. 423, 459 (1931).

tion as the guiding principle in an equitable apportionment suit on an interstate stream. *Wyoming* v. *Colorado*, 259 U. S. 419, decided June 5, 1922. As appears from the commissioners' reports, Article III(a) and (b) is intended to prevent the application of the priority rule between the two Basins, a result accomplished by placing limits on the acquisition of appropriative or other water rights in each Basin (Ariz. Exs. 49, 51). These limitations, which are 7,500,000 acre-feet and 8,500,000 acre-feet per annum for the Upper and Lower Basins respectively, are controlling until a further apportionment is had pursuant to Article III(f) and (g), which can in no event occur, under the terms of the Compact, prior to October 1, 1963.

Other provisions of the Compact also make clear that it governs inter-basin relations exclusively. Article III(c) divides between the two Basins the burden of delivering water to Mexico pursuant to a prospective treaty obligation of the United States. Article III(d) forbids the states of the Upper Division[12] to cause the flow of the River to be depleted below an aggregate of 75,000,000 acre-feet of water at Lee Ferry, the division point between the two Basins established in Article II(f), for any period of ten consecutive years. Similarly, Articles I and VIII contemplate inter-basin and not interstate operation of the Compact. Nothing in the Compact prescribes a division of water among the Lower Basin states.

I therefore conclude that the provisions of the Compact, unless made operative by relevant statutes or contracts, do not control the disposition of this case. Nevertheless, in view of the urgent arguments of the sovereign parties and against the eventuality that the Court may take a different view of the matter, I set forth my views regarding the meaning of some provisions of the Compact.

---

[12]Those states are Colorado, New Mexico, Utah, and Wyoming.

The limits established by the Compact on the acquisition of appropriative rights are applicable to the mainstream of the Colorado River and to its tributaries. Arizona has contended otherwise, claiming that the Compact relates to the mainstream exclusively. To support this contention, Arizona advances a number of arguments:

1. That the events leading to the adoption of the Compact, already mentioned in this Report, reveal an intention to deal with mainstream problems rather than with problems on the tributaries;

2. That the Upper Basin could physically control and acquire rights, against the Lower Basin, in mainstream and Upper Basin tributary water only, and hence was not interested in Lower Basin tributaries;

3. That the Compact purports to apportion only part and not all of the water in the River System;

4. That the obligation specified in Article III(d) necessarily refers to mainstream water only;

5. That subdivisions (a) and (d) of Article III are correlative and that III(b) refers to additional mainstream water;

6. That Article VIII deals with mainstream water.

At best, these arguments suggest two things: (1) that some provisions of the Compact relate to mainstream water exclusively, and (2) that the Compact might have been limited to the mainstream in all of its provisions if the negotiators had chosen to have it so confined. However, the plain words of the Compact permit only one interpretation —that Article III(a), (b), (c), (f) and (g) deal with both the mainstream and the tributaries. Article II(a) states: "The term 'Colorado River System' means that portion of the Colorado River and its tributaries within the United States of America." Article III(a) apportions "from the Colorado River System . . . the exclusive bene-

ficial consumptive use . . . of water." Article III(b) allows the Lower Basin "to increase its beneficial consumptive use of *such waters*. . . ." "Such waters" can only refer to System waters, that is, to mainstream and tributary water as defined in Article II(a). In Article III(c), (f) and (g) System water is specified by name.

The various arguments of Arizona fail before this unmistakable language of the Compact. The historical fact that the Upper Basin was primarily concerned with the mainstream will not nullify language of the Compact that subjugates both mainstream and tributaries to its rule. Nor is the argument persuasive that because some provisions deal only with the mainstream, all provisions are so limited. It is certainly true that the second sentence of Article VIII deals with the mainstream only. It very clearly says so. The preceding and the following sentences, however, speak of the Colorado River System, indicating the draftsmen's intent to distinguish the two terms.

Article I states that "an apportionment of the use of part of the water of the Colorado River System is made" by the Compact, and Article VI speaks of "waters of the Colorado River System not covered by the terms of this Compact". From this Arizona would have me infer that tributaries are not subject to the limitations of Article III(a) and (b). The provisions of Articles I and VI can be given full effect without thus overriding the plain language of Article II(a). Article I is consistent with Article III(f) and (g) which provides for further equitable apportionment of the use of System water. The 1922 Compact apportioned the use of 16,000,000 acre-feet of water to the two Basins; a later compact could make a "further equitable apportionment" of remaining System water. Article VI demonstrates that the Compact governs inter-basin and not interstate relations. If a controversy should arise, for example, between two Lower Basin states over the mainstream, or over a tributary, that Article provides for alter-

native modes of adjusting the dispute. As between Lower Basin states "the waters of the Colorado River System [are] not covered by the terms" of the Compact. (Colorado River Compact, Art. VI(a); see Ariz. Exs. 46, 49.)

Lastly, Arizona argues that Article III(a) relates to the mainstream only because III(a) and III(d) are correlative, III(d) being III(a) multiplied by ten, and Article III(d) is clearly a mainstream measurement. This argument is unacceptable. Since Article III(a) imposes a limit upon appropriation whereas III(d) deals with supply at Lee Ferry, an interpretation which makes these two provisions correlative one to another is inadmissible. Since a substantial quantity of water is lost through reservoir evaporation and channel losses as it flows from Lee Ferry, the point where the III(d) obligation is measured, to the diversion points downstream from Hoover Dam, where most of the appropriations are made, 7,500,000 acre-feet of water at Lee Ferry will supply a considerably smaller amount of appropriations below Hoover Dam. Moreover, III(a) extends to appropriations on Lower Basin tributaries as well as the mainstream. Such appropriations cannot possibly have any relation to the quantitative measurement of the flow of water at Lee Ferry.

The Compact does affect the supply of water available to the Lower Basin. Two provisions of the Compact relate to supply, Article III(c) and Article III(d). Article III(d) presents no questions of interpretation. Under it, the Upper Division states may "not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years, reckoned in progressive series beginning with the first day of October . . . ."

With the storage provided by Lake Mead, and barring a drought unprecedented in the recorded history of the River, the Lower Basin has, under the guarantee of the Compact, available for use at Hoover Dam a minimum of 7,500,000 acre-feet of water per year, less transit losses

between Lee Ferry and the dam, evaporation loss from Lake Mead, and its share of the Mexican treaty obligation.

The Compact provides for the delivery of water by the states of the Upper Division at Lee Ferry, in addition to the supply guaranteed by III(d), when the obligation to Mexico cannot be satisfied "from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b) [of Article III of the Compact] . . . ." In that event, "the burden of such deficiency shall be equally borne by the upper basin and the lower basin, and whenever necessary the states of the upper division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d)" of Article III. At the time the Compact was signed (1922) and when it became effective (1929), the United States was under no treaty obligation to Mexico and the Compact created no obligation. However, in 1944 the United States and Mexico negotiated a treaty, proclaimed in 1945, under which the United States has the duty to deliver 1,500,000 acre-feet annually to the United States of Mexico at the international boundary.[13]

Several questions arise regarding the effect of Article III(c), and the parties have offered various suggestions regarding its interpretation. These questions include: (1) what is the meaning of the word "surplus"? (2) If surplus is not sufficient to supply Mexico, how should the Upper Basin's further delivery obligation be measured under the language of Article III(c)? In my judgment, the various questions advanced by the parties concerning construction of this subdivision ought not to be answered in the absence of the states of the Upper Basin; nor need they be answered in order to dispose of this litigation affecting only Lower Basin interests. Under the interpretation which I propose of the Boulder Canyon Project Act and the water delivery contracts made by the Secretary of the Interior pursuant

[13]This obligation is subject to several qualifications; the treaty is discussed *infra* at pages 295-296.

thereto, it is unnecessary to predict the supply of water in the mainstream, in the Lower Basin, in order to adjudicate the present controversy.[14]

Arizona argues that Article III(b), relating exclusively to appropriations in the Lower Basin, imposes an additional delivery burden on the Upper Basin. She reasons that after the III(a) apportionment is exhausted, the Lower Basin

---

[14]Stream flow at Lee Ferry has historically exceeded the maximum delivery obligation under III (c) and III (d). Whether this condition will continue upon full development of the Upper Basin is a subject of dispute among the experts which need not be resolved here. Historic stream flows at Lee Ferry were as follows:

TEN-YEAR TOTALS OF COLORADO RIVER WATER AT LEE FERRY
(In Acre-Feet)

Ten-Year Period	Stream Flow in Acre-Feet	Ten-Year Period	Stream Flow in Acre-Feet
1896-1905	133,700,000	1923-1932	139,969,500

may, under Article III (b), increase its uses by 1,000,000 acre-feet and that the Upper Basin is obliged to furnish water for this increased III(b) use, subject only to the Upper Basin's first right to 7,500,000 acre-feet of water under Article III(a).

Article III(b) cannot be stretched so far. Whatever may account for its segregation as a separate provision of the Compact, there is nothing to suggest that III(b) imposes an affirmative duty on the Upper Basin. Rather, it imposes for the benefit of the Upper Basin, a ceiling on Lower Basin appropriations, albeit that the Lower Basin is privileged to have a higher ceiling than the Upper Basin.

It is my conclusion that Article III(b) has the same effect as Article III(a), and this conclusion is supported by the reports of the Compact commissioners, who spoke of III(a) and III(b) as apportioning 7,500,000 acre-feet to the Upper Basin and 8,500,000 acre-feet to the Lower Basin. (See Ariz. Exs. 46, 49, 53, 55, 57).

"Beneficial consumptive use" is a term used throughout the Compact although, regrettably, it is not defined in Article II or elsewhere in the document. In the early stages of the hearing, Arizona spent a vast amount of effort in seeking to establish the term as a word of art. She now contends that it has no special meaning and never did.

California argues that the term is used in the Compact as a word of art and means:

> "the loss of Colorado River System water in processes useful to man by evaporation, transpiration or diversion out of the drainage basin, or otherwise, whereby such water becomes unavailable for use within the natural drainage basin in the United States, or unavailable for delivery to Mexico in satisfaction of requirements imposed by the Mexican Treaty. The term includes but is not limited to incidental consumption of water such as evaporation and transpiration from water surfaces and banks

> of irrigation and drainage canals, and on or along seeped areas, when such incidental consumption is associated with beneficial consumptive use of water, even though such incidental consumption is not, in itself, useful."[15]

Further refinements of this definition are contained in a 70-page brief, labeled Appendix 1 of California's Opening Brief. Other parties have contributed suggestions for construing the term.

As used in the Compact, beneficial consumptive use was intended to provide a standard for measuring the amount of water each Basin might appropriate. This was necessary since Article III(a) and (b) imposed limits on appropriative rights. In early applications of the western law of appropriation, diversions were regarded as the measure of water use.[16] By 1922, however, it was recognized that the amount of water diverted for irrigation purposes was not necessarily the amount consumed and lost to the stream. Some water applied to the ground would usually reappear in the stream as return flow. The term beneficial consumptive use as employed in the Compact was intended to give each Basin credit for return flow. Thus whether the limits fixed by Article III(a) and (b) have been reached or exceeded is to be determined by measuring the amount of each Basin's total appropriations through the formula, diversions less return flows. In the Compact, "beneficial consumptive use" means consumptive use (as opposed to non-consumptive use, *e.g.* water power) measured by the formula of diversions less return flows, for a beneficial (that is, non-wasteful) purpose. This understanding of the term is reflected

[15]Calif. Brief, Vol. II, p. A1-4.

[16]See Hutchins, Selected Problems in the Law of Water Rights in the West 331 (1942).

in several of the commissioners' reports. (See Ariz. Exs. 46, 52, 54, 57.)[17]

As the foregoing discussion indicates, I regard Article III(a) and (b) as a limitation on appropriative rights and not as a source of supply. So far as the Compact is concerned, Lower Basin supply stems from Article III (c) and (d). There are, of course, other sources of supply, for example, Lower Basin tributary inflow, but these are not dealt with as supply items in the Compact. Thus when referring to the Compact, it is accurate to speak of III(c) and III(d) water, but it is inaccurate and indeed meaningless to speak of III(a) and III(b) water. For Compact purposes, Article III(a) and (b) can refer only to limits on appropriations, not to the supply of water itself.

It is true that Congress in Section 4(a) of the Project Act, treated Article III(a) as a source of supply rather than as a limitation on appropriations. The Act speaks of "the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact . . . ." Later in this Report I shall develop at some length the meaning of this language and the confusion it has produced in this litigation. Suffice it now to say that the congressional meaning is different from the Compact meaning. One may properly speak of III(a) water in the Project Act sense, but not in the Compact sense. Much of the confusion in this case may be traced to this difference between the two writings, for the parties speak of III(a) water without differentiating between the Compact and the Project Act.

---

[17]The term has since been adopted by branches of the engineering profession to express highly sophisticated formulae useful in the planning of irrigation projects. One such is the Blaney-Criddle formula U=KF—R. For an explanation of this formula, see Tr. 13417—13428 (Criddle). Such meanings have no bearing on the term as used in the Compact.

One other contention relating to the Compact may be noticed here. Under Section 4(a) of the Project Act, California, in addition to consuming a part of the so-called III(a) water, may share in "excess or surplus waters unapportioned by said Compact." California contends that III(b) uses are unapportioned by the Compact. The argument is based primarily on the fact that Article III(b) does not use the word "apportioned" which appears in Article III(a). Article III(b) gives the Lower Basin "the right to increase its beneficial consumptive use of" water by 1,000,000 acre-feet per annum. I have already indicated my view that subdivisions (a) and (b) of Article III operate in identical fashion; that the net effect of the two sections is to limit appropriations in the Upper Basin to 7,500,000 acre-feet and in the Lower Basin to 8,500,000 acre-feet. That both sections effect an apportionment is made clear by Article III(f), which provides for "further equitable apportionment of the beneficial uses of the waters of the Colorado River System unapportioned by paragraphs (a), (b) and (c)" of Article III. California argues that apportionment has no precise or consistent meaning in the Compact, since in the foregoing provision Article III(a) and (b) are lumped together with Article III(c) which, according to the argument, clearly does not apportion water to Mexico. California's argument has no merit. Article III(c), while apportioning no water to Mexico, does apportion the burden of a deficiency resulting from the Mexican obligation between the Upper and Lower Basins, and hence effects an apportionment. Moreover, as I have previously had occasion to observe, the reports of the Compact commissioners describe Article III(b) as an apportionment (See Ariz. Exs. 46, 49, 53, 55, 57).

By these observations I do not mean to rule on California's rights under Section 4(a) of the Project Act. That III(b) uses are apportioned for Compact purposes does not

control the interpretation of the statute, and I shall discuss its interpretation in this regard later in the Report.

B. The Boulder Canyon Project Act: Sections 1, 5, 6 and 8

The Boulder Canyon Project Act is in my view the source of authority for the allocation and delivery of water to Arizona, California and Nevada from Lake Mead and from the Colorado River below Lake Mead.[18] That the Congress intended the statute to be a source of such authority is made manifest in several sections. Section 1 of the Act authorizes the Secretary of the Interior "to construct, operate, and maintain" Hoover Dam for several purposes, including "for storage and for the delivery of the stored waters thereof for reclamation of public lands and other beneficial uses. . . ."

More specifically, Section 5 authorizes the Secretary "under such general regulations as he may prescribe to contract for the storage of water in said reservoir and for the delivery thereof at such points on the river . . . as may be agreed upon, for irrigation and domestic uses. . . ." To make its intention abundantly clear the Congress declared in Section 5 that: "No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract as herein stated." The intention to exert authority over the allocation and distribution of water stored in Lake Mead can likewise be derived from Section 8(b) of the Act. That section contemplates that Arizona, California and Nevada, or any two of them, might negotiate a compact for the equitable division of Colorado River water but provides that such a compact shall be subject to water delivery contracts made by the Secretary of the Interior prior to congressional approval of such compact.

---

[18]The Project Act does not govern the mainstream of the Colorado River above Lake Mead. See page 183, *infra*.

These provisions, together with the general operational scheme established in the Act and the purposes of the Act explicated in the legislative history, make it clear that the Project Act was designed by Congress to establish the authority for an allocation of all of the available water in Lake Mead and in the mainstream of the Colorado River downstream from Lake Mead among Arizona, California and Nevada, the only states having geographic access to this water. As to this water, principles such as equitable apportionment or priority of appropriation which might otherwise have controlled the interstate division of the River in its natural flow condition were rendered inapplicable by the Project Act.[19]

The Act itself clearly reserves to the United States broad powers over the water impounded in Lake Mead and delegates this power to the Secretary of the Interior, as agent of the United States. He is specifically authorized to impound the water of the Colorado River in Lake Mead and to exercise custody over the water so impounded through his control, management and operation of the dam and reservoir. No user, whether it be a state or an individual, may receive the impounded water unless the Secretary, by contract, agrees to release it for delivery to that user. Nothing in the Act purports to require the Secretary to agree to deliver specific quantities of water to any particular state or user, except that Section 6 requires him to satisfy water rights perfected as of June 25, 1929.[20] On the con-

---

[19]Since the Project Act does not affect rights to water flowing in the Colorado River upstream from Lake Mead, see page 183, *infra*, the application of these principles to this reach of the River has not been abrogated by the Project Act.

[20]Section 6 of the Project Act directs that Hoover Dam be operated in "satisfaction of present perfected rights in pursuance of Article VIII of said Colorado River compact. . . ." Article VIII states: "Present perfected rights . . . are unimpaired by this compact." The phrase "present perfected rights" means rights perfected when the Act became effective. A statute speaks as of its effective

trary, the Act clearly contemplates that water unappropriated as of that date is to be made available for use within a state only if the Secretary, within his discretion, contracts for the delivery of the water to that state. In short, no contract, no water, and the Secretary determines how much water he will contract to deliver to each state subject only to the limitations on his discretion expressed in the Project Act itself. Since Congress realized that the dam authorized by the Project Act would impound substantially all the water of the mainstream,[21] Congress legislated that the Project Act was to be the new source of power for the allocation of water so impounded. In Sections 8(b) and 4(a), Congress provided that the water could be divided by compact among the interested states. But failing such a compact, the water need not run to the sea nor be indefinitely stored in Lake Mead; in such event the water was to be divided by the Secretary of the Interior.

This conclusion, that the allocation of unappropriated water impounded in Lake Mead is governed by the Secretary's water delivery contracts, comports with the basic scheme established by Congress in the Project Act. It was

---

date. See Cabunac v. National Terminals Corp., 139 F. 2d 853 (7th Cir. 1944); Zimmerman v. United States, 277 Fed. 965 (7th Cir. 1921). Under the terms of the Act, it became effective only when the conditions of Section 4(a) were satisfied and the President so proclaimed. The Presidential Proclamation was made on June 25, 1929.

It has been suggested that "present perfected rights" should be construed to mean rights perfected as of the date the Compact was signed, namely, November 22, 1922. This argument must be rejected. A compact, like a statute, speaks as of its effective date. The Colorado River Compact became effective only upon congressional consent thereto, and such consent was given in the Boulder Canyon Project Act. Thus, the Compact became effective when the Act took effect, which, as noted, was June 25, 1929.

[21] *See Hearings on H. R. 9826 Before the House Committee on Irrigation and Reclamation*, 69th Cong., 1st Sess. 163-164 (1926); Legislative History of Sections 4(a), 5 (1st Paragraph), and 8, Boulder Canyon Project Act as compiled by the State of Arizona [hereinafter cited as "Ariz. Legis. Hist."] p. 6.

apparent that water from Lake Mead would be utilized for a great variety of purposes in three different states, as well as on United States projects and in satisfaction of United States treaty obligations. A great many conflicting interests, as between different sovereigns and competing uses, would have to be resolved in order to operate the reservoir and dam. In this context, it is understandable that Congress designed the Project Act itself as the source of the authority and guiding standards necessary for the operation of the dam and reservoir, including the interstate division of the unappropriated water to be impounded by the dam, except only as the Act itself expressly provided otherwise. Congress obviously felt that once the water was within the custody and control of the United States, in default of interstate agreement, the duty would devolve upon the United States, and particularly the Secretary of the Interior, to provide for the allocation of the water.

This conclusion is also supported by the legislative history of the Project Act. The congressional debates are almost unintelligible except on the premise that the legislators considered that they were providing, in the Project Act itself, the authority for the allocation of impounded water among the states. Thus Senator Pittman of Nevada carefully pointed out on the floor of the Senate that Section 4(a) of the Project Act provided the basis for an apportionment of the water stored in Lake Mead. See pages 176-177, *infra*. Section 4(a) authorized the three interested states themselves to enter into the compact therein defined for the division of this water. Alternatively, the states could, if they chose, formulate a different scheme of allocation subject to congressional approval. Section 8(b). But if the states would not agree to the one or the other, then Congress clearly intended that the limitation on California in Section 4(a) and the Secretary's water delivery contracts made pursuant to Section 5 would impose a federal apportionment on the states.

Senator Pittman explained why it was necessary for Congress to provide authority for the allocation of the water among the three states.

> "Mr. President, this question has been here now for seven years. The seven States have been attempting to reach an agreement. Apparently the Senate of the United States is about to reach an agreement as to what ought to be done. The Senate has already stated exactly what it thinks about the water. That might have been an imposition on some States. Why do we not leave it to California to say how much water she shall take out of the river or leave it to Arizona to say how much water she shall take out of the river? It is because it happens to become a duty of the United States Senate to settle this matter, and that is the reason."[22]

Senator Hayden of Arizona who, like Senator Pittman, was one of those most interested in the Proje t Act, emphasized a number of times that the bill provided a basis for the apportionment of water among Arizona, California and Nevada regardless of state law and interstate priorities, but that it would not affect intrastate water rights. Senator Hayden stated:

> "The only thing required in this bill is contained in the amendment that I have offered, that there shall be apportioned to each State its share of the water. Then, who shall obtain that water in relative order of priority may be determined by the State courts."[23]

The amendment referred to was the basis for a substitute amendment by Senator Phipps of Colorado which, in turn, was enacted as the first paragraph of Section 4(a) of the Project Act.

[22]70 Cong. Rec. 471 (1928), Ariz. Legis. Hist. p. 84.

[23]70 Cong. Rec. 169 (1928), Ariz. Legis. Hist. p. 30. For similar statements by Senator Hayden see 70 Cong. Rec. 163 (1928), Ariz. Legis. Hist. p. 18.

The following colloquy also makes clear that Congress intended that the Secretary of the Interior, in the exercise of the discretion vested in him by Section 5, could, by means of water delivery contracts, effectuate an interstate allocation, in default of allocation by the states themselves.

> "Mr. Walsh of Montana. If the city of Los Angeles has this enormous appropriation of the waters of the Colorado River, a perfected appropriation of [*sic*] an inchoate appropriation, does it follow; if the Government erects this dam across the Colorado River and creates a great storage basin, that it must yield up that amount of water to the city of Los Angeles?
>
> "Mr. Johnson. I rather think so, just exactly as if it were a perfected right for irrigation purposes.
>
> "Mr. Walsh of Montana. Yes; but I always understood that the interest that stores the water has a right superior to prior appropriations that do not store.
>
> "Mr. Johnson. Possibly so. What is the point?
>
> "Mr. Walsh of Montana. The point is that apparently, if that is correct, then this expenditure is being made with no right in the Government of the United States to control the water which is stored, but that it must go to those appropriators.
>
> "Mr. Johnson. No; the bill provides that a contract in advance must be made for the storage of water by the Secretary of the Interior.
>
> "Mr. Walsh of Montana. A contract with whom?
>
> "Mr. Johnson. With those who utilize and take and appropriate the water.
>
> "Mr. Walsh of Montana. That is to say, the Government may dispose of the stored water as it sees fit?
>
> "Mr. Johnson. Yes; under the terms of this bill.
>
> "Mr. Walsh of Montana. Then how can it be said that the city of Los Angeles has a perfected interest?

"Mr. Johnson. It has a perfected right there unquestionably, but the bill requires the city of Los Angeles to conform to it, and the city of Los Angeles is perfectly willing to conform to it just exactly as if it had no perfected right.

"Mr. Walsh of Montana. Am I correct in the assumption, that the Government of the United States must distribute the water to the various appropriators in accordance with their several appropriations?

"Mr. Johnson. If they contract.

"Mr. Walsh of Montana. Yes; but to contract means a liberty of contract. That is what I want to know. Can the Secretary give the water to them or withhold it from them as he sees fit?

"Mr. Johnson. Certainly, because before he begins work upon the dam he has to have the contract in his possession for its payment, and he is the one who is to fix the sums that are to be paid.

"Mr. Walsh of Montana. Yes, but that is quite contradictory. It seems to me that the city of Los Angeles has no rights by virtue of this appropriation.

"Mr. Johnson. Certainly it has, but those rights unquestionably will be controlled by this bill.

* * *

"Mr. Walsh of Montana. I directed the inquiry merely for the purpose of trying to find out, if I can, under what kind of obligation the Government of the United States, should it build this dam, would be to those who have the appropriations.

"Mr. Johnson. The Government would be under no obligations until it makes its terms. I seem unable to make that plain. But here is everything in this scheme, plan, or design: Everything is dependent upon the Secretary of the Interior contracting with those who desire to obtain the benefit of the construction, and he is not to undertake any expenditure nor to undertake any construction until that shall have been accomplished.

"Mr. Walsh of Montana. Let us suppose the Arizona people are perfectly willing to meet the requirements and that the Los Angeles people are perfectly willing to meet the requirements and other people who have not even attempted to make any appropriation are perfectly able and willing to meet the requirements. Who then has the right?

"Mr. Johnson. The Secretary of the Interior and the Government have the right.

"Mr. Walsh of Montana. The Secretary of the Interior may utterly ignore those appropriations?

"Mr. Johnson. Possibly so.

"Mr. Walsh of Montana. That is what I am curious to find out about."[24]

Arizona v. *California*, 283 U. S. 423 (1931), does not, as California urges, conflict with the conclusion here recommended. In that case Arizona filed an original bill of complaint to enjoin the construction of the dam authorized by the Project Act on the ground, *inter alia*, that the Secretary of the Interior would operate the dam in such a manner as to invade "Arizona's quasi-sovereign right to prohibit or to permit appropriation, under its own laws, of the unappropriated water of the Colorado River flowing within the State." 283 U. S., at 451. The bill was dismissed "without prejudice to an application for relief in case the stored water is used in such a way as to interfere with the enjoyment by Arizona, or those claiming under it, of any rights already perfected or with the right of Arizona to make additional legal appropriations and to enjoy the same." 283 U. S., at 464. The Court's reason for dismissing the bill, stated at page 464, was:

"As we hold that the grant of authority to construct the dam and reservoir is a valid exercise of

---

[24]70 Cong. Rec. 168 (1928), Ariz. Legis. Hist. pp. 26-29. See also the statements of Senator Pittman at 69 Cong. Rec. 10259 (1928), Ariz. Legis. Hist. pp. 13-14; and Senator Hayden at 70 Cong. Rec. 382, Ariz. Legis. Hist. pp. 56-56c.

> Congressional power, that the Boulder Canyon Project Act does not purport to abridge the right of Arizona to make, or permit, additional appropriations of water flowing within the State or on its boundaries, and that there is now no threat by Wilbur, or any of the defendant States, to do any act which will interfere with the enjoyment of any present or future appropriation, we have no occasion to consider other questions which have been argued."

I interpret *Arizona* v. *California* as holding nothing more than that the United States could, under the Constitution, construct a dam on the territory of Arizona and Nevada and impound the waters of the Colorado River, a navigable stream. Arizona's objections, that the dam might be operated in such a way as to trespass on her sovereignty, were dismissed as premature since it was by no means certain that the dam and other works would be so operated as to invade Arizona's rights. This is the only explanation of the dismissal without prejudice to a new application for relief if the dam were operated so as to adversely affect Arizona's appropriations from the Colorado River. The Court reasoned that the constitutional issues which might be raised, depending on how the Secretary operated the dam, were best left to await the outcome of its construction and operation. The Court recognized that when the dam impounded water this might affect Arizona's rights to appropriate it by reducing the supply which would flow on her borders, but the Court held that such an infringement was justified under the constitutional power of the Federal Government to regulate navigable streams. Thus the Court stated, at pages 462-463 of the opinion:

> "There is no allegation of definite physical acts by which Wilbur is interfering, or will interfere, with the exercise by Arizona of its right . . . . to make future appropriations by means of diversions below the dam, or limiting the enjoyment of rights

> so acquired, unless it be by preventing an adequate quantity of water from flowing in the river at any necessary point of diversion."

Beyond this the Court considered it unnecessary to go. The Court thus decided not to deal with the question, which must be answered in this litigation, of the extent of the Secretary's authority under the Project Act to control the allocation of water among the states. The fact that this and other questions are ripe for decision now, although they were not in 1931 when *Arizona* v. *California* was decided, gives some indication of the vast difference between the two cases. The prior case was decided before Hoover Dam was built and the sole issue was whether construction of the dam should be enjoined. The present case, of course, necessarily involves an adjudication of the claims and interests of the several states and the United States as they have developed during some twenty-five years of operation of Hoover Dam. For example, one of Arizona's primary fears in 1931 was that she would be required to conform to the Colorado River Compact in order to receive stored water; but she has since ratified the Compact, and, indeed, has relied on that ratification in this litigation. In short, *Arizona* v. *California* was concerned with different issues and different circumstances from those presented in this case.

The argument has been advanced that the Project Act, as I would construe it, constitutes an unconstitutional assumption of power by the United States. The argument does not survive scrutiny. Clearly the United States may construct a dam and impound the waters of the Colorado River, a navigable stream. *Arizona* v. *California,* 283 U. S. 423 (1931); see *United States* v. *Twin City Power Co.,* 350 U. S. 222 (1956); *United States* v. *Chandler-Dunbar Co.,* 229 U. S. 53 (1913); *United States* v. *Rio Grande Irrigation Co.,* 174 U. S. 690 (1899). Clearly, also, once the United States impounds the water and thereby obtains

physical custody of it, the United States may control the allocation and use of unappropriated water so impounded. *Ivanhoe Irrigation District* v. *McCracken,* 357 U. S. 275 (1958); *United States* v. *Gerlach Live Stock Co.,* 339 U. S. 725 (1950). Since Section 6 instructs the Secretary to satisfy property rights in mainstream water perfected as of June 25, 1929, the effective date of the Act, these rights are not in jeopardy. Rights that might be recognized as of that date under state law but that do not qualify as perfected rights under Section 6 do not receive this protection. See pages 306-309, *infra.* Despite this fact, however, there is no need to pass on questions of ownership of water in navigable streams or of the validity against the United States of rights therein recognized by state law. There has been no showing that non-perfected rights recognized by state law as of June 25, 1929, if any, have not been satisfied since Hoover Dam was constructed. If it develops that such rights are not satisfied in the future, that will be time enough to determine whether they are of such character as require compensation for their taking.

In order to sustain the Project Act as applied in this case, it need only be held that the United States may, under the Commerce clause of the Constitution, impound waters in a navigable stream and regulate the disposition thereof so long as perfected rights are satisfied, leaving open the question whether non-perfected rights recognized under state law must be compensated if they are not satisfied.

Not much can be said of the argument that the Project Act constitutes an unconstitutional delegation of legislative power to the Secretary of the Interior because there are insufficient standards to govern his allocation of the water impounded in Lake Mead. The premise is wrong. The Act imposes substantial limitations on the Secretary's discretion. He may not contract with California for more than 4,400,000 acre-feet out of 7,500,000 acre-feet of consumptive use of mainstream water nor for more than one-half

of surplus. Section 4(a). He must satisfy present perfected rights. Section 6. Contracts for water for irrigation and domestic uses must be for permanent service. Section 5. The Secretary, his permitees, licensees and contractees, "shall observe and be subject to and controlled by" the Colorado River Compact. Sections 8(a), 13(b) and 13(c). The Secretary and those claiming under him are subject to any compact between Arizona, California and Nevada, or any two of them, approved by Congress. Section 8(b).[25] The Secretary is subject to the provisions of the reclamation law in the operation and management of the works authorized by the Project Act, except as otherwise provided therein. Section 14.

The Secretary has in fact exercised his discretion, as will be more fully explained later, by making contracts which apportion the water available in Lake Mead substantially along the lines which Congress proposed in Section 4(a) of the Project Act as a fair and equitable division among Arizona, California and Nevada.

For these reasons I have concluded that the delegation of authority to the Secretary of the Interior to apportion Lake Mead water is constitutional and that the Secretary has exercised this authority in a reasonable manner.

Only two other contentions of the parties regarding the proper interpretation of the Secretary's authority under the Project Act need be discussed at this point. Arizona, while agreeing with the United States that the Project Act constitutionally delegates to the Secretary of the Interior the power to allocate mainstream water among the claimant states, argues that the second paragraph of Section 4(a) establishes a formula for the allocation which the Secretary is required precisely to follow, and that those clauses in her water delivery contract which deviate from the for-

---

[25]Compacts approved by Congress after January 1, 1929, are subject to contracts made by the Secretary prior to congressional approval of such compacts.

mula are void. This argument is premised on the language in Section 5 that "contracts respecting water for irrigation and domestic uses . . . shall conform to paragraph (a) of section 4 of this act." The second paragraph, Arizona points out, is included within Section 4(a). But the second paragraph of Section 4(a) is plain in that it merely *authorizes* a tri-state compact for the division of water; it does not compel it; nor does it condition approval of the Colorado River Compact upon acceptance of the proposed tri-state compact. Indeed, the second paragraph was specifically amended on the floor of the Senate to make the suggested division permissive rather than mandatory.[26] The suggested compact which Congress was willing to approve in advance is of no compelling force or effect since no such compact has ever been agreed to. In so far as Section 5 refers to the second paragraph of Section 4(a) it is for the purpose of requiring the Secretary to respect the compact if ratified by the states. See also Section 8(b). Arizona's contention in this respect must therefore be rejected.

Nevada contends that the congressional consent to the Colorado River Compact embodied in the Project Act includes consent to Article IV (a) of the Compact which declares that the Colorado River is no longer navigable. From this premise, she contends that Section 5 cannot empower the Secretary to divide and allocate water and that such a division can be accomplished in two ways only, by compact or adjudication. If Section 5 purports to provide a third method of apportionment, by contract, it is unconstitutional. Accordingly, Nevada argues that she is not bound by her contract limit of 300,000 acre-feet per annum and she seeks an equitable apportionment of the waters of the Lower Basin. This contention does violence to the Act. Section 1 of the Project Act authorized the construction

---

[26]See 70 Cong. Rec. 469 (1928), Ariz. Legis. Hist. pp. 83-84.

of the dam for the purpose of "improving navigation" and Section 6 provides that the dam is to be used "First, . . . for improvement of navigation . . ." Congress thus rejected the declaration of non-navigability in Article IV (a) of the Compact. That Article specifically provides that: "If the Congress shall not consent to this paragraph, the other provisions of this compact shall nevertheless remain binding."

C. The Boulder Canyon Project Act: Section 4(a) and the California Limitation Act

The first paragraph of Section 4(a) establishes a limitation on California's consumptive use of mainstream water, and, as will be developed later, this limitation forms an integral part of the interstate allocation which the water delivery contracts have made. Section 4(a) provides, in part, that the Act shall not take effect and the proposed dam shall not be constructed unless and until (1) all seven of the interested states had ratified the Colorado River Compact, or:

> "(2) [I]f said States fail to ratify the said compact within six months from the date of the passage of this Act then, until six of said States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and shall have approved said compact without conditions, save that of such six-State approval, and the President by public proclamation shall have so declared, and, further, until the State of California, by act of its legislature, shall agree irrevocably and unconditionally with the United States and for the benefit of the States of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming, as an express covenant and in consideration of the passage

> of this Act, that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of this Act and all water necessary for the supply of any rights which may now exist, shall not exceed four million four hundred thousand acre-feet of the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact."

The reason that Congress imposed this limitation on California's consumptive use of mainstream water in the event that all seven states did not agree to the Colorado River Compact within six months of the date of enactment of the Project Act is apparent from the statutory language itself. It was for the benefit of the other six states.

Absent seven-state ratification of the Compact, the Upper Basin required protection against appropriations in the Lower Basin in excess of the Compact apportionment. The Upper Basin feared that Arizona might not ratify, in which event California, unless limited, would be able to appropriate from the mainstream substantially all of the Lower Basin apportionment, leaving Arizona free to make further appropriations from the mainstream outside the Compact ceilings. The limitation on California left a sufficient margin for exploitation by Arizona so as to secure the Upper Basin against undue encroachment by the non-ratifying state.

Similarly, Arizona and Nevada were concerned that California's rapid development would enable that state to appropriate most of the mainstream water available in the Lower Basin. The California limitation afforded these states protection against this eventuality. Unless California

agreed with them to an acceptable division of mainstream water such as that suggested in the second paragraph of Section 4(a), they could, simply by delaying ratification for six months, bring the limitation into effect.

Seven states did not ratify the Colorado River Compact within six months of the date of enactment of the Project Act. California, in compliance with the statutory condition, passed its Limitation Act on March 4, 1929.[27] The California Limitation Act recites that it was enacted in order to comply with Section 4(a) of the Project Act, and it limits California's diversions of Colorado River water in language that is substantially identical to the Project Act limitation.

The limitation on California's use of Colorado River water, contained in the Project Act and the California Limitation Act, and incorporated into the Secretary's water delivery contracts with California users, is valid and binding on California. California argues that if it be held that Arizona effectively ratified the Compact, then California should be absolved of the limitation upon her. California's argument is based upon the premise that her act of self-limitation was exacted of her only in the event of a six-state compact, not of a seven-state compact. However, the natural reading of the language of the statute does not support her contention. The condition stated is the failure of seven states to ratify within six months. That contingency occurred.

Nor is there much to be said for California's alternative argument that Arizona did not effectively ratify the Compact. This is founded on the premise that the Compact, having been proclaimed as a six-state compact, could not fifteen years later become a seven-state compact. The premise is unsound. It was not proclaimed as a six-state compact. It never became a six-state compact. Article XI

---

[27]Calif. Stats. and Amendments to the Codes, ch. 16, pp. 38-39 (1929). For the complete text of the Limitation Act, see Appendix 4.

of the Compact was never stricken or amended. The Congress and six of the states "waived" compliance with Article XI. Certainly Congress contemplated the future adherence of Arizona. Section 13(a) of the Project Act provides: "[T]his approval shall become effective when the State of California and *at least* five of the other States mentioned, shall have approved or *may hereafter* approve said compact as aforesaid and shall consent to such waiver, as herein provided." (emphasis added) Nothing has been called to my attention to indicate that California or any of the other signatory states expressed itself differently.

Under ordinary contract law it may be that fifteen years is too long a time within which an invitation to agree may be said to remain open. But that is always a question of fact to be determined from all the circumstances reflecting the understanding of the parties. 1 Williston on Contracts § 54 (3rd ed. 1957); 1 Corbin on Contracts § 36 (1950). Considering what has already been said, coupled with the perpetual character of the Compact and the very long-range interests which it embraced, I do not think Arizona outwaited her invitation.

Interpretation of the limitation on California.

We turn now to the construction of the language of Section 4(a) of the Project Act and the substantially identical phraseology which appears in California's Limitation Act. Although the problems inherent in those words do not leap to the eye, nevertheless so troublesome are they, that each of the parties which has dealt with then has construed them quite differently, and none of the parties advocates a literal reading of all the statutory language.

What is meant by the words "waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact"?

Article III(a) of the Compact reads as follows:

> "(a) There is hereby apportioned from the Colorado River System in perpetuity to the Upper Basin and to the Lower Basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist."

Read literally, the phrase in Section 4(a) limiting California to 4.4 million acre-feet "of the waters apportioned to the lower basin States by paragraph (a) of Article III" means that, of the 7,500,000 acre-feet apportioned to the entire Lower Basin, California's aggregate annual consumptive use shall not exceed 4,400,000 acre-feet.

What is meant by the words "excess or surplus waters unapportioned by said compact"?

Article III(f) reads as follows:

> "(f) Further equitable apportionment of the beneficial use of the waters of the Colorado River System unapportioned by paragraphs (a), (b), and (c) may be made in the manner provided in paragraph (g) at any time after October 1, 1963, if and when either Basin shall have reached its total beneficial consumptive use as set out in paragraphs (a) and (b)."

The word "surplus" occurs in Article III(c) where it is used as follows: ". . . waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b)."

Thus read literally, the phrase limiting California to one-half of any "excess or surplus waters unapportioned by said compact" means that California may consume half of any water above that referred to in Article III(a) and (b).

California would have us read the first phrase literally so that all uses, both from the mainstream and the tributaries, in the Lower Basin will be included in the accounting.

But not so the second phrase, for if the second is read literally she has no share in the uses specified in Article III(b).[28]

Arizona would have us read the second phrase literally so as to exclude California from the 1,000,000 acre-feet allotted, or as she says, apportioned, by Article III(b). But not so the first phrase. Arizona argues that Article III(a) of the Compact, despite its plain language to the contrary, was construed by the Congress and should now be construed as apportioning to the Lower Basin not System water but mainstream water.

Nevada reads the language so that it makes no difference how the "surplus" language in California's limitation is construed. She argues that California can have no more than 4,400,000 acre-feet out of the available water in the mainstream, and since there is in fact no surplus, which Nevada defines as the excess over 10,000,000 acre-feet (8,500,000 acre-feet for the Lower Basin and 1,500,000 for Mexico), the question of how the language is to be read is moot. Nevada overlooks that her reasoning has in fact excluded California from so-called III(b) water.

The United States once suggested a totally different reading. It construed the first mentioned phrase as if it read "apportioned to the lower basin states by paragraph (*d*) of Article III." Such a construction relates the phrase to the obligation of the states of the Upper Division not to cause a depletion of the River at Lee Ferry below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years. The United States considers "surplus" to be "the waters in the main stream available for use in the Lower Basin in excess of 7,500,000 acre-feet per year."[29]

---

[28]That Article reads: "(b) In addition to the apportionment in paragraph (a), the Lower Basin is hereby given the right to increase its beneficial consumptive use of such waters by 1,000,000 acre-feet per annum."

[29]U. S. proposed conclusion 11.17.

The reason for such diversity of opinion is that the words of Section 4(a), despite their superficial simplicity, cannot bear their literal meaning. This becomes apparent in the attempt to apply the language of Section 4(a) to the factual situation in the Colorado River Basin.

First of all, Section 4(a), if read literally, authorizes a compact which would deprive two states, New Mexico and Utah, of the use of Lower Basin tributary waters which are presently being consumed in those states and which were being consumed there in 1928 when the Project Act was enacted. Section 4(a) contemplates the division of the water referred to therein only among the three states of the Lower Basin which have geographic access to water flowing in the mainstream of the Colorado River, namely, Arizona, California and Nevada. This becomes clear when we read the first and second paragraphs of Section 4(a) together. The first paragraph limits California to not more than "four million four hundred thousand acre-feet of the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact. . . ." The second paragraph authorizes a compact between Arizona, California and Nevada "which shall provide (1) that of the 7,500,000 acre-feet annually apportioned to the lower basin by paragraph (a) of Article III of the Colorado River compact, there shall be apportioned to the State of Nevada 300,000 acre-feet and to the State of Arizona 2,800,000 acre-feet for exclusive beneficial consumptive use in perpetuity, and (2) that the State of Arizona may annually use one-half of the excess or surplus waters unapportioned by the Colorado River compact. . . ." These two paragraphs are clearly correlative and contemplate allocation of all the available water among the three states. See pages 174-175, *infra*. Reading the two paragraphs together, it becomes apparent that the pro-

posed compact to which Congress gave advance approval in the second paragraph was for a division of the available annual supply of water so that of the first 7,500,000 acre-feet of consumptive use, 4,400,000 is allocated to California, 2,800,000 to Arizona and 300,000 to Nevada; any excess is divided half to California and half to Arizona. There is no water left for any other states.

Yet, if read literally, Section 4(a) applies to all of the water "apportioned to the lower basin states by paragraph (a) of Article III of the Colorado River compact." The water apportioned to the Lower Basin by Article III(a) of the Compact is water in the "Colorado River System," which is defined in Article II(a) of the compact as "that portion of the Colorado River and its tributaries within the United States of America." New Mexico and Utah are presently consuming water, as they were in 1928, from tributaries of the Colorado River in the Lower Basin. Thus, a literal reading of Section 4(a) would authorize Arizona, California and Nevada to enter into a compact for the division among themselves of all of the Lower Basin system water, including the water being used by New Mexico and Utah. The unlikelihood of such a congressional intention indicates that Section 4(a) should not be given its literal meaning.

Secondly, Section 4(a), if read literally, authorizes a compact which would prohibit the states of the Upper Basin from utilizing any of the water unapportioned by the Colorado River Compact despite the fact that Article III(f) of the Compact specifically contemplates a future apportionment of this water between the two Basins and Congress purported to ratify the Compact in the Project Act. The tri-state compact authorized by Congress in Section 4(a) provides for the division of all "waters unapportioned by the Colorado River compact" among Arizona and California. Yet that phrase, if given its literal Compact meaning, includes all unapportioned water throughout the entire

Colorado River Basin, in both the Upper and Lower Basins. See pages 194-195, *infra*. It is unlikely, particularly in view of Article III(f) of the Compact, that Congress intended to authorize Arizona and California to agree to divide among themselves all of the water in the Colorado River System unapportioned by the Compact, thus leaving nothing for the Upper Basin beyond its III(a) apportionment.

Finally, Section 4(a), if read literally, would prohibit California from consuming water from the Colorado River in excess of 4,400,000 acre-feet of consumptive uses per annum until consumptive uses throughout the Colorado River Basin totaled 16,000,000 acre-feet per annum, a figure which is approximately twice the present total of consumptive uses. Thus, California is limited by Section 4(a) to 4,400,000 acre-feet per annum plus "not more than one-half of any excess or surplus waters unapportioned by" the Colorado River Compact. Surplus waters unapportioned by the Compact, if taken literally, means water in excess of that "apportioned" in Article III(a) and (b), which means water in excess of 16,000,000 acre-feet of consumptive use in the Colorado River Basin.[30] Again it is extremely unlikely that Congress intended this literal result to apply.

For the reasons stated above, Section 4(a) of the Project Act cannot be given a literal interpretation. Such an interpretation would fly in the face of what must have been the congressional intention; it would make no practical sense whatsoever. This being the case, I have construed Section 4(a) so as to comport with the purposes of Congress in enacting it and to effectuate a result which makes sense when the section is applied to the factual situation existing in the Colorado River Basin.

---

[30]See p. 195, *infra*.

Interpretation of the phrase, waters apportioned by Article III(a).

I have concluded that Congress intended, in limiting California to 4.4 million acre-feet of "the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact," simply to limit California's annual uses[31] of water to 4.4 out of 7.5 million acre-feet. Congress referred to Article III(a) of the Compact solely as a shorthand way of saying "7,500,000 acre-feet per annum." This inappropriate reference to the Compact has been the cause of seeming inconsistency in the Act and of much confusion in its interpretation. Reflection has led to the conviction that the statutory language does not accurately express the true congressional intention.

Thus I hold that Section 4(a) of the Project Act and the California Limitation Act refer only to the water stored in Lake Mead and flowing in the mainstream below Hoover Dam, despite the fact that Article III(a) of the Compact deals with the Colorado River *System,* which is defined in Article II(a) as including the entire mainstream and the tributaries.

It is clear that Congress intended Section 4(a) of the Project Act to apply only to the mainstream, where the works authorized by the Act were to be constructed.[32] The United States cannot by its operation and control of Hoover

---

[31]Measured by diversions less returns.

[32]It is true that certain sections of the Project Act apply to the Colorado River System. The explanation for this is that in those sections Congress was dealing with problems which had system-wide application. Thus Section 13 applies system-wide because it approved the Colorado River Compact, which itself applies system-wide. Similarly, Section 16 applies to the entire river system because it deals with a possible *future* comprehensive development plan for the entire river system. But it is clear that many other sections of the Project Act apply only to the mainstream, and this is understandable because in them Congress was dealing only with mainstream problems.

Dam regulate the flow of water in the tributaries, nor can it deliver water on any of these streams.

Certainly Congress intended that the water, to a portion of which California was limited by Section 4(a), would be mainstream water only. The very language of the Section—it refers to the Colorado River and not to the System—points in this direction. But more important, the second paragraph of Section 4(a) demonstrates that Congress considered the limitation on California to be part of an overall allocation of the entire quantity of water dealt with in that Section among three states only: of the first 7.5 million acre-feet—4.4 to California, 2.8 to Arizona, and .3 to Nevada; the balance to California and Arizona equally. This intention is clearly stated in the legislative history. Thus Senator Hayden of Arizona made the following comments about an amendment to the Project Act which he offered and which subsequently became the second paragraph of Section 4(a). The Phipps Amendment, which is referred to in the quotation, became the first paragraph of Section 4(a).

> "MR. HAYDEN. Mr. President, an examination of the amendment offered by the Senator from Colorado [Mr. Phipps] will disclose that it proposes that the State of California shall agree with the United States, for the benefit of the States of Arizona and Nevada, that the aggregate annual consumptive use of water from the Colorado River by the State of California shall not exceed 4,400,000 acre-feet. Further, that the State of California may have one-half of any excess of [*sic*] surplus waters unapportioned by the Colorado River compact.
>
> "The first part of my amendment is a mere corollary to the amendment offered by the Senator from Colorado. It provides that of the remainder of the seven and one-half million acre-feet there

shall be apportioned to the State of Nevada 300,000 acre-feet, and to the State of Arizona 2,800,000 acre-feet, which, combined with 4,400,000 acre-feet which the State of California will use, completely exhausts the seven and one-half million acre-feet apportioned in perpetuity to the lower basin.

"The second proposal in my amendment is that the State of Arizona may annually use one-half of the surplus or unapportioned water, which is likewise a corollary to the proposal made by the Senator from Colorado, which likewise disposes of the total quantity of surplus or unapportioned waters in the lower basin."[33]

To maintain that Congress intended to adopt, in Section 4(a), the Compact concept of apportioning all of the water uses in the entire Colorado River System, in the Lower Basin, requires that I attribute to Congress an intent to deprive two of the states having Lower Basin interests of any participation in the Lower Basin apportionment. Such a deprivation would have divested even perfected rights in New Mexico and Utah. In the light of the fact that Congress expressly protected perfected rights in Section 6, it is extremely unlikely that Congress intended to divest such rights in Section 4(a). Moreover, it is preposterous to suggest that such a result would have been accomplished with the active support of Senator Bratton [34] of New Mexico, one of the principal architects of Section 4(a). If Congress had intended to adopt the system wide method of accounting used in the Compact, it would have divided the III(a) and (b) apportionment of appropriative rights made by the Compact among all five states

---

[33]70 Cong. Rec. 459-460 (1928), Availability of Article III(b) Waters For Use in California: Legislative History of Section 4(a) (submitted by the California Defendants) [hereinafter cited as "Calif. Legis. Hist."] pp. 148-149.

[34]In 1933 Senator Bratton was appointed to the Court of Appeals for the Tenth Circuit and, in 1953, he became Chief Judge.

having Lower Basin interests. Thus, Congress would have said: "The Lower Basin is entitled to a total appropriation in the amount of 8,500,000 acre-feet. This apportionment is divided among the *five* states having Lower Basin interests as follows," giving ceilings on appropriations within the Lower Basin for each of the five states. But Congress did no such thing. It dealt only with three of the five Lower Basin states, the three states which, significantly, are geographically accessible to mainstream water. This strongly indicates that the congressional intention was to provide only for the apportionment of mainstream water.

Furthermore, Senator Pittman made it perfectly clear that Section 4(a) of the Project Act was designed by Congress to apply only to the mainstream and to apportion water only among the three states that could utilize mainstream water. Thus Senator Pittman, in discussing the Phipps amendment, stated:

> "The Senate has already determined upon the division of water between those States. How? It has been determined how much water California may use, and the rest of it is subject to use by Nevada and Arizona. Nevada has already admitted that it can use only . . . 300,000 acre-feet. That leaves the rest of it to Arizona. As the bill now stands it is just as much divided as if they had mentioned Arizona and Nevada and the amounts they are to get . . . ."[35]

This statement by Senator Pittman obviously reflected the congressional understanding that the limitation on California in the first paragraph of Section 4(a), along with the fact that Nevada could use no more than 300,000 acre-feet of water from the mainstream because of physical limitations, as her representatives continually stated to the Congress, would leave the remaining water available to Ari-

[35]70 Cong. Rec. 468 (1928), Ariz. Legis. Hist. p. 80.

zona, the only other state having access to mainstream water. Since the first paragraph limited California to 4,400,000 acre-feet of the 7,500,000 acre-feet of water "apportioned . . . by paragraph (a) of Article III," and Nevada could only use 300,000 acre-feet, there would be left 2,800,000 of the 7,500,000 acre-feet for Arizona if the apportionment were intended to be only of mainstream water among these three states. Senator Pittman confirmed this when he concluded that:

> ". . . Arizona today has practically allocated to it 2,800,000 acre-feet of water in the *main Colorado River.*"[36] (emphasis added)

Similarly, since California was limited to one-half of "excess or surplus waters," and since Nevada represented that she could not utilize any of this water, Arizona became the inevitable beneficiary of the other half.

This construction of Section 4(a) as applying only to the mainstream of the Colorado River requires rejection of California's principal contention. The crux of her case lies in the view that the Project Act adopts and applies the Compact method of accounting. Thus California would total all uses of System water in the Lower Basin until the sum of 7,500,000 has been reached, after which she would assign all remaining uses to "excess or surplus waters unapportioned by said compact." There being no tributaries in California, the effect of this thesis is, of course, to exhaust the 7,500,000 apportionment with the help of tributary uses outside of California and to leave a large supply of mainstream water which California shares as "surplus." The effect of California's accounting system is disclosed in Part XII of her Proposed Findings and Conclusions. The California position is there revealed as follows:

---

[36]70 Cong. Rec. 469 (1928), Ariz. Legis. Hist. p. 82.

1. Art. III(a) of the Compact apportioned 7,500,000 acre-feet of uses to the Lower Basin;

2. Congress limited California to not more than 4,400,000 acre-feet of uses from this apportionment;

3. California is using all of the 4,400,000 acre-feet;

4. Thus, 3,100,000 acre-feet of uses remain for other Lower Basin states out of the III(a) apportionment;

5. The 3,100,000 acre-feet of uses are exhausted in other states, as follows:

(1) Gila River	1,750,000
(2) Other tributaries	200,000
(3) Mainstream, other than California	1,150,000
Total	3,100,000;

6. Any water remaining in the *mainstream* in excess of 5,550,000 acre-feet (4,400,000 for California and 1,150,00 for others) is surplus, of which California may take as much as one-half.

Under this hypothesis California argues that she is privileged to take as surplus up to 978,000 acre-feet[87] from the mainstream in addition to taking 4,400,000 acre-feet, also from the mainstream, out of what she interprets to be the Article III(a) System apportionment. The effect of this argument is to give California 5,378,000 acre-feet out of the first 7,500,000 acre-feet available from the mainstream, leaving only 2,122,000 acre-feet for Arizona and Nevada.

[87]California arrives at this figure by dividing her contract amount of 5,362,000 acre-feet between 4,400,000 acre-feet of III(a) water and 962,000 acre-feet of surplus and by adding to the latter 16,000 acre-feet of other uses. See note 71, page 208, *infra*.

Nothing in the words or the legislative history of Section 4(a) lends countenance to this hypothesis. The second paragraph of Section 4(a) contemplates that Arizona could receive 2,800,000 acre-feet of the 7,500,000 acre-feet *in addition* to the exclusive use of the Gila River within her boundaries.[38] Under the California hypothesis, over one-half of Arizona's 2,800,000 acre-feet is used up by appropriations on the Gila.

After the prolonged dispute between Arizona and California, which was uniformly described as a difference over whether California should be limited to 4,200,000 or

---

[38]The second paragraph of Section 4(a) authorizes a compact among Arizona, California and Nevada which would allocate 2,800,000 acre-feet plus one half of surplus to Arizona. It then further provides that "the State of Arizona shall have the exclusive beneficial consumptive use of the Gila River and its tributaries within the boundaries of said State. . . ." This language must mean that Arizona may consume Gila River water *in addition* to the 2,800,000 plus half of surplus. California's explanation of the language, that it ensures Arizona exclusive use of Gila River water *as part of* her 2,800,000 plus half of surplus, makes it redundant since that would necessarily be the result even without this language.

This is so because Gila River water flowing in Arizona can, as a matter of geography, be consumed only in that state, California or Mexico. California had no diversion works as of 1928 capable of diverting Gila River water for use in that state nor were there any contemplated at that time. Indeed, California has not used Gila River water since 1928, and she has no facilities for the diversion of that water today. Also another clause in the second paragraph of section 4(a), clause (4), specifically provides that Gila River water shall never be used to satisfy the Mexican treaty. Thus, even without the above quoted language, Gila River water could be consumed only in Arizona, and the language, if it is to be given some effect, must mean that Arizona may consume this water *in addition* to the 2,800,000 plus half of surplus allocated to it from the mainstream.

This necessary interpretation of the second paragraph of section 4(a) was recognized by Senators Johnson and Hayden during the debates in the Senate. Senator Johnson was interpreting the second paragraph when he stated that: "When Arizona says that she has but 2,800,000 acre-feet of water, to that must be added the Gila River with its 3,500,000 acre-feet. . . ." And Senator Hayden agreed with Senator Johnson that Arizona's use of Gila River water would be in addition to its allocation of mainstream water under the language of the second paragraph of section 4(a). 70 Cong. Rec. 466, Calif. Legis. Hist. p. 175.

4,600,000 out of the first 7,500,000 acre-feet of mainstream water, it would be remarkable indeed to discover at this late date that Congress intended to give California up to 5,378,000 acre-feet of the first 7,500,000 acre-feet of mainstream water and to assure Arizona of only 1,822,000 acre-feet.[39]

The one claim that can be made for the California contention is that it makes the congressional reference to the III(a) apportionment consistent with the Compact meaning, but at the expense of inconsistency between the first and second paragraphs of Section 4(a) of the Project Act itself, and in the face of every expression of intent made by any Senator who had anything to do with the legislation.[40] Accordingly, the California hypothesis is rejected.

California advances one more argument to support her contention that Section 4(a) should be interpreted as applying to both the mainstream and the tributaries. She strenuously urges "the contractual character of the California Limitation Act."[41] On the premise that Section 4(a) of the Project Act is "an offer to the Legislature of California of a statutory compact,"[42] California states that "the issue must be what the California Legislature understood from the words used [in Section 4(a)]."[43] California's conclusion then follows:

> "In enacting it [the Limitation Act], the California Legislature accepted a communicated offer plain on its face."[44]

---

[39]Congress contemplated that the other 300,000 acre-feet would go to Nevada.

[40]In addition, California's position on Article III(a) is incompatible with her position on III(b). If the Project Act reference to III(a) is to be read literally, in a Compact sense, then "surplus" and "unapportioned" must be read literally, and California would be excluded from III(b) uses, since they are apportioned by the Compact. See pages 147, 150-151, *supra,* and 197-200, *infra.*

[41]Calif. Comment on Draft Report, p. 2.

[42]*Id.* at p. 5.

[43]*Id.* at p. 40.

[44]*Id.* at p. 5.

The plain meaning California ascribes to Section 4(a) is, of course, the adoption in the Project Act of the Compact method of system-wide accounting.

I cannot accept California's premise, nor if I did would I reach her conclusion.

California's premise is faulty in that it characterizes Section 4(a) as an offer and the California Limitation Act as an acceptance, which together constitute a binding contract or compact between the United States and California. This analysis misreads both the Project Act and the Limitation Act.

Properly analyzed, Section 4(a) is not an offer but a condition precedent to the effectiveness of the Project Act. Section 4(a) provides: "This Act shall not take effect and . . . no work shall be begun . . . in connection with the works or structures provided for in this Act . . . unless and until [California enacts the required legislation]." The meaning of the condition is necessarily determined by the congressional intent, just as the interpretation of other provisions of the statute is governed by such intent.

Whether the condition has been satisfied is determined by examining the California Limitation Act to see whether it meets the congressional requirement. The wording of the Limitation Act is substantially identical to the limitation provision of Section 4(a). But California did not stop with the enactment of the congressional words. It went further to provide that the statute was intended to satisfy the congressional condition and should be so construed. Specifically Section 2 of the California Limitation Act provides:

> "By this Act the State of California intends to comply with the conditions respecting limitation on the use of water specified in subdivision 2 of Section 4(a) of the said 'Boulder Canyon Project Act' and this act shall be so construed."

This language reflects an understanding that the construction of the dam and other works depended on California's compliance with the terms of the condition as imposed by Congress and as understood by Congress. The language "and this act shall be so construed," can have no other purpose.

However, even if the Project Act can be interpreted as an offer, it does not follow that the Limitation Act and Section 4(a) must be construed as adopting the Compact method of accounting. California contends that the intent of the California Legislature controls. But there is no evidence whatsoever that the California Legislature understood the Limitation Act to adopt the Compact accounting system. Indeed, there is no evidence of the California Legislature's understanding of the meaning of the Section 4(a) "offer" nor of its intention in its acceptance of that "offer". To fill this void, California argues that the Legislature "accepted a communicated offer plain on its face."[45] Thirty years of unabated controversy give unchallenged testimony that the language is *not* plain on its face.

As explained at pages 170-172, *supra,* it is impossible to interpret the language of Section 4(a) literally, and none of the parties in this case has suggested a literal interpretation. That the California Legislature was aware of this ambiguity in the statutory language is suggested by Section 2 of the California Limitation Act. Section 2 provides, in effect, that the Limitation Act is to be interpreted in the same way that Section 4(a) of the Project Act is ultimately interpreted, hardly a necessary clause if the California Legislature understood the Project Act to be "plain on its face".

Whether the congressional limitation be regarded as an offer or as a condition, California bound itself by that limitation when it adopted the California Limitation Act. It did so, aware of the risks of litigation, in return

[45]Calif. Comment on Draft Report, p. 5.

for a dam that would regulate the river and eliminate the threat of disastrous floods and for a canal wholly within the United States, free from control by a foreign power.

The water to a portion of which California is limited by Section 4(a) is that part of the mainstream which consists of Lake Mead and the River below. Water consumed from the mainstream above Lake Mead is not relevant in computing the limit that Section 4(a) places on California's use of mainstream water. The Project Act was concerned primarily with the construction and operation of Hoover Dam, and most of its provisions relate to this basic purpose. Hoover Dam gives the United States physical control over the water stored in Lake Mead and over the use of substantially all of the water in the mainstream below, but it does not enable the United States physically to control the use of water from the mainstream above Lake Mead. Consistently with this physical fact, the provisions of the Project Act do not purport to govern the mainstream above Lake Mead. Section 5 authorizes the Secretary of the Interior to contract for the delivery of water stored in Lake Mead at points which may be agreed upon along the Lake and the mainstream below; that section specifically applies only to water in Lake Mead and to water released therefrom. Also Sections 6 and 8 of the Project Act apply in terms to water controlled by the United States by means of Hoover Dam.

Section 4(a) must be interpreted within the context just described. Consistent with the other provisions of the Project Act, I interpret Section 4(a) as applying only to Lake Mead and the mainstream below. Water in the mainstream above Lake Mead is treated precisely like water in the tributaries above Lake Mead; it is a potential source of supply and is not within the scope of the Project Act unless and until it finds its way into Lake Mead.[45a]

[45a] Consistent with this interpretation of Section 4(a), the water delivery contracts of the Secretary of the Interior effectuate an apportionment of water in Lake Mead and the mainstream below. See pp. 225-228, *infra*.

The only water available for diversion from the mainstream of the Colorado River below Hoover Dam is the water released from Lake Mead and the tributary inflow from the Bill Williams River.[46] The annual inflow from the Bill Williams River, which varied during the period 1944 to 1951 from a minimum contribution to the mainstream of 7,300 acre-feet to a maximum contribution of 114,400 acre-feet,[47] is stored by Parker Dam, and is available for use in Arizona and California. Consumption of this water, after it reaches the mainstream, is chargeable to the state within which it is consumed under the Section 4(a) limitation and the Arizona water delivery contract. As an administrative matter, it would be impossible to reach a different result, for water from the Bill Williams commingles with water released from Lake Mead in the mainstream, and diversions of water below Parker Dam could not be broken down into water which was supplied from Lake Mead and water which was supplied from the Bill Williams. Since it is impossible to segregate water supplied from each source, it is impractical to treat the two sources differently.

Furthermore, even if such a demarcation were possible, Section 4(a) and the Arizona water delivery contract provide that consumption of the inflow from the Bill Williams is charged to the states. Article 7(1) of the Arizona contract specifically provides for this result. The Project Act treats the Bill Williams inflow as *de minimis* in comparison to releases from Lake Mead, and assumes that this inflow will not be accounted for separately. Indeed, the Section 4(a) limitation specifically limits Cali-

---

[46]The Gila River is the only other tributary which has its confluence with the mainstream below Lake Mead. It is already overappropriated, however, and the occasional inflow which it does supply to the mainstream cannot be captured for use in the United States by any existing works.

[47]See Part One, page 121.

fornia's use of water diverted from the Colorado River without excluding the water supplied from the Bill Williams River.

For these reasons I have concluded that the limitation on California's consumption of water from the Colorado River contained in Section 4(a) of the Project Act and the correlative apportionment of this water among Arizona, California and Nevada effectuated by the water delivery contracts, which apportionment is discussed *infra*, apply only to water diverted from Lake Mead and from the mainstream of the Colorado River below Lake Mead. Hereafter, reference to the "mainstream", except where otherwise specifically indicated, means Lake Mead and the Colorado River downstream from Lake Mead within the United States.

The limitation on California is measured at points of diversion.

The foregoing conclusion leaves open the question of the points of measurement for the application of the California limitation. The United States, as will more fully appear, once suggested Lee Ferry as the point of measurement. I come to a different conclusion.

The language of Section 4(a) of the Project Act makes plain its intention that the limitation on California's use of water from the Colorado River is to be measured in terms of consumptive use of water, which is defined as diversions from the River less return flow thereto. Thus Section 4(a) provides:

> ". . . the aggregate annual consumptive use (diversions less returns from the river) of water of and from the Colorado River for use in the State of California . . . shall not exceed four million four hundred thousand acre-feet . . . plus not more than one-half of any excess or surplus. . . ."

This language clearly states that California is limited to 4,400,000 acre-feet, not of water, but of the consumptive use of water measured by diversions less return flow. Congress did not purport in Section 4(a) to limit California to a portion of the water flowing at Lee Ferry or stored in Lake Mead. While Congress could have limited California to 4,400,000 acre-feet of consumptive use out of a body of water at some point along the River, no such point is specified in Section 4(a), and the more natural reading of the language is that Congress limited California to a portion of the total amount of consumptive uses made of mainstream water in the United States each year.

The most rational way to measure consumptive use of water as defined in Section 4(a) is to measure diversions made from the mainstream and to measure or calculate how much of the diverted water returns to the mainstream. Segregating water at Lee Ferry or Lake Mead cannot contribute to the measurement of "diversions less returns to the river." And the consistent administrative interpretation of Section 4(a) supports the conclusion that the limitation on California is not to be measured at Lee Ferry or at Lake Mead, but rather at points of diversion. All of the water delivery contracts entered into by the Secretary of the Interior on behalf of the United States, including the contracts with California users which incorporate the Section 4(a) limitation and the contracts with other states which are correlated to it, provide that the delivery obligation under each contract shall be measured at the points of diversion.

For the reasons stated, I interpret Section 4(a) as limiting California annually to 4,400,000 acre-feet of consumptive use of mainstream water out of the first 7,500,000 acre-feet of consumptive use annually of such water in Arizona, California and Nevada. Consumptive use is to be measured by diversions at each diversion point on the mainstream less returns to the mainstream, meas-

ured or estimated by appropriate engineering methods, available for use in the United States or in satisfaction of the Mexican treaty obligation.

Section 4(a) as here interpreted does not charge California for evaporation and channel losses on water in the mainstream which occur before the water is diverted for use within the state. California is charged only for the amount of water which she actually diverts and which does not return to the mainstream. Losses of water which occur before diversion are a diminution of the available supply under Section 4(a), not a consumptive use.

The United States at one time urged a different conclusion, namely, that Section 4(a) limits California to a part of the water flowing at Lee Ferry.[48] It would necessarily follow that this water must be segregated for California at Lee Ferry and traced downstream, through Lake Mead, to California's diversion works. This interpretation measures the Section 4(a) limitation, not to a portion of aggregate consumptive use, but to a portion of a body of water 650 miles upstream from some of California's diversion works, and 355 miles upstream from Hoover Dam, the operation of which the Project Act was designed to regulate. Furthermore, it charges California for evaporation and channel losses which occur before the water is diverted from the mainstream for use in California, despite the statutory language which limits California to a quantity determined by the measurement of "diversions less returns to the river."

The argument to justify overriding the statutory language in this manner is that Congress, in limiting California's consumption to a part of "the waters apportioned . . . by paragraph (*a*) of Article III of the Colorado River compact," really meant to say "paragraph (*d*) of

---

[48]The United States, in its Comment on the Draft Report, although it recognizes that this position is fairly implied from its opening brief, says that it altered its position in its reply brief.

Article III" of the Compact, which refers to the flow at Lee Ferry. The support for interpreting III(a) to mean III(d) is (1) that the 7.5 million acre-feet per annum, which is the figure found in Article III(a), is one-tenth of the 75 million acre-feet mentioned in Article III(d), and (2) that the Upper Basin governors, in a meeting held in Denver in the summer of 1927, recommended a division of III(d) water at Lee Ferry among Arizona, California and Nevada.

While there is some basis for this interpretation of Section 4(a), I have after careful reflection rejected it, for it requires that "Article III(a)" be interpreted to mean "Article III(d)," and I do not believe there is sufficient support for rewriting the statutory language in this manner.

As I have pointed out before, subdivisions (a) and (d) of Article III are not correlative despite the coincidence that the number mentioned in (d) happens to be ten times the number mentioned in (a). See page 144, *supra*. Moreover, the legislative history tends to demonstrate that Congress did not intend Article III(a) to mean Article III(d). It is true that the Upper Basin governors recommended a division of water at Lee Ferry in the following language:

> "1. Of the average annual delivery of water to be provided by the States of the upper division at Lees [*sic*] Ferry under the terms of the Colorado River compact: (a) To the State of Nevada, 300,000 acre-feet. (b) To the State of Arizona, 3,000,000 acre-feet. (c) To the State of California, 4,200,000 acre-feet."[49]

The recommendations of the governors' conference designated a body of water out of which the allocation would be made by reference to the contemplated deliveries

---

[49]70 Cong. Rec. 172 (1928), Ariz. Legis. Hist. p. 34.

derived from the Upper Division performance of its obligation under Article III(d) of the Compact.

However, Congress never clearly understood this, and, indeed, seems never to have considered the relationship of the limitation on California to some actual body of water. Thus Senator Pittman of Nevada reported the governors' recommendation as follows:

> ". . . when we assembled at Denver the governors of the four upper Colorado River basin states, trying to reconcile the differences on water between California and Arizona, finally made this proposition. California 4,200,000 acre-feet of water, Arizona 3,000,000, Nevada 300,000"[50]

This report by Senator Pittman did not adopt, or perhaps failed to grasp, that portion of the governors' resolution which expressly found the source of the allocated waters in the Article III(d) obligation of the Upper Division. Instead, Senator Pittman related the limitation to Article III(a), not III(d), as appears from the very next sentence of his statement, which reads as follows:

> "How did they get at that? Under what is called the seven-state agreement, we find this clause in Article III:
>
> "'(a) There is hereby apportioned from the Colorado River system in perpetuity to the upper basin and to the lower basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist.'
>
> "In other words, those State governors believed that there was only 7,500,000 acre-feet of water to divide, and they proposed to divide it, as I have said

[50] 69 Cong. Rec. 10259 (1928), Ariz. Legis. Hist. p. 14.

4,200,000 acre-feet to California, 3,000,000 acre-feet to Arizona, and 300,000 acre-feet to Nevada."[51]

Thus Senator Pittman used Article III(a) to define the area against which the limitation was to operate. He did this in apparent misunderstanding of the governors' recommendation. All subsequent discussion in the Senate flowed in the same channel.

One of the major issues in the Senate debates (Section 4(a) was adopted on the floor of the Senate and was not debated in the House) was whether California should be limited to 4.6 or 4.2 out of 7.5 million acre-feet per annum. This dispute was finally compromised at the enacted limitation of 4.4 million acre-feet. Throughout the debates on this subject the Senators clearly revealed an understanding that this limitation was to be applied against the 7.5 million acre-feet which they identified by reference to Article III(a). "Article III(a)" became a shorthand expression for the quantitative measurement of 7.5 million acre-feet. Similarly, the Senators participating in the debate used "Article III(b)" as a shorthand method of designating a quantity of one million acre-feet of water. The debates indicate that the Senate considered the water designated by "Article III(a) and (b)" as being undifferentiated. For example, Senator Hayden stated:

> "Mr. Hayden. I shall offer the amendment in a few moments.
>
> "At the time to which I have just referred the Senator from Nevada stated that at a conference held in the city of Denver during the summer of 1927, at the instance of the Governors of the States of New Mexico, Colorado, Utah, and Wyoming, there were present governors and commissioners from the States of Nevada, Arizona, and California. The subject of paramount importance, the subject

[51] *Ibid.*

that was the most discussed at that conference, was an adjustment of the differences between the States of Arizona and California with respect to an apportionment of the waters of the lower Colorado River Basin, in order that, if those two States might be brought into accord, the Colorado River compact, which affected the entire seven States, might be ratified and approved by all of the States.

"Each of the States in the lower basin was called upon to submit to the Denver conference a statement of the quantity of water they desired to obtain out of the Colorado River. At the time the conference was held it was thought that there were but seven and a half million acre-feet of water to divide, and upon that basis the senior Senator from Nevada stated to the Senate that the governors of the upper-basin States recommended that there be awarded to the State of California 4,200,000 acre-feet, to the State of Arizona 3,000,000 acre-feet, and to the State of Nevada 300,000 acre-feet.

"The Senator explained in his remarks how the four governors arrived at that apportionment, and said that it was done under article 3 of the Colorado River compact, paragraph (a) of which reads as follows:

* * * *

"The Senator then stated that subsequently it was discovered that there was an additional million acre-feet of water apportioned to the lower basin which could be divided. The idea of dividing that additional apportionment of water did not occur to the governors and the representatives of the lower basin States at the time of the Denver conference.

"The Senator then read to the Senate this provision of the compact, which is paragraph (b) of article 3:

'In addition to the apportionment in paragraph (a), the lower basin is hereby given the

right to increase its beneficial consumptive use of such waters by 1,000,000 acre-feet per annum.'

"Senator Pittman stated further that at conferences held in his office during the last session of Congress the suggestion had been made that the additional million acre-feet be divided equally between Arizona and California, and that if that were done the total quantity of water apportioned to the State of California under the Colorado River compact out of the total amount allocated to the lower basin would be 4,700,000 acre-feet, or 100,000 acre-feet more than California had asked for at Denver, and that by adding 500,000 acre-feet to the 3,000,000 acre-feet apportioned to Arizona on the basis recommended by the four upper basin governors that State would receive 3,500,000 acre-feet, or within 100,000 acre-feet of what had been requested by her commissioners at Denver.

"The Senator from Nevada then stated that, based upon the recommendations made by the upper basin governors plus an equal division of the additional 1,000,000 acre-feet, Mr. Francis B. Wilson, interstate river commissioner of the State of New Mexico, had prepared an amendment which the Senator asked to have printed in the Record. He did not offer it at that time, but merely asked to have it printed for the information of the Senate. I now offer that amendment to the bill."[52]

That amendment clearly stated that the limitation was 4.2 out of the 7.5 million acre-feet referred to in Article III(a) plus 500,000 out of the million acre-feet referred to in Article III(b). The Hayden amendment provided that California should be limited to:

"... 4,200,000 acre-feet of the water apportioned to the lower basin by paragraph (a) of Article III of said compact, ... 500,000 acre-feet of the water apportioned by the compact to the lower basin by

[52]70 Cong. Rec. 161-162 (1928), Calif. Legis. Hist. pp. 55-57.

> paragraph (b) of said Article III; and that the use by California of the excess or surplus waters unapportioned by the Colorado River compact shall never exceed annually one-half of such excess or surplus water. . . ."[58]

Senators Pittman and Hayden could not have referred to an extra million acre-feet of water to be divided among Arizona and California if they were thinking of Article III(d), which can be said to guarantee only an average of 7.5 million acre-feet of water per year. Since the Senators equated Article III(a) and III(b), they could not have equated III(a) and III(d), because III(d) has no relationship to III(b).

Furthermore, this suggested interpretation would create very difficult administrative problems. Even after each state's share of the flow at Lee Ferry and the Lower Basin tributary flow into the mainstream were segregated, it would be necessary to determine the channel and evaporation losses sustained by such water, as it flowed in the mainstream and was stored in Lake Mead, in order to calculate the amount left for each state to divert below Lake Mead. An accurate determination of the total losses on all the water flowing in the mainstream and stored in Lake Mead is extremely difficult if not impossible to make. Yet, even if such a determination were possible, it would not be possible to calculate the losses on each state's share of water simply by allocating total losses among the states in the same proportions as the total water is allocated among them. This is so because the amount of loss depends on such factors as volume and flow of water, and because the allocation of water among the three states varies depending on whether or not particular water is surplus.

On the other hand, it is unnecessary to compute losses on water flowing in the mainstream above Lake Mead

---

[58]70 Cong. Rec. 162 (1928), Ariz. Legis. Hist. p. 17.

or stored in Lake Mead, much less to allocate these losses among the states, if the California limitation and the correlative apportionment among the three states are measured by consumptive use and applied at the diversion points.

Interpretation of the phrase, excess or surplus waters.

I turn now to a consideration of the phrase "plus not more than one-half of any excess or surplus waters unapportioned by said compact." Our task of defining "excess or surplus waters unapportioned by said compact" is not aided by looking at the Compact. It uses the word "surplus" just once, in Article III(c), which provides that the Mexican burden "shall be supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b)" of Article III. Article III(f) makes equally clear the uses of water that are "unapportioned" for Compact purposes, by providing for "further equitable apportionment of the beneficial uses of the waters of the Colorado River system unapportioned by paragraphs (a), (b) and (c)" of Article III. Thus by a literal Compact reading, the phrase would mean System water in excess of the aggregate of the apportionments of Article III(a), (b) and (c). But such a literal meaning is unacceptable.

In the Compact sense, surplus is System water; that is, it is water in both the mainstream and the tributaries, and is water in both the Upper and Lower Basins. If the Project Act is given a literal Compact meaning, one-half of such surplus could be appropriated by California. Moreover, the proposed tri-state compact authorized Arizona to agree with California and Nevada for Arizona to take the other half. It is incredible that the Senators of the other five states in the Basin intended this act of generosity. Not one word of the legislative history suggests such an intention. The Upper Basin Senators, who originated the first para-

graph of Section 4(a), and who supported the second paragraph, obviously did not intend to divide surplus in the entire System between two Lower Basin states.

It might be thought that appropriations of surplus would not be firm rights since these appropriations are subject to divestment in the event of a further equitable apportionment by compact after 1963, and therefore that Congress was not concerned about the matter. But congressional concern can not be brushed off so lightly. There is nothing to compel any state to ratify a compact making such further apportionment. Moreover, in answer to questions about the Compact propounded by Senator Hayden, Herbert Hoover stated that appropriations from surplus would doubtless be recognized in a future equitable apportionment.[54] Whether or not this position is, in fact, correct, it could hardly be expected that the Upper Basin Senators were willing to run the risk that it would prevail.

Surplus in a Compact sense means, in quantitative terms, water in the System in excess of appropriations of 16,000,000 acre-feet in the United States plus 1,500,000 acre-feet of water delivered to Mexico. Hence, appropriations from surplus could not commence until the 17,500,000 acre-feet were exhausted. Even putting aside the Mexican burden because it did not exist in 1928, it is not credible that Congress considered surplus in the Project Act sense to be water in the System in excess of 16,000,000 acre-feet. To attribute this view to Congress would ascribe to it an intent that no surplus would be available to Arizona and California until there were 16,000,000 acre-feet of appropriations, which, of course, did not exist in 1928 and seemed unlikely to occur in the foreseeable future.[55]

This is not to say that "surplus" and "unapportioned water" have no rational meaning as used in the Compact.

---

[54]Special Master's Ex. No. 4, The Hoover Dam Documents, p. A36, Ariz. Ex. 55.

[55]*Ibid.*

On the contrary, their meaning is clear and consistent with other Compact provisions. The Compact puts an embargo upon the acquisition of appropriative rights in excess of the limits set by Article III(a) and (b). The first call upon any remaining water goes to supply Mexico. Thereafter, any remaining water anywhere in the System is available for further equitable apportionment after 1963. Thus a new compact might raise the III(a) and (b) limits from 16 million acre-feet as they presently stand to, for example, 20 million acre-feet. The Compact thus makes sense when it deals with surplus unapportioned water of the Colorado River System, although it specifies no point of measuring this water, because, for Compact purposes, the accounting is made at the point of diversion. In effect, Article III(a) and (b) establishes quotas of allowable appropriations. When these quotas have been exhausted, any remaining water in the System (surplus) may be further apportioned by compact so as to increase the quotas. But the phrase as used in the Compact makes no sense in the Project Act, and thus the Compact interpretation must be rejected.

Since I rejected the Compact definition of the phrase "excess or surplus waters unapportioned by said compact," its meaning must be derived from the Act itself and in harmony with the construction of the phrase "waters apportioned to the lower basin States by paragraph (a) of Article III." On the basis of my interpretation of the latter phrase, the words "excess or surplus waters" must necessarily mean all consumptive use in the United States in any year from the mainstream in the Lower Basin in excess of 7.5 million acre-feet. This is so because Congress intended that any consumptive uses in addition to the first 7.5 million acre-feet should be disposed of under the surplus accounting. In short, surplus was intended by Congress to complete the universe, the first part of which was the 7.5 million acre-feet. This universe consists of all consumptive

use of water diverted from Lake Mead or the mainstream below.

Arizona and Nevada disagree. They argue that Section 4(a) bars California from any share of what is described as Article III(b) water. This argument is based on an interpretation of the words "excess or surplus waters unapportioned by said compact" as meaning water above the 8,500,000 acre-feet referred to in Article III(a) and (b) of the Compact. Thus Section 4(a), Arizona and Nevada contend, permits California to consume 4,400,000 of the 7,500,000 acre-feet "apportioned" in Article III(a), none of the million acre-feet "apportioned" in Article III(b), and half of the "excess or surplus" above the 8,500,000 acre-feet "unapportioned by" Article III(a) and (b).

This contention must be rejected. Questions regarding the proper interpretation of the words "surplus" and "apportioned" as used in the Compact aside, the legislative history of the Project Act makes it crystal clear that Congress did not intend to delimit an amount of water above 7.5 million acre-feet per annum which was not "excess or surplus water" and thus to which California could have no access. Rather, Congress intended that once the 7.5 million acre-feet of consumptive use were allocated, the surplus accounting would commence and California would be eligible to receive 50% of all other allocations.

As explained at pages 190-193, the amendment proposed by Senator Hayden, based on the suggestion of Senator Pittman, clearly apportioned half of the million acre-feet referred to in Article III(b) to California. So did an amendment suggested by Senator Bratton of New Mexico,[56] which was similar to the Hayden amendment. The amendment offered by Senator Phipps of Colorado,[57] which was ultimately enacted as the first paragraph of Section 4(a),

[56]Calif. Ex. 2013.
[57]70 Cong. Rec. 324 (1928), Ariz. Legis. Hist. pp. 48-48A.

was intended to adopt this feature of the Hayden and Bratton amendments. Indeed, it was recognized by all of the Senators participating in the debates that the only major difference between the three amendments having relevance to this case was the amount of water to which California would be limited out of the first 7,500,000 acre-feet; the Hayden amendment limited California to 4,200,000, the Bratton amendment to 4,400,000, and the Phipps amendment to 4,600,000. Thus Senator Bratton observed that, other than the difference of 200,000 acre-feet, his amendment and Senator Phipps' were "quite similar."[58] This is also made clear by the parliamentary maneuver in the Senate, carried out without opposition, substituting the Phipps amendment for the Hayden amendment in order to permit a vote on whether California should be limited to 4,200,000 acre-feet or 4,600,000 acre-feet.[59] Senators Hayden and Phipps specifically agreed that there were only three substantive differences between their amendments: (1) the difference between 4,200,000 and 4,600,000 acre-feet; (2) a provision, unrelated to this litigation, involving the Federal Power Commission; and (3) whether Congress would approve a six-state ratification of the Colorado River Compact. This definitively excludes the possibility that the Phipps amendment, unlike the Hayden amendment, could have been intended to exclude California from any part of the million acre-feet referred to in Article III(b). Since, under the Phipps amendment, California was limited to 50% of all water above 7.5 million acre-feet of consumptive use, and Nevada disclaimed any intention of taking more than her share of the 7.5 million acre-feet, the language of that amendment had exactly the same effect as the language of the Hayden amendment which specifically

---

[58] 70 Cong. Rec. 333 (1928), Calif. Legis. Hist. p. 87.

[59] 70 Cong. Rec. 382 (1928), Ariz. Legis. Hist. pp. 56-56C.

Senator Hayden's motion to change 4.6 to 4.2 lost; Senator Bratton's motion to change the figure to 4.4 carried. 70 Cong. Rec. 384-387 (1928).

gave California 500,000 acre-feet and Arizona 500,000 acre-feet of the million acre-feet referred to in Article III(b). The intended effect of the Phipps amendment, like the Hayden amendment, was to limit California to 4.4 out of the 7.5 million acre-feet referred to in Article III(a), plus 50% of the million acre-feet referred to in Article III(b), plus 50% of any additional water that might be available above 8.5 million acre-feet. In order to clarify that his amendment limited California to 4.4 out of 7.5 million acre-feet, not out of 8.5 million acre-feet as Arizona and Nevada in effect contend, Senator Phipps perfected his amendment, by adding the italicised language, to specify that the 4.4 million acre-foot limitation on California was from the water "apportioned to the lower basin States by *paragraph (a) of Article III of* the Colorado River compact."[60]

This conclusion is also supported by the following colloquy between Senator King of Utah and Senator Johnson of California:

> "MR. KING. If I may have the attention of the Senator from California and the Senator from Colorado, I direct attention to line 5, page 3, of the amendment offered by the Senator from Colorado. Let me read back a few words:
>
> > plus not more than one-half of any excess or surplus waters unapportioned by said compact.
>
> I was wondering if there might not be some uncertainty as to what surplus waters were therein referred to. I think it was the intention to refer to the surplus waters mentioned in paragraph (b) of article 3 of the compact, being the 1,000,000 acre-feet supposed to be unappropriated.
>
> MR. JOHNSON. No; that is not quite my understanding. It is by no means certain that there is any other, and it is by no means certain that there

[60] 70 Cong. Rec. 459-460 (1928), Ariz. Legis. Hist. pp. 64-67.

is the 1,000,000; but the language referred to any other waters.

MR. KING. Speaking for myself, I have no objection; but I was under the impression that the purpose was to link it with paragraph (b) so as to be sure that California was to receive one-half of the 1,000,000 acre-feet.

MR. JOHNSON: Not necessarily. This gives one-half of the unapportioned water, and I think it is a better way to leave the matter.

MR. KING. If it is sufficiently certain to suit the Senators of the lower basin, I have no objection.

MR. JOHNSON. I think it is."[61]

Whatever Senator Johnson may have meant by his replies, he obviously was not suggesting that Senator King was incorrect in his assumption that California could share in so-called III(b) water.

This is apparent also from the second paragraph of Section 4(a) which allocates to Arizona half of the "excess or surplus waters unapportioned by the Colorado River compact." As pointed out by Senator Hayden, this language was corollary to the limitation on California in the first paragraph. See pages 174-175, *supra*. Thus if Article III(b) water was barred to California under the first paragraph, neither was it allocated to Arizona in the second paragraph. Since Nevada represented that she could not utilize this water, Arizona's and Nevada's construction would impute to Congress an intention to have one million acre-feet go to waste.

The reasons given compel the conclusion that "excess or surplus waters unapportioned by said compact" as used in Section 4(a) includes all consumptive use above the first 7.5 million acre-feet of mainstream water in the Lower Basin, in the United States, in one year.

[61] 70 Cong. Rec. 459 (1928), Ariz. Legis. Hist. pp. 64-65.

D. Water Delivery Contracts Made By the Secretary of the Interior

Since Arizona, California and Nevada have not entered into compacts for the allocation of mainstream water pursuant to Sections 4 and 8 of the Project Act, the several water delivery contracts made by the Secretary of the Interior, on behalf of the United States, govern this allocation. The Secretary has contracted with the states of Arizona and Nevada. He has also entered into contracts with California users which incorporate a so-called Seven-party Agreement setting forth priorities among them. The Secretary has further contracted with a number of water users in Arizona and California for the delivery of water to federal reclamation projects, lands bordering these projects and special users in the Yuma, Arizona, area. All of the Secretary's contracts, except one Special Use contract, recite that deliveries under them are subject to the availability of the water under the Colorado River Compact and the Boulder Canyon Project Act.

After consideration of the arguments bearing on the validity of the Secretary's water delivery contracts, I am persuaded that, with the exception of a provision in the Arizona and Nevada contracts[62] and one Special Use contract,[62a] they are valid and binding both on the United States and the other contracting parties.

The contentions of the parties respecting the contracts may be divided into two categories: those respecting their own contracts; and those respecting the contracts of other parties.

Arizona contends that her contract is unenforceable to the extent that it departs from the statutory formula

---

[62]Article 7(d) of the Arizona Contract and Article 5(a) of the Amended Nevada Contract, discussed *infra*, at pp. 237-247.

[62a]This contract, between the United States and the Arizona-Edison Company, Inc., is discussed at pp. 220-221, *infra*.

of the second paragraph of Section 4(a) of the Project Act. The provisions she regards as invalid are Article 7(b), (f) and (g), which provide for Arizona's recognition of rights in Nevada, New Mexico and Utah, and Article 7(d), which in effect reduces the quantity of water available for consumption in Arizona below Lake Mead by the amount that diversions in Arizona on tributaries and the mainstream itself above Lake Mead deplete the flow of water into the reservoir.[63]

I have rejected the contention that the second paragraph of Section 4(a) of the Act established a mandatory formula governing the amount of water Arizona must receive. See pages 162-163, *supra*. The contention respecting Article 7(d) is dealt with hereafter at pages 237-247.

Arizona does not contest the validity of the contracts of other parties except as she seeks to aid Nevada in contending that Nevada's contract is invalid to the extent that it reduces Nevada's diversions of Lake Mead water by the amount of Nevada's tributary uses.[64]

With respect to the California contracts, Arizona argues only that they must be read according to Arizona's construction of the limitation provision in Section 4(a) of the Project Act. This contention presents the same issues already disposed of by the discussion of the Act in the next preceding section of this Report.

California does not contest the validity of her contracts and indeed pays scant attention to them. California's view is that appropriative rights are decisive of the case and the contracts do not amount to appropriative rights but constitute only licenses to appropriate, which licenses must be perfected by beneficial use of the water. Similarly, California contends that the Arizona contract does not establish a water right in Arizona, is not a muniment of title,

---

[63] Ariz. Opening Brief, pp. 55-56.
[64] *Id.*, at 55.

and cannot be the basis of a decree in this suit. California's contentions appear in Appendix 4 of her brief, and in summary present these three points:

(1) The Arizona contract is dependent upon Arizona's ratification of the Colorado River Compact and Arizona has not effectively ratified the Compact. The reasons for the rejection of this contention appear *supra,* at pages 166-167 of this Report.

(2) No water right exists under the Arizona contract because "no right to the use of water can be acquired in the absence of a specific project, or use lawfully initiated and diligently prosecuted."[65] If this argument means that the possession of a water right is necessary before one is eligible for a delivery contract, it puts the cart before the horse. In effect it says, no contract without a water right. Under the Act, however, the reverse is true: no new water right without a contract. Congress certainly understood in 1928 that all of the water to be impounded in Lake Mead was not then appropriated. I cannot ascribe to the Congress an intention to bring all further development in the Lower Basin to a halt, as this contention would require me to do. On the other hand, if the California contention means only that a water delivery contract does not amount to a perfected water right, then it is not an attack on the contract at all. I do not think it necessary to decide whether the various contractees have water rights in addition to their contractual rights for the delivery of water from Lake Mead; I have not been shown any situation in which the distinction, if any, is material in this case. Since interstate rights and priorities are controlled by the delivery contracts themselves (see pages 151 *et seq., supra*) and since intrastate rights and priorities, including the question whether a contractual right constitutes a water right, are controlled by state law, with

[65] Calif. Appendix 4, p. 5.

which we are not concerned in this litigation (see pages 216-218, *infra*), there is no need to decide the question. California asserts a similar objection to the Nevada contract,[66] and it is overruled for the same reasons.

(3) A third objection to the Arizona contract raised by California rests on Article 7(1), which provides that deliveries of the water allocated to Arizona by her master contract will be made only to users who contract therefor with the Secretary. California argues that this exposes the contract merely as an agreement to agree and accordingly that is unenforceable. She also claims that the contract is unenforceable for vagueness, since essential terms are yet to be agreed upon. This argument will be considered when I reach my discussion of the terms of each of the contracts, at pages 206-207, *infra*.

Nevada complains about her water delivery contracts, but does not contest those of the other parties. Nevada's theory, if adopted, would, however, nullify all of the contracts, at least so far as they purport to fix the quantities of water to which the parties are entitled. As was pointed out earlier in this Report, Nevada regards the Project Act as an unconstitutional delegation of judicial power if construed to empower the Secretary to make contracts fixing the allotment of water to each state. See pages 163-164. She avoids the constitutional problem by regarding the contracts as "neither floors nor ceilings. The contracts are merely service or delivery contracts for such amounts of water as each of the states shall ultimately be judicially determined to be entitled, in the absence of a compact among the states."[67] The answer to this contention was given in upholding the Project Act and sustaining the power of the Secretary to allocate the unappropriated water impounded in Lake Mead.

---

[66]Calif. Response to Nevada, pp. 51-53.
[67]Nev. Answering Brief, p. 46.

In the alternative, Nevada argues that if the contracts are held to govern, Nevada is not bound by the amendment to Article 5(a) contained in her supplemental contract of 1944. That amendment provides for delivery from Lake Mead of "so much water, *including all other waters diverted for use within the State of Nevada from the Colorado River system,* as may be necessary to supply the state a total quantity not to exceed three hundred thousand (300,000) acre-feet each calendar year." Nevada contends that the debit imposed by the italicized words for use of tributary water was beyond the Secretary's authority to impose on Nevada under the Project Act.[68] This contention is considered *infra,* at pages 237-247.

Finally, the United States asserts the validity of all of the water delivery contracts and declares that Arizona and Nevada are bound by the provisions to which they object.[69] The only reservation made by the United States is its claim that the contracts are subject to certain paramount rights of the United States. These claims of superiority are dealt with in the section of the Report commencing at page 254.

1. *The Arizona Contract.* A water delivery contract between the United States and the State of Arizona was entered into on February 9, 1944.[69a]

Subdivisions (a) and (b) of Article 7 specify the quantity of water Arizona is to receive, subject to certain deductions set forth in Article 7(d), (f) and (g). Article 7(a) promises the delivery, from storage in Lake Mead, of so much water as may be necessary to supply a maximum of 2,800,000 acre-feet of consumptive use in the state each year, and Article 7(b) grants an additional amount denominated as one-half of surplus, both subject to the availability thereof

---

[68]Nev. Reply Brief, pp. 9-12.

[69]U. S. Brief, pp. 7-22.

[69a]The complete text of the contract appears in Appendix 5, page 399.

for use in Arizona under the Colorado River Compact and the Boulder Canyon Project Act. Article 7(f) reserves to the United States the right to contract with Nevada for the delivery to her of 4% of surplus with a consequent reduction in Arizona's share. The contract nowhere defines "surplus," and I construe the word as used in the contract to mean the same thing as it does in Section 4(a) of the Boulder Canyon Project Act. In addition, by Article 7(g), Arizona recognizes rights in New Mexico and Utah to "equitable shares" of Lower Basin water, but no amount is specified in the contract. Article 7(d) provides in part that the obligation to deliver water "shall be subject to such reduction on account of evaporation, reservoir and river losses, as may be required to render this contract in conformity with said compact and said act." As I construe this provision, questions of allocation of losses are expressly left undetermined by the contract; such determination is to be made on the basis of the Compact and Project Act, without reference to other terms of the contract.

Article 7(1) contemplates the making of further contracts between the Secretary of the Interior and the users of the water allocated for use in Arizona under the master contract with the State. California contends that this provision renders the agreement illusory, that it becomes an unenforceable agreement to agree. I do not think Article 7(1) has this far-reaching effect. The Secretary's water delivery contracts should not be viewed as ordinary, private agreements for the sale of goods. Indeed, none of the contracts satisfies the elementary rules governing private agreements. For example, the Imperial Irrigation District contract does not obligate the District to take any water at all, nor is any charge made for the water delivered. What then, is the consideration for the Secretary's promise to deliver the water? Something of the same difficulty is encountered in the Nevada contract. Although that agreement specifies a

charge of 50 cents per acre-foot, it does not oblige Nevada to take any water. Such an agreement might fail for lack of consideration under the principles governing ordinary private contracts. The *Restatement of Contracts* illustrates the point in Section 79, illustration 3:

> "A offers to deliver to B at $2 a bushel as many bushels of wheat, not exceeding 5,000, as B may choose to order within the next thirty days. B accepts, agreeing to buy at that price as much as he shall order of A within the specified time. B's acceptance involves no promise by him and is not sufficient consideration."

If the *Restatement* requirements were to apply to the contracts made by the Secretary, many, if not all of them, would fail.

The answer then to the California contention is that Section 5 water delivery contracts are not contracts in the ordinary sense. They are arrangements whereby the Secretary, acting for the United States, consents to the release of water from his custody. The contracts set the terms upon which the Secretary will release the water. The Secretary is bound by those terms, as are the contractees, not because of the legal chemistry of offer, acceptance and consideration, but because they are part of the statutory scheme provided for in the Boulder Canyon Project Act. Hence, Article 7(1) does not render the Arizona contract nugatory, any more than failure of consideration destroys the Imperial Irrigation District contract or the Nevada contract.

I hold that the Arizona contract is valid, except for a provision in Article 7(d) which is discussed hereafter at pages 237-247.

2. *The California Contracts.* There is no water delivery contract between the United States and the State of Cali-

fornia. Rather, the Secretary of the Interior has contracted with a number of agencies within the State, incorporating in each such contract the so-called Seven-party Agreement among all the users which governs their priorities *inter sese* to California's share of water from the Colorado River.[70]

In her answer to the bill of complaint, California alleges that the Secretary's contracts with the California users call for the delivery of sufficient water to satisfy 5,362,000 acre-feet of consumptive use per year.[71] No party contests this allegation.[72] Since all of the California contracts contain the proviso that the Secretary's water delivery obligation is "subject to the availability thereof for use in California under the Colorado River Compact and the Boulder Canyon Project Act," the amount of water legally available to California depends upon the interpretation of Section 4(a) of the Project Act. California can in no event demand more water than her contracts permit, and she may receive less under Section 4(a) of the Project Act.

No other questions are raised by the parties regarding the California contracts, and they need not be further considered.

---

[70]The Seven party Agreement is incorporated in Article (6) of the Palo Verde contract, printed in Appendix 8, page 423.

[71]California's Answer to the Bill of Complaint, pp. 1, 33.

The California Proposed Findings of Fact barely mention the California contracts, but it may be inferred from California's Proposed Conclusion of Law 7A:201, Table 2 at Note 4, that California adheres to the allegation of the answer that the contracts call for a total of 5,362,000 acre-feet of water. California claims, in addition, 16,000 acre-feet of "water for existing projects . . . for which no water right, either under state law appropriations or federal water delivery contracts, was proved but which is chargeable to the state" and for United States wildlife refuges.

[72]Ariz. Proposed Finding of Fact No. 122: "Those contracts call for delivery for use in California of an aggregate of 5,362,000 acre-feet of water." See also United States Proposed Conclusion of Law No. 1.4.

I hold that the California contracts are valid and that the California defendants are entitled to demand water in the amounts specified in the recommended decree.

3. *The Nevada Contract.* The United States entered into a contract with the State of Nevada and its Colorado River Commission on March 30, 1942.[72a] Therein the United States undertook "subject to the availability thereof for use in Nevada under the Colorado River Compact and the Boulder Canyon Project Act" to deliver from storage in Lake Mead "so much water as may be necessary to supply the state a total quantity not to exceed 100,000 acre-feet each calendar year."

On January 3, 1944, the same parties entered into a supplemental contract which increased the quantity of water to be delivered to 300,000 acre-feet described in the following words: "so much water, including all other waters diverted for use within the State of Nevada from the Colorado River system, as may be necessary to supply the State a total quantity not to exceed Three Hundred Thousand (300,000) acre-feet each calendar year."[72b]

I have heretofore noted various contentions respecting this contract and it is unnecessary to review them here.

Nevada would disavow her contract, claiming that the Supreme Court, in an equitable apportionment suit, can award her water in excess of the contract maximum of 300,000 acre-feet. Projecting her needs to the year 2,000, Nevada prays for an apportionment of approximately 530,000 acre-feet of water per year.[73] Having determined that a contract with the Secretary of the Interior is a pre-

---

[72a]The complete text of the contract appears in Appendix 6, page 409.

[72b]The complete text of the contract appears in Appendix 7, page 419.

[73]Nev. Petition of Intervention, p. 25. See also Nev. Answering Brief, pp. 26-27, 94-96.

requisite for the delivery of water from Lake Mead, and that to the Secretary has constitutionally been delegated power to allocate the unappropriated water impounded in Lake Mead, I must reject Nevada's prayer for water in excess of 300,000 acre-feet, unless and until the Secretary sees fit to amend the Nevada contract to allow an increase in the amount of water delivered to her.

It should be noted that the Nevada contract, unlike the Arizona contract, does not require additional subcontracts between each water user and the Secretary of the Interior. On the contrary, the State of Nevada is free to determine who shall use the water, subject only to the Secretary's approval of the points of diversion.

I hold the Nevada contract to be valid, with the exception of a provision in Article 5(a) which is discussed hereafter at pages 237-247.

4. *Contracts For Reclamation Projects, Adjoining Lands and Miscellaneous Special Uses.* The United States has entered into water delivery contracts with various users in Arizona and California pursuant to the Reclamation Act of 1902, 32 Stat. 388, and acts amendatory thereof, 43 U. S. C. §§ 371 *et seq.* (1958), which obligate the United States to deliver water from the mainstream to lands on federal reclamation projects. The United States has also contracted with users in the Yuma, Arizona, area to deliver water to lands bordering federal reclamation projects pursuant to the Warren Act, 36 Stat. 925 (1911), 43 U. S. C. §§ 523-525 (1958), and to various special users pursuant to the Miscellaneous Special Use Act of February 25, 1920, 41 Stat. 451, 43 U. S. C. § 521 (1958).

There are four federal reclamation projects located within the Lower Basin to which the Secretary is obligated to deliver water from the mainstream. These projects are described in detail at pages 50-58, 60-61, *supra.*

One is the Yuma Reclamation Project which is located on both sides of the Colorado River downstream from Yuma, Arizona; the Valley Division is on the Arizona side of the River and the Reservation Division on the California side. The Valley Division is serviced by the Yuma County Water Users' Association. The non-Indian landowners on the Reservation Division have entered into individual water right application contracts with the United States for the irrigation of the particular acreage which they severally own.

A second project is the Yuma Auxiliary Reclamation Project which is located in Arizona, south of Yuma and east of the Valley Division of the Yuma Project. The Yuma Auxiliary Project is serviced by the Unit B Irrigation and Drainage District.

A third is the Gila Reclamation Project located in Arizona near the confluence of the Gila and Colorado Rivers. It contains three areas: North Gila Valley, Yuma Mesa, and Wellton-Mohawk. The North Gila Valley Unit is serviced by the North Gila Valley Irrigation District, the Yuma Mesa Division by the Yuma Mesa Irrigation and Drainage District, and the Wellton-Mohawk Division by the Wellton-Mohawk Irrigation and Drainage District. The South Gila Valley, while not presently operated as a federal reclamation project, is within the authorized limits of the Gila Project. It is serviced by the Yuma Irrigation District.

The fourth federal reclamation project constitutes the All-American Canal System and the Coachella Distribution System in California. The All-American Canal System is serviced by the Imperial Irrigation District; the Coachella Distribution System by the Coachella Valley County Water District.

The contracts which the United States has made for delivery of water to these Reclamation Act projects, to lands bordering these projects and to special users are as follows:

(1) Contract dated June 15, 1951 between the United States and the Yuma County Water Users' Association for delivery of water to the Valley Division of the Yuma Project in such quantities "as may be ordered by the Association and as may be reasonably required and beneficially used for the irrigation of the irrigable lands situate within the division . . . subject to the availability of such water for use in Arizona under the provisions of the Colorado River Compact and the Act of December 21, 1928 (45 Stat. 1057). . . ."[74]

(2) Water right application contracts providing for the delivery of water to non-Indian users on the Reservation Division of the Yuma Project located in California.[75] Substantially all of the non-Indian users on the Reservation Division have so contracted with the United States.

(3) Contract dated December 22, 1952 between the United States and Unit B Irrigation and Drainage District for the delivery of water to the Yuma Auxiliary Project in such quantities "as may be reasonably required and beneficially used for the irrigation of those irrigable lands which are situate within the . . . limited auxiliary project . . . subject to the availability of such water for use in Arizona under the provisions of the Colorado River Compact and the Act of December 21, 1928 (45 Stat. 1057). . . ."[76]

(4) Contract dated May 12, 1953 between the United States and the North Gila Valley Irrigation District for the delivery of water to the North Gila Valley Unit of the Gila Reclamation Project in such quantities "as may be ordered by the District and as may be reasonably required and beneficially used for the irrigation of the irrigable land situate within the District . . . subject to the

[74]Ariz. Ex. 92.
[75]Calif. Ex. 379.
[76]Ariz. Ex. 94.

availability of such water for use in Arizona under the provisions of the Colorado River Compact and the Act of December 21, 1928 (45 Stat. 1057) and subject to: (a) The availability of the water for the division under the provisions of . . . the Act of July 30, 1947 (61 Stat. 628). . . ."[77]

(5) The United States is planning to enter into a contract with the Yuma Irrigation District providing for the delivery of water from the Colorado River for use in the South Gila Valley.

(6) Contract dated May 26, 1956 between the United States and the Yuma Mesa Irrigation and Drainage District providing for the delivery of water to the Yuma Mesa Division of the Gila Project in such quantities "as may be ordered by the District . . . and as may be reasonably required and beneficially used for the irrigation of not to exceed 25,000 irrigable acres situate therein; subject to the availability of such water for use in Arizona under the provisions of the Colorado River Compact and the Act of December 21,1928 (45 Stat. 1057) and subject to: (a) The availability of the water for the division under the provisions of . . . the Act of July 30, 1947 (61 Stat. 628). . . ."[78]

(7) Contract dated March 4, 1952 between the United States and the Wellton-Mohawk Irrigation and Drainage District for the delivery of water to the Wellton-Mohawk Division of the Gila Project in such quantities "as may be ordered by the District . . . and as may be reasonably required and beneficially used for the irrigation of not to exceed 75,000 irrigable acres . . . subject to the availability of such water for use in Arizona under the provisions of the Colorado River Compact and the Act of December 21, 1928 (45 Stat. 1057) and subject to: (a) The availability

[77]Ariz. Ex. 95.
[78]Ariz. Ex. 96.

of the water for the division under the provisions of . . . the Act of July 30, 1947 (61 Stat. 628). . . ."[79]

(8) Contracts concluded between 1951 and 1956 under the Warren Act for the delivery of water from the facilities of the Yuma, Yuma Auxiliary, and Gila reclamation projects by the United States to individual users on lands bordering the reclamation projects.[80]

(9) Contracts concluded between 1945 and 1956 under the Miscellaneous Special Use Act of February 25, 1920 for the delivery of water from the facilities of the Yuma, Yuma Auxiliary, and Gila reclamation projects by the United States to various special users in the Yuma, Arizona, area.[80a]

(10) Contracts between the United States and the Imperial Irrigation District and between the United States and the Coachella Valley County Water District for delivery of water to those districts in the amounts and with the priorities stated in the Seven-party Agreement among various California users, subject to the availability thereof for use in California under the Colorado River Compact and the Boulder Canyon Project Act.[81]

The United States seeks a decree adjudging that it has the right and power to release for diversion from the mainstream of the Colorado River the amount of water necessary to fulfill the contractual obligations detailed above. Arizona objects. She argues that, under the Project Act, the Secretary of the Interior must contract for the delivery of water directly with each state, and that the division of each state's allotment of water among individual users is controlled by the state. Arizona says that the

---

[79]Ariz. Ex. 93.
[80]Ariz. Exs. 163, 165.
[80a]*Ibid.*
[81]Ariz. Exs. 34, 35.

Secretary has contracted to deliver certain amounts of water to Arizona and it is for the State to decide which projects within Arizona will receive the State's allotment of water. Thus Arizona argues that the Secretary of the Interior cannot deliver water from the mainstream pursuant to his Reclamation Act delivery contracts unless the State agrees to the intrastate allotment.

California joins Arizona in seeking to accomplish the same result, but on different grounds. California suggests that the Reclamation Acts give the Secretary of the Interior power only to build dams and diversion works, not to vest rights to water in individual owners of land on the reclamation projects. California argues that even though the contracts be valid, they, by themselves, do not give individual landowners, water users' associations, or project lands the right to receive water. That right, California states, vests under state law, and it would not be appropriate to decide in this case the various rights and priorities under state law.

Arizona's objection to the United States' claims is not well taken. I interpret the Boulder Canyon Project Act as empowering the Secretary of the Interior to contract for delivery of mainstream water to states and to individual users, whether private or public. The Project Act does not require or even suggest that the delivery contracts must be made only with states. It is certainly within the discretion of the Secretary, under the Project Act, to contract directly with individual users in the various states for the delivery of water. He is not confined to contracting with each state and permitting the state to allocate its share of the water to various individual users. Section 5 of the Project Act states that "no person" shall receive water without a contract. Assuming that the word "person" includes a state, it certainly includes entities other than states. If additional support were necessary for this proposition,

the action of the Secretary in entering into contracts with political subdivisions in California[82] immediately after enactment of the Project Act is evidence of the contemporaneous understanding. Indeed, in the case of California, the Secretary has made no contract with the State itself.

The Secretary's contract with Arizona obligates him to deliver a certain quantity of water for use within the state, but this contract leaves it to the Secretary to decide with which users within Arizona he will contract for the delivery of all or part of Arizona's allotment. Article 7(1) of that contract specifically provides that deliveries of water to Arizona users "shall be made for use within Arizona to such individuals, irrigation districts, corporations or political subdivisions . . . as may contract therefor with the Secretary, and as may qualify under the Reclamation Law. . . ." In other words, the Secretary has agreed with the State of Arizona that he will deliver a certain amount of water to Arizona users, but he has reserved to himself discretion to decide with which users he will contract. This being the case, the Secretary is free, subject to statutory limitations, to contract with users in Arizona qualifying under the reclamation law for delivery to them of certain amounts of water out of the total amount allocated to Arizona. This is precisely what the Secretary has done in the contracts which are before us in this case.

California's objection to the United States claims is on a different footing. For reasons hereinafter stated, I am of the view that state law governs intrastate rights and priorities to water diverted from the Colorado River. The application of such law presents issues which have not been tried and it would be inappropriate in any event to determine in this litigation the water rights of the various federal reclamation projects, adjoining lands and special users under the relevant state law.

---

[82]For a representative California contract see Appendix 8.

Section 18 of the Project Act provides:

> "Nothing herein shall be construed as interfering with such rights as the states now have either to the waters within their borders or to adopt such policies or enact such laws as they may deem necessary with respect to the appropriation, control, and use of waters within their borders, except as modified by the Colorado River compact or other interstate agreement."

Under this section, Congress has specifically declined to give the Secretary of the Interior authority to deliver water to users within a state in disregard of the state's water law. Although a contract with the Secretary is necessary under Section 5 of the Project Act for a user to receive mainstream water, the user must also, under Section 18, be under no disability to receive such water under the applicable state law. And, state law governs priorities between various users within a state who have delivery contracts with the Secretary.[83] This is apparent from the language of Section 18 and is corroborated by the legislative history. See page 155, *supra*.

This scheme is similar to the one employed by Congress in the federal reclamation laws, to which the Project Act is specifically stated to be supplementary. Section 8 of the Reclamation Act of 1902 provides:

> ". . . that nothing in this act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any state or territory relating to the control, appropriation, use, or distribution of water used in irrigation . . . and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with such laws. . . ."

---

[83] All I hold is that under the Project Act state law governs intrastate water rights; I do not pass on whether other federal statutes such as the Gila Project Reauthorization Act, 61 Stat. 628 (1947), supersede state law in particular cases.

Under the Reclamation Acts the Secretary is authorized to build dams and irrigation canals and to store and deliver water. Nobody may receive the stored water without a delivery contract. But the water rights of lands in reclamation projects are, under Section 8, governed, at least to some extent, by state law. *Ickes* v. *Fox,* 300 U. S. 82 (1937), on remand, *Fox* v. *Ickes,* 137 F.2d 30 (D.C. Cir. 1943); *Nebraska* v. *Wyoming,* 325 U.S. 589, 612-615 (1945). And, as the Supreme Court has but recently indicated, the water rights and priorities as between a reclamation project and other users within the same state are governed by state law. See *Ivanhoe Irrigation District* v. *McCracken,* 357 U. S. 275, 291 (1958). The fact that the Project Act is denominated as a supplement to the Reclamation Acts buttresses the conclusion, apparent from the plain language of Section 18 itself, that state law governs rights and priorities among intrastate users.

The various delivery contracts made by the Secretary for delivery of water to reclamation projects, adjoining lands and special users are, with one exception, authorized by the Reclamation Acts, the Miscellaneous Special Use Act and the Project Act and are therefore valid. How much water a particular project or user may receive out of a state's total apportionment as against other users in the state who also have or may in the future obtain delivery contracts with the Secretary of the Interior must be decided under state law. The relevant issues for such a decision have not been tried and it would be impossible to determine here all of the relevant rights and priorities under the applicable state laws which would affect a project's water rights. Furthermore, persons who are the most concerned with this decision are other users or potential users in the states, who are not parties to this suit. Therefore, I have declined to accept the United States' invitation to determine the right of any reclamation

project or other user to receive water as against competing users in the same state.

California contends that the Warren Act contracts and the Special Use contracts described at page 214, *supra,* are invalid because they are not for permanent service as required by Section 5 of the Project Act.[83a] All of the Warren Act contracts and all but three of the Special Use contracts recite that they are made pursuant to the Project Act and further recite that they are for permanent service.[84] Nothing in the Warren Act or in the Miscellaneous Special Use Act prevents contracts made pursuant thereto from being for permanent service. Hence, as to all but three Special Use contracts, no problem is presented with respect to the requirements of Section 5.

Of these three Special Use contracts, one, dated June 12, 1951, is between the Bureau of Reclamation and the Department of the Army and provides that the Bureau will supply water from the Gila Gravity Main Canal of the Gila Project for the use of an Army test station.[84a] This contract states, in paragraph 4, that it "shall extend so long as the Army requires said service." Another of the three contracts, dated November 1, 1953, is between the Bureau of Reclamation and the Department of the Air Force and provides that the Bureau will supply water from the facilities of the Gila Project for the use of the Air Force base at Yuma, Arizona.[84b] This contract states, in paragraph 8, that it "shall extend from the date hereof until such time as Air Force no longer requires said service and so advises Bureau." Both of these contracts conform to Section 5 and are valid. Both specifically state that they are made pursuant to the Project Act and that deliveries of water under

---

[83a]The permanent service requirement of Section 5 is discussed at pp. 237-240, *infra.*

[84]The contracts are reproduced in Ariz. Ex. 165.

[84a]Ariz. Ex. 165, Contract No. 176r-696.

[84b]Ariz. Ex. 165, Contract No. 14-06-300-330.

them are governed and limited by the Project Act. Furthermore, although neither specifically uses the words "permanent service", both provide for continued deliveries for as long as the user needs water. As is true of all Warren Act and Special Use contracts, the contractees' rights to receive water are "subordinate to the rights of" lands within the reclamation project, but this merely establishes priority; it does not violate the permanent service requirement of Section 5.

The third contract, dated June 12, 1945, is between the United States and the Arizona Edison Company, Inc. and provides for the delivery of water from the Yuma Main Canal of the Yuma Project for the municipal water supply of Yuma, Arizona.[84c] This contract is the only one of all of the Warren Act and Special Use contracts in evidence which does not state that it was made pursuant to the Project Act. It provides, in paragraph 13, that "the term of this contract shall extend from the date hereof to and including December 31, 1970." Paragraph 14 provides:

> "It is understood and agreed that the furnishing of water hereunder to the Company shall not be taken or construed as binding the United States after the termination of this contract to furnish water to the said Company or to any one claiming through or under it, nor shall it under any circumstances become the basis of a permanent water right."

It is clear that this contract between the United States and the Arizona Edison Company, Inc. is not for permanent service; it unequivocally states that deliveries of water under it shall end on December 31, 1970, and that the United States shall be under no obligation to continue deliveries beyond that date. It is equally clear that it is a con-

---

[84c]Ariz. Ex. 165, Contract No. 176r-40.

tract for the delivery of water stored in Lake Mead and flowing in the mainstream below. The only water in the Yuma Main Canal of the Yuma Project, and thus the only water which can be delivered under this contract, is mainstream water which has been diverted at Imperial Dam. See pages 35, 50-51, *supra*. Since Section 5 of the Project Act commands that no person may receive mainstream water "except by contract made as herein stated", and since the Arizona Edison contract is not "as herein stated" because it is not for permanent service, the contract is invalid and the Secretary may not deliver water pursuant to it.

Water deliveries under the Arizona Edison contract have constituted a "supplemental water supply" for the City of Yuma. If the city requests a Section 5 contract to replace the deliveries which have been made under the Arizona Edison contract nothing has been called to my attention which would prevent the Secretary of the Interior from entering into such a contract if he so desired.

5. *The Contractual Allocation System.* The water delivery contracts into which the Secretary has entered with the states of Arizona and Nevada and with the California users constitute an allocation of mainstream water. Although the Arizona contract is written in terms of the "maximum" amount to be delivered and the Nevada contract in terms of "a total quantity not to exceed" the specified amount, I think that the Secretary has delivery obligations under these contracts. Otherwise they would be illusory and would make little sense. Of course, the Secretary is not required to drain Lake Mead dry in fulfilling demands for delivery of water. In the exercise of a reasoned discretion he will decide how much water is to be released from the reservoir each year, and his decision may be based on any reasonably relevant factors. Clearly he has this power under Sections 1, 5 and 6 of the Project Act, and I can find nothing in the

water delivery contracts to indicate that he has surrendered it. But once water is released for consumption in the United States, the delivery contracts oblige the Secretary to apportion certain quantities to each state.

The aggregate delivery obligation under the Secretary's contracts with California users constitutes a duty similar to the one which the Secretary has undertaken to Arizona and Nevada. Those contracts call for total deliveries of sufficient water to satisfy 5,362,000 acre-feet of consumptive use per annum, subject to the availabilty thereof for use in California under the Project Act. These contracts mean that the Secretary is required to apportion to California users, in accordance with the system of priorities stated in all of the California contracts, 4.4 million acre-feet of the first 7.5 million acre-feet of consumptive use of water from the mainstream in one year, plus one-half of any additional uses apportioned in that year, until a maximum of 5,362,000 acre-feet per annum is consumed in California. As in the case of the Arizona and Nevada contracts, however, I find nothing which indicates that the Secretary has relinquished his discretion to determine in the light of his multiple obligations how much water is to be released from the reservoir for consumptive use in the United States.

The water delivery contracts substantially effectuate the apportionment contemplated by Congress in Section 4(a) of the Project Act. It can be no accident that the obligation to deliver 2.8 million acre-feet per annum found in Arizona's contract and the obligation to deliver .3 million acre-feet found in Nevada's contract, when added to the 4.4 million acre-feet to which California is limited out of 7.5 million acre-feet, total that 7.5 million acre-feet. Similarly, it is more than fortuitous that Arizona and Nevada, under their contracts, may share in the half of surplus which California cannot receive under the Section 4(a) limitation. The Secretary's intention must have been that Ari-

zona's 2.8, Nevada's .3 and the 4.4 to which California is limited would all come from the same 7.5 million acre-feet, and that Arizona's 46% of surplus, Nevada's 4% and the 50% to which California is limited would come out of any available water in addition to the 7.5 million acre-feet per annum. This is precisely the way that Senator Pittman interpreted Section 4(a) on the floor of the Senate; he assumed that California would receive the full 4.4 million acre-feet which was the maximum she could receive out of 7.5 million acre-feet and that Arizona would receive 2.8 and Nevada .3 million acre-feet to round out the full 7.5. Senator Pittman also assumed that California would receive all of the 50% of surplus that she was eligible to receive and that Arizona would receive the rest. See pages 176-177, *supra*. This seems also to have been the understanding of Senator Hayden and of other Senators who participated in the debate. See pages 174-175, *supra*. This correlation demonstrates that the Secretary obligated himself in his contracts with the California agencies to satisfy 5,362,000 acre-feet of consumptive use out of the water allocated to California under the three-state apportionment.

It is true that the California contracts do not in terms call for the delivery of half of surplus and therefore that they do not expressly apportion to California the maximum amount of water she can receive under her limitation. This does not impugn the conclusion that the water delivery contracts substantially effectuate the apportionment contemplated by Congress. The fact that the Secretary based the contractual apportionment on Section 4(a) and that he was careful to ensure that Nevada's 4% of surplus was to come from Arizona's share demonstrates that he intended to reserve 50% of surplus for California in making the contractual apportionment. The Secretary made no master contract with the State of California, but rather made a number of contracts for specific quantities of water with

the several California users. So far as appears, California users have not requested contracts for additional water out of surplus, probably for the reason that they have never been in a position to utilize the full amount of their present allotments. This explains why California's share of surplus has not yet been fully contracted for. In years in which "surplus" exceeds twice 962,000 acre-feet,[85] the Secretary is not required by his existing contracts with California users to deliver to them out of such surplus more than the 962,000 acre-feet. New contracts can, of course, change this situation.

Since the Secretary has intentionally bound himself to a contractual apportionment substantially (although not precisely) along the lines suggested by Congress as fair and equitable in the two paragraphs of Section 4(a) of the Project Act, that section has been used as a guide for interpreting and defining the contractual allocation. Applying this gloss to the contracts, I interpret them as establishing the following water delivery scheme: The Secretary, in his discretion, decides how much water is to be released from mainstream reservoirs in any particular period. The amount available for consumption in the United States in any one year will be the amount so released less the amount necessary to satisfy higher priorities. The contracts do not limit the Secretary's discretion; they operate only upon mainstream water which is available for consumption in the United States. They require that this water be apportioned as follows: of the first 7.5 million acre-feet of consumptive use in one year, 4.4 for use in California, 2.8 in Arizona and .3 in Nevada; of the remaining consumptive uses during that year, 50% for use in California and 50% in Arizona, subject to the possibility that Arizona's share

---

[85]The 5,362,000 acre-feet for which California users have contracted must be satisfied as follows: 4,400,000 acre-feet out of the first 7,500,000 acre-feet; and 962,000 acre-feet out of surplus.

may be reduced to 46% if the Secretary contracts to allocate 4% of surplus for use in Nevada.

The Section 4(a) limitation which is incorporated into the California contracts measures California's apportionment in terms of consumptive use, see pages 185-187, *supra,* and the delivery contract between the United States and Arizona also specifies that Arizona's apportionment is measured by consumptive use. The Nevada delivery contract is not so specific, but it must be interpreted in the same manner since it was intended to correlate to the California contract and the prospective Arizona contract and also to approximate the apportionment suggested in Section 4(a). Consumptive use means, in all of the contracts, diversions from the mainstream less return flow thereto. Thus a state is not charged for water diverted by it which ultimately finds it way back to the Colorado River and which is available for use within the United States or which is available for delivery to Mexico in satisfaction of obligations imposed by the Mexican treaty.

It should also be pointed out that the apportionment made by the delivery contracts applies to water stored in Lake Mead and flowing in the mainstream below Lake Mead. In other words, a state is charged for consumption of water released from Lake Mead and water which flows into the mainstream below Lake Mead from the Bill Williams River. The Section 4(a) limitation which is incorporated in the California contracts clearly provides for this result, see pages 184-185, *supra,* as does Article 7(1) of the Arizona delivery contract. Nevada, of course, does not have access to the inflow from the Bill Williams River; under her contract she is charged for all the mainstream water she utilizes.

Furthermore, it is clear that the mainstream apportionment among Arizona, California and Nevada effectuated by the Secretary's water delivery contracts in conjunction

with Section 4(a) applies only to water diverted from Lake Mead and the mainstream below. The argument advanced by the United States and California, that diversions from the mainstream between Lake Mead and Lee Ferry are chargeable under the apportionment, cannot be sustained.

As heretofore explained, page 183, *supra*, diversions from this reach of the River are outside the scope of the Section 4(a) limitation on California. Furthermore, Section 4(a), even if applicable to the mainstream above Lake Mead, cannot limit diversions by Arizona and Nevada because it is solely a limitation on California. Since Arizona and Nevada are the only states geographically in a position to divert water from the mainstream between Lake Mead and Lee Ferry, the water delivery contracts between those states and the United States are the only authority on the basis of which diversions from this reach of the river could be limited.

But the Arizona and Nevada contracts do not limit diversions in those states above Lake Mead. This is consistent with Section 5 of the Project Act which authorizes the Secretary to enter into contracts only for the delivery of "water in said reservoir," *i.e.*, Lake Mead.

Thus the Arizona water delivery contract, in paragraph 7(a), purports to affect only deliveries of water "from storage in Lake Mead," not diversions above Lake Mead. It is true that paragraph 7(d) of the Arizona contract provides that the United States' obligation to deliver water from Lake Mead or the mainstream below "shall be diminished to the extent that consumptive uses now or hereafter existing in Arizona above Lake Mead diminish the flow into Lake Mead. . . ." But even this paragraph does not purport to limit Arizona's diversions from the mainstream above Lake Mead. If, for example, Arizona diverted 3,000,000 acre-feet from this stretch of

the mainstream this would not be a violation of paragraph 7(d) although the Secretary could reduce Arizona's consumptive uses of water below Lake Mead to the extent of such uses. At any rate, for the reasons detailed at pages 237-247, *infra,* paragraph 7(d) is invalid, and thus it cannot limit Arizona's diversions from the mainstream above Lake Mead. Similarly, nothing in the Nevada water delivery contract purports to limit diversions by that state above Lake Mead, except for part of Article 5(a) which is invalid for the same reasons that Article 7(d) of the Arizona contract is invalid.

One of the proposed plans for the Central Arizona Project contemplated the diversion of water at Bridge Canyon or Marble Canyon, both of which are on the mainstream between Lake Mead and Lee Ferry. California and the United States are concerned lest Arizona be permitted to divert a substantial quantity of water for the Central Arizona Project from one of these sites in addition to the water apportioned to her from Lake Mead and the mainstream below. But this cannot occur without the specific authorization of Congress. First of all, there is no indication that the Central Arizona Project can be financed other than by Congress. Secondly, under the Rivers and Harbors Act, 33 U. S. C. §§ 401 *et seq.* (1958), the dam necessary for the Project could not be constructed in the Colorado River without the approval of Congress. *United States* v. *Arizona,* 295 U. S. 174 (1935); *Wisconsin* v. *Illinois,* 278 U. S. 367, 411-414 (1929).

When Congress, in the Project Act, authorized the construction of Hoover Dam, it focused its attention on the problem of how the water impounded and released by that dam should be distributed, authorizing the Secretary of the Interior to apportion that water among the interested states. Congress did not focus its attention on the diver-

sion of water above Lake Mead. If Congress authorizes a dam and diversion works on the mainstream above Lake Mead, its attention will then be directed to the problem of apportioning the water diverted by those structures. At that time Congress can determine whether or not Arizona's diversions above Lake Mead shall be chargeable to her under the present contractual apportionment.[86]

California strenuously urges that the contractual apportionment explained in this section of the Report is contrary to the "bargain" she made with Congress in enacting the California Limitation Act. According to California, she was assured of 4.4 million acre-feet out of the first 7.5 million acre-feet of consumptive uses of water diverted throughout the entire Colorado River System in the Lower Basin. She calls this "III(a) water," referring to the allocation of 7.5 million acre-feet of system-wide consumptive uses made to the Lower Basin by Article III(a) of the Colorado River Compact. The apportionment suggested in this Report, of course, allocates to California 4.4 million acre-feet out of 7.5 million acre-feet of mainstream uses only. Since California, which has no tributaries, would receive substantially more water under a system-wide apportionment, see pp. 177-178, *supra,* she claims that the suggested mainstream apportionment diminishes the fruits of her bargain. Since consumptive use of water from the Gila River System in Arizona accounts for most of the tributary uses in the Lower Basin, the real thrust of California's argument is that Arizona's mainstream uses should be curtailed, for the benefit of California uses, to the extent of Arizona uses on the Gila River.

California has never clearly designated the ground on which she bases her claim to 4.4 million acre-feet out of a

---

[86]The doctrine of equitable apportionment may affect diversions in this reach of the River. See pages 316-318, *infra.*

Lower Basin system-wide apportionment. There are only four possible sources for this claim: (1) the law of prior appropriation or equitable apportionment, (2) the Colorado River Compact, (3) the Boulder Canyon Project Act, or (4) the water delivery contracts executed by the Secretary of the Interior under Section 5 of the Project Act. None of these sustains California's position.

(1) Prior Appropriation and Equitable Apportionment. Since the doctrines of prior appropriation and equitable apportionment were rendered inapplicable to the Colorado River below Lake Mead by the Project Act, see pp. 151-162, *supra,* California's claim to Colorado River water cannot be grounded on them. But even if those doctrines did apply, they would not support California's claim.

The appropriation doctrine holds merely that a junior appropriator can neither demand nor withhold water required for beneficial use by a senior appropriator. Under this rule, the total quantity of uses in any state is immaterial to the rights of appropriators in other states. It is true that junior appropriators on tributaries can be shut down if the water they would consume has been appropriated by senior appropriators on a mainstream. But that rule of the law of appropriation does not justify California's claim that Gila River water uses are to be charged to Arizona so as to reduce Arizona's claims to the mainstream, since it does not appear that California users have any appropriative rights in waters of the Gila River, their points of diversion all being upstream from the confluence of the Gila with the mainstream.

This result is not changed by the modification of strict priority of appropriation that has been made by the Supreme Court in equitable apportionment suits. None of the equitable apportionment cases establishes an accounting system

comparable to the one that California urges for adoption here. Perhaps the simplest way to demonstrate this is to assume that the Project Act and the Colorado River Compact do not exist. In an equitable apportionment suit over mainstream water between Arizona and California, the Gila River would not be in issue because its waters have not been appropriated by California and there are no diversion works in California which permit the utilization of this water in that state. The Supreme Court has never yet based an apportionment of one stream on the water available to one party but not to the other, from another stream. Presumably the apportionment would be based on the supply in the main Colorado River, not that river and the Gila, which California cannot use.

(2) The Colorado River Compact. As explained at pp. 139-141, *supra,* the Compact operates inter-basin and not interstate. It does not purport on its face and it cannot be construed to affect rights between Arizona and California. Although the Compact in Article III(a) and (b) apportions system waters to each Basin, it gives no direction regarding which uses are III(a) or III(b) or some other category, as among states of either Basin. The Upper Basin states recognized that the Compact did not control the intra-basin division of water when, in 1948, they apportioned by compact their share of Colorado River Basin water among themselves. How the Lower Basin states should divide their Compact apportionment, their surplus and the water not covered by the Compact was left to those states, as they themselves recognized in their various efforts to reach agreement and as Congress recognized in the second paragraph of Section 4(a).

(3) The Boulder Canyon Project Act. Nothing in the Project Act establishes an apportionment of all Lower Basin

uses, both mainstream and tributary. The only section which purports to effect a specific allocation of water is Section 4(a), and that, as explained at pp. 173-183, *supra*, applies only to the mainstream. But even if Section 4(a) applied to the entire river system, it would not support California's claim.

The first paragraph of Section 4(a) is a limitation on California, not a grant to her, and hence cannot be a source of her rights to water as against the other Lower Basin states. The critical words in the first paragraph state that consumptive uses of water in California "shall not exceed" certain quantities per annum. This provision, that California's uses "shall not exceed" the specified quantity, does not mean that she is entitled to that quantity. California relies on the language in the first paragraph which states that the amount of water to which she is limited shall include "all water necessary for the supply of any rights which may now exist. . . ." She argues that this is a grant to her. But even if it were a grant, the language would give California only water to which she had rights derived from another source and would not constitute an independent basis for claiming water as against the other Lower Basin states. Furthermore, the natural reading of these words indicates not a grant, but a double limitation: California's consumptive uses shall not exceed 4.4 million acre-feet of 7.5 million acre-feet, and this is true despite her claims in 1928 that her existing rights exceeded 4.4 million acre-feet.

The second paragraph of Section 4(a) authorizes a compact which was never consummated and hence it cannot be a source of California's right to water as against the other Lower Basin states. Moreover, that paragraph makes clear that Arizona uses of Gila River water are in addition to the apportionment authorized therein. See note 38, p. 179.

(4) The Water Delivery Contracts. The water delivery contracts which the Secretary of the Interior has entered into with the California defendants constitute the only possible basis for California's claim to mainstream water. Those contracts do allocate water to California, see pp. 221-225, *supra*, but only from a three-state apportionment limited to the mainstream.

The California contracts, together with the Arizona and Nevada contracts, constitute an apportionment among the three states. California's major contention, that Arizona is to be charged for her uses of Gila River water under the tri-state apportionment, fails before the clear language of the Arizona water delivery contract. Paragraph 7 of that contract explicitly apportions to Arizona "from storage in Lake Mead at a point or points of diversion on the Colorado River" 2.8 million acre-feet plus half of surplus. Paragraph 7(1) also provides that: "All consumptive uses of water by users in Arizona, *of water diverted from Lake Mead or from the main stream of the Colorado River below Boulder Dam* . . . shall be deemed, when made, a discharge pro tanto of the obligation of this contract." (Emphasis added) Nothing in the Arizona water delivery contract can be interpreted, even with the most vivid imagination, as charging Arizona for her consumptive uses of Gila River water. Rather, the language of that contract explicitly and unmistakably allocates water to Arizona only from the mainstream, leaving her free to consume water from the Gila in addition to the contractual apportionment.

Thus far the Report has described that part of the contractual allocation scheme that governs two distinct supply situations: (1) where there is sufficient mainstream water to satisfy 7.5 million acre-feet of consumptive use in the United States in one year; and (2) where there is surplus because of sufficient water to satisfy uses in excess of the

7.5 million acre-feet. The contractual allocation scheme also determines each state's apportionment in the event of insufficient mainstream water to supply 7.5 million acre-feet of consumptive use in one year. In such event, the allocation scheme requires each state to share the burden of the shortage ratably. This is to say that the contracts, executed by the Secretary in conformity with the apportionment contemplated by Congress in Section 4(a), apportion to each state a pro rata share of the available water. The interstate ratios are determined by the contractual apportionment to each state of the first 7.5 million acre-feet of consumptive uses. Thus in the event of shortage, to Arizona is apportioned by her contract $\frac{2.8}{7.5}$ of the aggregate consumptive use in the three states; to California is apportioned by her contracts $\frac{4.4}{7.5}$ of such use; and to Nevada is apportioned by her contract $\frac{.3}{7.5}$ of such use. Priority of appropriation is nullified by the Project Act and by the contracts, and this ratable apportionment is substituted in lieu thereof.[87]

It is demonstrable that the Project Act and the water delivery contracts contemplate a pro rata allocation of mainstream water among Arizona, California and Nevada in times of short supply. As explained above, the three states' apportionments are on a parity whenever the annual supply is sufficient to satisfy 7.5 million acre-feet or more of consumptive use in the United States. Thus California and Arizona are each allocated 50% of surplus, under existing contracts, and necessarily without regard to priority of appropriation. Even if, hypothetically, California were to

[87] As is explained hereafter (pp. 306 *et seq., infra*) Section 6 of the Act makes an exception to this rule.

have appropriations of 5 million acre-feet which are prior in time to any of Arizona's and some of these California appropriations were unsatisfied, the two states would nevertheless share surplus equally. And there is, with one exception, nothing in the Project Act or the Secretary's delivery contracts which suggests that a similar parity as between the states does not prevail if there is less than 7.5 million acre-feet of consumptive use to be apportioned among them.

That single exception, the command in Section 6 that "present perfected rights" shall be satisfied, further emphasizes that Congress did not intend that principles of priority of appropriation should apply in times of short supply to control the interstate allocation of mainstream water. The purpose of Section 6, as explained more fully at pages 306 *et seq.*, is to protect mainstream uses in existence at the time the Project Act was enacted against the possibility that their water would be impounded by the proposed dam and delivered to other uses developed after the dam was constructed. Since these early uses are prior in time to uses developed in reliance on Hoover Dam, there would be no need to protect them against this possibility if priority of appropriation governed the interstate delivery of water in periods of short supply.

Furthermore, the priority scheme established by Section 6, which is based on "perfected rights," is in certain particulars inconsistent with principles of priority of appropriation. Thus, it is quite possible that a right "perfected" as of June 25, 1929, and thus protected by Section 6 is junior in priority to a right recognized under state law but not "perfected" as of that date. In such a case, Section 6 would reverse the order of state priorities. If Congress had intended priority of appropriation to retain interstate significance after the enactment of the Project Act, it might

be expected that it would have suggested that priority of appropriation was still to govern in circumstances in which it was not inconsistent with Section 6.

Moreover, the Project Act approved the Colorado River Compact, and thus the Compact provides the background for the enactment of the Project Act. The Compact treats the Upper and Lower Basins on a parity one to the other in regard to the division of water; priority of appropriation is not an operative factor under the Compact. Thus subdivisions (a) and (b) of Article III apportion consumptive use of water to each Basin in fixed quantities with the manifest intention that priority of appropriation as between Basins shall be irrelevant to the apportionment. It is true that the greater development in the Lower Basin may have been taken into account when that Basin was apportioned an extra million acre-feet, but, the division having been made, each Basin's apportionment is, under the Compact, of the same quality, regardless of priority of appropriation. This is made clear by Article III(c) which provides that, if there is not enough water in excess of the III(a) and (b) apportionment to fulfill United States treaty obligations to Mexico, "then the burden of such deficiency shall be equally borne by the Upper Basin and the Lower Basin . . . ." The respective Basins do not bear the loss of water in such a period of short supply on the basis of priority of appropriation, but on the basis of parity.

As I have pointed out, the second paragraph of Section 4(a) gives advance approval to a compact among Arizona, California and Nevada containing an allocation of water which was substantially effectuated by the contractual allocation established by the Secretary. Under this proposed compact, each state's apportionment would be of equal quality, precisely like the inter-basin apportionment in the Colorado River Compact. Surely Congress did not intend

that such an interstate compact would give California superior priorities to water because of the earlier dates of her uses. A compact is ordinarily thought of as an agreement between sovereigns with the rights of each standing on equal footing. The sensible interpretation of the proposed compact is that California's more advanced development was taken into account in allocating to her a larger share of water than to her sister states, and that once the ratio of 4.4 to 2.8 to .3 was established, it would be applied to all of the water consumed, regardless of dates of appropriation. Since Congress intended the second paragraph of Section 4(a) to be correlative to the first paragraph, the latter must be interpreted in the same manner as the former, to provide for a pro rata apportionment in periods of shortage.

In short, Congress contemplated inequality in the quantities allocated to each of the states, but parity in their rank. Interstate priorities were rejected. The principle of sovereign parity was established.

As pointed out above, it is patent that the Secretary was profoundly influenced in his water delivery contracts by the apportionment suggested in Section 4(a). Therefore, it must be concluded that these contracts embody the pro rata system of apportionment that is incorporated in Section 4(a). None of the contracts suggests that a system other than pro rata distribution is to be applied. Although the Secretary's contracts with California users specify a system of priorities among them, they do not mention interstate priorities, nor do any of the Secretary's other water delivery contracts. Indeed, in order to apply an interstate priority system it would be necessary for the Secretary to establish the priority date for each use diverting water from the mainstream as against all of the other uses diverting such water. So far as appears, the

Secretary has not considered it necessary to compile such a complicated list in order to deliver water pursuant to his contracts. Furthermore, as noted at pages 233-234, *supra*, the contracts adopt a pro rata system of distribution of surplus.

6. *Deductions for Uses above Lake Mead Invalid.* The contractual allocation scheme detailed above, which has been deduced from the Secretary's water delivery contracts, does not take into account the provisions of Article 7(d) of the Arizona contract and Article 5(a) of the amended Nevada contract which reduce the Secretary's obligation to deliver water from Lake Mead for use in those states to the extent that consumption of water in those states diminishes the flow of water into Lake Mead.[88] These provisions are in violation of the Project Act; they are unenforceable. They are contrary to the command of Section 5 that "contracts respecting water for irrigation and domestic uses shall be for permanent service . . .," they violate Section 18, which directs that state law shall govern intrastate water rights and priorities, and they result in an allocation of mainstream water totally out of harmony with the limitation on California contained in Section 4(a).

These contract provisions require that deliveries of water from the mainstream to users in Arizona and Nevada be reduced as depletions in those states above Lake Mead increase, regardless of the supply of water in Lake Mead. For example, assume that annual deliveries from Lake

---

[88]Article 7(d) of the Arizona contract clearly states that the Secretary's delivery obligation is reduced to the extent that consumption diminishes the flow into Lake Mead. Article 5(a) of the Nevada contract is worded differently, however, and could be interpreted as reducing the delivery obligation to Nevada by the total amount of tributary diversions in that state regardless of the effect on the flow into Lake Mead. Since I have concluded that these provisions are unenforceable, it is unnecessary to differentiate between the two versions, and I have treated Article 7(d) and Article 5(a) as synonymous for purposes of the following discussion.

Mead to users in Nevada aggregate 300,000 acre-feet of consumptive use, the full contract allotment. It will be noted that the present Nevada contract does not call for delivery of any surplus. If thereafter a consumptive use from the Virgin River in Nevada were to occur which reduced the flow into Lake Mead by 50,000 acre-feet, the Secretary's obligation, under his contract to deliver water to Nevada from Lake Mead, would be reduced by this amount, and this would result in the cancellation of deliveries to those junior-most Nevada users who had been receiving the last 50,000 acre-feet under the contract, even though the supply of Lake Mead water was sufficient to satisfy all demands.[89] This would be true despite the fact that the Secretary has absolutely no control over consumptive uses on the Virgin River. For these junior Nevada users, the Nevada contract cannot be regarded as one for permanent service.

Since Section 5 requires the Secretary's water delivery contracts to be "for permanent service," the contract provisions in question are in violation thereof. The requirement of permanent service has no antecedent in the prior Reclamation Acts, and the legislative history sheds very little light on its meaning. Clearly a contract for a stated term of years would not be for "permanent service." However, the general context suggests that Congress intended to do more than outlaw term contracts. This requirement was placed in the Project Act also to ensure that deliveries of water from Lake Mead would be on a stable and annually re-

[89]Consumption of water on any particular tributary above Lake Mead affects the supply of water in Lake Mead and hence the amount of water that can be released for consumption each year. But it is only one of many factors that affect supply, and is clearly not among the most important ones, which are the mainstream flow into Lake Mead and storage from prior years. Thus, it is quite likely that the Secretary would be able to release the same amount of water for consumption from the mainstream in successive years despite an intervening project which depleted the flow into Lake Mead from one of the tributaries.

curring basis, insofar as this is possible under the physical conditions existing in the River Basin. Because of the topography and geography of the Lower Basin, water from the mainstream can be feasibly diverted and utilized for irrigation only by the construction of immense projects consisting of dams, pumping facilities, canals and other necessary works. Needless to say, the cost of such projects is enormous, and they can be financed only if a relatively constant and dependable supply of water seems likely to be available once they are completed. Similarly, existing projects cannot be economically operated unless a dependable supply of water is available.

There will necessarily be some uncertainty of supply of mainstream water because of the very large fluctuation in the flow of water into Lake Mead each year.[90] Legislation could not, of course, affect the geography of the region or the amount of precipitation. But the primary purpose of the Project Act in providing for the construction of Hoover Dam was to regulate this erratic flow so as to provide, so far as physically possible, a stable supply of water on the basis of which the economy of the Lower Basin could be developed.[91] While Congress could not legislate away the uncertainties of supply created by nature, it could reduce them by means of the great reservoir and by pursuing a policy of permanent service contracts. In conformity with this purpose, the requirement of permanent service in Section 5 seems to have been intended to instruct the Secretary to contract for water deliveries in such a way as to assure users, as far as is physically possible, of a stable supply of water. Having authorized the dam to overcome the physical conditions which resulted in uncertainty of supply, Congress did not want the Secretary's contracts

---

[90]See Part One, pp. 117-120.

[91]Hoover Dam cannot be entirely successful in this regard. See Part One, pp. 107-110.

to generate new causes of uncertainty. Congress undoubtedly realized that unless Hoover Dam and Lake Mead were operated so as to make deliveries of water as dependable as possible it would be extremely difficult to develop new projects, existing projects might fail, and the effective utilization of the River would be seriously impaired.

But the provisions charging Arizona and Nevada for depletions above Lake Mead create this very uncertainty of supply that Hoover Dam and the Section 5 command were explicitly designed to avoid. For under these provisions, deliveries to projects below Lake Mead would be reduced on the basis of fluctuating factors which neither the Secretary nor the downstream users can control.[92]

It is true that deliveries to users in a particular state below Lake Mead are reduced, under Articles 7(d) and 5(a), only as consumption within that state on the System above Lake Mead increases, and thus, in a sense, the total amount of water used within the state remains relatively constant. But Section 5 clearly requires that individual users be assured permanent service, regardless of overall state allocations. Furthermore, Section 5 deals with the mainstream only and thus it must have been intended to require permanent service in regard to mainstream deliveries regardless of consumption on the tributaries.

These provisions also violate Section 18 of the Project Act. That section, set forth and discussed at pages 216-218, *supra,* provides in effect that state law shall govern water rights and priorities intrastate. The example given above illustrates the violation of Section 18. The example assumed

---

[92]It may be that in some instances a user below Lake Mead could obtain an injunction under state law prohibiting consumption of water above Lake Mead because of the collateral effect on deliveries to that user. However, nothing has been brought to my attention to indicate that this would be true in all, or even some, cases. Besides, Section 5 requires that the Secretary's contracts themselves must ensure permanent service.

that, after the full 300,000 acre-feet of Nevada's Lake Mead water had been appropriated and put to beneficial use, a project was developed on the Virgin River in Nevada that depleted the flow into Lake Mead annually by 50,000 acre-feet. Under the law of prior appropriation, the Virgin River project would be junior to all users of the 300,000 acre-feet. The contract provisions, if enforced, would reverse this order of priority. The users of the last 50,000 acre-feet of mainstream water under the Nevada contract would be deprived of water, while the Virgin River project continued to use water, despite the fact that the tributary user was, under state law, junior to the mainstream users. No more flagrant violation of Section 18 can be conceived. The Secretary has attempted, by his contracts, to intervene within the States of Nevada and Arizona to dictate who shall receive water and in what order of priority. Moreover, in this attempt, the Secretary has adopted a rule of priority exactly the reverse of the state rules; the contract provisions would displace senior downstream users for the benefit of junior upstream users.

Since the Secretary's power to make water delivery contracts under Section 5 of the Project Act is limited by Section 18 of the Act, and since the provisions in question violate Section 18, those provisions must be stricken on this ground also.

In addition to violating Sections 5 and 18 of the Project Act, Articles 7(d) and 5(a) are inconsistent with the Section 4(a) limitation on California's use of mainstream water, and indeed, defeat the basic purpose of the delivery contracts themselves; namely, to provide for the allocation in fixed proportions among Arizona, California and Nevada of all the mainstream water released for use in the United States.

Congress intended, in Section 4(a), to provide for an apportionment of the first 7,500,000 acre-feet of consump-

tive use of mainstream water plus a further apportionment of surplus water in the mainstream. Consumption of water diverted from the Lower Basin tributaries is irrelevant to the Section 4(a) apportionment. The Secretary's water delivery contracts, except for the provisions in question, substantially adopt and effectuate the congressional apportionment. Except for these provisions, the several water delivery contracts provide for the disposition of all the 7,500,000 acre-feet and all surplus. See pages 222-224, *supra*. But Articles 7(d) and 5(a) defeat the mainstream allocation, otherwise completely provided for in the contracts, by introducing System, *i.e.*, tributary, considerations in a mainstream apportionment. To enforce these provisions would distort the mainstream apportionment and leave some mainstream water undisposed of.

The resulting incomplete allocation may be demonstrated by the following example: Assume that the Secretary decided to release in a particular year enough mainstream water to permit consumption of 7.7 million acre-feet in the three states. Assume, also, that Arizona's diversions from the Little Colorado River depleted the flow into Lake Mead by .1 million acre-feet. Under the interstate apportionment established by the Section 4(a) limitation on California and the delivery contracts with Arizona and Nevada, of the first 7.5 million acre-feet of mainstream consumption, Arizona would be allocated 2.8 million acre-feet, California 4.4, and Nevada .3. Of the .2 million acre-feet constituting surplus, Arizona and California would each be allocated one-half. Thus to California would be apportioned a total consumption of 4.5 million acre-feet for the year in question. She could not consume more than this amount because of the Section 4(a) limitation, which is based on mainstream considerations only. To Nevada would be apportioned a total consumption of .3 million acre-feet, and she could not utilize more than this since that constitutes

her full contractual allotment. To Arizona would be apportioned a total consumption of 2.9 million acre-feet. But if Article 7(d) of her contract were applied in this situation, the Secretary's delivery obligation of 2.9 million acre-feet would be reduced by the amount of the depletion of the flow into Lake Mead, and Arizona could consume only a total of 2.8 million acre-feet from the mainstream. Thus, although 7.7 million acre-feet were released for consumption within the three states for the year, only 7.6 million acre-feet could be utilized under the statutory and contractual limitations. 100,000 acre-feet of water released for consumption could not be used.

The United States suggests that the solution for this dilemma is simply to consider the uses above Lake Mead as part of the total supply of available consumptive uses under the apportionment, and to charge them to Arizona and Nevada. Thus the United States, in the example, would add the 100,000 acre-feet of depletions from the Little Colorado to the total of available consumptive uses from the mainstream, giving a total of 7.8 million acre-feet of available consumptive uses, and 300,000 acre-feet of surplus. The United States then would allocate this total supply among the three states according to the apportionment formula, giving California 4,550,000 acre-feet of consumptive uses, Arizona 2,950,000 (including the 100,000 from the Little Colorado), and Nevada 300,000.[93]

There are two flaws in this suggestion. First of all, the United States would equate consumptive use measured by diversions less returns, which is the apportionment measurement, with depletion of the flow into Lake Mead, which is the measurement under Article 7(d) of the Arizona contract. But the two measurements are not similar; for example, 100,000 acre-feet of consumptive use on the Little

---

[93]Letter of the Solicitor General commenting on the Draft Report, p. 8

Colorado will result in a depletion of the flow into Lake Mead by a substantially smaller quantity of water.

Secondly, the United States' suggestion would violate the interpretation of Section 4(a) proposed in this Report, an interpretation to which the United States herself agrees. Thus Section 4(a) limits California to 4.4 plus half of surplus out of the total consumptive use of water diverted from the *mainstream;* it establishes a mainstream, not a system-wide, method of accounting. But the United States' suggestion would import tributary considerations into the Section 4(a) limitation. In the example, there are only 7.7 million acre-feet of consumptive uses of water diverted from the mainstream and Section 4(a) would limit California to 4,500,000 acre-feet of this. However, the United States' solution, because it takes tributary uses into account, would result in California receiving 4,550,000 acre-feet of consumptive use, 50,000 acre-feet more than she is permitted to take under Section 4(a).

The reason for the existence of this body of available water which cannot be utilized by any of the interested states under the contractual apportionment created by the provisions in question is quite clear. Articles 7(d) and 5(a) dictate that Arizona and Nevada cannot receive mainstream water to the extent that they deplete the tributaries above Lake Mead. But California cannot use this water that is denied to her sister states because the statutory limitation on her consumption is based on consumption of mainstream water only. Under Section 4(a), California cannot receive more mainstream water because of depletions on the tributaries even though, under the Arizona and Nevada contracts, those states receive less. In other words, because of the lack of correlation between the Arizona and Nevada contracts on one hand and the California contracts on the other, all of the apportioned water physically available for consumption cannot be legally utilized.

It is significant that under the apportionment suggested in Section 4(a) itself all of the available water could be consumed in the three states. This is because Congress intended the limitation on California in the first paragraph and the allocations to Arizona and Nevada in the second paragraph to correlate perfectly; both were to apply to mainstream water only. Indeed, it seems that the Secretary himself intended the delivery contracts to provide for the apportionment of all of the available mainstream water among Arizona, California, and Nevada, since that apportionment was based on the one suggested by Congress in Section 4(a) of the Project Act.

It is unlikely that the Secretary intended that the formula established by his contractual apportionment would call for the delivery of water to California which California could not receive under the Section 4(a) limitation, and, conversely, that Arizona and Nevada would not be able to receive, under their contracts, water which California could not use under the statutory limitation. But this is precisely the result of applying the provisions in the Arizona and Nevada contracts which inject System considerations into the scheme for apportioning mainstream water. Rather, the Secretary seems to have intended that California should receive, out of the available supply, all of the water she was eligible to receive under the statutory limitation, at least until the 5,362,000 acre-feet of consumptive uses per annum called for in the existing delivery contracts with California users is provided, and that Arizona and Nevada would receive all of the rest.

Perhaps it was not apparent at the time that the Arizona and Nevada contracts were entered into that, because of Articles 7(d) and 5(a), they would not correlate with the California contracts. Certainly it is clear that none of the interested parties intended that the Arizona and Nevada contracts would waive the limitation on California's con-

sumption contained in the Project Act, or that they would operate so as to prevent Arizona and Nevada users from eventually consuming the full amount of water that was barred to California. The Arizona and the amended Nevada contracts were executed within six weeks of each other, and Article 10 of the Arizona contract specifically provides that the entire contract, and Article 7 in particular, "is without prejudice to, any of the respective contentions of said states [which term includes Nevada] and water users as to (1) the intent, effect, meaning, and interpretation of said compact and said act . . . (5) what limitations on use, rights of use and relative priorities exist as to the waters of the Colorado River system. . . ." And in a memorandum issued by Secretary of the Interior Ickes on February 10, 1944, the day following the execution of the Arizona contract, he stated that "Article 10 was purposely designed to prevent Arizona, or any other state, from contending that the proposed contract, or any provision of the proposed contract, resolves any issue on the amounts of waters . . . available to the respective states under the compact and the act. It expressly reserves for future judicial determination any issue involving the intent, effect, meaning and interpretation of the compact and act."[94]

Whatever the reason for the incorporation of Articles 7(d) and 5(a) into the contracts, it is apparent that, in light of the interpretation here proposed for Section 4(a), those provisions defeat the basic purpose of the delivery contracts in that they, and they alone, prevent the contracts from establishing a rational and easily administered scheme for the apportionment of all the available mainstream water among the three interested states.

In this posture, failure to give effect to the provisions charging Arizona and Nevada for depletions above Lake

---

[94]Special Master's Exhibit No. 4, The Hoover Dam Documents, p. A568.

Mead is consistent with the general scheme of the delivery contracts and enables the Secretary to operate Lake Mead efficiently. It would be unconscionable to uphold a delivery scheme which required, on a permanent basis, that water flowing in the mainstream and available for use could not be consumed in any of the three states.

As a final matter, it should be pointed out that voiding these provisions does not impair the Secretary's control and management of Hoover Dam and Lake Mead, nor does it leave California helpless to protect her interests. The Secretary will still be able to control the supply of water in Lake Mead since it is within his reasoned discretion to determine how much water is to be released for use in the three states each year. And California will be able to protect herself against undue depletions on the tributaries and the mainstream above Lake Mead by compact, or, if the necessity arises, by suit.

7. United States Uses Charged to States. All consumption of mainstream water within a state is to be charged to that state, regardless of who the user may be. Thus, consumption of mainstream water on United States Indian Reservations, National Parks, Forests, Monuments, and Recreation Areas, lands under the control of the Bureau of Land Management, reclamation projects, wildlife refuges, and other United States projects within the Lower Basin, all of which will be treated subsequently, is chargeable to the state within which the use is made. All of the parties seem to agree to this accounting, and it is required by the contracts and the Project Act. Article 7(1) of the Arizona contract specifically provides that Arizona's apportionment includes the consumptive use of all water diverted from the mainstream "whether made under this contract or not." Similarly, Section 4(a) of the Project Act limits diversions of water "for use in the

State of California" and nothing indicates that this language does not include all uses, including federal uses. The Nevada contract was intended to be correlative with the Arizona and California contracts and hence should be interpreted in the same manner. Furthermore the Nevada contract provides for the delivery of "so much water . . . as may be necessary to supply the state a total quantity not to exceed [300,000 acre-feet per annum]." Clearly this "total quantity" includes all mainstream water consumed in Nevada by any user.

E. California's Offer of Proof.

In connection with the oral argument on the Draft Report, California made an Offer of Proof, consisting of about 60 papers, which, she asserts, show thirty years of legislative and administrative interpretation of the Project Act contrary to the conclusions reached in the Report. California contends that these papers, if admitted in evidence, would establish:

> (1) That state and federal officials concerned with the administration of the Project Act construed Section 4(a) to be applicable to the tributaries as well as to the mainstream, as California contends, see pp. 177-178;
>
> (2) That the Secretary of the Interior had no intention of apportioning water when he entered into water delivery contracts with the several California defendants and with Arizona and Nevada.

Careful consideration of the Offer of Proof leads to the conclusion that the papers proffered do not establish either of these contentions.

First, as to the correct interpretation of Section 4(a), the papers tend to show only that Arizona and California have for over thirty years disagreed over the meaning of

this provision, and that neither of the states, through its officials, has exhibited a uniform consistency in positions taken regarding its meaning. Arizona's changes of position are fully documented in the several litigations affecting the River. Similarly, the exigencies of the moment seem to affect the interpretation of the Project Act advanced by California. For example, in opposing ratification of the Mexican Water Treaty, Mr. James H. Howard (then as now counsel for Metropolitan Water District) advanced these contentions:

> MR. HOWARD. Section 5 of the Boulder Canyon Project Act announced that the Secretary of the Interior was authorized to contract for the storage and delivery of water from the Boulder project, and it provided that those contracts should be for permanent serivce. It was also provided that no right in the stored waters of Boulder should be acquired by a method other than contract with the Secretary of the Interior. The value of that clause to the State of California may not be immediately apparent, but I want to develop that it is important.[95]
>
> * * *
>
> MR. HOWARD. No. The statement is, in fact, that California will never claim more than 4,400,000 acre-feet plus one-half of the waters apportioned by the compact.
>
> THE CHAIRMAN. You are right. There is nothing in this act, as I see it, in that clause, that guarantees to give California that; it merely requires California to acquit anybody of any claim in connection with that; is not that true?
>
> MR. HOWARD. Yes; the act does not give California any water.
>
> THE CHAIRMAN. How much water of that 4,400,000 acre-feet——

[95] Senate Hearings on Mexican Water Treaty, Committee on Foreign Relations, vol. 8, 79th Cong., 1st Sess. (1945), pp. 865-66.

SENATOR JOHNSON of California. Let him answer.

THE CHAIRMAN. He has already answered, but I will let him answer again.

MR. HOWARD. *That is a limitation, I take it, not a grant. The grant to California came in contracts with the Secretary of the Interior, authorized by the Boulder Canyon Project Act. It is upon those contracts that we rely for our affirmative right to water.*[96] (Italics added.)

* * *

THE CHAIRMAN. I do not like to interrupt you, but this contract with the Secretary of the Interior is more in the nature of a license to use so much water, is it not?

MR. HOWARD. No, sir; these are contracts.

THE CHAIRMAN. Is there any binding obligation on the Secretary to deliver that amount of water?

MR. HOWARD. Yes; there is.[97]

* * *

SENATOR MILLIKIN. Let me ask a question, please. Is there a compact at the present time between Nevada, Arizona, and California, and the lower basin States?

MR. HOWARD. No, sir; there is none.

SENATOR MILLIKIN. You have not decided on your allocation of water among yourselves?

MR. HOWARD. No. We have a rather complicated situation there, sir. In a way, the California Limitation Act constitutes a substitute for such an apportionment. That is, they held our side down, but there was no agreement between California and Arizona in the matter.

* * *

---

[96] *Id.*, at 876.
[97] *Id.*, at 880.

> MR. HOWARD. The Secretary of the Interior and the State of Arizona have entered into a contract which in a way is a substitute already, a three-State compact.[98]

The purpose in 1945 was, of course, to convince Congress that it would be a breach of the California contracts to allocate any Lake Mead water to Mexico; hence, the reliance on the contract as a grant. In the posture of this litigation, however, California rejects the contracts as a source of right, since the contracts clearly relate to mainstream water and not to tributary water.

A further example of inconsistency is found in the testimony of Attorney General Kenny of California. His opposition to the Mexican Treaty was based on the proposition that California would be deprived of some of its 4.4 million acre-feet. General Kenny stated:

> SENATOR WILEY. Then is the nub of this argument that you are presenting (1) that you are getting the water, 4,400,000 acre-feet; (2) that you feel, if this treaty should become the law of the land, your rights will be prejudiced and that you will not get that water?
>
> MR. KENNY. Definitely.[99]

In oral argument in this case, on the other hand, California advanced the contention that the apportionment formula adopted in this Report errs in that it permits, in times of shortage, some of California's 4.4 million acre-feet to go to Mexico, whereas, according to California, Congress intended in the Project Act that water to be forever free from the Mexican Treaty burden. Since Congress ratified the Mexican Treaty despite General Kenny's admonition that it subjected California's 4.4 to diminution in order to

---

[98] *Id.*, at 886.
[99] *Id.*, at 379

fulfill the treaty obligation, it is somewhat inconsistent for California to argue in this litigation that Congress intended her 4.4 to be free from this obligation.

My conclusion is that both Arizona and California have, with respect to the meaning of Section 4(a), taken various positions from time to time as their immediate interests dictated and that the Offer of Proof fails to show a consistent interpretation of the Act by either.

So far as United States government officials are concerned, the dominant note sounded in the proffered papers is the avowed refusal of these officials to take sides in the Arizona-California controversy. The papers show a firm refusal of federal officials to state the effect of the Compact and the Project Act on the rights of Arizona and California. One need not burrow through all the papers to discover that this has been the position of the Interior Department. It is explicitly set forth in Article 10 of the Arizona contract.

From this hands-off attitude of the Secretary, California argues her second proposition that the Secretary could not have intended his contracts to apportion the water in Lake Mead. This proposition is in error. The circumstances of the time and the terms of the contracts show that the Secretary did intend to make an apportionment. The situation facing the Secretary was clear. He had to apportion the water because it was physically in Lake Mead and nobody could use it unless he did so. He had a dam capable of storing nearly 30 million acre-feet. He had clear authority under Section 5 to contract for the use of that water; indeed he was directed by the statute to make contracts, both for power and irrigation, to pay for the dam. Moreover, if contracts were not made, the water would be wasted, for no person was, according to the Act, entitled to the use of water without a contract. It would have been impractical for the Secretary to await judicial resolution of the Arizona-California controversy, since the Supreme Court had held

the United States to be an indispensable party in such litigation[99a] and the United States had refused to join as a party. Nor could the Secretary apportion water on a temporary basis, pending such an adjudication, since Section 5 of the Project Act required his contracts to be for permanent service. Accordingly, the Secretary made contracts for delivery of the water, necessarily intending thereby to allocate it.

California's Offer of Proof does not contradict this conclusion. It shows only that the contracts were intended not to be the basis for any contention respecting the meaning of the Compact or the Project Act in future litigation. Although the Secretary was forced to interpret the Project Act in order to make the contracts, he did not want his interpretation to influence future judicial construction of the Compact and the Act. The Secretary's contractual allocation scheme was to govern water deliveries to the several states unless and until it was held invalid by this Court, but the fact that he made the allocation was not to be evidence of its validity. If the scheme was valid, it was to prevail forever, unless changed as authorized by Section 8(b) of the Project Act.

Thus California's Offer of Proof shows no more than what is made explicit by Article 10 of the Arizona contract; it fails to show that the Secretary did not intend his contracts to apportion water. Since California's Offer of Proof, assuming the competence of the proffered papers, fails to establish any proposition that would affect the disposition of the issues in this litigation, it would not be provident to reopen the hearings for the purpose of receiving them as well as any evidence which might then be tendered by the other parties in contradiction.

[99a] Arizona v. California, 298 U. S. 558 (1936).

IV. The Claims of the United States to Water in the Mainstream of the Colorado River

The United States claims, in addition to control of the mainstream by reason of the Boulder Canyon Project Act and its ownership and management of the various dams and works which regulate mainstream water, the use of water in the Lower Basin for a variety of its projects and needs. The United States urges that it has reserved water for the use of the various Indian Reservations, National Forests, Parks, Recreational Areas, Monuments, Memorials and lands under the control of the Bureau of Land Management located in the Lower Basin. The United States also claims the right to fulfill its treaty obligations by delivering 1,500,000 acre-feet of water per annum in the Colorado River at the Mexican border, and by consuming water on wildlife refuges and management areas located in the Lower Basin. Finally, the United States claims the right to deliver water from Lake Mead to Boulder City, Nevada, pursuant to a federal statute.

A. Indian Reservations

The United States argues that it has reserved water flowing in the Colorado River and its tributaries in the Lower Basin for the needs of all of the Indian Reservations located within the Lower Basin. Thus the United States claims that each Indian Reservation has the right to divert and consume the amount of water necessary to irrigate all irrigable acreage on the Reservation and to satisfy related needs, subject only to the priority of appropriative rights established before a particular Reservation was created and water reserved for its benefit.

Arizona argues that the rights of the various Indian Reservations on the tributaries ought not to be adjudi-

cated in this case.[1] I agree with Arizona that there is no need in this litigation to adjudicate the rights or priorities of Indian Reservations diverting water from the Lower Basin tributaries, except for the Gila River. For the reasons detailed at pages 318-321, 323-324, *infra,* it would be inappropriate at this time to apportion water in any of these tributaries, except the Gila River. Moreover, it would certainly be inappropriate to attempt a determination of the rights and priorities between each Indian Reservation and the myriad individual users who divert water from these tributaries.[2] As to Indian Reservations on the Gila River System, I have made recommendations concerning the United States claims in a subsequent section of this Report at pages 332-334.

As to the mainstream Indian Reservations, I have concluded that it is necessary to determine their water rights, and I have done so in the Findings of Fact and Conclusions of Law which conclude this section of the Report. The United States claims it has reserved mainstream water for Indian Reservations under federal law, independently of the state law of appropriation, in quantities sufficient to irrigate all the irrigable acreage in each of the Reservations and to satisfy related uses. Arizona and California resist this claim. Arizona asserts that the quantity of water reserved for an Indian Reservation is no more than that amount necessary to satisfy the requirements of Indians living on the Reservation at any particular time. California also denies that the United States intended to reserve water for all irrigable lands on an Indian Reservation.[3]

This disagreement presents a justiciable controversy between the United States and the States of Arizona and California which ought to be adjudicated in this case in order

[3]Calif. Brief, pp. 177-195; Calif. Response to U. S., pp. 112-127.

that the Secretary may know how much water he may release for consumption on each Indian Reservation. Thus in periods when there is insufficient water for the Secretary to fulfill all of his delivery obligations to users in a particular state, he will have to satisfy them according to priority. In such a case it will be necessary for him to know the rights and priorities of Indian Reservations as against other users within the state.[4] What these rights and priorities are can be determined only by resolving the controversy between the United States and the States of Arizona and California over the validity and scope of the reservations of mainstream water which the United States claims to have made. Indeed, if the Indian Reservations can acquire water rights only pursuant to state law, the Secretary may be prohibited from delivering any mainstream water to some of them since, so far as the evidence shows, some of the Reservations have never complied with the formalities required by the applicable state law in order to obtain a water right. Furthermore, the claims of the United States to water from the Colorado River for the benefit of Indian Reservations are of such great magnitude that failure to adjudicate them would leave a cloud on the legal availability of substantial amounts of mainstream water for use by non-Indian projects.

Since the Secretary cannot know how to operate Hoover Dam and the mainstream works below unless the controversy between the United States and the States of Arizona and California is resolved, since failure to adjudicate it will leave non-Indian users in doubt as to the water available for their use, and since this controversy has been prop-

---

[4]It should be noted that, under similar circumstances, the Secretary may need to know the water rights intrastate of other users. In the case of the California agencies who are parties to this suit these rights are set out in the Seven-party Agreement. Such rights of other users not parties to this suit obviously cannot be determined herein.

erly presented in this case, it is appropriate to adjudicate it here.

The United States claims are sustained.

It has been established that the United States has the power to reserve water for the benefit of an Indian Reservation, created out of public lands, and that such a reservation of water creates a water right good against subsequent appropriators even if they beneficially use the water before the Reservation uses it. In short, the United States has the power to create a water right appurtenant to such lands without complying with state law. *Winters* v. *United States,* 207 U. S. 564 (1908), involved a suit by the United States on behalf of the Fort Belknap Indian Reservation, which was created by treaty between the United States and various Indian tribes on May 1, 1888. The land set apart for the Indians under the treaty was arid, but susceptible of sustaining agriculture if irrigated from the Milk River, a non-navigable stream which formed the northern border of the Reservation. The Court found that it was the intention of the United States and the Indians that the Indians should settle on the Reservation and change from a nomadic to a "pastoral and civilized people." 207 U. S., at 576. Subsequent to the establishment of the Indian Reservation, the defendants in the case acquired lands along the Milk River upstream from the Reservation under the Desert Land Act, 19 Stat. 377 (1877), by settling on the land and putting it to productive use by irrigation with water diverted from the Milk River. Some of the defendant farmers diverted water from the Milk River and obtained appropriative rights thereto under the Desert Land Act and the local law of Montana as early as 1895. 143 Fed. 740, 742 (1906). According to the opinion of the Circuit Court of Appeals, the Indians were diverting, at the time of trial, 5,000 miners' inches of water, most of which they began to use after appropriative rights of some of the defendants

had vested. The United States successfully sued to enjoin the upstream farmers from interfering with the flow of water to the Fort Belknap Reservation.

The Supreme Court affirmed the trial court's holdings that "there was reserved to said Indians the right to use the water of Milk River to an extent reasonably necessary to irrigate the lands included in the reserve created by the said treaty . . .," and that the defendants would be enjoined from interfering with the flow of 5,000 miners' inches of Milk River water to the Reservation. 143 Fed., at 743. The Supreme Court thus held that the reservation of water was effective as of the date that the Fort Belknap Reservation was created, 207 U. S., at 577, and that the appropriative rights obtained by the defendants subsequent to the time that the water was reserved but prior to the time that it was put to use on the Reservation were subordinate to the Reservation's rights.

The Supreme Court supported this result with the following reasoning, at p. 577:

> "The power of the Government to reserve the waters and exempt them from appropriation under the state laws is not denied, and could not be. . . . That the Government did reserve them we have decided, and for a use which would be necessarily continued through the years."

The *Winters* case has been cited many times as establishing that the United States may, when it creates an Indian Reservation, reserve water for the future needs of that Reservation, and that appropriative water rights of others established subsequent to the reservation must give way when it becomes necessary for the Indian Reservation to utilize additional water for its expanding needs. *United States* v. *Powers,* 305 U. S. 527 (1939); *United States* v. *Ahtanum Irrigation District,* 236 F.2d 321 (9th Cir. 1956), *cert. denied,* 352 U. S. 988 (1957); *United States*

v. *Walker River Irrigation District,* 104 F.2d 334 (9th Cir. 1939); *Conrad Investing Co.* v. *United States,* 161 Fed. 829 (9th Cir. 1908). In the *Winters* case the United States exercised its power to reserve water by a treaty; but the power itself stems from the United States' property rights in the water, not from the treaty power. Since the United States has the power to reserve water, by treaty, against appropriation under state law, there is no reason why it lacks the power to do so by statute or executive order. In the *Walker River* case, the Court of Appeals squarely held that the United States had reserved water for an Indian Reservation which had been created by executive order.

It is unnecessary, for the purposes of this case, to explore the origin or limits of such power to reserve water against subsequent appropriators. The authorities cited above sufficiently sustain the validity of such a reservation to preserve the Indians' rights here under consideration.

The question to be decided, therefore, as to each Indian Reservation which can divert water from the mainstream of the Colorado River is whether the United States exercised the power to reserve such water for the Reservation's future needs. As stated in the *Walker River* case, 104 F. 2d, at 336:

> "The power of the Government to reserve the waters and thus exempt them from subsequent appropriation by others is beyond debate. . . . The question is merely whether in this instance the power was exercised."

The United States need not expressly reserve waters for the benefit of an Indian Reservation; an implied reservation is effective. Indeed, in all of the cases cited above, including *Winters* v. *United States* itself, the intent to reserve water was never explicitly stated at the time the Indian Reservation was established; rather that intent was implied from the circumstances surrounding the creation of the Reservation. In the present case I have found that the

United States intended to reserve mainstream water for the reasonable future needs of the following Indian Reservations: Chemehuevi, Cocopah, Yuma, Colorado River and Fort Mohave. As to each it is apparent that it was intended that the Indians would settle on the Reservation land and develop an agricultural economy. The land, however, is too arid to support such an economy without irrigation from the Colorado River. It would be unconscionable for the United States to have coerced or induced Indians onto a Reservation without providing the water necessary to make the lands habitable. I refuse to accept this possibility as to any of the mainstream Indian Reservations since there is no evidence as to any of them that such was the case. As the Court of Appeals stated in the *Walker River* case, at page 339: "It would be irrational to assume that the intent was merely to set aside the arid soil without reserving the means of rendering it productive."

Also, wherever I have found an intent to reserve water, I have inferred, absent evidence to the contrary, that the reservation was not limited to the needs of the population then resident upon the land, nor to the acreage being irrigated when the Reservation was created. I have concluded that enough water was reserved to satisfy the future expanding agricultural and related water needs of each Indian Reservation. Invariably the United States intended that the Indian tribes settled on a Reservation would remain there for generations, and the possibility that other Indians would be settled on the Reservation could not be excluded. Certainly the possibility of expanding populations, expanding agricultural development, and hence expanding water needs must have been apparent at the time each Reservation was created. It is unreasonable to attribute to the United States an intention or an expectation that the Indians would remain stagnant or die out when they were settled on a Reservation. Since the Indians could remain

on these Reservations and develop their society and economy only if water from the Colorado River was available to meet their future needs, I have found that the United States, when it reserved water, reserved it for all of such needs.

This conclusion comports with the holdings in the three cases decided by the Court of Appeals for the Ninth Circuit which are cited above. As that Court stated in *United States* v. *Ahtanum Irrigation District,* 236 F.2d 321, 327 (9th Cir. 1956):

> "It is plain from our decision in the *Conrad Investing Co.* case, *supra,* that the paramount right of the Indians to the waters of Ahtanum Creek was not limited to the use of the Indians at any given date but this right extended to the ultimate needs of the Indians as those needs and requirements should grow to keep pace with the development of Indian agriculture upon the reservation."

The conclusion reached here is also consistent with the holding in the *Winters* case that the upstream farmers could not interfere with uses on the Indian Reservation which were initiated subsequent to the farmers' diversions.

The suggestion is unacceptable that the United States intended that the Indians would be required to obtain water for their future needs by acquiring appropriative rights under state law. The Indians were not an agricultural people and it was necessary for them to develop their agricultural skills after settling on the Reservations. It must have been apparent that if they were thrown into competition with the more advanced non-Indians in a race to acquire rights to water by putting it to beneficial use, they would have lost the match before it was begun. Rather than assuming that the United States intended to put the Indians in the position of having to leave their Reservations as their water needs increased if they were unable to satisfy these needs by acquiring appro-

priative rights under state law, I have concluded that reservations of water by the United States included enough to supply expanding needs regardless of state water law.

This brings us to the question of quantity. This is sharply debated, and many conflicting views have been advanced. I have concluded that the United States effectuated the intention to provide for the future needs of the Indians by reserving sufficient water to irrigate all of the practicably irrigable lands in a Reservation and to supply related stock and domestic uses. The magnitude of the water rights created by the United States is measured by the amount of irrigable land set aside within a Reservation, not by the number of Indians inhabiting it. At the times of the creation of the five Indian Reservations in question, it was impossible to predict the future needs of the Indians who might inhabit them. Indeed, in some instances it was not clear which Indian tribes would ultimately be settled on a particular Reservation. What the United States did, in withdrawing public lands for these Indian Reservations, was to establish areas that could be used in the indefinite future to satisfy the needs of Indian tribes in the United States as those needs might develop. It follows from this that the United States intended to reserve enough water to make the lands productive, in other words, enough to irrigate all of the practicably irrigable acreage. Only by reserving water in this manner could the United States ensure that the Reservation lands would be usable when needed to support an Indian economy. This conclusion is also supported by the fact that the irrigable land originally withdrawn for each of the five Indian Reservations was considerably more extensive than was necessary to support the Indians who inhabited the Reservations immediately after their establishment. The only explanation for this withdrawal of excess irrigable acreage is that the United States intended it to be utilized in the future.

It must have been apparent that unless the United States reserved water for the land at the time of withdrawal, there might be no water left to appropriate at the time that the land was needed for the purposes for which it was withdrawn.

Arizona argues that the United States reserved water for the Indians themselves and not for the lands withdrawn for a Reservation. Arizona seems to envisage that the United States intended to create water rights in gross which would fluctuate in magnitude as the Indian population and needs fluctuated, the water right being measured by the amount of water needed at any particular time by the Indians actually inhabiting a particular Reservation. As pointed out above, the more sensible conclusion is that the United States intended to reserve enough water to irrigate all of the practicably irrigable lands on a Reservation and that the water rights thereby created would run to defined lands, as is generally true of water rights.

But even if Arizona were correct in her contention, the most feasible way to give full effect to the water rights created by the United States, as Arizona defines them, would be to decree to each Reservation enough water to irrigate all of the practicably irrigable acreage. It is clear that the water rights of the five Reservations in question cannot be fixed at present uses for this would defeat the basic purpose of reserving water to meet future requirements. Even if, as Arizona argues, the reservation of water was in gross for Indians and not Reservation lands, the Indians' needs may well increase in the future and these increased needs would have to be provided for. Thus, under the Arizona theory, there are two possible methods of framing the decree in this action, other than in terms of irrigable acreage.

One possibility would be to adopt an open-end decree, simply stating that each Reservation may divert at any

particular time all the water reasonably necessary for its agricultural and related uses as against those who appropriated water subsequent to its establishment. However, such a limitless claim would place all junior water rights in jeopardy of the uncertain and the unknowable. Financing of irrigation projects would be severely hampered if investors were faced with the possibility that expanding needs on an Indian Reservation might result in a reduction of the project's water supply. Moreover, it would not give the United States any certainty as to the extent of its reserved rights, which would undoubtedly hamper the United States in developing them. Since, under the Arizona theory, United States water rights vary with changes in Indian population, the planning of works to serve future needs would be difficult because the United States could never know whether sufficient water to operate the works economically would be legally available.

The other possibility, which would avoid the serious disadvantage of creating uncertainty as to the extent of the reserved rights, would be to predict the ultimate needs of each Reservation and to decree that much water for its future uses. The shortcoming of this solution, however, lies in the difficulty of predicting the future needs of Indian Reservations. Failure to foresee expanding requirements would result in a forfeiture of the Indians' water rights and would stultify development of the Reservations. Whether it is ever possible accurately to predict the future needs of an Indian Reservation, it is clearly not possible in this case where the attention of the parties has been directed to a great many complex and important issues quite apart from those relating to the Indians. Whatever might be possible in a case involving solely the issue of the reserved rights of a

single Indian Reservation,[5] it would not be possible to predict future Reservation needs in this litigation.

Therefore, the most feasible decree that could be adopted in this case, even accepting Arizona's contention, would be to establish a water right for each of the five Reservations in the amount of water necessary to irrigate all of the practicably irrigable acreage on the Reservation and to satisfy related stock and domestic uses. This will preserve the full extent of the water rights created by the United States and will establish water rights of fixed magnitude and priority so as to provide certainty for both the United States and non-Indian users.

The amount of water reserved for the five Reservations, and the water rights created thereby, are measured by the water needed for agricultural, stock and related domestic purposes. The reservations of water were made for the purpose of enabling the Indians to develop a viable agricultural economy; other uses, such as those for industry, which might consume substantially more water than agricultural uses, were not contemplated at the time the Reservations were created. Indeed, the United States asks only for enough water to satisfy future agricultural and related uses. This does not necessarily mean, however, that water reserved for Indian Reservations may not be used for purposes other than agricultural and related uses. The question of change in the character of use is not before me. I hold only that the amount of water reserved, and hence the magnitude of the water rights created, is determined by agricultural and related requirements, since when the water was reserved that was the purpose of the reservation.

---

[5]Even in such cases, courts have not attempted to bind the Indians on the basis of a prediction as to future needs. See Conrad Investment Co. v. United States, 161 Fed. 829 (9th Cir. 1908).

The water rights established for the benefit of the five Indian Reservations and enforced in the recommended decree are similar in many respects to the ordinary water right recognized under the law of many western states: They are of fixed magnitude and priority and are appurtenant to defined lands. They may be utilized regardless of the character of the particular user. Thus Congress has provided for the leasing of certain Reservation lands to non-Indians,[6] and these lessees may exercise the water rights appurtenant to the leased lands. *Skeem* v. *United States,* 273 Fed. 93, 96 (9th Cir. 1921). The measurement used in defining the magnitude of the water rights is the amount of water necessary for agricultural and related purposes because this was the initial purpose of the reservations, but the decree establishes a property right which the United States may utilize or dispose of for the benefit of the Indians as the relevant law may allow. See *United States* v. *Powers,* 305 U. S. 527 (1939).

[6]See 26 Stat. 794 (1891), 31 Stat. 229 (1900), 39 Stat. 128 (1916), 41 Stat. 1232 (1921) and, the general leasing statute presently in force, 69 Stat. 539 (1955), 25 U. S. C. § 415 (Supp. 1959), 25 U. S. C. §§ 415a-d (1958).

1. *Chemehuevi Indian Reservation*

FINDINGS OF FACT

1. The Chemehuevi Indian Reservation was established by an order of withdrawal from entry made by the Secretary of the Interior dated February 2, 1907.[7]

2. In withdrawing lands for the Chemehuevi Indian Reservation the United States intended to reserve rights to the use of so much water from the Colorado River as would be necessary to irrigate all of the practicably irrigable acreage therein and to satisfy related uses.[8]

3. There are 1,900 acres of irrigable Reservation land all located within the State of California which, together with related uses, have a maximum annual diversion requirement of 11,340 acre-feet.[9]

CONCLUSION OF LAW

For the benefit of the Chemehuevi Indian Reservation, the United States has the right to the annual diversion of a maximum of 11,340 acre-feet of water from the Colorado River or to the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 1,900 acres and for the satisfaction of related uses, whichever is less, with a priority of February 2, 1907.

2. *Cocopah Indian Reservation*

FINDINGS OF FACT

1. The Cocopah Indian Reservation was established by an Executive Order of September 27, 1917.[10]

---

[7]U. S. Ex. 1201. This withdrawal was made pending congressional approval. Although the United States has not furnished evidence of such congressional action, I have assumed, absent evidence to the contrary, that approval was given.

[8]U. S. Exs. 1201, 1204, 1205, 1207.

[9]U. S. Ex. 1210.

[10]U. S. Ex. 1001.

2. In withdrawing lands for the Cocopah Indian Reservation the United States intended to reserve rights to the use of so much water from the Colorado River as would be necessary to irrigate all of the practicably irrigable acreage therein and to satisfy related uses.[11]

3. Colorado River water is delivered to the Reservation lands through the facilities of the Yuma Reclamation Project.[12]

4. There are 431 acres of irrigable Reservation land all located within the State of Arizona which, together with related uses, have a maximum annual diversion requirement of 2,744 acre-feet.[13]

CONCLUSION OF LAW

For the benefit of the Cocopah Indian Reservation, the United States has the right to the annual diversion of a maximum of 2,744 acre-feet of water from the Colorado River or to the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 431 acres and for the satisfaction of related uses, whichever is less, with a priority of September 27, 1917.

3. *Yuma Indian Reservation*

FINDINGS OF FACT

1. The Yuma Indian Reservation was established by an Executive Order of January 9, 1884.[14]

2. In withdrawing lands for the Yuma Indian Reservation the United States intended to reserve rights to the use

[11] *Ibid.*, U. S. Exs. 258, pp. 386-387; 510, p. 301; 513, p. 152.
[12] Tr. 14020 (Rupkey); U. S. Ex. 1006.
[13] U. S. Ex. 1009.
[14] U. S. Ex. 1101.

of so much water from the Colorado River as would be necessary to irrigate all of the practicably irrigable acreage therein and to satisfy related uses.[15]

3. There are 7,743 acres of irrigable Reservation land all located within the State of California which, together with related uses, have a maximum annual diversion requirement of 51,616 acre-feet.[16]

CONCLUSION OF LAW

For the benefit of the Yuma Indian Reservation, the United States has the right to the annual diversion of a maximum of 51,616 acre-feet of water from the Colorado River or to the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 7,743 acres and for the satisfaction of related uses, whichever is less, with a priority of January 9, 1884.

4. *Colorado River Indian Reservation*

FINDINGS OF FACT

1. The Colorado River Indian Reservation was established by an Act of March 3, 1865 (13 Stat. 541, 559) which set apart 75,000 acres in the Territory of Arizona for an Indian Reservation.[17]

2. By an Executive Order of November 22, 1873, adjoining bottom lands in the Territory of Arizona were added to the Reservation.[18]

3. By an Executive Order of November 16, 1874, the Reservation was enlarged to include lands on the westerly side

---

[15] *Ibid.*, U. S. Exs. 258, p. 387; 512, p. 20.
[16] U. S. Ex. 1121.
[17] U. S. Ex. 501.
[18] U. S. Ex. 503.

of the Colorado River in the State of California. The boundaries were defined as follows:

> "Beginning at a point where the La Paz Arroyo enters the Colorado River, 4 miles above Ehrenberg; thence easterly with said arroyo to a point south of the crest of La Paz Mountain; thence with said crest of mountain in a northerly direction to the top of Black Mountain; thence in a northwesterly direction across the Colorado River to the top of Monument Peak, in the State of California; thence southwesterly in a straight line to the top of Riverside Mountain, California; thence in a southeasterly direction to the point of beginning. . . ."[19]

4. On January 31, 1876, the United States Indian Agent reported to the Commissioner of Indian Affairs that the boundaries as defined by the Executive Order of 1874 crossed the Colorado River twice and cut off a large tract of land on the east side of the River which was being settled by non-Indians for unlawful and improper purposes. The Agent requested that an Executive Order be obtained making the Colorado River the boundary line. The Commissioner of Indian Affairs and the Secretary of the Interior approved the recommendation that the boundary be redefined.[20]

5. Thereafter, on May 15, 1876, an Executive Order issued which redefined the boundaries of the Reservation and which contained the following description of the western boundary:

> ". . . thence southwesterly in a straight line to the top of Riverside Mountain, California; thence in a direct line toward the place of beginning *to the*

[19]U. S. Ex. 504.
[20]U. S. Exs. 505A, 505B, 505C.

west bank of the Colorado River; thence down said west bank to a point opposite the place of beginning. . . ." (italics added)[21]

6. The southern boundary of the Reservation was subsequently adjusted by an Executive Order of November 22, 1915.[22]

7. In withdrawing lands for the Colorado River Indian Reservation the United States intended to reserve rights to the use of so much water from the Colorado River as would be necessary to irrigate all of the practicably irrigable acreage therein and to satisfy related uses.[23]

8. Except at one point, the Colorado River now flows east of its 1876 course.[24]

9. The "Olive Lake Cut-off" was constructed across the neck of a large loop in the existing channel of the Colorado River in 1920. By 1921, the entire river flow passed through the new channel.[25]

10. As a result of this cut-off the River now flows east of its 1920 course.[26]

11. There are 2,058 acres of irrigable Reservation land lying west of the present west bank of the Colorado River and east of the west bank of the River as it existed in 1920 prior to the "Olive Lake Cut-off."[27]

12. The "Ninth Avenue Cut-off" was constructed across the neck of a loop in the existing channel of the Colorado

---

River in 1943. By February, 1944, 80-90% of the River flowed through the cut and, after August 1944, substantially all of the river flow passed through the new channel. As a result of this cut-off the River now flows east of its 1943 course.[28]

13. There are 222 acres of irrigable Reservation land lying west of the present west bank of the Colorado River and east of the west bank of the River as it existed in 1943 prior to the "Ninth Avenue Cut-off."[29]

14. There are 5,933 acres of irrigable Reservation land in the Northern West Side Area to the north of the intersection of the Reservation's westerly boundary and the west bank of the Colorado River.[30]

15. Thus there is an aggregate of 8,213 acres of irrigable Reservation land west of the present west bank of the Colorado River which, together with related uses, have a maximum annual diversion requirement of 54,746 acre-feet.[31]

16. There are 99,375 acres of irrigable Reservation land east of the present west bank of the Colorado River which, together with related uses, have a maximum annual diversion requirement of 662,402 acre-feet.[32]

17. Thus there is an aggregate of 107,588 acres of irrigable Reservation land which, together with related uses, have a maximum annual diversion requirement of 717,148 acre-feet.

CONCLUSIONS OF LAW

1. The Executive Order of 1876 established the west bank of the Colorado River as the western boundary of the Colorado River Indian Reservation.

2. The Executive Order of 1876 established a boundary which changes as the course of the Colorado River changes, except when such changes are due to avulsion.

3. In the case of avulsion, the boundary remains at the west bank of the River as it existed immediately prior to the avulsive change.

4. The west bank, along which the boundary line is drawn, is the fast land along the west side of the Colorado River which serves to confine the waters within the bed and tends to preserve the course of the River. In the case of avulsion, the west bank, along which the boundary line is drawn, is the fast land along the west side of the former course of the River which served to confine the waters within the bed and tended to preserve the course of the River immediately prior to the avulsive change.

5. The 1920 "Olive Lake Cut-off" was an avulsion and worked no change in the western boundary of the Colorado River Indian Reservation.

6. The 1943 "Ninth Avenue Cut-off" was an avulsion and worked no change in the western boundary of the Colorado River Indian Reservation.

7. For the benefit of the Colorado River Indian Reservation, the United States has the right to the annual diversion of a maximum of 717,148 acre-feet of water from the Colorado River or to the quantity of mainstream water necessary to supply the consumptive use required for irriga-

tion of 107,588 acres and for the satisfaction of related uses, whichever is less, with priority dates of March 3, 1865 for lands reserved by the Act of March 3, 1865 (13 Stat 541, 559); November 22, 1873, for lands reserved by the executive order of said date; November 16, 1874, for lands reserved by the executive order of said date, except as later modified; May 15, 1876 for lands reserved by the executive order of said date; November 22, 1915 for lands reserved by the executive order of said date.[33]

BOUNDARY DISPUTE—OPINION

A dispute concerning a portion of the west boundary of the Colorado River Indian Reservation arose between the United States and California when the United States sought to establish irrigable acreage within that Reservation. An Executive Order of May 15, 1876,[34] established the "west bank of the Colorado River" as the boundary of the Reservation. The United States contends that this language established a permanent, unchanging boundary defined by the west bank of the River as it existed in 1876.[35] California contends that the language established a changing boundary, defined by the west bank of the River as it may exist at any point of time.[36] Since the Colorado River has in this area moved eastward since 1876, California's contention, if sustained, would reduce the amount of irrigable acreage within the Reservation below the amount claimed by the United States.

In the alternative, the United States contends that if the west bank of the River as it presently exists is held to be the correct boundary, then certain land west of the present

---

[33]The evidence does not permit greater specificity regarding priority.

[34]U. S. Ex. 505.

[35]U. S. Brief, pp. 31-35.

[36]Calif. Proposed Findings and Conclusions 18D: 112-18D: 209.

west bank should nevertheless be held to be within the Reservation, since two changes in the course of the river were caused by avulsion. The United States points to two artificial changes made in the channel of the River, both of which eliminated large loops or horseshoes in the river and caused its channel to move to the east. If the United States contention is accepted, the irrigable acreage in the Reservation will be somewhat greater than California concedes.

I hold that California is correct in its assertion that the present boundary of the Reservation is the west bank of the River as it now exists, but that the United States is correct in claiming that the two artificial channel changes were avulsive and that such changes did not affect the Reservation's western boundary.

The call in the Executive Order of 1876 "to the west bank of the Colorado River; thence down said west bank" clearly established the west bank of the River as the boundary line. *Alabama* v. *Georgia,* 64 U. S. (23 How.) 505 (1859); *Howard* v. *Ingersoll,* 54 U. S. (13 How.) 380 (1851). That bank is defined as the fast land along the west side of the Colorado River which serves to confine the waters within the bed and tends to preserve the course of the River.[87] See *Oklahoma* v. *Texas,* 260 U. S. 606, 631-32 (1923); *Howard* v. *Ingersoll, supra,* at 416.

---

[87]The United States claims 1800 acres lying on the west side of the present channel of the River but east of the 1876 west bank (*i.e.* the lands in question lie roughly between the old channel and the present channel of the River). This contention seems to be based on the proposition that the 1876 west bank and the present west bank are the same, because in an unregulated state, the River would extend to the 1876 line. See U. S. Finding 4.4.102; Tr. 20068-20069. However, it is clear that the flow of the River does not now in fact extend to the 1876 line. *Id.* See also U. S. Exs. 560, 562. Since "bank" is defined as the fast land that serves to confine the waters of the stream to its bed, the 1876 line does not represent the present west bank of the River. Hence the 1800 acres, which lie west of the present west bank of the River, are outside the boundaries of the Reservation, and the claim of water therefor is disallowed.

It is equally clear that the boundary established along the west bank changes as the course of the River changes, except in cases of avulsion. In *Oklahoma* v. *Texas, supra,* the Court defined the south bank of the South Fork of the Red River, which was the boundary between Oklahoma and Texas. After setting forth its definition of the south bank the Court said:

> "The boundary as it was in 1821, when the treaty became effective, is the boundary of today, subject to the right application of the doctrine of erosion and accretion and of avulsion to any intervening changes."[38]

There is substantial evidence that the Executive Order of 1876 did not intend to establish a fixed boundary and, certainly, a flexible boundary is not inconsistent with the purpose of the Order, which was to prevent the acquisition by non-Indians of land proximate to Indian land on the east side of the River.[39] The evidence establishes that various officers and departments of the United States have considered the Colorado River itself and not the 1876 meander line to be the western boundary of the Reservation.[40]

---

[38]260 U. S., at 636. *Cf.* Railroad Co. v. Schurmeir, 74 U. S. (7 Wall.) 272 (1868); United States v. Boynton, 53 F.2d 297 (9th Cir. 1931); United States v. 11,993.32 Acres of Land More or Less, 116 F. Supp. 671 (D. N. D. 1953).

[39]See U. S. Exs. 505A, 505B, 505C.

[40]Various maps prepared by agencies of the United States (General Land Office; Office of Indian Affairs; Indian Irrigation Service) show no Indian land west of the River in the disputed area. Calif. Exs. 3532-3534.

In acquiring land for the construction of Palo Verde Dam, the Palo Verde Irrigation District was required by Congress to furnish easements over land other than that owned by the United States or within the Reservation. The United States was required to pay for Indian land conveyed by the Secretary of the Interior. 68 Stat. 1045 (1954). A portion of the land over which an easement was granted by Palo Verde lay east of the 1876 meander line and west of the course of the River. A portion of the land paid for by the United

Evidence of such an understanding by officers and departments of the United States may properly be considered in determining the intent of the Executive Order of 1876. See *Stewart* v. *United States,* 316 U. S. 354 (1942); *cf. United States* v. *Hill,* 120 U. S. 169 (1887). In *Stewart* v. *United States,* Mr. Justice Roberts, in interpreting the extent of a Mexican grant under which the United States claimed title, considered various maps and charts prepared by United States officers and departments subsequent to the grant as probative of the amount of land to which the United States obtained title.

Finally, the understanding of the various officers and departments of the United States that the 1876 Executive Order did not establish a fixed boundary at the 1876 meander line was apparently shared by the defendant Palo Verde Irrigation District which has, for various periods of time beginning in 1927, assessed lands within the disputed area for purposes of taxation.[41] It is also worthy of note that no evidence was introduced to demonstrate that the United States has ever asserted title to the area in controversy prior to this litigation.

It having been concluded that the west bank of the River, as presently located, is the boundary of the Reservation, the question arises of avulsive changes in the course of the River since 1876. An avulsive change is a sudden,

---

States and conveyed by the Secretary lay west of the 1876 meander line and east of the course of the River. Tr. 20269-20274; Calif. Exs. 3535-3537. It is at this point that the River flows west of the 1876 meander line. Calif. Ex. 3537.

In 1934 the California Department of Public Works obtained a right of way for construction of what later became United States Highway 95. Although the State was required to pay for Indian land traversed by the project, California was not required to pay for land lying in the disputed area. The United States officials involved in the various stages of the transaction were the Secretary of Agriculture, the Secretary of the Interior, the Commissioner of the General Land Office and the Superintendent of the Colorado River Indian Agency. Tr. 20305-20309; Calif. Exs. 3543-3543G.

[41] Tr. 20435-20439 (Shipley); Calif, Ex. 3547.

perceptible change in the course of a river; it does not affect existing boundaries. See, e.g., *Missouri* v. *Nebraska,* 196 U. S. 23 (1904); *Nebraska* v. *Iowa,* 143 U. S. 359 (1892). The doctrine of avulsion includes both natural changes in course and changes caused by artificial means. *Arkansas* v. *Tennessee,* 246 U. S. 158, 173 (1918); *cf. County of St. Clair* v. *Lovingston,* 90 U. S. (23 Wall.) 46, 68 (1874).

The United States seeks to invoke the doctrine of avulsion with respect to two artificial changes in the course of the Colorado River in the area in question. I find that in the period 1920-1921, a man-made change in the Olive Lake reach of the River caused the River to change course to the east, and I further find that a similar artificial change in the course of the River was made in the period 1943-1944 by the so-called "Ninth Avenue Cut-Off" in the Palo Verde Valley. Both of these changes being avulsive, the land that now lies west of the present west bank of the River but east of the west bank as it existed before these changes occurred is Reservation land and should be counted in determining the amount of irrigable acreage within the Reservation.

With reference to these avulsive changes, California requests that the findings, conclusions and decree specifically disclaim any intention to pass on land titles of occupants of these areas. Of necessity, a determination of the amount of irrigable acreage within the Reservation and the consequent award of a quantity of water based on this determination requires adjudication of the boundaries of the Reservation. The findings herein made are therefore binding on the parties. Nevertheless, in the hearings and in this Report, I did not inquire into or determine the right of any occupant, whoever he might be, to the possession of lands within the questioned areas.

5. *Fort Mohave Indian Reservation*

FINDINGS OF FACT

1. The Hay & Wood Military Reserve at Camp Mohave was created by an Executive Order of March 30, 1870, as follows:

> "The reservations at Camps *Mojave, Verde, Date Creek, McDowell, Grant, Bowie* and *Crittenden,* Arizona, as described in the accompanying plats and notes of survey—approved by the *Secretary of War,* are made for military purposes, and the *Secretary of the Interior* will cause the same to be noted in the General Land Office to be reserved as military posts."[42]

2. The western boundary of the Reserve was defined by the notes of survey as follows:

> "Thence S. 76° 17′ 28″ W.228.50 chains to a post marked U. S. in mound of earth near the left bank of the Colorado River. Thence N.23° 01′ 32″ W.362.70 chains to a post marked U. S. in a mound of earth near the left bank of the Colorado River. Thence S.88° 45′ 32″ E.369.00 chains to the post at the point of commencement. The said boundaries containing 9114.81 acres, more or less."[43]

3. When laid out, the call to the artificial monuments and the calls for specified courses and distances conflict. Adherence to the latter would require a boundary line in the foothills to the west of the Colorado River. The call to monuments would fix a line at or near the left or east bank of the River.[44]

---

[42]U. S. Ex. 1323.

[43]*Ibid.*

[44]Tr. 20240; Calif. Ex. 2616, pp. 8-9.

4. An Executive Order of September 18, 1890, transferred the Fort Mohave Military Reservation, which included the Hay & Wood Military Reserve, to the Department of the Interior for Indian school purposes.[45] This Reservation is presently known as the Fort Mohave Indian Reservation.

5. An Executive Order of February 2, 1911, which superseded an Order of December 1, 1910, reserved additional lands for the Reservation.[46]

6. In 1896, pursuant to the Swamp and Overflowed Lands Act [9 Stat. 519 (1850); 43 U. S. C. §§ 982-984 (1958)], the United States conveyed lands to California, some of which lay in the area in dispute in this case. These lands were subsequently conveyed to private owners prior to 1928.[47]

7. In 1923, pursuant to the Act of July 27, 1866 (14 Stat. 292), the United States conveyed certain lands in the disputed area to the Southern Pacific Railroad.[48]

8. In 1928, the United States Field Surveying Service, under the direction of the General Land Office, surveyed the boundaries of the Fort Mohave Indian Reservation. The survey was approved by the General Land Office in 1931.[49]

9. The 1928 General Land Office survey resolved the conflict between the call to the monuments and the calls for specified courses and distances in favor of the former.[50]

10. The locations of the monuments defining the western boundary of the Hay & Wood Reserve, which now con-

stitutes part of the western boundary of the Fort Mohave Indian Reservation, were established by the 1928 General Land Office survey by reference to a survey map of the Reserve, dated 1870, and set forth in California Exhibit 3501.[51]

11. The 1870 map of the Hay & Wood Reserve, to which reference was made in surveying the western boundary of the Reserve in 1928, is one of the plats which accompanied the Executive Order of March 30, 1870.[52]

12. In withdrawing lands for the Fort Mohave Indian Reservation the United States intended to reserve rights to the use of so much water from the Colorado River as would be necessary to irrigate all of the practicably irrigable acreage therein and to satisfy related uses.[53]

13. There are 14,916 acres of irrigable Reservation land in the State of Arizona which, together with related uses, have a maximum annual diversion requirement of 96,416 acre-feet.[54]

14. There are 2,119 acres of irrigable land in the State of California and within the exterior boundaries of the Reservation as determined by the 1928 General Land Office survey, exclusive of the tract covered by the patents referred to in Finding 6. A portion of the 2,119 acres may be land which has accreted to patented land which was riparian to the Colorado River at the time of patent and such land shall not be included within the Reservation. The 2,119 acres, together with related uses, have a maximum annual diversion requirement of 13,698 acre-feet, said maximum diversion requirement to be reduced by the

---

[51]Calif. Exs. 2616, pp. 3, 8-9; 3501.

quantity of 6.4 acre-feet per acre of irrigable accreted lands owned by owners of such patented lands.[55]

15. There are 1,939 acres of irrigable Reservation land in the State of Nevada which, together with related uses, have a maximum annual diversion requirement of 12,534 acre-feet.[56]

16. There is, in the aggregate, a maximum of 18,974 acres of irrigable Reservation land which, together with related uses, have a maximum annual diversion requirement of 122,648 acre-feet. There should be subtracted from this 18,974 acres of irrigable land the number of irrigable acres within the exterior boundaries of the Reservation as determined by the 1928 General Land Office survey that have accreted to patented lands and that are owned by the owners of such patented lands, and the diversion requirement of 122,648 acre-feet is to be reduced by the amount of 6.4 acre-feet per acre of such land that is irrigable.[56a]

CONCLUSIONS OF LAW

1. The General Land Office had jurisdiction to survey the boundaries of the Fort Mohave Indian Reservation.

2. The General Land Office survey of 1928 is conclusive as to the western boundary line of the Hay & Wood Reserve of the Fort Mohave Indian Reservation.

3. The call to artificial monuments prevails over conflicting calls for courses and distances or acreage specified in the notes of survey accompanying the Executive Order of March 30, 1870.

4. The General Land Office survey of 1928 adequately located the western boundary of the Hay & Wood Reserve

---

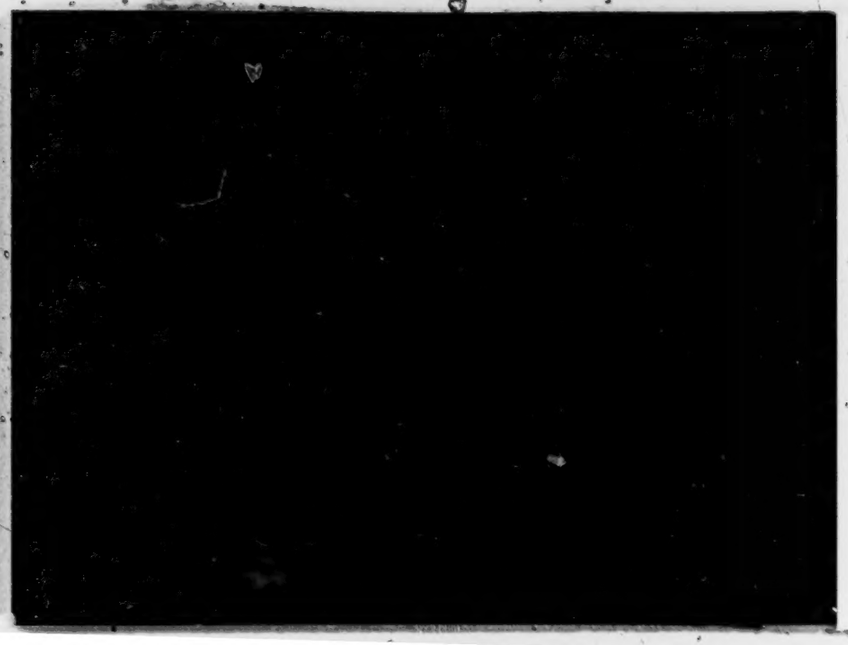
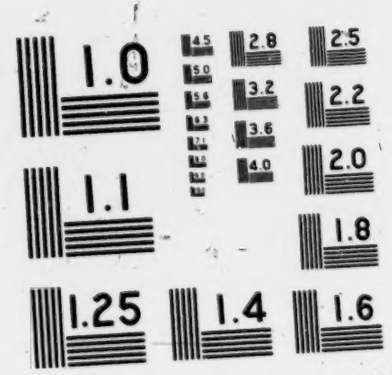
CARD 46





Reserve was initially established as a military post by an Executive Order of 1870,[58] and the western boundary thereof was described in notes of survey accompanying the order. When laid out on the ground the calls in the notes of survey conflict. The call to artificial monuments in the notes of survey would place the western boundary on a line near the east bank of the Colorado River, but the call for courses and distances in the notes of survey would place the boundary farther west, in foothills west of the River. In 1928, a General Land Office survey resolved this conflict in favor of the call to the artificial monuments, thus establishing the boundary on the east side of the Colorado River. California contends that the 1928 survey correctly establishes the western boundary of the Hay & Wood Reserve portion of the Reservation.[59] The United States contends that the proper boundary is farther west, as prescribed by the calls for courses, distances and acreage given in the 1870 notes of survey.[60] The California contention is sustained. In my view the 1928 General Land Office survey is conclusive of the boundary location, and, in any event, the 1928 survey is the best evidence of the proper location of the boundary and, therefore, the correct boundary is as determined therein.

It has been established beyond question that a General Land Office survey, when made within the jurisdiction of that department, is conclusive and cannot be collaterally assailed. *United States* v. *Coronado Beach Co.*, 255 U. S. 472 (1921); *Stoneroad* v. *Stoneroad*, 158 U. S. 240 (1895); *Knight* v. *United States Land Assoc.*, 142 U. S. 161 (1891); *Cragin* v. *Powell*, 128 U. S. 691 (1888); *Smelting Co.* v. *Kemp*, 104 U. S. (14 Otto) 636 (1881);

---

[58]U. S. Ex. 1323.

[59]Calif. Proposed Conclusion 18E:204.

[60]Memorandum of United States Re Fort Mohave Indian Reservation Boundary (December 1958) (*passim*); see U. S. Finding 4.58.

Beard v. *Federy,* 70 U. S. (3 Wall.) 478 (1865). In *Cragin* v. *Powell, supra,* the Court said:

> " . . . the power to make and correct surveys of the public lands belongs to the political department of the government and that, whilst the lands are subject to the supervision of the General Land Office, the decisions of that bureau in all such cases . . . are unassailable by the courts, except by a direct proceeding; and that the latter have no concurrent or original power to make similar corrections, if not an elementary principle of our land law, is settled by such a mass of decisions of this court that its mere statement is sufficient."[61]

It is equally clear that the 1928 survey was made within the jurisdiction of the General Land Office. At the time of the survey that department was vested with authority to supervise the surveying and sale of the public lands of the United States. Rev. Stat. § 453 (1875). Moreover, by Section 6 of the Act of April 8, 1864, the Congress provided that:

> " . . . hereafter, when it shall become necessary to survey any Indian or other reservations, or any lands, the same shall be surveyed under the direction and control of the general land-office, and as nearly as may be in conformity to the rules and regulations under which other public lands are surveyed."[62]

A General Land Office survey of an Indian Reservation made pursuant to this statute has been held not subject to collateral attack. *French* v. *United States,* 49 Ct. Cls. 337 (1914).

Even if the 1928 survey is not conclusive as to the correct western boundary of the Hay & Wood Reserve, it nevertheless constitutes the best and most substantial

---

[61] 128 U. S., at 698-99.

[62] 13 Stat. 41 (1864); 25 U.S.C. § 176 (1958).

evidence of the western boundary as established by the Executive Order of March 30, 1870, and the accompanying notes of survey.

Because the description of the western boundary is internally inconsistent justification exists for resort to applicable rules of construction. These rules are clear. Generally, monuments, whether artificial or natural, prevail over courses and distances or acreage for the purpose of determining the location of a boundary,[63] and quantity is less reliable than any other element of description, particularly where the words "more or less" are added.[64] The 1928 Survey applied these principles, giving control to the call for monuments in the 1870 notes of survey. Thus, if the 1928 survey properly located these monuments, it correctly established the boundary of the Reservation.

The field notes of the 1928 survey[65] demonstrate that the surveyor, in attempting to establish the width of the Colorado River as of 1869 for purposes of locating the monuments, referred to "the official map" of the Hay & Wood Reserve. He then restored the monuments for the purposes of the survey with the aid of that "official map."[66] The "official map" could only have been the 1870 map of the Reserve which is California Exhibit 3501. The surveyor was aware of the 1869 survey upon which the 1870 map was based.[67] Indeed, he indicated knowledge of only one other survey[68] and that survey purports only to represent

---

[67]Calif. Ex. 2616, p. 3.

[68]*Ibid.*

certain lands in the State of Arizona.[69] Other evidence compels the conclusion that the "official map" (California Exhibit 3501) referred to in making the 1928 survey was the Fort Mohave plat accompanying the Executive Order of March 30, 1870.[70]

Because the 1928 General Land Office survey located the western boundary of the Reserve by reference to the map set forth as California Exhibit 3501, which map accompanied the Executive Order of March 30, 1870, it can safely be said that the 1928 survey adequately identified the location of the monuments and that the boundary line set forth therein is the correct western boundary of the Hay & Wood Reserve of the Fort Mohave Indian Reservation.

Manifestly, lands within the disputed area which have been patented pursuant to Congressional authorization cannot be considered as part of the irrigable acreage of the Reservation, title having passed from the United States. See *United States* v. *State Investment Co.*, 264 U. S. 206, 212 (1924).

---

[69]Tr. 20326-20328 (Pratt); Calif. Ex. 3518.

[70]U. S. Ex. 1323.

The map is dated February 1870; the survey upon which it was based was made in 1869; and the letter requesting withdrawal, dated March 12, 1870, transmitted a plat of the Hay & Wood Reserve. *Ibid.* Moreover, California Exhibit 3501 was drawn by military engineers at the Head Quarters Department, California, and the letter requesting withdrawal was written by the United States Military Commander at San Francisco. In addition, the courses and distances and acreage specified in a table on the map correspond exactly to those set forth in the notes of survey accompanying the Executive Order of 1870. Tr. 20343-20344 (Pratt). *Compare* Calif. Ex. 3501 *with* U. S. Ex. 1323. Finally, the southwest and northwest corners of the tract shown on the map correspond to courses and distances specified in the notes of survey and the plat could be prepared from the description given in the notes of survey. Tr. 20344-20346 (Pratt).

6. *Coachella Indian Reservations*

FINDINGS OF FACT

1. An agreement between the Coachella Valley County Water District and the Secretary of the Interior provides:

> "After any major part of such irrigation distribution system and drainage works has been turned over to the District for care, operation and maintenance, the District shall deliver water to the lands within Improvement District No. 1 that are listed on Schedule A [the Indian lands] and that can be irrigated through such part of the system under the same conditions, rules, regulations, to the same extent, without discrimination, and for the same charges, including standby charges, as water is delivered by the District to other lands similarly located within the District. . . ."[71]

2. The agreement became effective upon the enactment of the Act of August 28, 1958. (72 Stat. 968)

3. There is no evidence that any major part of the extension of the irrigation system has been turned over to the District as provided in the agreement above cited.

4. There is no evidence that the District has repudiated the agreement or has in any way threatened to violate it.

CONCLUSION OF LAW

There is no controversy between the United States and the Coachella Valley County Water District with respect to an obligation to deliver water to the Indian Reservations within said District which requires adjudication at this time.

---

[71]U. S. Ex. 2510C.

OPINION

The United States claims the right to the use of a certain quantity of Colorado River water, through the facilities of the Coachella Valley County Water District, for the irrigation of a specified number of irrigable acres of the Cabazon, Augustine and Torres-Martinez Indian Reservations located within the District.[72] This claim is based upon the Boulder Canyon Project Act, various federal statutes and several contracts to which the Coachella Valley County Water District is a party.

It is clear that the geographic relationship of these Reservations to the Colorado River—they are outside the River's drainage basin—leaves no room for a presumption, absent a specific showing, that the United States intended to reserve water from the Colorado River for use on these Reservations. Indeed, the United States does not rely on the "reservation" theory in claiming water for these Reservations.

The Boulder Canyon Project Act does not specifically invest the Coachella Reservations, or indeed any Indian Reservation, with rights to water from the Colorado River. Nor can any such rights be reasonably inferred from the Act's authorization of the Secretary of the Interior to deliver water to the Coachella Valley.

The same conclusion follows upon examination of two contracts between the Coachella Valley County Water District and the United States dated 1934 and 1947. The 1934 contract[73] provides for the construction of Imperial Dam and the All-American Canal for the benefit, *inter alia,* of lands within the Coachella Valley. The 1947 contract[74] provides for the construction of distribution and drainage

---

[72]See U. S. Proposed Conclusion 4.9.
[73]Ariz. Ex. 36
[74]Calif. Ex. 309.

works for the benefit of lands within the Coachella Service Area. Neither of these contracts purports in any manner to deal with water rights of the Coachella Indian Reservations and they cannot form the basis for assertion of such rights.

The Act of August 25, 1950, 64 Stat. 470[75] is of no aid either. That statute directs the Secretary of the Interior to designate the lands of the Coachella Reservations which could be irrigated by the facilities of the Coachella Valley County Water District and authorizes him to enter into a contract with the District for the benefit of the Indian lands. The Act does not create rights to water in favor of the Indians; it merely serves as a preliminary step towards possible acquisition of rights. It is apparent, therefore, that up to and including 1950 the Coachella Reservations had no enforceable right to water from the Colorado River.

In 1957 the Coachella Valley County Water District entered into an agreement[76] with the Secretary of the Interior whereby the Secretary undertook to construct irrigation distribution works connected to the District's system to serve Indian lands designated by the Secretary. Paragraph 5 of the contract provides as follows:

> "After any major part of such irrigation distribution system and drainage works has been turned over to the District for care, operation, and maintenance, the District shall deliver water to the lands within Improvement District No. 1 that are listed on Schedule A and that can be irrigated through such part of the system under the same conditions, rules, and regulations, to the same extent, without discrimination, and for the same charges, . . . as water is delivered by the District to other lands similarly located within the District. . . ."

---

[75]Calif. Ex. 254.
[76]U. S. Ex. 2510C.

The agreement was to become effective when the Congress authorized the Secretary to fulfill the obligations undertaken by him. Authorization was given by the Act of August 28, 1958.[77]

From the foregoing it is clear that rights of the Coachella Reservations to water from the Colorado River can be derived only from the 1957 contract between the Secretary and the District. But there has been no showing that the Indian distribution system has been constructed. Nor has it been established that "any major part of such irrigation distribution system . . . has been turned over to the District. . . ." The obligation of the District to deliver water to the Coachella Reservations under the contract with the Secretary, therefore, cannot be said to have matured. Thus, there is no occasion on the facts and circumstances presented for a determination of what rights may accrue to the Coachella Reservations should the District become obligated to deliver water to them in the future.

B. National Forests, Recreation Areas, Parks, Memorials, Monuments and Lands Administered By the Bureau of Land Management

The United States claims water rights for its "forests, parks, monuments, memorial, recreation area and lands under the jurisdiction of the United States Bureau of Land Management in the lower Colorado River Basin," both under state law and by reservation of water for each project when that project was established.[78] I have concluded that it is not necessary or appropriate to determine various water rights under state law in this litigation, see pages 216-218, *supra,* nor to determine water rights on

[77]72 Stat. 968.
[78]U. S. Brief, pp. 56-61.

tributaries other than the Gila River, see pages 318-321, 323-324, *infra*. The United States' interests on the Gila are disposed of in a subsequent section of this Report.

Therefore, it is necessary to treat here only the single national recreation area which presently diverts water from the Colorado River. Except for the Lake Mead National Recreation Area, no National Forests, Parks, Monuments, Memorials or lands administered by the Bureau of Land Management divert water from the mainstream of the Colorado River.[79] The United States does not claim water specifically from the Colorado River for any of its Forests, Parks, Monuments, Memorials, or lands administered by the Bureau of Land Management; rather it proposes conclusions of law to the effect that the United States establishments have rights to the water generally available in the Lower Basin.[80] I think it would be inappropriate to predict which of such federal establishments might attempt to utilize water from the mainstream in the future. It may well be that none of the others will ever need to use mainstream water and there would be no point in determining their rights to this water until it appears that it may be necessary to exercise those rights.

It is necessary to adjudicate the water rights of the Lake Mead National Recreation Area for the same reason that the rights of the mainstream Indian Reservations must be adjudicated. I conclude that the United States had the power to reserve water in the Colorado River for use in the Lake Mead National Recreation Area for the same reasons that it could reserve such water for Indian Reservations. Although the authorities discussed above which establish the reservation theory all involved Indian Reserva-

---

[79]See U. S. Exs. 2700-2722, 2800-2821, 2900-2911; U. S. Proposed Conclusion 11.4.

[80]U. S. Proposed Conclusions 8.1, 9.1, 10.1.

tions, the principles seem equally applicable to lands used by the United States for its other purposes. If the United States can set aside public land for an Indian Reservation and, at the same time, reserve water for the future requirements of that land, I can see no reason why the United States cannot equally reserve water for public land which it sets aside as a National Recreation Area. *Cf. F.P.C.* v. *Oregon,* 349 U. S. 435 (1955). Certainly none of the parties has suggested a tenable distinction between the two situations.

In determining whether the United States intended to reserve water for the future reasonable needs of the Lake Mead National Recreation Area, I have followed the course outlined in regard to Indian Reservations. Since the purposes of the Recreation Area could not be fully carried out without the use of water from the mainstream of the Colorado River, I have found that the United States intended to reserve such water for use within the Recreation Area. Furthermore, having found that the United States intended to reserve water for the Area, I have assumed, since there is no evidence to the contrary, that the reservation was for reasonable future requirements. As in the case of Indian Reservations, it is not likely that the United States intended that any future development of the Area would have to depend on appropriative rights to water obtained under state law.

I have not set maximum limits on the amount of mainstream water that the Lake Mead National Recreation Area can consume as I did in the case of the Indian Reservations. First, it would be very difficult to predict accurately the future requirements of the Area. Indeed, even to attempt such a prediction would require more evidence than the parties have introduced in this litigation. Second, there is no need whatsoever to predict future needs or to put an outside limit on the amount of water that can be diverted from the mainstream. The pres-

ent consumption of water diverted from the mainstream on the Lake Mead National Recreation Area is less than 300 acre-feet per annum.[81] Furthermore, from all that appears, its future requirements, whatever they may precisely be, will be of the same general order of magnitude as present uses. Unlike the mainstream Indian Reservations, the potential future uses of the Recreation Area do not cast a cloud on the continuing availability of any appreciable amount of water. This being the case, I have concluded that it would be unwise to attempt to limit the Area to a specific quantity of mainstream water for its future needs.

FINDINGS OF FACT

1. The Lake Mead National Recreation Area in Arizona and Nevada is the only one of the National Forests, Parks, Recreation Areas, Monuments, Memorials and lands administered by the Bureau of Land Management currently diverting water from the mainstream of the Colorado River in the Lower Basin.[82]

2. Executive Orders dated May 3, 1929 (No. 5105) and April 25, 1930 (No. 5339) withdrew lands in Arizona and Nevada pending determination as to the advisability of including such lands in a national monument. In 1936, the Congress appropriated funds for the operation of the Boulder Canyon Project Area which included these lands. 49 Stat. 1794. Lake Mead National Recreation Area was established on the basis of agreements between the Bureau of Reclamation and the National Park Service, dated October 13, 1936 and July 18, 1947, governing administration of the Boulder Canyon Project Area.[83]

[81]U. S. Ex. 2802.
[82]See U. S. Exs. 2700-2722, 2800-2821, 2900-2911.
[83]U. S. Ex. 2802.

3. In withdrawing lands now constituting the Lake Mead National Recreation Area the United States intended to reserve rights to the use of so much water from the Colorado River as might thereafter be reasonably needed by the National Park Service for appropriate purposes.[84]

4. There is not sufficient evidence to make a finding of the ultimate water requirements of the Lake Mead National Recreation Area in Arizona and Nevada.

CONCLUSION OF LAW

The United States has the right to divert water from the mainstream of the Colorado River in quantities reasonably necessary to fulfill the purposes of the Lake Mead National Recreation Area in Arizona and Nevada with priority dates of May 3, 1929, for lands reserved by the executive order of said date (No. 5105), and April 25, 1930, for lands reserved by the executive order of said date (No. 5339).

C. United States Obligations Under the Mexican Water Treaty and Treaties for the Protection of Wildlife

Pursuant to a treaty between the United States and Mexico, dated February 3, 1944,[85] the United States is obligated to deliver to Mexico 1,500,000 acre-feet of water per annum in the limitrophe section of the Colorado River.[86] All of the parties to this litigation concede, as they must, that the Secretary may deliver this amount of water from the mainstream.

---

[84]Executive Order 5105 (May 3, 1929); Executive Order 5339 (April 25, 1930); 49 Stat. 1794 (1936).

[85]59 Stat. 1219 (1945), Ariz. Ex. 4.

[86]This obligation may vary in certain circumstances; it is more precisely defined in Articles 10, 11 and 15 of the treaty.

The treaty obligation has priority over other water rights in the Basin. If the United States, in fulfilling this treaty obligation, divests water rights, compensation may be due. In this connection, however, Article III(c) of the Compact may be significant.[87] The question of compensation is not before me because there has been no claim of a taking under the treaty.

The United States also claims the right to divert certain quantities of water from the Colorado River for use on the Havasu Lake National Wildlife Refuge, the Imperial National Wildlife Refuge and the proposed Cibola Valley Waterfowl Management Area. The United States urges that these refuges and management areas were or will be established in fulfillment of its treaty obligations under a Convention dated August 16, 1916, between the United States and Great Britain for the protection of migratory birds[88] and a Convention dated February 7, 1936 between the United States and Mexico for the protection of migratory birds and game mammals.[89] Congress has enacted legislation to give effect to both of these Conventions.[90] The Executive Orders establishing the several

---

[87]Article III(c) provides:

> "If, as a matter of international comity, the United States of America shall hereafter recognize in the United States of Mexico any right to the use of any waters of the Colorado River System, such waters shall be supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b); and if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the Upper Basin and the Lower Basin, and whenever necessary the States of the Upper Division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d)."

[88]39 Stat. 1702 (1916), U. S. Ex. 2601.

[89]50 Stat. 1311 (1937), U. S. Ex. 2605.

[90]40 Stat. 755 (1918), U. S. Ex. 2602; 45 Stat. 1222 (1929), U. S. Ex. 2603; 49 Stat. 1555 (1936), U. S. Ex. 2606.

refuges are detailed in the Findings of Fact which conclude this section of the Report.

Although the United States undoubtedly has the power to take property, including water rights, in order to fulfill its treaty obligations, there is no indication that it has chosen to do so in order to operate the two wildlife refuges currently diverting water from the Colorado River. The Executive Orders creating these refuges simply reserve public lands owned by the United States for use as a wildlife refuge. Nothing in these orders purports to authorize the Secretary of the Interior to utilize water from the Colorado River previously appropriated by others.

Rather, the intention of the United States, as expressed in the Executive Orders, was to reserve enough of the unappropriated water available in the River to satisfy the reasonable requirements of the Refuges. I have previously concluded that the United States had the power to reserve unappropriated water in the Colorado River for the future requirements of Indian Reservations and a National Recreation Area and I can perceive no material distinction between them and wildlife refuges. Furthermore, it is abundantly clear that the Havasu Lake National Wildlife Refuge and the Imperial National Wildlife Refuge could not successfully be operated without diverting water from the Colorado River. Thus I find that the United States intended to reserve water from the mainstream for the reasonable future needs of these Refuges.

The United States suggests that it will need to divert no more than 41,839 acre-feet of water per annum and consumptively use no more than 37,339 acre-feet per annum for the Havasu Refuge. The United States also suggests it will need to divert no more than 28,000 acre-feet per annum and consumptively use no more than 23,000 acre-feet per annum for the Imperial Refuge. I find that diver-

sions and consumptive use in these amounts are reasonably necessary for the operation of the Refuges and that the necessary water was reserved by the United States for the Refuges when they were created. Thus I hold that the United States may divert and consume the stated quantities of water from the Colorado River as against all appropriations made subsequent to the dates that the water was reserved. If the United States requires water appropriated by others before these Refuges were created, it will have to take the necessary steps to acquire it.

Since lands within the proposed Cibola Valley Waterfowl Management Area have not as yet been withdrawn for this purpose, the United States has not reserved water for use on this management area.

1. *Havasu Lake National Wildlife Refuge.*

FINDINGS OF FACT

1. An Executive Order of January 22, 1941 (No. 8647) established the Havasu Lake National Wildlife Refuge and set apart approximately 37,370 acres of land owned by the United States in Mohave and Yuma Counties, Arizona and San Bernardino County, California, as a refuge and breeding ground for migratory birds and other wildlife.[91]

2. On February 11, 1949, the Assistant Secretary of the Interior, by Public Land Order 559, added approximately 1,677 acres in Arizona and approximately 1,080 acres in California to the Havasu Lake National Wildlife Refuge.[92]

3. In withdrawing lands for the Havasu Lake National Wildlife Refuge the United States intended to reserve rights

[91]U. S. Ex. 2607.
[92]U. S. Ex. 2610.

to the use of so much water from the Colorado River as might be reasonably needed to fulfill the purposes of the Refuge.[93]

4. The Fish and Wildlife Service of the United States Department of Interior has formulated a development plan for the Havasu Lake National Wildlife Refuge.[94]

5. Annual diversions of 41,839 acre-feet and annual consumptive use of 37,339 acre-feet of water from the Colorado River will satisfy the estimated water requirement of the development plan for the Havasu Lake National Wildlife Refuge.[95]

CONCLUSION OF LAW

The United States has the right to the annual diversion of a maximum of 41,839 acre-feet or to the annual consumptive use of 37,339 acre-feet (whichever is less) of water from the Colorado River for use in the Havasu Lake National Wildlife Refuge, with a priority of January 22, 1941 as to land reserved by Executive Order No. 8647, and a priority of February 11, 1949 as to land reserved by Public Land Order 559.

2. *Imperial National Wildlife Refuge.*

FINDINGS OF FACT

1. An Executive Order of February 14, 1941 (No. 8685) established the Imperial National Wildlife Refuge and set apart approximately 51,090 acres of land owned by the United States in Yuma County, Arizona and Imperial

---

[93]U. S. Exs. 2607, 2610; see U. S. Exs. 2601-2603; 2605-2606.
[94]U S. Ex. 2618.
[95]U. S. Ex. 2619.

County, California, as a refuge and breeding ground for migratory birds and other wildlife.[96]

2. In withdrawing lands for the Imperial National Wildlife Refuge the United States intended to reserve rights to the use of so much water from the Colorado River as might be reasonably needed to fulfill the purposes of the Refuge.[97]

3. The Fish and Wildlife Service of the United States Department of Interior has formulated a development plan for the Imperial National Wildlife Refuge.[98]

4. Annual diversions of 28,000 acre-feet and annual consumptive use of 23,000 acre-feet of water from the Colorado River will satisfy the estimated water requirement of the development plan for the Imperial National Wildlife Refuge.[99]

CONCLUSION OF LAW

The United States has the right to the annual diversion of a maximum of 28,000 acre-feet or to the annual consumptive use of 23,000 acre-feet (whichever is less) of water from the Colorado River for use in the Imperial National Wildlife Refuge with a priority of February 14, 1941.

D. United States Water Rights Limited by Each State's Apportionment

It has previously been concluded that consumptive uses of mainstream water by the United States on federal establishments are chargeable to the state within which the use occurs. See pages 247-248, *supra*. As a corollary to this proposition, I have also concluded that United States' uses

---

[96]U. S. Ex. 2608.
[97]*Ibid;* see U. S. Exs. 2601-2603.
[98]Tr. 15693 (Taylor); U. S. Ex. 2621.
[99]U. S. Ex. 2621; Tr. 15,737 (Taylor).

in each state are limited by the apportionment to the state in which the uses occur.[1] Thus the United States receives water in accordance with its priorities, and if the state apportionment is insufficient to satisfy all uses within the state, including federal uses, junior rights, whether acquired under state or federal law, must yield to senior rights within the state. In other words, United States projects must be fitted into a schedule of priorities along with other uses within a state, and the state's mainstream apportionment will be used to satisfy uses within the state, beginning with the senior priority. If the apportionment is not sufficient to satisfy all uses, junior priorities will not receive water.

This conclusion is required by the Project Act and the Secretary's water delivery contracts. The Project Act's limitation on California's consumption is written in terms of "the *aggregate* annual consumptive use . . . in the state of California," which language clearly includes all uses, both federal and state. Furthermore, the second paragraph of Section 4(a) contemplates a compact which apportions total consumptive use of mainstream water in the Lower Basin: Arizona is to receive 2.8 million acre-feet plus half of surplus and Nevada is to receive .3 million acre-feet. With California permitted (and expected) to take the other 4.4 million acre-feet of consumptive use plus half of surplus, total annual consumptive use is accounted for. See pages 174-177, 222-224, *supra*. Nothing is left out of the accounting; nothing remains, therefore, for the United States, except as its uses come within a state's apportionment. The Project Act, in short, contemplates a division of total uses among three parties, Arizona, California and Nevada. No separate provision is made for the United States. If Congress had intended the apportionment to be made among

[1]Such federal uses as constitute "present perfected rights" within the meaning of Section 6 are, like other perfected rights within the state, an exception to this rule.

four parties rather than the three it named, surely it would have said so.

As noted before, the Secretary's contracts substantially effectuate the apportionment authorized by Congress, and therefore should be construed in conformity with the congressional intent. Moreover, the Arizona contract, by its express terms, requires this result. Article 7(1) of the contract provides as follows: "All consumptive uses of water by users in Arizona, of water diverted from Lake Mead or from the mainstream of the Colorado River below Boulder [Hoover] Dam, whether made under this contract or not, shall be deemed, when made, a discharge pro tanto of the obligation of this contract." This provision requires federal uses in Arizona to be limited by the contractual apportionment. The Secretary, having apportioned total consumptive use of mainstream water among the three states, has safeguarded himself by this contract provision, which says in substance: the contract apportionment is the maximum that can be consumed in Arizona, whoever the user may be, whether or not a contractee.

Although the Nevada contract is not as explicit in limiting United States' uses to the state's apportionment as is the language of the California limitation and the Arizona contract, the Nevada contract was intended to carry out the apportionment contemplated by Congress and to correlate Nevada's apportionment to those of the other two states. Hence, the same result must follow as to United States' uses in Nevada.

In the light of my earlier conclusion that consumptive uses by the United States are to be charged to the states, and of the provisions and purposes of the Project Act and water delivery contracts, I hold that the uses of the United States within each state are limited by that state's apportionment, except to the extent that such uses are protected by Section 6 of the Project Act.

E. Boulder City, Nevada

By an Act of September 2, 1958, 72 Stat. 1726, Congress provided that the Secretary of the Interior shall:

> "supply water to . . . [Boulder City, Nevada] for domestic, industrial, and municipal purposes. . . . Such delivery shall be subject to the availability of water for use in the State of Nevada under the provisions of the Colorado River compact and the Project Act and . . . shall be in accordance with the terms of . . . [Nevada's water delivery contract]."

The United States claims the right to deliver water from Lake Mead to Boulder City for the purposes recited in the statute. Since the offices of the Boulder Canyon Project, Region Three of the Bureau of Reclamation and a number of other United States agencies are located in Boulder City, the United States has a substantial interest in the deliveries of such water. Nevada has acquiesced in water deliveries under this statute and I hold that the United States may deliver water to Boulder City pursuant to its terms.

The statute in effect instructs the Secretary to deliver water to Boulder City as if he had contracted for such deliveries. Thus these deliveries are clearly limited under the statute by the total amount of water available to Nevada under the Secretary's contractual apportionment. Boulder City's priorities are to be determined in the same manner as those of all other Nevada users, under Nevada law, and the city may receive only as much of Nevada's 300,000 acre-feet as is available after senior priorities have been satisfied. Conversely, consumption of mainstream water by Boulder City is chargeable to Nevada for purposes of applying the interstate apportionment. The Act of September 2, 1958 states that deliveries to Boulder City "shall be in accordance with the terms of . . . [the Nevada delivery con-

tract]." That contract specifically limits the "use in Nevada" of all water delivered from Lake Mead to 300,000 acre-feet per annum and thus deliveries to Boulder City, being for use in Nevada, are chargeable to the state under the contract. Nevada has not objected to this charge.

V. Mainstream Allocation: Conclusion

It may be useful at this point to summarize the apportionment which controls the consumption of water diverted from Lake Mead and from the mainstream of the Colorado River below Lake Mead for use in Arizona, California and Nevada under the decree recommended in this Report.

The Secretary of the Interior determines the total amount of water to be released from Lake Mead and from the several reservoirs on the mainstream of the Colorado River below Hoover Dam for consumptive use in Arizona, California and Nevada. That determination is solely within the Secretary's reasoned discretion and presumably is based on the amount of water in Lake Mead and the reservoirs below, the amount necessary to satisfy the United States treaty obligations to Mexico, necessities of "river regulation, improvement of navigation, and flood control," predictions as to future supply, and other relevant conditions in the River Basin. The only specific limitation on his discretion is that he must follow the priorities set forth in Section 6 of the Project Act. The supply of water available for consumptive use in the three states, then, is neither more nor less than the quantity of water that the Secretary annually releases for this purpose.

Of the mainstream water released for consumptive use in the United States, the first 7,500,000 acre-feet of annual consumptive use is apportioned as follows: 2,800,000 acre-feet for use in Arizona; 4,400,000 acre-feet in California; 300,000 acre-feet in Nevada.

If sufficient mainstream water is released in one year to satisfy more than 7,500,000 acre-feet of consumptive use in the three states, such additional consumptive use is surplus and is apportioned as follows: 50% to California[1a]

[1a] Subject, at the present time, to a total maximum consumption in California of 5,362,000 acre-feet under existing contracts. See pp. 208, 223-224, *supra*.

and 50% to Arizona, unless and until the Secretary makes a contract with Nevada for 4% of surplus, in which event, to Nevada shall be apportioned 4% of surplus and to Arizona 46% of surplus.

In the event that insufficient water is released from the mainstream reservoirs to satisfy 7,500,000 acre-feet of consumptive use in the United States in one year, the supply must be prorated among the three mainstream states. Each state's allocation is that proportion of the consumptive uses which can be satisfied by the available water which its apportionment of the first 7,500,000 acre-feet of mainstream consumption bears to the aggregate apportionment to all three states. Thus, if in one year water is available to satisfy an aggregate of only 6,000,000 acre-feet of consumptive use in the three states, each state's apportionment will be determined by the ratios described above, *viz:*

$\frac{2.8}{7.5}$ x 6 million acre-feet to Arizona;

$\frac{4.4}{7.5}$ x 6 million acre-feet to California;

$\frac{.3}{7.5}$ x 6 million acre-feet to Nevada.

The Secretary of the Interior is required to make deliveries of water in accordance with the apportionments outlined above; the one exception to this requirement is prescribed by Section 6 of the Project Act, which directs that the dam and reservoir be operated in "satisfaction of present perfected rights in pursuance of Article VIII of said Colorado River compact. . . ." I have heretofore construed "present perfected rights" to mean rights perfected as of June 25, 1929, the effective date of the Project Act. See note 20, page 152, *supra.*

Before turning to the meaning of the term "perfected rights" as used in the Act, it should be noted that if California receives in one year 4,400,000 acre-feet of consump-

tive use or more, her perfected rights are deemed by Section 4(a) to be satisfied. That section limits California to 4,400,000 acre-feet of consumptive use plus half of surplus, which shall include "all water necessary for the supply of any rights which may now exist." I construe this language to mean that California's consumptive use may not exceed the specified amount, whatever her "present perfected rights" might have been in 1929. In short, Section 4(a) limits the operation of Section 6 in the case of California.

No such statutory provision limits the protection extended by Section 6 to Arizona and Nevada. It is clear from the evidence, however, that if water is made available to satisfy an aggregate of 7,500,000 acre-feet of consumptive use in one year, the Arizona and Nevada apportionments will substantially exceed the amount of "present perfected rights" in the respective states.

In the event that sufficient water is not made available to satisfy an aggregate consumptive use of 7,500,000 acre-feet in the United States in one year, Section 6 may come into play. California will not be allotted as much as 4.4 million acre-feet of consumptive use and can, therefore, rely on the protection afforded by Section 6 until she receives sufficient water to satisfy present perfected rights, up to the maximum of 4.4 million acre-feet fixed by Section 4(a). Since it is possible for these circumstances to occur, it becomes necessary to interpret the phrase "perfected rights" in Section 6.

Neither the Compact nor the Project Act defines "perfected rights." It seems clear, however, that the term was not used in either of these enactments to refer to notices of appropriation which had not yet become the foundation of a going economy—mere paper filings on the River. The use of the term "perfected rights" rather than the more familiar "appropriative rights" suggests that Congress intended to limit the protection of Section 6 to rights of a more sub-

stantial character than paper filings sometimes recognized as an appropriative right under state law. Congress was concerned that those who were actually using water from the Colorado River and who relied on such water for their existing needs should not be deprived of it because of the proposed dam. But Congress was aware that many paper appropriations had been filed and claims of various sorts made to Colorado River water which, whatever their legal status under state law, were worthless as a practical matter unless and until the dam was built. Congress was not concerned to protect such claims. Projects and water uses developed by virtue of the construction of the dam did not need to be protected against its consequences.[2] Of course, a water right is not a "present perfected" right within the meaning of Section 6 unless it is recognized under the applicable state law, for if it cannot be vindicated under state law there would be no reason to protect it in the Project Act.

Hence I conclude that a water right is a "present perfected right" and is within the protection of Section 6 only if it was, as of the effective date of the Project Act (June 25, 1929), acquired in compliance with the formalities of state law and only to the extent that it represented, at that time, an actual diversion and beneficial use of a specific quantity of water applied to a defined area of land or to a particular domestic or industrial use.

It has been suggested by the Imperial Irrigation District that state law would treat as "perfected" the right to take water in an amount measured by the capacity of existing works, even though such amount of water had never yet been actually diverted and applied to beneficial use. It is highly unlikely that Congress intended to adopt this broader

---

[2]See 70 Cong. Rec. 167-169 (1928), Ariz. Legis. Hist., pp. 22-31.

definition. Congress must have realized that following construction of Hoover Dam new diversion works would be built for most downstream uses. The Project Act authorized not only the erection of the dam but also the construction of the All-American Canal to serve Imperial and Coachella Valleys, thus relieving them of dependence on diversions through Mexico. Since the Project Act authorized structures designed to replace existing diversion works, it is unlikely that Congress intended to define perfected rights in terms of the carrying capacity of these obsolete works. More natural is a congressional intention to protect, as present perfected rights, those uses which were actually in existence and which were the basis of a going economy. As stated before, the congressional intention was to insure that persons actually applying water to beneficial use would not have their uses disturbed by the erection of the dam and the storage of water in the reservoir.

Under the proposed definition of perfected rights a question arises with respect to water reserved from the mainstream for use on federal establishments in the Lower Basin. I have held that the United States has the power to reserve water for the reasonable future needs of federal establishments and that certain statutes, executive orders and other orders of withdrawal were intended to exercise this power. The water rights created by such a federal reservation do not depend upon state law or upon the actual diversion and beneficial use of a specific quantity of water. On the contrary, they are superior to subsequent appropriations under state law, although the subsequent appropriator may be first to divert and use the water. See pages 257 *et seq., supra.*

The question that arises is whether a reservation of water by the United States before June 25, 1929, is accorded the protection given by Section 6 to present perfected rights,

even though, as of that date, the rights were not acquired under state law and all the water reserved had not been put to beneficial use. I have concluded that they are so protected.

Although not acquired in conformity with state law, these rights are protected by Section 6, since their creation and existence are valid independent of state law.

Moreover, they receive this protection although none or only part of the reserved water had been put to use as of June 25, 1929. The fundamental nature of a reserved water right is that it is fully vested at the time of its creation; nothing further need be done to perfect it. It differs radically from appropriative rights under state law, which may be initiated by a filing but which must be perfected by actual diversion and beneficial use of water within a reasonable time after the filing. Thus a reserved water right created before June 25, 1929, is, by its very nature, "perfected" as of that date. Furthermore, failure to include reserved water rights within the protection of Section 6 could have the effect of divesting them. For example, I have concluded that the United States reserved the right to divert annually a maximum of 11,340 acre-feet of mainstream water for the Chemehuevi Indian Reservation, with a priority of February 2, 1907. The Reservation was not consuming all of this water in 1929. If the right is not considered a present perfected right under Section 6, then present perfected rights acquired under California law would have seniority, even though initiated after 1907. Thus, in certain times of shortage, water would be supplied in satisfaction of the California rights and the Reservation would not receive the full amount of its reserved water, despite its needs.

To hold that Congress did not include reserved water within the protection of Section 6 would require a holding

that Congress, without saying so expressly, and without ever considering the matter,[3] intended to nullify, in times of shortage, the very purpose of the reservation. The cases cited at pp. 258-259, *supra,* demonstrate that reservation of water was made by the United States to assure an adequate supply of water for the future needs of the federal establishments, in order that they could fulfill their purposes. It would frustrate this intent to deny the United States the use of this reserved water in times of shortage.

I do not believe that Congress, when directing that the dam be operated in "satisfaction of present perfected rights", intended these consequences, and accordingly, I conclude that water rights reserved before June 25, 1929, for federal establishments are "perfected rights" within the meaning of Section 6.

In the unlikely event that water is so short that a state's apportionment is insufficient to satisfy present perfected rights therein, the Secretary must deliver water to satisfy such rights from the other states' apportionments. Each of the other two states contributes water from its apportionment for this purpose in the proportion that its apportionment of the first 7.5 million acre-feet of mainstream consumption bears to the aggregate apportionment to the two states. In the example stated, in which annual consumptive use was limited to 6 million acre-feet, California's apportionment would be $\frac{4.4}{7.5}$ x 6 million acre-feet or 3,520,000 acre-feet of consumptive use. If, hypothetically, California has present perfected rights of 3,600,000 acre-feet, she would be entitled under Section 6 of the Project Act to consumption of 3,600,000 acre-feet, and thus, ex-

[3]The legislative history reveals nothing concerning the status of federal water rights as perfected rights.

ceed her apportionment by 80,000 acre-feet of consumptive use. Arizona and Nevada would have to contribute water to supply this 80,000 acre-feet in proportion to their interstate ratios; that is, Arizona would contribute $\frac{2.8}{3.1}$ of the water necessary to supply the 80,000 acre-feet of consumption in California, and Nevada would contribute $\frac{.3}{3.1}$ of this water.

Of course, if two states' apportionments were not sufficient to satisfy present perfected rights in those states in one year, the third state would have to contribute all of the necessary water. In the extremely improbable event that releases do not satisfy the rights perfected in any of the states as of the effective date of the Act, deliveries must be made in accordance with the priority of "present perfected rights" regardless of state lines.

The water apportioned to each state is delivered to users within the state according to the provisions of the several delivery contracts. No user may consume mainstream water unless there is a contract with the Secretary providing for the delivery of such water.[8a] Under the Project Act, state law governs rights and priorities among users within a single state, except for federal establishments for which water has been reserved independent of state law. As to such establishments, the priorities recommended herein control.

Water consumed on Indian Reservations, National Forests, Parks, Monuments, Memorials, Recreation Areas, lands under the control of the Bureau of Land Management, Federal Reclamation Projects, Wildlife Refuges and Management Areas, and in Boulder City, Nevada, is

---

[8a] Of course the Secretary need not contract with himself, and hence no contracts are required for Indian Reservations and similar federal establishments.

chargeable to the state within which the water is consumed, and this consumption is included within each state's apportionment. Conversely, each state's apportionment is an overriding limitation on all consumptive use within the state, including uses claimed by the United States for federal establishments.

Consumptive use is measured at the several points of diversion in each state by a determination of the amount of water diverted from the mainstream less return flow thereto available for consumptive use in the United States or in satisfaction of the Mexican treaty obligation. The Secretary must keep an account of diversions for each state. He must compute, as accurately as possible, the amount of usable return flow from water diverted and credit this amount to each state. Reservoir evaporation, channel and other losses sustained prior to the diversion of water from the mainstream are not chargeable to the states but are to be treated as diminution of supply. Only after water is diverted from the mainstream are losses on it chargeable to a state as consumption.

The interstate allocation outlined above is based on the conclusion that the Secretary has used his water delivery contracts in conjunction with the Section 4(a) limitation on California to effectuate an apportionment among Arizona, California and Nevada of all of the water he determines to release in any year from Lake Mead and from downstream reservoirs for consumption in the United States. Of the first 7.5 million acre-feet of annual consumptive use of water from Lake Mead and the mainstream below, the Secretary has forever allocated $\frac{2.8}{7.5}$ to Arizona. Of the excess consumption, he has allocated to Arizona 50%, subject to reduction to 46% if he contracts to allocate 4% to Nevada. Similarly, out of the first 7.5 million acre-

feet of such use, he has forever allocated $\frac{4.4}{7.5}$ to California plus 50% of any excess each year up to a total annual consumption in California of 5,362,000 acre-feet. Finally, of such 7.5 million acre-feet, he has forever allocated $\frac{.3}{7.5}$ to Nevada.

However, until a state is prepared to apply to beneficial use all of its apportioned water, it has no cause for complaint if the water within its allocation is consumed elsewhere. Thus if, in any one year, water apportioned for consumptive use in a state will not be consumed in that state, whether for the reason that there are no delivery contracts outstanding for the full amount of the state's apportionment, or that users cannot apply all of such water to beneficial uses, or for any other reason, nothing herein shall be construed as prohibiting the Secretary of the Interior from releasing such apportioned but unused water during such year for consumptive use in the other states. No rights to the recurrent use of such water shall accrue by reason of the use thereof.[4]

California and Nevada have suggested that it would be useful for the Court to provide for a permanent commission or commissioner to administer the decree. I do not regard this as necessary. In view of the control of the mainstream vested in the Secretary of the Interior, he will in effect administer the decree.

---

[4]For comparable provisions see Colorado River Compact, Article III(e); Boulder Canyon Project Act, Section 4(a), second paragraph, subdivision 5.

VI. Claims to Water in the Tributaries

There are five principal tributaries of the Colorado River in the Lower Basin. They are: the Virgin River System, the Kanab and Johnson Creek System, the Little Colorado River System, the Bill Williams River, and the Gila River System. All but the Gila River make regularly recurring contributions to mainstream supply.[5] Inflow from the Virgin and Little Colorado Rivers and from Kanab Creek is stored in Lake Mead. Inflow from the Bill Williams River is impounded by Parker Dam and stored in Lake Havasu. The Gila River empties into the mainstream near the Mexican border, and there is no dam capable of impounding its inflow.

The controversies arising over tributary water may be divided into two general categories. First, there is the controversy between mainstream states and tributary states regarding rights in tributary supply.[6] California expressed concern in this litigation that increased uses on the tributaries will decrease mainstream supply. The mainstream state-tributary state controversy is treated in subdivision A of this section of the Report. Second, there are controversies among the tributary states *inter sese*. These controversies, which concern the Virgin, Little Colorado and Gila River systems, and Johnson and Kanab Creeks, present the usual questions that arise in the traditional equitable apportionment suit. They are dealt with in subdivision B herein. Present tributary uses do not exhaust the available water supply in any of the tributaries, except the Gila River System; therefore the considerations that apply to the Gila differ from those applicable to the other tributaries. For

---

[5] See Part One, pp. 119-123.

[6] It should be noted that two states, Arizona and Nevada, are both mainstream states (*i.e.*, they share in mainstream supply) and tributary states (*i.e.*, their tributaries contribute to mainstream supply and users therein divert water from the tributaries).

this reason, the discussion in subdivision B is divided into two parts.

A. Controversies Between Mainstream States and Tributary States

Absent the Colorado River Compact and the Boulder Canyon Project Act, it is clear that principles of equitable apportionment would control the disposition of a controversy between downstream states using mainstream water and upstream tributary states. See *Nebraska* v. *Wyoming,* 325 U. S. 589, 617-619 (1945); *Colorado* v. *Kansas,* 320 U. S. 383, 393-394 (1943); *New Jersey* v. *New York,* 283 U. S. 336, 342-343 (1931). Thus, junior uses on the tributaries might well be enjoined for the benefit of senior uses on the mainstream. *Nebraska* v. *Wyoming, supra,* at 665. Therefore, unless the Compact, the Project Act or the Secretary's delivery contracts made pursuant to Section 5 of the Project Act have somehow displaced the law that would otherwise be applicable, the principles of equitable apportionment still control rights of mainstream states in water of the tributaries of the Colorado River in the Lower Basin.

The Compact does not govern the relations, *inter sese,* of the states having Lower Basin interests.[7] Therefore, it could not have displaced the principles of equitable apportionment as decisive of the question of rights in Lower Basin tributary supply.

It is equally clear that the Project Act and the California Limitation Act have not rendered the principles of equitable apportionment inapplicable to the tributaries or the mainstream above Lake Mead. The limitation in Section 4(a) of the Project Act applies only to California. It does not affect possible claims by Arizona and Nevada to tributary water. With respect to California, Section

[7] See pp. 139-141, *supra.*

4(a) is concerned with consumption and not with supply and therefore does not affect any rights of that state to demand that tributary water be permitted to flow into the mainstream. Furthermore, it has been demonstrated that Section 4(a) regulates the mainstream only. Nothing in that section may reasonably be said to affect the question of tributary supply. It is difficult to believe that Congress, including the California senators who voted for the Project Act, and the California Legislature which passed the Limitation Act, intended that California should waive all claims to the substantial tributary contributions to the mainstream supply. It is unlikely that they intended that the states in the Lower Basin through which the tributaries flowed could consume all of the water in those tributaries without regard for California's claims, needs or existing uses.

Similarly, the contracts for delivery of mainstream water which the Secretary of the Interior has made with Arizona, Nevada and the California defendants have no bearing on the question of tributary supply. The contracts are solely for delivery of water after it has found its way into the mainstream; they do not affect inflow into the mainstream. Nor can they reasonably be construed to include the waiver of any rights mainstream states may have to tributary inflow.

In the light of the foregoing, the conclusion is inescapable that principles of equitable apportionment still control rights of mainstream states in waters of the tributaries of the Colorado River in the Lower Basin. At the present time the tributaries which empty into the Colorado River in the Lower Basin, other than the Gila River, make a substantial contribution to the supply of water in the mainstream. Once this tributary water commingles with the mainstream water it is governed by the Project Act and the Secretary's water delivery contracts and may be consumed only according to the interstate apportionment created by them. The mainstream users most certainly

have a substantial interest in tributary inflow, for the greater the quantity of water entering the mainstream, the greater the quantity of water likely to be available for use by them.

There is, however, no occasion at this time to apportion water of the tributaries of the Colorado River in the Lower Basin between mainstream and tributary states. An equitable apportionment of the tributaries at the instance of mainstream states could only accomplish either or both of two objects: (1) the enjoining of existing junior tributary uses for the benefit of senior mainstream uses; (2) the enjoining of increased uses on the tributaries for the benefit of existing mainstream uses.

There is no basis in the record for closing down existing tributary uses. The mainstream states have neither asked that present tributary uses be limited nor presented evidence that would justify such a limitation.

Nor, indeed, have they asked that increased future uses on the tributaries be enjoined. Arizona expressly declares that adjudication of rights in tributary water would be premature and unwarranted.[8] California proposes to treat present tributary inflow as part of the dependable supply in the mainstream, but does not seek a determination of rights in this water.[9] Similarly, Nevada does not ask that increased uses on the tributaries be enjoined; on the contrary she seeks a decree in favor of tributary users as against the mainstream interests.[10]

Even if the mainstream states had asked for an injunction against increased tributary uses, it would be inappropriate to adjudicate the request at this time. Mainstream users are presently enjoying the use of tributary inflow, and there is no indication that such enjoyment is in imme-

---

[8]Ariz. Proposed Conclusions 20-22.
[9]See Calif. Proposed Decree, pp. 7-9.
[10]Nev. Proposed Conclusion 33.

diate danger of being interfered with. There is no evidence that there will be, in the immediately forseeable future, any substantial increase in uses on the tributaries. Indeed, except for the proposed Dixie Project on the Virgin River in Utah, there is no evidence of any pending proposals or plans for the construction of specific works involving the increased use of water on any of the tributaries. At best, the evidence shows only vague general hopes for growth and development on the tributaries.

The Dixie Project itself cannot be considered an immediate threat to the continuation of present tributary inflow into the mainstream. There is no evidence that the Dixie Project will be developed except as a federal reclamation project, yet its authorization by the United States is far from certain. The Regional Director of the Bureau of Reclamation for Region Three has twice issued favorable reports on the proposed project to the Commissioner of Reclamation, but the latter has not yet approved it.[11] So far as the evidence shows, the proposed project has not even been brought to the attention of the Secretary of the Interior or of Congress,[12] and congressional approval is required before the project can be developed. Moreover, the Regional Director's approval of the Dixie Project was conditioned on Utah fulfilling certain conditions which have not yet been met.[13]

In this state of the record, principles established by the Supreme Court dictate that mainstream rights to tributary inflow ought not now be adjudicated. As the Court has stated:

> " 'Before this court can be moved to exercise its extraordinary power under the Constitution to control the conduct of one State at the suit of another, the threatened invasion of rights must be of serious

[11]Calif. Exs. 2901, 2902; Utah Exs. 31, 31A.
[12]Tr. 17925-17937, 17949-17954 (Bingham); Calif. Ex. 2904.
[13]*Ibid.*

> magnitude and it must be established by clear and convincing evidence.' New York v. New Jersey, 256 U. S. 296, 309; North Dakota v. Minnesota, 263 U. S. 365, 374; Connecticut v. Massachusetts, 282 U. S. 660, 669; Missouri v. Illinois, 200 U. S. 496, 521."[14]

There has been no showing that, at the present time, tributary users are threatening mainstream rights to continued tributary inflow within the meaning of this principle.

Furthermore, it is clear that up to the present time, no existing mainstream project has been refused water, the delivery of which it has demanded. That this condition will continue at least until another large project using mainstream water is constructed cannot, on this record, be doubted. Should this condition change in the future then will be the time to consider the problem.

Since, then, there is no occasion to determine mainstream rights to tributary inflow at the present time, since such an occasion may never arise, and since, even if it should arise, a more intelligent determination can be made in the future, it would violate precedent to adjudicate these rights in this case. See *Nebraska* v. *Wyoming,* 325 U. S. 589, 608 (1945); *Colorado* v. *Kansas,* 320 U. S. 383, 398 (1943); *New York* v. *Illinois,* 274 U. S. 488, 489-490 (1927); *Missouri* v. *Illinois,* 200 U. S. 496, 521 (1906); *cf. Arizona* v. *California,* 283 U. S. 423, 463-464 (1931).

One other aspect of the mainstream-tributary controversy requires comment. Three tributary states, New Mexico, Nevada and Utah, seek a decree confirming existing uses and reserving to them rights to water for use in the future. Tributary users are not now being challenged by mainstream states in the enjoyment of their existing uses and therefore there is no controversy over their continued enjoyment. Moreover, since no new tributary uses appear

---

[14]Washington v. Oregon, 297 U. S. 517, 522 (1936).

imminent, it is unnecessary to determine whether there is water available for such uses. The Supreme Court has clearly stated that it will not exercise its original jurisdiction to apportion water in an interstate stream in order to reserve it for consumption at an unspecified time in the future by one state against the possibility that another state might utilize the water first. See cases cited at page 320, *supra*.

Even assuming that an equitable apportionment of tributary water between mainstream and tributary uses would be appropriate, it is extremely doubtful that the evidence is sufficient to form the basis for decision. Arizona is an important tributary state and yet there is little evidence of the extent or seniority of her uses on tributaries other than the Gila. Moreover, the full effect of the decree in this case upon the Lower Colorado River Basin may not be immediately apparent. Undoubtedly, a more "equitable" apportionment might be achieved if apportionment is postponed at least until all practical consequences of the decree are ascertained.

B. Controversies Among the Tributary States Inter Sese

1. *Tributaries Other Than the Gila River.*

Controversies among the tributary states have arisen over four tributary systems which flow into the Colorado River in the Lower Basin, namely, the Little Colorado River System, the Virgin River System, Johnson and Kanab Creeks, and the Gila River System. The latter is dealt with in the next following section of this Report. Controversies over the other three can be disposed of on a single ground and are dealt with together in this section.

The Little Colorado River rises in Arizona at the New Mexico border and flows through the State of Arizona, joining the Colorado River upstream from Grand Canyon. Rio Puerco, the Zuni River, Black Creek and Carrizo Creek, the principal tributaries of the Little

Colorado River which originate in the State of New Mexico, join the Little Colorado River in Arizona. The Little Colorado River System drains a total of 26,930 square miles.[15]

The Virgin River rises in Utah, and flows through that state and the states of Arizona and Nevada, entering the Colorado River at Lake Mead. Important tributaries of the Virgin in Utah are the North Fork of the Virgin River, North Creek and the Santa Clara River. The principal tributary of the Virgin in Nevada was the Muddy River, which now flows directly into Lake Mead. Meadow Valley Wash is a Nevada tributary of the Muddy River. The Virgin River System drains 11,000 square miles.[16]

Kanab and Johnson Creeks rise in the eastern portion of the Lower Colorado River Basin in Utah, each having an individual drainage basin within Utah. Johnson Creek has its confluence with Kanab Creek in the State of Arizona. Kanab Creek flows into the Colorado River at Grand Canyon, midway between Lake Mead and the confluence of the Colorado and Little Colorado Rivers.[17]

The States of Nevada, New Mexico and Utah have asked for a decree confirming present uses and reserving water for future requirements on various interstate tributaries of the Colorado River flowing within their borders. Nevada asserts rights in the Virgin River System; New Mexico asserts rights in the Little Colorado and Gila Systems; and Utah asserts rights in the Virgin River System as well as in Kanab and Johnson Creeks. Arizona, the only other tributary state in the Lower Basin, does not ask that any of her rights in the tributaries be adjudicated in this case, other than the Gila. The United States claims

---

[15]Ariz. Exs. 106, 1000, p. 11; N. M. Ex. 400.
[16]Ariz. Ex. 1000, p. 11; Nev. Ex. 1; Utah Ex. 1.
[17]Tr. 17814 (Bingham); Ariz. Ex. 77, p. 60; Utah Ex. 1.

rights to the use of water from these tributaries for Indian Reservations and other federal establishments.[18]

As stated above, the Supreme Court will not apportion the waters of an interstate stream unless the state seeking the adjudication establishes "by clear and convincing evidence" that there exists a substantial conflict over the present use of the water. The burden is on the state seeking the adjudication to prove the necessity for it. See cases cited at page 320, *supra*.

Neither Nevada, New Mexico nor Utah has met this burden as to any of the tributaries except the Gila River. None of the downstream tributary states contests existing upstream uses on any of the tributaries. Arizona, a downstream state on each of the tributaries, maintains that existing upstream uses on the tributaries do not interfere with her uses,[19] and she does not challenge existing uses on any of the tributaries. Nor does Nevada, the only other downstream state, contest existing upstream uses on the Virgin River System in Utah.

Thus Nevada, New Mexico (except as to the Gila) and Utah are, in effect, asking for a declaratory decree confirming their respective existing tributary uses despite the fact that such uses are unchallenged. Such a decree would be wholly without precedent. Indeed, an unbroken line of decisions requires that jurisdiction not be exercised. See *e.g., Colorado* v. *Kansas,* 320 U. S. 383 (1943); *New York* v. *Illinois,* 274 U. S. 488 (1927); *Missouri* v. *Illinois,* 200 U. S. 496 (1906).

It is equally clear that rights of tributary users *inter sese* to make increased uses of tributary water in the future ought not to be adjudicated. There is presently unused tributary water regularly flowing into the mainstream from all of the tributaries except the Gila. The record

---

[18]See U. S. Proposed Conclusions 4.1, 4.2, 4.3, 4.12, 4.13, 4.21, 4.22.2, 8.1, 9.1.

[19]Ariz. Proposed Findings 159, 161, 163-164.

indicates that none of the tributary states will be able to utilize this water in the immediate future, and Supreme Court precedent requires that it not be reserved for one user against the possibility that another may appropriate it first. See cases cited at page 320, *supra*.

The considerations set forth above also control disposition of the claims of the United States. Present United States uses on the tributaries, other than the Gila, are not contested by any of the parties to this suit, and the record indicates that there is no danger of insufficient water to supply them in the future. No substantial increased United States uses appear imminent. If such uses are developed in the future, and other tributary users contest them, it will then be time to determine the extent of United States rights in the tributaries. Unlike the mainstream, the tributaries are not subject to the legal and physical control of the Secretary of the Interior, and hence with them there is no necessity of determining priorities so that the Secretary may know how to discharge his duties. There is, therefore, no occasion for declaring the extent of rights to water in the tributaries asserted for the benefit of Indian Reservations and National Forests, Parks, Recreation Areas, Memorials, and Monuments as well as lands administered by the Bureau of Land Management.

2. *The Gila River System.*

The interstate reaches of the Gila River System consist of parts of three streams, the Gila River proper and its tributaries, the San Francisco River and San Simon Creek. All of these streams have their headwaters in or near New Mexico, flow for a distance through that state and then enter Arizona.

The State of New Mexico seeks in this action a decree apportioning a quantity of water from the Gila River System sufficient to satisfy present and future requirements

for water in that part of the Gila River drainage basin located in New Mexico.[20]

Both Arizona and the United States oppose New Mexico's claims. First, they assert that New Mexico present uses are junior to those of the other parties and should not be confirmed out of priority.[21] Second, they maintain that actual present uses in New Mexico are substantially less than those claimed by New Mexico.[22] Third, they argue that confirmation of estimated New Mexico future requirements is completely unjustified.[23]

The Gila River System is overappropriated; the supply of water presently available and which seems likely to be available in the future is not sufficient to satisfy the needs and demands of existing projects. Under such circumstances, it is appropriate to adjudicate the controversy among New Mexico, Arizona and the United States over the right to water in the Gila System. *Nebraska* v. *Wyoming,* 325 U. S. 589 (1945). None of the parties opposes such an adjudication.

As noted in this Report, neither the Colorado River Compact nor the Boulder Canyon Project Act bears upon the question of the apportionment of water in the Lower Basin tributaries, see pages 316-317, *supra,* and hence they are of no help in deciding this controversy over the Gila River System. The doctrine of equitable apportionment is decisive of this controversy, as all the parties agree, although they differ as to its proper application.[24]

a. Present Uses

New Mexico seeks a confirmation of existing uses in that state from the Gila River System. Despite the fact

---

[20]N. M. Brief, Point III.

[22]Ariz. Special Appendix, pp. 1-8; U. S. Reply Brief, pp. 54-59.

[23]Ariz. Special Appendix, pp. 9-13; U. S. Reply Brief, pp. 60-61.

[24]Ariz. Opening Brief, pp. 62-63; N. M. Brief, pp. 4-5, 10-33; U. S. Brief, pp. 42-43.

that many of these uses are junior in time to uses downstream in Arizona, I conclude that they should not be disturbed.

Although priority of appropriation has been characterized as the guiding principle of equitable apportionment in the arid regions of the United States, *Nebraska* v. *Wyoming,* 325 U. S. 589 (1945); *Wyoming* v. *Colorado,* 259 U. S. 419 (1922), it is by no means necessarily conclusive of the rights in dispute. In *Nebraska* v. *Wyoming, supra,* at 618, the Court said:

> "Priority of appropriation is the guiding principle. But physical and climatic conditions, the consumptive use of water in the several sections of the river, the character and rate of return flows, the extent of established uses, the availability of storage water, the practical effect of wasteful uses on downstream areas, the damage to upstream areas as compared to the benefits to the downstream areas if a limitation is imposed on the former—these are all relevant factors. They are merely an illustrative, not an exhaustive catalogue. They indicate the nature of the problem of apportionment and the delicate adjustment of interests which must be made."

It is worthy of note that the Court, in an equitable apportionment suit, has never reduced junior upstream existing uses by rigid application of priority of appropriation. Indeed, the tendency has been to protect existing uses wherever possible. See *Washington* v. *Oregon,* 297 U. S. 517 (1936); *Kansas* v. *Colorado,* 206 U. S. 46 (1907).

In *Nebraska* v. *Wyoming, supra,* at 621-622, junior upstream existing uses were confirmed despite the fact that the North Platte, as the Gila is here, was overappropriated. The Court stated:

> "We are satisfied that a reduction in present Colorado uses is not warranted. The fact that the same amount of water might produce more in

> lower sections of the river is immaterial. [citations omitted] The established economy in Colorado's section of the river basin based on existing use of the water should be protected. [citations omitted] Appropriators in Colorado junior to Pathfinder have made out-of-priority diversions of substantial amounts. Strict application of the priority rule might well result in placing a limitation on Colorado's present use for the benefit of Pathfinder. But as we have said, priority of appropriation, while the guiding principle for an apportionment is not a hard and fast rule. Colorado's countervailing equities indicate it should not be strictly adhered to in this situation."

It is clear that the agricultural economy of the Gila River Basin in New Mexico is dependent upon water from the system and that reduction of present uses will result in commensurate contraction of that economy. Furthermore, some of the water which is used beneficially in New Mexico would be lost enroute to users in Arizona.[25] In addition, it seems that New Mexico uses only a relatively small portion of the water she contributes to the Gila River System.[26] I am satisfied, therefore, that a reduction of present New Mexico uses is not warranted. The presently irrigated acreage figures for lands in New Mexico outside the Virden Valley, set forth in the Findings of Fact and recommended decree, represent a compromise between Arizona and New Mexico to which the United States has interposed no objection. This compromise has been adopted in the decree.

This does not mean, however, that priorities as to present uses are entirely without force. On the contrary, the Gila Decree, *United States* v. *Gila Valley Irrigation District, et al* (Globe Equity No. 59),[26a] which adjudicated priorities

---

[25]Tr. 1403 (Gookin).
[26]See Ariz. Ex. 77, table 23.
[26a]Ariz. Ex. 103.

on an interstate reach of the Gila River, including the Virden Valley in New Mexico, is not abrogated. Certainly confirmation of present uses requires adherence to the priorities presently being administered under that Decree. The major justification for refusing to reduce existing junior uses is to avoid disrupting going economies. Since the economy of the Virden Valley is largely based on the Gila Decree, enforcement of that decree will not disrupt the existing economy. Furthermore, the State of New Mexico is bound by that Decree to the extent that her citizens, whom she represents *parens patriae* in this suit, are bound. See *Brooks* v. *United States,* 119 F.2d 636, 643 (9th Cir.), cert. *denied,* 313 U. S. 594 (1941); *cf. Hinderlider* v. *La Plata,* 304 U. S. 92 (1938); *Wyoming* v. *Colorado,* 286 U. S. 494 (1932). If this were not the case then the rights of individual citizens, when asserted by them, would be limited by the Gila Decree, whereas their rights would not be so limited if asserted by the State as their representative.

The so-called Greenlee County and Cave Creek Decrees[27] are not binding upon New Mexico as they purport only to adjudicate water rights appurtenant to land located within Greenlee County and Cochise County, Arizona.

The decree in this cause will, of necessity, limit uses of both underground and surface water, as New Mexico's proof of irrigated acreage included acreage irrigated from surface and underground sources without distinction. This would be the proper course in any event since it appears that there is such a close relationship between surface and underground waters in this part of the System that f[illegible]ure to limit uses of underground water might well provide New Mexico an opportunity for further reduction of the surface flow of the Gila River System by allowing unrestricted depletion of underground sources.[28]

---

[27]Ariz. Exs. 301-302A.

[28]See Tr. 2659-2660, 2674-2675 (Turner); 17745-17746 (Reynolds).

Two questions have been raised with respect to the use of underground, pumped water on lands in the Virden Valley in New Mexico. One question is whether lands specified in the Gila Decree may be irrigated by pumped water in addition to the surface diversions from the Gila River permitted by the Decree. The resolution of this question, which requires an interpretation of the Gila Decree, is best left to the court which rendered and administers that Decree. It is sufficient in this case to hold that the Gila Decree governs all uses of water on lands in the Virden Valley specified in the Decree, and that the interpretation of the Decree is left to the United States District Court for the District of Arizona. The recommended decree is to be so construed.

The other question is whether the use of underground, pumped water on lands in the Virden Valley which are not specified in the Gila Decree should be prohibited. Arizona and New Mexico have stipulated that there are 380.81 acres of land within the Virden Valley which are not specified in the Gila Decree and which are presently being irrigated with water from the underground water sources of the Gila River. The United States does not dispute this figure.

Arizona and New Mexico have compromised this question by agreeing that these non-decree lands, or other lands or uses in the Virden Valley to which their water rights may be transferred, may consumptively use not more than 838.2 acre-feet of underground water per annum "unless and until such uses are adjudged by a court of competent jurisdiction to be an infringement or impairment of rights confirmed by the Gila Decree." The United States objects to this compromise, asserting that the use of this water may reduce the surface supply in the Gila River available for storage in the San Carlos Reservoir, which in turn would reduce the water available for the Gila River Indian Reservation.

Despite this opposition from the United States, I have decided to adopt the Arizona-New Mexico settlement. The total quantity of ground water involved is only 838.2 acre feet. While I have found that pumping of ground water in the Gila River System basin affects the surface supply, there is no evidence regarding the extent that out-of-decree pumping in the Virden Valley affects United States interests in Arizona. The maximum effect would be in the amount of the 838.2 acre-feet, and in all probabilty the diminution of surface supply available to the Gila River Indian Reservation would be much less. Moreover, the United States is not foreclosed. It is protected from injury if it can show that pumping from lands outside the Gila Decree impairs rights confirmed to it under the Decree. For similar reasons I have also adopted in the recommended decree a compromise between Arizona and New Mexico which permits the domestic use of a maximum of 265 acre-feet per annum of water diverted from the Gila River or its underground sources in the Virden Valley in addition to the uses confirmed by the Gila Decree, "unless and until such uses are adjudged by a court of competent jurisdiction to be an infringement or impairment of rights confirmed by the Gila Decree."

Both San Simon Creek and the San Francisco River have their confluence with the Gila River in Arizona. In order to ensure that Arizona users on the Gila and on those tributaries of the Gila will not be adversely affected by increased use, diversions from one of these streams may not be transferred to any of the other streams, nor may uses for irrigation purposes within any area on one of the streams be transferred for use for irrigation purposes to any other area on that stream.[20] The recommended decree so provides.

---

[20]The areas on the San Francisco River System are: Luna, Apache Creek-Aragon, Reserve, and Glenwood (including Mule Creek). The Luna, Apache Creek-Aragon, and Reserve areas are

b. Future Uses

New Mexico also claims the right to water for future requirements. It is here, however, that priority of appropriation has its greatest effect. It would be unreasonable in the extreme to reserve water for future use in New Mexico when senior downstream appropriators in Arizona remain unsatisfied. It was so held as to Colorado's claim in *Nebraska* v. *Wyoming,* 325 U. S. 589 (1945).

New Mexico seeks to mitigate the effect of her claim by attempting to establish that, should additional water storage facilities be constructed sometime in the uncertain future, increased uses in New Mexico would not diminish the supply for downstream Arizona users.[80] To formulate a decree on the basis of such hypothetical facts would not be prudent. In *Nebraska* v. *Wyoming, supra,* at 620, the Court said:

> "There is no reliable basis for prediction. But a controversy exists; and the decree which is entered must deal with conditions as they obtain today. If they substantially change, the decree can be adjusted to meet the new condition."

Of course, the decree will provide for modification should a change of condition warrant it.

---

as shown on Arizona Exhibit 334. Glenwood (including Mule Creek) embraces the area delineated on Arizona Exhibit 334 as the Glenwood area and in addition thereto all of the San Francisco River System in New Mexico to the south of the Glenwood area as shown on said Exhibit 334.

The areas on the Gila River System are: Upper Gila, Cliff-Gila and Buckhorn-Duck Creek, Red Rock, and Virden Valley. The Red Rock area is as shown on Arizona Exhibit 328. The Cliff-Gila and Buckhorn Duck-Creek area is as shown on Arizona Exhibit 328 and in addition thereto embraces all areas on Mangas Creek and tributaries thereto. The Upper Gila area embraces the entire Gila River System upstream from the Cliff-Gila and Buckhorn-Duck Creek area as herein defined. The Virden Valley is that portion of the Gila River System in New Mexico (excluding the San Francisco River and San Simon Creek and their tributaries) downstream from the area delineated as Red Rock on Arizona Exhibit 328.

[80] N. M. Proposed Findings 18-21.

c. United States Claims

The United States asserts rights to water from sources within the drainage of the Gila River System for use on various Indian Reservations as well as on National Forests, Parks, Monuments and lands administered by the Bureau of Land Management.

A number of Indian Reservations and several other federal establishments are situated on tributaries of the Gila which flow exclusively within the State of Arizona. The United States claims on these Arizona tributaries assume the posture of claims against other individual users within the State of Arizona. It would be inexpedient in this case to adjudicate such purely local claims. Moreover, there is no such collision between competing uses on these tributaries as to warrant judicial interference in this litigation. And even if there were such a dispute, it would not be necessary or helpful to resolve it in order to make the apportionment between Arizona and New Mexico.

Different considerations govern the claims of the United States to water from the Gila River and its interstate tributaries. These streams are overappropriated. The controversy with respect to them is real and immediate; and the disposition of these claims materially affects the interstate allocation as between Arizona and New Mexico. Thus New Mexico's claim for confirmation of existing uses out-of-priority conflicts with the United States claim that it has reserved water of the Gila River and its interstate tributaries for the use of its establishments downstream in Arizona.

There are three Indian Reservations on behalf of which the United States claims the right to water from the Gila River proper; they are the Gila River, the San Carlos and the Gila Bend Indian Reservations.[81] The United States

[81] See U. S. Proposed Conclusions 4.21, 4.22.2, 4.23.4.

does not claim any rights to divert water for Indian Reservations from the San Francisco River and San Simon Creek, the other two interstate streams of the Gila System. The interests of both the Gila River Indian Reservation and San Carlos Indian Reservation were represented by the United States in *United States* v. *Gila Valley Irrigation District, et al.* (Globe Equity No. 59)[32] and the United States concedes that rights to divert water from the mainstream of the Gila River asserted on behalf of these Reservations are governed by the Gila Decree.[33] However, rights of the Gila Bend Indian Reservation, which is located below the confluence of the Salt and Gila Rivers approximately 40 miles southwest of Phoenix, are not subject to the Gila Decree.

Assuming *arguendo* that this Reservation has the senior priority on the Gila River, proper application of the principles of equitable apportionment would still compel a finding that reduction of present New Mexico uses for its benefit would be unwarranted. The Gila is a wasting stream below Ashurst-Hayden Dam, see note 45, page 338, *infra*. Water required to be released at potential points of use in New Mexico would have to travel through part of that state and through half of Arizona, across hot deserts, before reaching the Reservation, and a substantial amount of it would be lost en route. Moreover, the United States admits that "an adequate water supply, primarily from underground sources . . . . is presently available for the irrigation of lands of the Gila Bend Indian Reservation."[34] It is apparent, therefore, that no reasonable purpose can be served in an equitable apportionment by allocating water to the Reservation at the expense of present New Mexico uses.

---

[32]Ariz. Ex. 103.
[33]See U. S. Proposed Conclusions 4.22.1, 4.23.2.
[34]U. S. Proposed Finding 4.21.5.

Any claims that the Reservation might have as against Arizona users on the Salt and Gila Rivers are, as discussed above, matters of intrastate rights and priorities which should not be adjudicated in this case.

The United States also claims rights to water from sources within the drainage area of the Gila River System for use in National Forests, Parks, Memorials and Monuments as well as for lands administered by the Bureau of Land Management. For reasons already stated, only claims to water of the Gila River and its interstate tributaries will be here considered. Ten federal establishments fall within this category.

With the exception of the Gila National Forest, it is unnecessary to pass on the claims of the United States for water for any of the other nine federal establisments, because the United States has not demonstrated, except as to the Gila National Forest, that it presently utilizes or requires water from the mainstream of the Gila or its interstate tributaries in order to carry out the purposes of these establishments. Nor has the United States demonstrated, again excepting the Gila National Forest, that it will in the future require water from these sources. There is, therefore, no controversy over uses by these federal establishments to be adjudicated. Certainly it would be inappropriate to adjudicate the claims of the United States (with the exception noted) at this time since those claims may never be exercised much less questioned. Moreover, it would be impossible on the basis of this record to determine the water rights of the United States (except for the Gila National Forest) either on the basis of state law or on the basis of federal reservation of water. Of course, the rights of Arizona and New Mexico adjudicated herein are subject to possible superior rights of the United States asserted on behalf of National Forests, Parks, Memorials, Monuments and lands administered by the Bureau of

Land Management, as such rights may be determined hereafter.

The Gila National Forest presently diverts water from the mainstream of the Gila and San Francisco Rivers. The finding is warranted that the United States intended, when it withdrew this Forest from entry, to reserve the water necessary to fulfill the purposes for which the Forest was created. Support for this finding lies in the following facts: The Gila and San Francisco Rivers are the only substantial streams which flow within the boundaries of the Forest; the purposes of the Forest cannot be fulfilled without an adequate water supply; and the United States presently utilizes water from these sources in order to maintain the Forest. The power of the United States to make such a reservation with respect to the Forest cannot be logically differentiated from the power of the United States with respect to Indian Reservations and Recreation Areas.

Having found that the United States intended to reserve water from these sources in quantities reasonably necessary to fulfill the purpose of withdrawal, and having concluded that the United States has the power to make such a reservation, it follows that water rights in the Gila River System recognized by the recommended decree herein are subordinate to the right of the United States to divert water for the Gila National Forest to the extent that the former rights are junior in time. As in the case of the Lake Mead National Recreation Area, the future water requirements of the Gila National Forest appear to be so modest that it is unnecessary to put maximum limits on the reserved water rights created for its benefit.

FINDINGS OF FACT

1. The Gila River rises in the mountainous areas of southwestern New Mexico near the towns of Cliff and Gila. It flows southwesterly—entering Arizona between Virden,

New Mexico and Duncan, Arizona. Thence it flows westerly across Arizona to its confluence with the Colorado River below Imperial and Laguna Dams near Yuma, Arizona. Its major tributaries are San Simon Creek and the San Francisco, San Carlos, San Pedro, Santa Cruz, Salt, Verde (a tributary of the Salt), Agua Fria and Hassayampa Rivers. The Gila River System drains a total of 57,800 square miles.[35]

2. The San Francisco River, which rises in Arizona near the town of Alpine, enters New Mexico near Luna and thence flows easterly, southerly and then westerly to re-cross the state line and enter Arizona near Clifton. Its confluence with the Gila River lies below Clifton and west of Guthrie, Arizona. The San Francisco River drains a total of 2,800 square miles.[36]

3. San Simon Creek is formed in New Mexico by tributaries which rise in southeastern Arizona and southwestern New Mexico. It enters Arizona in the San Simon-Cienaga area north of Rodeo, New Mexico and thence flows northwesterly for over 100 miles to its confluence with the Gila River below Solomonsville, Arizona. San Simon Creek drains a total of 2,280 square miles.[37]

4. There are ten Indian Reservations on the Gila River System, all within the State of Arizona. They are the Ak Chin, Camp Verde, Fort Apache, Fort McDowell, Papago, Salt River, San Xavier, Gila Bend, Gila River and San Carlos Reservations.[38]

5. The Gila Bend, Gila River and San Carlos Reservations are situated on the Gila River. The other seven Reserva-

[35]Ariz. Exs. 106, 328, 1000, p. 12; N. M. Exs. 400, 402B, 402D.

[38]See Part One, pp. 88-94.

tions are situated on tributaries of the Gila which flow entirely within the State of Arizona.[39]

6. The Gila Bend Indian Reservation is situated below the confluence of the Salt and Gila Rivers in Arizona, approximately 40 miles southwest of Phoenix.[40]

7. Coolidge Dam is the sole water storage facility on the Gila River between its headwaters and its confluence with the Salt River. Situated 26 miles southeast of Globe, Arizona, it creates the San Carlos Reservoir which serves the San Carlos Project in Arizona.[41]

8. The flow of the Gila River and its tributaries has been erratic.[42]

9. On June 29, 1935, the United States District Court for the District of Arizona entered a final decree which determined rights to divert and use water from the Gila River from a point in New Mexico (above the Virden Valley) ten miles east of the eastern boundary of Arizona to the Gila River Crossing, located a short distance upstream from the joinder of the Gila and Salt Rivers southwest of Phoenix, Arizona. *United States* v. *Gila Valley Irrigation District, et al.* (Globe Equity No. 59).[43]

10. The Gila River, San Francisco River, and San Simon Creek are overappropriated, supply being insufficient to satisfy existing needs.[44]

---

[40]See U. S. Exs. 1408-1409.
[41]See Part One, p. 39.
[42]See *e.g.*, Ariz. Ex. 98, pp. 604-605, 609-610, 626-627.
[43]Ariz. Exs. 103, 300.
[44]Ariz. Answering Brief p. 83; N. M. Rebuttal Brief, p. 5. For example, under the Gila Decree (Globe Equity No. 59) the United States has the right to divert up to 603,276 acre-feet per annum at Ashurst-Hayden Dam for the use of the San Carlos Project and

11. The Gila River is a losing or wasting stream below Ashurst-Hayden Dam.[45]

12. Lands within the Gila River System drainage basin in New Mexico are irrigated with surface and underground water.[46]

13. There are 2,900 acres presently being irrigated with water from San Simon Creek, its tributaries and underground water sources in New Mexico.[47]

14. Present annual consumptive uses of water from San Simon Creek, its tributaries and underground water sources in New Mexico are 7,200 acre-feet.[48]

---

certain federal and Arizona agencies. Ariz. Ex. 103 p. 98. However, diversions at Ashurst-Hayden Dam from 1934 to 1955 averaged 187,000 acre-feet per year. Ariz. Ex. 139, p. 1. The 1951-1955 diversion figures were as follows:

1951	47,000 acre-feet
1952	226,000 acre-feet
1953	53,000 acre-feet
1954	121,000 acre-feet
1955	113,000 acre-feet

Similarly, the Gila Decree authorized the storage in San Carlos Reservoir of 1,285,000 acre-feet. Ariz. Ex. 103, p. 105. Storage in the Reservoir, however, has never exceeded 800,000 acre-feet and storage, from 1934 to 1955, averaged 168,000 acre-feet. Ariz. Ex. 139, p. 5. Storage figures as of May 1 for the years 1951 through 1955 were:

1951	—0— acre-feet
1952	160,000 acre-feet
1953	9,000 acre-feet
1954	26,000 acre-feet
1955	—0— acre-feet

An average of 63,000 acres of the 100,546 acre San Carlos Project were irrigated from 1934 to 1955. Most of the unirrigated acreage would have been irrigated had the water supply been adequate. Tr. 1560-1562 (Gookin); see Ariz. Ex. 139. See also Part One, pp. 48-50.

[45]Tr. 1399-1402 (Gookin); 5584-5590 (Dugan); Ariz. Ex. 77B, p. 33, Table G.

[46]See Tr. 17389-17407 (Sorenson); N. M. Ex. 517.

[47]Tr. 17389-17407 (Sorenson).

[48]N. M. Ex. 517.

15. There are 225 acres presently being irrigated in the Luna area of the San Francisco River System in New Mexico.

16. There are 316 acres presently being irrigated in the Apache Creek-Aragon area of the San Francisco River System in New Mexico.

17. There are 725 acres presently being irrigated in the Reserve area of the San Francisco River System in New Mexico.

18. There are 1,003 acres presently being irrigated in the Glenwood area (including Mule Creek) of the San Francisco River System in New Mexico.

19. Thus there is an aggregate of 2,269 acres presently being irrigated with water from the San Francisco River, its tributaries and underground water sources in New Mexico.

20. Present annual consumptive uses of water from the San Francisco River, its tributaries and underground water sources in New Mexico, for all uses, are 3,187 acre-feet.

21. There are 287 acres presently being irrigated in the Upper Gila area of the Gila River in New Mexico.

22. There are 1,456 acres presently being irrigated in the Red Rock area (including the Fuller Ranch) of the Gila River in New Mexico.

23. There are 5,314 acres presently being irrigated in the Cliff-Gila and Buckhorn-Duck Creek area of the Gila River in New Mexico.

24. Thus there is an aggregate of 7,057 acres (exclusive of the Virden Valley) presently being irrigated with water

from the Gila River and its underground water sources in New Mexico.

25. Present annual consumptive uses of water from the Gila River and its underground water sources in New Mexico (exclusive of the Virden Valley), for all uses, are 13,662 acre-feet.

26. There are 380.81 acres of land within the Virden Valley, New Mexico, with no rights confirmed by the Gila Decree (Globe Equity No. 59) which are presently being irrigated with water from the underground water sources of the Gila River, to-wit, the following designated and described parcels owned by the following persons:

27. New Mexico has not established that her claimed rights are senior in time to rights of Arizona and the United States.[49]

28. The Gila National Forest is the only one of the National Forests, Parks, Memorials, Monuments and lands administered by the Bureau of Land Management which presently diverts water from the mainstream of the Gila or its interstate tributaries.[50]

---

[49]See N. M. Opening Brief, pp. 6-10; N. M. Rebuttal Brief, p 4; N. M. Proposed Finding 12.

[50]See U. S. Exs. 2706, 2708, 2710, 2712, 2716, 2718, 2720A, 2720B, 2803, 2815, 2821. 2908-2911.

29. The Gila National Forest was created as a public reservation by a Presidential Proclamation dated March 2, 1899. Its area was subsequently enlarged and modified.[51]

30. In withdrawing lands for the Gila National Forest the United States intended to reserve rights to the use of so much water from the Gila and San Francisco Rivers as might be reasonably needed to fulfill the purposes of the Forest.[52]

31. There is not sufficient evidence to make a finding of the ultimate water requirements of the Gila National Forest.

CONCLUSIONS OF LAW

1. The Colorado River Compact does not give New Mexico any rights to the use of water from the Gila River System as against any of the other states of the Lower Basin.

2. The Boulder Canyon Project Act, 45 Stat. 1057 (1929), does not give New Mexico any rights to the use of water from the Gila River System as against any of the other states of the Lower Basin.

3. This controversy is governed by the principles of equitable apportionment.

4. An equitable apportionment of the waters of the Gila River System does not justify reduction of present New Mexico uses. Such uses as are specified in the foregoing Findings of Fact should be confirmed.

5. An equitable apportionment of the waters of the Gila River System requires that uses in excess of those specified in the foregoing Findings of Fact should be enjoined.

---

[51]See U. S. Exs. 2720A-2720B.

[52]Presidential Proclamation of March 2, 1899, U. S. Exs. 2719A-2720B.

6. For purposes of this equitable apportionment, the State of New Mexico, as well as her citizens, is bound by the Gila Decree (Globe Equity No. 59) and priorities therein specified shall continue to be administered thereunder.

7. The decree herein recommended applies both to surface and underground water.

8. Uses recognized on particular streams may not be transferred so as to justify additional uses on other streams.

9. Rights to water from the Gila River for the benefit of the San Carlos and Gila River Indian Reservations are governed by the Gila Decree (Globe Equity No. 59).

10. Claims of the United States on behalf of the Gila Bend Indian Reservation against New Mexico users are rejected. Similar claims against Arizona users are not determined herein.

11. The United States has the right to divert water from the mainstream of the Gila and San Francisco Rivers in quantities reasonably necessary to fulfill the purposes of the Gila National Forest with priority dates as of the date of withdrawal for forest purposes of each area of the Forest within which the water is used.

PART THREE

PART THREE

Recommended Decree

It is ORDERED, ADJUDGED AND DECREED that

I. For purposes of this decree:

(A) "Consumptive use" means diversions from the stream less such return flow thereto as is available for consumptive use in the United States or in satisfaction of the Mexican treaty obligation;

(B) "Mainstream" means Lake Mead and the mainstream of the Colorado River downstream from Lake Mead within the United States;

(C) Consumptive use from the mainstream within a state shall include all uses of water of the mainstream within that state, including but not limited to, uses made by persons, by agencies of the state, and by the United States for the benefit of Indian Reservations and other federal establishments within the state;

(D) "Regulatory structures controlled by the United States" refers to Hoover Dam, Davis Dam, Parker Dam, Headgate Rock Dam, Palo Verde Weir, Imperial Dam, Laguna Dam and all other dams and works controlled or operated by the United States which regulate the flow of water in the mainstream or the diversion of water from the mainstream;

(E) "Water controlled by the United States" refers to the water in Lake Mead, Lake Mohave, Lake Havasu and all other water in the mainstream below Hoover Dam and within the United States of America;

(F) "Tributaries" means all stream systems in the Lower Basin of the Colorado River the waters of which

naturally drain into the main Colorado River and also means that portion of the main Colorado River in the Lower Basin above Lake Mead;

(G) "Perfected right" means a water right acquired in accordance with state law, which right has been exercised by the actual diversion of a specific quantity of water that has been applied to a defined area of land or to definite municipal or industrial works, and in addition shall include water rights created by the reservation of mainstream water for the use of federal establishments under federal law whether or not the water has been applied to beneficial use;

(H) "Present perfected rights" means perfected rights, as here defined, existing as of June 25, 1929, the effective date of the Boulder Canyon Project Act;

(I) "Domestic use" shall include the use of water for household, stock, municipal, mining, milling, industrial, and other like purposes, but shall exclude the generation of electrical power;

(J) "Annual" and "Year," except where the context may otherwise require, refer to calendar years;

(K) Consumptive use of water diverted in one state for consumptive use in another state shall be treated as if diverted in the state for whose benefit it is consumed.

II. The United States, its officers, attorneys, agents and employees, be, and they are hereby severally enjoined:

(A) From operating regulatory structures controlled by the United States and from releasing water controlled by the United States other than in accordance with the following order of priority:

(1) For river regulation, improvement of navigation, and flood control,

(2) For irrigation and domestic use, and

(3) For power;

Provided, however, that the United States may release water in satisfaction of its obligations to the United States of Mexico under the treaty dated February 3, 1944, without regard to the priorities specified above;

(B) From releasing water controlled by the United States for irrigation and domestic use in the States of Arizona, California and Nevada, except as follows:

(1) If sufficient mainstream water is available for release, as determined by the Secretary of the Interior, to satisfy 7,500,000 acre-feet of annual consumptive use in the aforesaid three states, then of such 7,500,000 acre-feet of consumptive use, there shall be apportioned 2,800,000 acre-feet for use in Arizona, 4,400,000 acre-feet for use in California, and 300,000 acre-feet for use in Nevada;

(2) If sufficient mainstream water is available for release, as determined by the Secretary of the Interior, to satisfy annual consumptive use in the aforesaid states in excess of 7,500,000 acre-feet, such excess consumptive use is surplus, and 50% thereof shall be apportioned for use in Arizona and 50% for use in California; provided, however, that if the United States so contracts with Nevada, then 46% of such surplus shall be apportioned for use in Arizona and 4% for use in Nevada;

(3) If insufficient mainstream water is available for release, as determined by the Secretary of the In-

terior, to satisfy annual consumptive use of 7,500,000 acre-feet in the aforesaid three states, then the available annual consumptive use shall be apportioned as follows:

(a) For use in Arizona $\frac{2.8}{7.5}$,

(b) For use in California $\frac{4.4}{7.5}$,

(c) For use in Nevada $\frac{.3}{7.5}$;

(4) Any mainstream water consumptively used within a state shall be charged to its apportionment, regardless of the purpose for which it was released;

(5) If the water apportioned for consumptive use in any of said states in any year is insufficient to satisfy present perfected rights in that state, the deficiency shall first be supplied out of water apportioned for use in the other two states but not consumed in those states, and any remaining deficiency shall be supplied by each of the remaining states, out of water apportioned for consumptive use in such states which is in excess of the quantity necessary to satisfy present perfected rights in such states, in proportion to the ratios heretofore established between them, to wit: if water must be supplied to satisfy present perfected rights in two of the three states, then the third state shall, out of such excess, supply all the necessary water, and if water must be supplied to satisfy present perfected rights in one state, then each of the other two states shall out of such excess supply that proportion of the necessary water that its apportionment of the first

7,500,000 acre-feet of consumptive use bears to the aggregate apportionment of the two states;[1] provided, however, that present perfected rights in California shall not exceed 4,400,000 acre-feet of consumptive use per annum;

(6) If the mainstream water apportioned for consumptive use in any year is insufficient to satisfy present perfected rights in each and all of the three states, then such water shall be allocated for consumptive use in accordance with the priority of present perfected rights without regard to state lines; provided, however, that present perfected rights in California shall not exceed 4,400,000 acre-feet of consumptive use per annum;

(7) Notwithstanding the provisions of Paragraphs (1) through (6) of this subdivision (B), mainstream water shall be delivered to users in Arizona, California and Nevada only if contracts have been made by the Secretary of the Interior, pursuant to Section 5 of the Boulder Canyon Project Act, for delivery of such water;

(8) If, in any one year, water apportioned for consumptive use in a state will not be consumed in that state, whether for the reason that delivery contracts for the full amount of the state's apportionment are not in effect or that users cannot apply all of such water to beneficial uses, or for any other reason, nothing in this decree shall be construed as prohibiting the Secretary of the Interior from releasing such apportioned but unused water during such year for consumptive use in the other

[1]Thus if water is to be supplied to California from the other states' apportionment, Arizona shall contribute $\frac{2.8}{3.1}$ and Nevada $\frac{.3}{3.1}$ of the total amount supplied.

states. No rights to the recurrent use of such water shall accrue by reason of the use thereof;

(C) From releasing water controlled by the United States for use in the States of Arizona, California and Nevada for:

(1) Any use or user in violation of state law, except as specified in Article II (B) (5) and (6) of this decree and except as federal statutes may otherwise specifically direct;

(2) The benefit of any federal establishment, except as specified hereinafter; provided, however, that such release may be made notwithstanding the provisions of Paragraph (7) of subdivision (B) of this Article and of Paragraph (1) of this subdivision (C) and provided further that nothing herein shall prohibit the United States from making future additional reservations of unappropriated mainstream water as may be authorized by law:

(a) The Chemehuevi Indian Reservation in annual quantities not to exceed (i) 11,340 acre-feet of diversions from the mainstream or (ii) the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 1,900 acres and for the satisfaction of related uses, whichever of (i) or (ii) is less, with a priority date of February 2, 1907;

(b) The Cocopah Indian Reservation in annual quantities not to exceed (i) 2,744 acre-feet of diversions from the mainstream or (ii) the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 431 acres and for the satisfaction of related uses, whichever of (i) or (ii) is less, with a priority date of September 27, 1917;

(c) The Yuma Indian Reservation in annual quantities not to exceed (i) 51,616 acre-feet of diversions from the mainstream or (ii) the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 7,743 acres and for the satisfaction of related uses, whichever of (i) or (ii) is less, with a priority date of January 9, 1884;

(d) The Colorado River Indian Reservation in annual quantities not to exceed (i) 717,148 acre-feet of diversions from the mainstream or (ii) the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 107,588 acres and for the satisfaction of related uses, whichever of (i) or (ii) is less, with priority dates of March 3, 1865, for lands reserved by the Act of March 3, 1865 (13 Stat. 541, 559); November 22, 1873, for lands reserved by the Executive Order of said date; November 16, 1874, for lands reserved by the Executive Order of said date, except as later modified; May 15, 1876, for lands reserved by the Executive Order of said date; November 22, 1915, for lands reserved by the Executive Order of said date;

(e) The Fort Mohave Indian Reservation in annual quantities not to exceed (i) 122,648 acre-feet of diversions from the mainstream or (ii) the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 18,974 acres and for the satisfaction of related uses, whichever of (i) or (ii) is less, and, subject to the next succeeding proviso, with priority dates of September 18, 1890, for lands transferred by the Executive Order of said date;

February 2, 1911, for lands reserved by the Executive Order of said date; provided, however, that lands conveyed to the State of California pursuant to the Swamp and Overflowed Lands Act [9 Stat. 519 (1850)] as well as any accretions thereto to which the owners of such land may be entitled, and lands patented to the Southern Pacific Railroad pursuant to the Act of July 27, 1866 (14 Stat. 292) shall not be included as irrigable acreage within the Reservation and that the above specified diversion requirement shall be reduced by 6.4 acre-feet per acre of such land that is irrigable;

(f) The Lake Mead National Recreation Area in annual quantities reasonably necessary to fulfill the purposes of the Recreation Area, with priority dates of March 3, 1929, for lands reserved by the Executive Order of said date (No. 5105), and April 25, 1930, for lands reserved by the Executive Order of said date (No. 5339);

(g) The Havasu Lake National Wildlife Refuge in annual quantities reasonably necessary to fulfill the purposes of the Refuge, not to exceed (i) 41,839 acre-feet of water diverted from the mainstream or (ii) 37,339 acre-feet of consumptive use of mainstream water, whichever of (i) or (ii) is less, with a priority date of January 22, 1941, for lands reserved by the Executive Order of said date (No. 8647), and a priority date of February 11, 1949, for land reserved by the Public Land Order of said date (No. 559);

(h) The Imperial National Wildlife Refuge in annual quantities reasonbly necessary to fulfill

the purposes of the Refuge not to exceed (i) 28,000 acre-feet of water diverted from the mainstream or (ii) 23,000 acre-feet of consumptive use of mainstream water, whichever of (i) or (ii) is less, with a priority date of February 14, 1941.

Provided further, that consumptive uses for the benefit of the above named federal establishments shall be satisfied only out of water allocated, as provided in subdivision (B) of this Article, to each state wherein such uses occur, and only to the extent that their priorities specified herein are senior to other priorities within the state.

III. The States of Arizona, California and Nevada, Palo Verde Irrigation District, Imperial Irrigation District, Coachella Valley County Water District, Metropolitan Water District of Southern California, City of Los Angeles, City of San Diego, and County of San Diego, their officers, attorneys, agents and employees, be and they are hereby severally enjoined:

(A) From interfering with the management and operation, in conformity with Article II of this decree, of regulatory structures controlled by the United States;

(B) From interfering with or permitting the interference with releases and deliveries, in conformity with Article II of this decree, of water controlled by the United States;

(C) From diverting or permitting the diversion of water from the mainstream the diversion of which has not been authorized by the United States for use in the respective states; and provided further that none of the above named political subdivisions of the State of California shall divert or permit the diversion of water

from the mainstream the diversion of which has not been authorized by the United States for its particular use;

(D) From consuming or permitting the consumptive use of water from the mainstream in excess of the quantities specified in Article II of this decree.

IV. The State of New Mexico, its officers, attorneys, agents and employees, be and they are after four years from the date of this decree hereby severally enjoined:

(A) From diverting or permitting the diversion of water from San Simon Creek, its tributaries and underground water sources for the irrigation of more than a total of 2,900 acres during any one year, and from exceeding a total consumptive use of such water, for whatever purpose, of 72,000 acre-feet during any period of ten consecutive years; and from exceeding a total consumptive use of such water, for whatever purpose, of 8,220 acre-feet during any one year;

(B) From diverting or permitting the diversion of water from the San Francisco River, its tributaries and underground water sources for the irrigation within each of the following areas of more than the following number of acres during any one year:

Luna Area	225
Apache Creek-Aragon Area	316
Reserve Area	725
Glenwood Area	1,003;

and from exceeding a total consumptive use of such water, for whatever purpose, of 31,870 acre-feet during any period of ten consecutive years; and from exceeding a total consumptive use of such water, for whatever purpose, of 4,112 acre-feet during any one year;

(C) From diverting or permitting the diversion of water from the Gila River, its tributaries (exclusive of the San Francisco River and San Simon Creek and their tributaries) and underground water sources for the irrigation within each of the following areas of more than the following number of acres during any one year:

Upper Gila Area	287
Cliff-Gila and Buckhorn-Duck Creek Area	5,314
Red Rock Area	1,456;

and from exceeding a total consumptive use of such water (exclusive of uses in Virden Valley, New Mexico), for whatever purpose, of 136,620 acre-feet during any period of ten consecutive years; and from exceeding a total consumptive use of such water (exclusive of uses in Virden Valley, New Mexico), for whatever purpose, of 15,895 acre-feet during any one year;

(D) From diverting or permitting the diversion of water from the Gila River and its underground water sources in the Virden Valley, New Mexico, except for use on lands determined to have the right to the use of such water by the decree entered by the United States District Court for the District of Arizona on June 29, 1935, in *United States* v. *Gila Valley Irrigation District, et al.* (Globe Equity No. 59) (herein referred to as the Gila Decree), and except pursuant to and in accordance with the terms and provisions of the Gila Decree; provided, however, that:

(1) This decree shall not enjoin the use of underground water on any of the following lands:

or on lands or for other uses in the Virden Valley to which such use may be transferred or substituted on retirement from irrigation of any of said specifically described lands, up to a maximum total consumptive use of such water of 838.2 acre-feet per annum, unless and until such uses are adjudged by a court of competent jurisdiction to be an infringement or impairment of rights confirmed by the Gila Decree; and

(2) This decree shall not prohibit domestic use of water from the Gila River and its underground water sources on lands with rights confirmed by the Gila Decree, or on farmsteads located adjacent to said lands, or in the Virden Townsite, up to a total consumptive use of 265 acre-feet per annum in addition to the uses confirmed by the Gila Decree, unless and until such use is adjudged by a court of competent jurisdiction to be an infringement or impairment of rights confirmed by the Gila Decree;

(E) Provided, however, that nothing in this Article IV shall be construed to affect rights as between individual water users in the State of New Mexico; nor shall anything in this Article be construed to affect possible superior rights of the United States asserted on behalf of National Forests, Parks, Memorials, Monuments and

lands administered by the Bureau of Land Management; and provided further that in addition to the diversions authorized herein the United States has the right to divert water from the mainstream of the Gila and San Francisco Rivers in quantities reasonably necessary to fulfill the purposes of the Gila National Forest with priority dates as of the date of withdrawal for forest purposes of each area of the Forest within which the water is used.

V. The United States shall prepare and maintain, or provide for the preparation and maintenance of, and shall make available, annually and at such shorter intervals as the Secretary of the Interior shall deem necessary or advisable, for inspection at all reasonable times and at a reasonable place or places, complete, detailed and accurate records of:

(A) Releases of water through regulatory structures controlled by the United States;

(B) Diversions of water from the mainstream, return flow of such water to the stream as is available for consumptive use in the United States or in satisfaction of the Mexican treaty obligation, and consumptive use of such water. These quantities shall be stated separately as to each diverter from the mainstream, each point of diversion, and each of the States of Arizona, California and Nevada;

(C) Releases of mainstream water pursuant to orders therefor but not diverted by the party ordering the same, and the quantity of such water delivered to Mexico in satisfaction of the Mexican Treaty or diverted by others in satisfaction of rights decreed herein. These quantities shall be stated separately as to each diverter from the mainstream, each point of diversion, and each of the States of Arizona, California and Nevada;

(D) Deliveries to Mexico of water in satisfaction of the obligations of Part III of the Treaty of February 3, 1944, and, separately stated, water passing to Mexico in excess of treaty requirements;

(E) Diversions of water from the mainstream of the Gila and San Francisco Rivers and the consumptive use of such water, for the benefit of the Gila National Forest.

VI. Within two years from the date of this decree, the States of Arizona, California, and Nevada shall furnish to this Court and to the Secretary of the Interior a list of the present perfected rights, with their priority dates, in waters of the mainstream within each state, respectively, in terms of consumptive use, except those relating to federal establishments. The Secretary of the Interior shall supply similar information, within a similar period of time, with respect to federal establishments within each state. If the three states and the Secretary of the Interior are unable at that time to agree on the present perfected rights to the use of mainstream water in each state, any state or the United States may apply to the Court for the determination of such rights by the Court.

VII. The State of New Mexico shall, within four years from the date of this decree, prepare and maintain, or provide for the preparation and maintenance of, and shall annually thereafter make available for inspection at all reasonable times and at a reasonable place or places, complete, detailed and accurate records of:

(A) The acreages of all lands in New Mexico irrigated each year from the Gila River, the San Francisco River, San Simon Creek and their tributaries and all of their underground water sources, stated by legal description and component acreages and sepa-

rately as to each of the areas designated in Article IV of this decree and as to each of the three streams;

(B) Annual diversions and consumptive uses of water, in New Mexico, from the Gila River, the San Francisco River and San Simon Creek and their tributaries, and all their underground water sources, stated separately as to each of the three streams.

VIII. This decree shall not affect:

(A) The relative rights *inter sese* of water users within any one of the states, except as otherwise specifically provided herein;

(B) The rights or priorities to water in any of the Lower Basin tributaries of the Colorado River in the States of Arizona, California, Nevada, New Mexico and Utah except the Gila River System;

(C) The rights or priorities, whether under state law or federal law, except as specific provision is made herein, of any Indian Reservation; National Forest, Park, Recreation Area, Monument or Memorial; or lands administered by the Bureau of Land Management.

IX. Any of the parties may apply at the foot of this decree for its amendment or for further relief. The Court retains jurisdiction of this suit for the purpose of any order, direction, or modification of the decree, or any supplementary decree, that may at any time be deemed proper in relation to the subject matter in controversy.

This Report, together with the Findings of Fact and Conclusions of Law therein contained, and the recommended decree thereto annexed are

Respectfully submitted,

SIMON H. RIFKIND
Special Master

New York, N. Y.
December 5, 1960

COLORADO RIVER COMPACT

The States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming, having resolved to enter into a compact under the Act of the Congress of the United States of America approved August 19, 1921 (42 Statutes at Large, page 171), and the Acts of the Legislatures of the said States, have through their Governors appointed as their Commissioners:

W. S. Norviel for the State of Arizona
W. F. McClure for the State of California
Delph E. Carpenter for the State of Colorado
J. G. Scrugham for the State of Nevada
Stephen B. Davis, Jr., for the State of New Mexico
R. E. Caldwell for the State of Utah
Frank C. Emerson for the State of Wyoming

who, after negotiations participated in by Herbert Hoover appointed by The President as the representative of the United States of America, have agreed upon the following articles:

Article I

The major purposes of this compact are to provide for the equitable division and apportionment of the use of the waters of the Colorado River System; to establish the relative importance of different beneficial uses of water; to promote interstate comity; to remove causes of present and future controversies; and to secure the expeditious agricultural and industrial development of the Colorado River Basin, the storage of its waters, and the protection of life and property from floods. To these ends the Colorado River Basin is divided into two Basins, and an apportionment of the use of part of the water of the Colorado River System is made to each of them with the provision that further equitable apportionments may be made.

Appendix 2

ARTICLE II

As used in this compact—

(a) The term "Colorado River System" means that portion of the Colorado River and its tributaries within the United States of America.

(b) The term "Colorado River Basin" means all of the drainage area of the Colorado River System and all other territory within the United States of America to which the waters of the Colorado River System shall be beneficially applied.

(c) The term "States of the Upper Division" means the States of Colorado, New Mexico, Utah, and Wyoming.

(d) The term "States of the Lower Division" means the States of Arizona, California, and Nevada.

(e) The term "Lee Ferry" means a point in the main stream of the Colorado River one mile below the mouth of the Paria River.

(f) The term "Upper Basin" means those parts of the States of Arizona, Colorado, New Mexico, Utah, and Wyoming within and from which waters naturally drain into the Colorado River System above Lee Ferry, and also all parts of said States located without the drainage area of the Colorado River System which are now or shall hereafter be beneficially served by waters diverted from the System above Lee Ferry.

(g) The term "Lower Basin" means those parts of the States of Arizona, California, Nevada, New Mexico, and Utah within and from which waters naturally drain into the Colorado River System below Lee Ferry, and also all parts of said States located without the drainage area of the Colorado River System which are now or shall hereafter be beneficially served by waters diverted from the System below Lee Ferry.

(h) The term "domestic use" shall include the use of water for household, stock, municipal, mining, milling, in-

dustrial, and other like purposes, but shall exclude the generation of electrical power.

ARTICLE III

(a) There is hereby apportioned from the Colorado River System in perpetuity to the Upper Basin and to the Lower Basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist.

(b) In addition to the apportionment in paragraph (a), the Lower Basin is hereby given the right to increase its beneficial consumptive use of such waters by one million acre-feet per annum.

(c) If, as a matter of international comity, the United States of America shall hereafter recognize in the United States of Mexico any right to the use of any waters of the Colorado River System, such waters shall be supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b); and if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the Upper Basin and the Lower Basin, and whenever necessary the States of the Upper Division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d).

(d) The States of the Upper Division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of this compact.

(e) The States of the Upper Division shall not withhold water, and the States of the Lower Division shall not

require the delivery of water, which cannot reasonably be applied to domestic and agricultural uses.

(f) Further equitable apportionment of the beneficial uses of the waters of the Colorado River System unapportioned by paragraphs (a), (b), and (c) may be made in the manner provided in paragraph (g) at any time after October first, 1963, if and when either Basin shall have reached its total beneficial consumptive use as set out in paragraphs (a) and (b).

(g) In the event of a desire for a further apportionment as provided in paragraph (f) any two signatory States, acting through their Governors, may give joint notice of such desire to the Governors of the other signatory States and to The President of the United States of America, and it shall be the duty of the Governors of the signatory States and of The President of the United States of America forthwith to appoint representatives, whose duty it shall be to divide and apportion equitably between the Upper Basin and Lower Basin the beneficial use of the unapportioned water of the Colorado River System as mentioned in paragraph (f), subject to the legislative ratification of the signatory States and the Congress of the United States of America.

Article IV

(a) Inasmuch as the Colorado River has ceased to be navigable for commerce and the reservation of its waters for navigation would seriously limit the development of its Basin, the use of its waters for purposes of navigation shall be subservient to the uses of such waters for domestic, agricultural, and power purposes. If the Congress shall not consent to this paragraph, the other provisions of this compact shall nevertheless remain binding.

(b) Subject to the provisions of this compact, water of the Colorado River System may be impounded and used for the generation of electrical power, but such impounding and

use shall be subservient to the use and consumption of such water for agricultural and domestic purposes and shall not interfere with or prevent use for such dominant purposes.

(c) The provisions of this article shall not apply to or interfere with the regulation and control by any State within its boundaries of the appropriation, use, and distribution of water.

ARTICLE V

The chief official of each signatory State charged with the administration of water rights, together with the Director of the United States Reclamation Service and the Director of the United States Geological Survey shall cooperate, ex-officio:

(a) To promote the systematic determination and coordination of the facts as to flow, appropriation, consumption, and use of water in the Colorado River Basin, and the interchange of available information in such matters.

(b) To secure the ascertainment and publication of the annual flow of the Colorado River at Lee Ferry.

(c) To perform such other duties as may be assigned by mutual consent of the signatories from time to time.

ARTICLE VI

Should any claim or controversy arise between any two or more of the signatory States: (a) with respect to the waters of the Colorado River System not covered by the terms of this compact; (b) over the meaning or performance of any of the terms of this compact; (c) as to the allocation of the burdens incident to the performance of any article of this compact or the delivery of waters as herein provided; (d) as to the construction or operation of works within the Colorado River Basin to be situated in two or more States, or to be constructed in one State for the bene-

fit of another State; or (e) as to the diversion of water in one State for the benefit of another State; the Governors of the States affected, upon the request of one of them, shall forthwith appoint Commissioners with power to consider and adjust such claim or controversy, subject to ratification by the Legislatures of the States so affected.

Nothing herein contained shall prevent the adjustment of any such claim or controversy by any present method or by direct future legislative action of the interested States.

Article VII

Nothing in this compact shall be construed as affecting the obligations of the United States of America to Indian tribes.

Article VIII

Present prefected rights to the beneficial use of waters of the Colorado River System are unimpaired by this compact. Whenever storage capacity of 5,000,000 acre-feet shall have been provided on the main Colorado River within or for the benefit of the Lower Basin, then claims of such rights, if any, by appropriators or users of water in the Lower Basin against appropriators or users of water in the Upper Basin shall attach to and be satisfied from water that may be stored not in conflict with Article III.

All other rights to beneficial use of waters of the Colorado River System shall be satisfied solely from the water apportioned to that Basin in which they are situate.

Article IX

Nothing in this compact shall be construed to limit or prevent any State from instituting or maintaining any action or proceeding, legal or equitable, for the protection of any right under this compact or the enforcement of any of its provisions.

Appendix 2

ARTICLE X

This compact may be terminated at any time by the unanimous agreement of the signatory States. In the event of such termination all rights established under it shall continue unimpaired.

ARTICLE XI

This compact shall become binding and obligatory when it shall have been approved by the Legislatures of each of the signatory States and by the Congress of the United States. Notice of approval by the Legislatures shall be given by the Governor of each signatory State to the Governors of the other signatory States and to the President of the United States, and the President of the United States is requested to give notice to the Governors of the signatory States of approval by the Congress of the United States.

IN WITNESS WHEREOF, the Commissioners have signed this compact in a single original, which shall be deposited in the archives of the Department of State of the United States of America and of which a duly certified copy shall be forwarded to the Governor of each of the signatory States.

APPENDIX 3

Appendix 3

BOULDER CANYON PROJECT ACT

[PUBLIC—NO. 642—70TH CONGRESS]
[H. R. 5773]

AN ACT To provide for the construction of works for the protection and development of the Colorado River Basin, for the approval of the Colorado River compact, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purpose of controlling the floods, improving navigation and regulating the flow of the Colorado River, providing for storage and for the delivery of the stored waters thereof for reclamation of public lands and other beneficial uses exclusively within the United States, and for the generation of electrical energy as a means of making the project herein authorized a self-supporting and financially solvent undertaking, the Secretary of the Interior, subject to the terms of the Colorado River compact hereinafter mentioned, is hereby authorized to construct, operate, and maintain a dam and incidental works in the main stream of the Colorado River at Black Canyon or Boulder Canyon adequate to create a storage reservoir of a capacity of not less than twenty million acre-feet of water and a main canal and appurtenant structures located entirely within the United States connecting the Laguna Dam, or other suitable diversion dam, which the Secretary of the Interior is hereby authorized to construct if deemed necessary or advisable by him upon engineering or economic considerations, with the Imperial and Coachella Valleys in California, the expenditures for said main canal and appurtenant structures to be reimbursable, as provided in the reclamation law, and shall not be paid out of revenues derived from the sale or disposal of water power or electric energy at the dam authorized to be constructed at said Black Canyon or Boulder Canyon, or for water for potable purposes outside

of the Imperial and Coachella Valleys: *Provided, however,* That no charge shall be made for water or for the use, storage, or delivery of water for irrigation or water for potable purposes in the Imperial or Coachella Valleys; also to construct and equip, operate, and maintain at or near said dam, or cause to be constructed, a complete plant and incidental structures suitable for the fullest economic development of electrical energy from the water discharged from said reservoir; and to acquire by proceedings in eminent domain, or otherwise, all lands, rights-of-way, and other property necessary for said purposes.

SEC. 2. (a) There is hereby established a special fund, to be known as the "Colorado River Dam fund" (hereinafter referred to as the "fund"), and to be available, as hereafter provided, only for carrying out the provisions of this Act. All revenues received in carrying out the provisions of this Act shall be paid into and expenditures shall be made out of the fund, under the direction of the Secretary of the Interior.

(b) The Secretary of the Treasury is authorized to advance to the fund, from time to time and within the appropriations therefor, such amounts as the Secretary of the Interior deems necessary for carrying out the provisions of this Act, except that the aggregate amount of such advances shall not exceed the sum of $165,000,000. Of this amount the sum of $25,000,000 shall be allocated to flood control and shall be repaid to the United States out of 62½ per centum of revenues, if any, in excess of the amount necessary to meet periodical payments during the period of amortization, as provided in section 4 of this Act. If said sum of $25,000,000 is not repaid in full during the period of amortization, then 62½ per centum of all net revenues shall be applied to payment of the remainder. Interest at the rate of 4 per centum per annum accruing during the year upon the amounts so advanced and remaining unpaid shall be paid annually out of the fund, except as herein otherwise provided.

(c) Moneys in the fund advanced under subdivision (b) shall be available only for expenditures for construction and the payment of interest, during construction, upon the amounts so advanced. No expenditures out of the fund shall be made for operation and maintenance except from appropriations therefor.

(d) The Secretary of the Treasury shall charge the fund as of June 30 in each year with such amount as may be necessary for the payment of interest on advances made under subdivision (b) at the rate of 4 per centum per annum accrued during the year upon the amounts so advanced and remaining unpaid, except that if the fund is insufficient to meet the payment of interest the Secretary of the Treasury may, in his discretion, defer any part of such payment, and the amount so deferred shall bear interest at the rate of 4 per centum per annum until paid.

(e) The Secretary of the Interior shall certify to the Secretary of the Treasury, at the close of each fiscal year, the amount of money in the fund in excess of the amount necessary for construction, operation, and maintenance, and payment of interest. Upon receipt of each such certificate the Secretary of the Treasury is authorized and directed to charge the fund with the amount so certified as repayment of the advances made under subdivision (b), which amount shall be covered into the Treasury to the credit of miscellaneous receipts.

SEC. 3. There is hereby authorized to be appropriated from time to time, out of any money in the Treasury not otherwise appropriated, such sums of money as may be necessary to carry out the purposes of this Act, not exceeding in the aggregate $165,000,000.

SEC. 4. (a) This Act shall not take effect and no authority shall be exercised hereunder and no work shall be begun and no moneys expended on or in connection with the works or structures provided for in this Act, and no

water rights shall be claimed or initiated hereunder, and no steps shall be taken by the United States or by others to initiate or perfect any claims to the use of water pertinent to such works or structures unless and until (1) the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming shall have ratified the Colorado River compact, mentioned in section 13 hereof, and the President by public proclamation shall have so declared, or (2) if said States fail to ratify the said compact within six months from the date of the passage of this Act then, until six of said States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and shall have approved said compact without conditions, save that of such six-State approval, and the President by public proclamation shall have so declared, and, further, until the State of California, by act of its legislature, shall agree irrevocably and unconditionally with the United States and for the benefit of the States of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming, as an express covenant and in consideration of the passage of this Act, that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of this Act and all water necessary for the supply of any rights which may now exist, shall not exceed four million four hundred thousand acre-feet of the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact.

The States of Arizona, California, and Nevada are authorized to enter into an agreement which shall provide (1) that of the 7,500,000 acre-feet annually apportioned to the lower basin by paragraph (a) of Article III of the Colorado River compact, there shall be apportioned to the

State of Nevada 300,000 acre-feet and to the State of Arizona 2,800,000 acre-feet for exclusive beneficial consumptive use in perpetuity, and (2) that the State of Arizona may annually use one-half of the excess or surplus waters unapportioned by the Colorado River compact, and (3) that the State of Arizona shall have the exclusive beneficial consumptive use of the Gila River and its tributaries within the boundaries of said State, and (4) that the waters of the Gila River and its tributaries, except return flow after the same enters the Colorado River, shall never be subject to any diminution whatever by any allowance of water which may be made by treaty or otherwise to the United States of Mexico but if, as provided in paragraph (c) of Article III of the Colorado River compact, it shall become necessary to supply water to the United States of Mexico from waters over and above the quantities which are surplus as defined by said compact, then the State of California shall and will mutually agree with the State of Arizona to supply, out of the main stream of the Colorado River, one-half of any deficiency which must be supplied to Mexico by the lower basin, and (5) that the State of California shall and will further mutually agree with the States of Arizona and Nevada that none of said three States shall withhold water and none shall require the delivery of water, which cannot reasonably be applied to domestic and agricultural uses, and (6) that all of the provisions of said tri-State agreement shall be subject in all particulars to the provisions of the Colorado River compact, and (7) said agreement to take effect upon the ratification of the Colorado River compact by Arizona, California, and Nevada.

(b) Before any money is appropriated for the construction of said dam or power plant, or any construction work done or contracted for, the Secretary of the Interior shall make provision for revenues by contract, in accordance with the provisions of this Act, adequate in his judgment to insure payment of all expenses of operation and maintenance of said works incurred by the United States and the repayment, within fifty years from the date of the com-

pletion of said works, of all amounts advanced to the fund under subdivision (b) of section 2 for such works, together with interest thereon made reimbursable under this Act.

Before any money is appropriated for the construction of said main canal and appurtenant structures to connect the Laguna Dam with the Imperial and Coachella Valleys in California, or any construction work is done upon said canal or contracted for, the Secretary of the Interior shall make provision for revenues, by contract or otherwise, adequate in his judgment to insure payment of all expenses of construction, operation, and maintenance of said main canal and appurtenant structures in the manner provided in the reclamation law.

If during the period of amortization the Secretary of the Interior shall receive revenues in excess of the amount necessary to meet the periodical payments to the United States as provided in the contract, or contracts, executed under this Act, then, immediately after the settlement of such periodical payments, he shall pay to the State of Arizona 18¾ per centum of such excess revenues and to the State of Nevada 18¾ per centum of such excess revenues.

Sec. 5. That the Secretary of the Interior is hereby authorized, under such general regulations as he may prescribe, to contract for the storage of water in said reservoir and for the delivery thereof at such points on the river and on said canal as may be agreed upon, for irrigation and domestic uses, and generation of electrical energy and delivery at the switchboard to States, municipal corporations, political subdivisions, and private corporations of electrical energy generated at said dam, upon charges that will provide revenue which, in addition to other revenue accruing under the reclamation law and under this Act, will in his judgment cover all expenses of operation and maintenance incurred by the United States on account of works constructed under this Act and the payments to the United States under subdivision (b) of section 4. Contracts respecting water for irrigation and domestic uses shall be for

permanent service and shall conform to paragraph (a) of section 4 of this Act. No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated.

After the repayments to the United States of all money advanced with interest, charges shall be on such basis and the revenues derived therefrom shall be kept in a separate fund to be expended within the Colorado River Basin as may hereafter be prescribed by the Congress.

General and uniform regulations shall be prescribed by the said Secretary for the awarding of contracts for the sale and delivery of electrical energy, and for renewals under subdivision (b) of this section, and in making such contracts the following shall govern:

(a) No contract for electrical energy or for generation of electrical energy shall be of longer duration than fifty years from the date at which such energy is ready for delivery.

Contracts made pursuant to subdivision (a) of this section shall be made with a view to obtaining reasonable returns and shall contain provisions whereby at the end of fifteen years from the date of their execution and every ten years thereafter, there shall be readjustment of the contract, upon the demand of either party thereto, either upward or downward as to price, as the Secretary of the Interior may find to be justified by competitive conditions at distributing points or competitive centers, and with provisions under which disputes or disagreements as to interpretation or performance of such contract shall be determined either by arbitration or court proceedings, the Secretary of the Interior being authorized to act for the United States in such readjustments or proceedings.

(b) The holder of any contract for electrical energy not in default thereunder shall be entitled to a renewal thereof upon such terms and conditions as may be authorized or required under the then existing laws and regulations, unless the property of such holder dependent for its usefulness on a continuation of the contract be purchased

or acquired and such holder be compensated for damages to its property, used and useful in the transmission and distribution of such electrical energy and not taken, resulting from the termination of the supply.

(c) Contracts for the use of water and necessary privileges for the generation and distribution of hydroelectric energy or for the sale and delivery of electrical energy shall be made with responsible applicants therefor who will pay the price fixed by the said Secretary with a view to meeting the revenue requirements herein provided for. In case of conflicting applications, if any, such conflicts shall be resolved by the said Secretary, after hearing, with due regard to the public interest, and in conformity with the policy expressed in the Federal Water Power Act as to conflicting applications for permits and licenses, except that preference to applicants for the use of water and appurtenant works and privileges necessary for the generation and distribution of hydroelectric energy, or for delivery at the switchboard of a hydroelectric plant, shall be given, first, to a State for the generation or purchase of electric energy for use in the State, and the States of Arizona, California, and Nevada shall be given equal opportunity as such applicants.

The rights covered by such preference shall be contracted for by such State within six months after notice by the Secretary of the Interior and to be paid for on the same terms and conditions as may be provided in other similar contracts made by said Secretary: *Provided, however,* That no application of a State or a political subdivision for an allocation of water for power purposes or of electrical energy shall be denied or another application in conflict therewith be granted on the ground that the bond issue of such State or political subdivision, necessary to enable the applicant to utilize such water and appurtenant works and privileges necessary for the generation and distribution of hydroelectric energy or the electrical energy applied for, has not been authorized or marketed, until after a reasonable time, to be determined by the said Secretary, has been

given to such applicant to have such bond issue authorized and marketed.

(d) Any agency receiving a contract for electrical energy equivalent to one hundred thousand firm horsepower, or more, may, when deemed feasible by the said Secretary, from engineering and economic considerations and under general regulations prescribed by him, be required to permit any other agency having contracts hereunder for less than the equivalent of twenty-five thousand firm horsepower, upon application to the Secretary of the Interior made within sixty days from the execution of the contract of the agency the use of whose transmission line is applied for, to participate in the benefits and use of any main transmission line constructed or to be constructed by the former for carrying such energy (not exceeding, however, one-fourth the capacity of such line), upon payment by such other agencies of a reasonable share of the cost of construction, operation, and maintenance thereof.

The use is hereby authorized of such public and reserved lands of the United States as may be necessary or convenient for the construction, operation, and maintenance of main transmission lines to transmit said electrical energy.

SEC. 6. That the dam and reservoir provided for by section 1 hereof shall be used: First, for river regulation, improvement of navigation, and flood control; second, for irrigation and domestic uses and satisfaction of present perfected rights in pursuance of Article VIII of said Colorado River compact; and third, for power. The title to said dam, reservoir, plant, and incidental works shall forever remain in the United States, and the United States shall, until otherwise provided by Congress, control, manage, and operate the same, except as herein otherwise provided: *Provided, however*, That the Secretary of the Interior may, in his discretion, enter into contracts of lease of a unit or units of any Government-built plant, with right to generate electrical energy, or, alternatively, to enter into contracts of lease for the use of water for the generation of

electrical energy as herein provided, in either of which events the provisions of section 5 of this Act relating to revenue, term, renewals, determination of conflicting applications, and joint use of transmission lines under contracts for the sale of electrical energy, shall apply.

The Secretary of the Interior shall prescribe and enforce rules and regulations conforming with the requirements of the Federal Water Power Act, so far as applicable, respecting maintenance of works in condition of repair adequate for their efficient operation, maintenance of a system of accounting, control of rates and service in the absence of State regulation or interstate agreement, valuation for rate-making purposes, transfers of contracts, contracts extending beyond the lease period, expropriation of excessive profits, recapture and/or emergency use by the United States of property of lessees, and penalties for enforcing regulations made under this Act of penalizing failure to comply with such regulations or with the provisions of this Act. He shall also conform with other provisions of the Federal Water Power Act and of the rules and regulations of the Federal Power Commission, which have been devised or which may be hereafter devised, for the protection of the investor and consumer.

The Federal Power Commission is hereby directed not to issue or approve any permits or licenses under said Federal Water Power Act upon or affecting the Colorado River or any of its tributaries, except the Gila River, in the States of Colorado, Wyoming, Utah, New Mexico, Nevada, Arizona, and California until this Act shall become effective as provided in section 4 herein.

SEC. 7. That the Secretary of the Interior may, in his discretion, when repayments to the United States of all money advanced, w interest, reimbursable hereunder, shall have been made, transfer the title to said canal and appurtenant structures, except the Laguna Dam and the main canal and appurtenant structures down to and including Syphon Drop, to the districts or other agencies of the United States having a beneficial interest therein in propor-

tion to their respective capital investments under such form of organization as may be acceptable to him. The said districts or other agencies shall have the privilege at any time of utilizing by contract or otherwise such power possibilities as may exist upon said canal, in proportion to their respective contributions or obligations toward the capital cost of said canal and appurtenant structures from and including the diversion works to the point where each respective power plant may be located. The net proceeds from any power development on said canal shall be paid into the fund and credited to said districts or other agencies on their said contracts, in proportion to their rights to develop power, until the districts or other agencies using said canal shall have paid thereby and under any contract or otherwise an amount of money equivalent to the operation and maintenance expense and cost of construction thereof.

SEC. 8. (a) The United States, its permittees, licensees, and contractees, and all users and appropriators of water stored, diverted, carried, and/or distributed by the reservoir, canals, and other works herein authorized, shall observe and be subject to and controlled by said Colorado River compact in the construction, management, and operation of said reservoir, canals, and other works and the storage, diversion, delivery, and use of water for the generation of power, irrigation, and other purposes, anything in this Act to the contrary notwithstanding, and all permits, licenses, and contracts shall so provide.

(b) Also the United States, in constructing, managing, and operating the dam, reservoir, canals, and other works herein authorized, including the appropriation, delivery, and use of water for the generation of power, irrigation, or other uses, and all users of water thus delivered and all users and appropriators of waters stored by said reservoir and/or carried by said canal, including all permittees and licensees of the United States or any of its agencies, shall observe and be subject to and controlled, anything to the contrary herein notwithstanding, by the terms of such

compact, if any, between the States of Arizona, California, and Nevada, or any two thereof, for the equitable division of the benefits, including power, arising from the use of water accruing to said States, subsidiary to and consistent with said Colorado River compact, which may be negotiated and approved by said States and to which Congress shall give its consent and approval on or before January 1, 1929; and the terms of any such compact concluded between said States and approved and consented to by Congress after said date: *Provided,* That in the latter case such compact shall be subject to all contracts, if any, made by the Secretary of the Interior under section 5 hereof prior to the date of such approval and consent by Congress.

SEC. 9. All lands of the United States found by the Secretary of the Interior to be practicable of irrigation and reclamation by the irrigation works authorized herein shall be withdrawn from public entry. Thereafter, at the direction of the Secretary of the Interior, such lands shall be opened for entry, in tracts varying in size but not exceeding one hundred and sixty acres, as may be determined by the Secretary of the Interior, in accordance with the provisions of the reclamation law, and any such entryman shall pay an equitable share in accordance with the benefits received, as determined by the said Secretary, of the construction cost of said canal and appurtenant structures; said payments to be made in such installments and at such times as may be specified by the Secretary of the Interior, in accordance with the provisions of the said reclamation law, and shall constitute revenue from said project and be covered into the fund herein provided for: *Provided,* That all persons who served in the United States Army, Navy, Marine Corps, or Coast Guard during World War II, the War with Germany, the War with Spain, or in the suppression of the insurrection in the Philippines, and who have been honorably separated or discharged therefrom or placed in the Regular Army or Naval Reserve, shall have the exclusive preference right for a period of three months to enter said lands, subject, however, to the provisions of sub-

section (c) of section 4 of the Act of December 5, 1924 (43 Stat. 672, 702; 43 U. S. C., sec. 433); and also, so far as practicable, preference shall be given to said persons in all construction work authorized by this chapter: *Provided further,* That the above exclusive preference rights shall apply to veteran settlers on lands watered from the Gila canal in Arizona the same as to veteran settlers on lands watered from the All-American canal in California: *Provided further,* That in the event such an entry shall be relinquished at any time prior to actual residence upon the land by the entryman for not less than one year, lands so relinquished shall not be subject to entry for a period of sixty days after the filing and notation of the relinquishment in the local land office, and after the expiration of said sixty-day period such lands shall be open to entry, subject to the preference in this section provided.[1]

SEC. 10. That nothing in this Act shall be construed as modifying in any manner the existing contract, dated October 23, 1918, between the United States and the Imperial Irrigation District, providing for a connection with Laguna Dam; but the Secretary of the Interior is authorized to enter into contract or contracts with the said district or other districts, persons, or agencies for the construction, in accordance with this Act, of said canal and appurtenant structures, and also for the operation and maintenance thereof, with the consent of the other users.

SEC. 11. That the Secretary of the Interior is hereby authorized to make such studies, surveys, investigations, and do such engineering as may be necessary to determine the lands in the State of Arizona that should be embraced within the boundaries of a reclamation project, heretofore commonly known and hereafter to be known as the Parker-Gila Valley reclamation project, and to recommend the most practicable and feasible method of irrigating lands within said project, or units thereof, and the cost of the

[1]As amended by act of March 6, 1946 (60 Stat. 36).

same; and the appropriation of such sums of money as may be necessary for the aforesaid purposes from time to time is hereby authorized. The Secretary shall report to Congress as soon as practicable, and not later than December 10, 1931, his findings, conclusions, and recommendations regarding such project.

SEC. 12. "Political subdivision" or "political subdivisions" as used in this Act shall be understood to include any State, irrigation or other district, municipality, or other governmental organization.

"Reclamation law" as used in this Act shall be understood to mean that certain Act of the Congress of the United States approved June 17, 1902, entitled "An Act appropriating the receipts from the sale and disposal of public land in certain States and Territories to the construction of irrigation works for the reclamation of arid lands," and the Acts amendatory thereof and supplemental thereto.

"Maintenance" as used herein shall be deemed to include in each instance provision for keeping the works in good operating condition.

"The Federal Water Power Act," as used in this Act, shall be understood to mean that certain Act of Congress of the United States approved June 10, 1920, entitled "An Act to create a Federal Power Commission; to provide for the improvement of navigation; the development of water power; the use of the public lands in relation thereto; and to repeal section 18 of the River and Harbor Appropriation Act, approved August 8, 1917, and for other purposes," and the Acts amendatory thereof and supplemental thereto.

"Domestic" whenever employed in this Act shall include water uses defined as "domestic" in said Colorado River compact.

SEC. 13. (a) The Colorado River compact signed at Santa Fe, New Mexico, November 24, 1922, pursuant to Act of Congress approved August 19, 1921, entitled "An Act to permit a compact or agreement between the States of Arizona, California, Colorado, Nevada, New Mexico,

Utah, and Wyoming respecting the disposition and apportionment of the waters of the Colorado River, and for other purposes," is hereby approved by the Congress of the United States, and the provisions of the first paragraph of article 11 of the said Colorado River compact, making said compact binding and obligatory when it shall have been approved by the legislature of each of the signatory States, are hereby waived, and this approval shall become effective when the State of California and at least five of the other States mentioned, shall have approved or may hereafter approve said compact as aforesaid and shall consent to such waiver, as herein provided.

(b) The rights of the United States in or to waters of the Colorado River and its tributaries howsoever claimed or acquired, as well as the rights of those claiming under the United States, shall be subject to and controlled by said Colorado River compact.

(c) Also all patents, grants, contracts, concessions, leases, permits, licenses, rights-of-way, or other privileges from the United States or under its authority, necessary or convenient for the use of waters of the Colorado River or its tributaries, or for the generation or transmission of electrical energy generated by means of the waters of said river or its tributaries, whether under this Act, the Federal Water Power Act, or otherwise, shall be upon the express condition and with the express covenant that the rights of the recipients or holders thereof to waters of the river or its tributaries, for the use of which the same are necessary, convenient, or incidental, and the use of the same shall likewise be subject to and controlled by said Colorado River compact.

(d) The conditions and covenants referred to herein shall be deemed to run with the land and the right, interest, or privilege therein and water right, and shall attach as a matter of law, whether set out or referred to in the instrument evidencing any such patent, grant, contract, concession, lease, permit, license, right-of-way, or other privilege from the United States or under its authority, or not, and

shall be deemed to be for the benefit of and be available to the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming, and the users of water therein or thereunder, by way of suit, defense, or otherwise, in any litigation respecting the waters of the Colorado River or its tributaries.

SEC. 14. This Act shall be deemed a supplement to the reclamation law, which said reclamation law shall govern the construction, operation, and management of the works herein authorized, except as otherwise herein provided.

SEC. 15. The Secretary of the Interior is authorized and directed to make investigation and public reports of the feasibility of projects for irrigation, generation of electric power, and other purposes in the States of Arizona, Nevada Colorado, New Mexico, Utah, and Wyoming for the purpose of making such information available to said States and to the Congress, and of formulating a comprehensive scheme of control and the improvement and utilization of the water of the Colorado River and its tributaries. The sum of $250,000 is hereby authorized to be appropriated from said Colorado River Dam fund, created by section 2 of this Act, for such purposes.

SEC. 16. In furtherance of any comprehensive plan formulated hereafter for the control, improvement, and utilization of the resources of the Colorado River system and to the end that the project authorized by this Act may constitute and be administered as a unit in such control, improvement, and utilization, any commission or commissioner duly authorized under the laws of any ratifying State in that behalf shall have the right to act in an advisory capacity to and in cooperation with the Secretary of the Interior in the exercise of any authority under the provisions of sections 4, 5, and 14 of this Act, and shall have at all times access to records of all Federal agencies empowered to act under said sections, and shall be entitled to have copies of said records on request.

SEC. 17. Claims of the United States arising out of any contract authorized by this Act shall have priority over all others, secured or unsecured.

SEC. 18. Nothing herein shall be construed as interfering with such rights as the States now have either to the waters within their borders or to adopt such policies and enact such laws as they may deem necessary with respect to the appropriation, control, and use of waters within their borders, except as modified by the Colorado River compact or other interstate agreement.

SEC. 19. That the consent of Congress is hereby given to the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming to negotiate and enter into compacts or agreements, supplemental to and in conformity with the Colorado River compact and consistent with this Act for a comprehensive plan for the development of the Colorado River and providing for the storage, diversion, and use of the waters of said river. Any such compact or agreement may provide for the construction of dams, headworks, and other diversion works or structures for flood control, reclamation, improvement of navigation, division of water, or other purposes and/or the construction of power houses or other structures for the purpose of the development of water power and the financing of the same; and for such purposes may authorize the creation of interstate commissions and/or the creation of corporations, authorities, or other instrumentalities.

(a) Such consent is given upon condition that a representative of the United States, to be appointed by the President, shall participate in the negotiations and shall make report to Congress of the proceedings and of any compact or agreement entered into.

(b) No such compact or agreement shall be binding or obligatory upon any of such States unless and until it has been approved by the legislature of each of such States and by the Congress of the United States.

SEC. 20. Nothing in this Act shall be construed as a denial or recognition of any rights, if any, in Mexico to the use of the waters of the Colorado River system.

SEC. 21. That the short title of this Act shall be "Boulder Canyon Project Act."

Approved, December 21, 1928.

APPENDIX 4

Appendix 4

CALIFORNIA LIMITATION ACT

(Act of March 4, 1929; Ch. 16, 48th Sess.; Statutes and Amendments to the Codes, 1929, pp. 38-39)

CHAPTER 16

An act to limit the use by California of the waters of the Colorado river in compliance with the act of congress known as the "Boulder canyon project act," approved December 21, 1928, in the event the Colorado river compact is not approved by all of the states signatory thereto

(Approved by the Governor March 4, 1929; in effect August 14, 1929)

The people of the State of California do enact as follows:

SECTION 1. In the event the Colorado river compact signed at Santa Fe, New Mexico, November 24, 1922, and approved by and set out at length in that certain act entitled "An act to ratify and approve the Colorado river compact, signed at Santa Fe, New Mexico, November 24, 1922, to repeal conflicting acts and resolutions and directing that notice be given by the governor of such ratifications and approval," approved January 10, 1929 (statutes 1929, chapter 1), is not approved within six months from the date of the passage of that certain act of the congress of the United States known as the "Boulder canyon project act," approved December 21, 1928, by the legislatures of each of the seven states signatory thereto, as provided by article eleven of the said Colorado river compact, then when six of said states, including California, shall have ratified and approved said compact, and shall have consented to waive the provisions of the first paragraph of article eleven of said compact which makes the same binding and obligatory when approved by each of the states signatory thereto, and shall have approved said compact without conditions save that of

such six states approval and the President by public proclamation shall have so declared, as provided by the said "Boulder canyon project act," the State of California as of the date of such proclamation agrees irrevocably and unconditionally with the United States and for the benefit of the states of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming as an express covenant and in consideration of the passage of the said "Boulder canyon project act" that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado river for use in the State of California including all uses under contracts made under the provisions of said "Boulder canyon project act," and all water necessary for the supply of any rights which may now exist, shall not exceed four million four hundred thousand acre-feet of the waters apportioned to the lower basin states by paragraph "a" of article three of the said Colorado river compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact.

SEC. 2. By this act the State of California intends to comply with the conditions respecting limitation on the use of water as specified in subdivision 2 of section 4 (a) of the said "Boulder canyon project act" and this act shall be so construed.

APPENDIX 5

Appendix 5

ARIZONA CONTRACT OF FEBRUARY 9, 1944 (EFFECTIVE FEBRUARY 24, 1944)

UNITED STATES DEPARTMENT OF THE INTERIOR
BUREAU OF RECLAMATION

BOULDER CANYON PROJECT
ARIZONA-CALIFORNIA-NEVADA

CONTRACT FOR DELIVERY OF WATER

THIS CONTRACT made this 9th day of February 1944 pursuant to the Act of Congress approved June 17, 1902 (32 Stat. 388), and acts amendatory thereof or supplemental thereto, all of which acts are commonly known and referred to as the Reclamation Law, and particularly pursuant to the Act of Congress approved December 21, 1928 (45 Stat. 1057), designated the Boulder Canyon Project Act, and acts amendatory thereof or supplementary thereto, between THE UNITED STATES OF AMERICA, hereinafter referred to as "United States," acting for this purpose by Harold L. Ickes, Secretary of the Interior, hereinafter referred to as the "Secretary," and the STATE OF ARIZONA, hereinafter referred to as "Arizona," acting for this purpose by the Colorado River Commission of Arizona, pursuant to Chapter 46 of the 1939 Session Laws of Arizona,

Witnesseth that:

EXPLANATORY RECITALS

2. Whereas for the purpose of controlling floods, improving navigation, regulating the flow of the Colorado River, providing for storage and for the delivery of stored waters for the reclamation of public lands and other beneficial uses exclusively within the United States, the Secretary acting under and in pursuance of the provisions of the Colorado River Compact and Boulder Canyon Project Act, and acts amendatory thereof or supplementary thereto, has constructed and is now operating and maintaining in the

main stream of the Colorado River at Black Canyon that certain structure known as and designated Boulder Dam and incidental works, creating thereby a reservoir designated Lake Mead of a capacity of about thirty-two million (32,000,000) acre-feet; and

3. Whereas said Boulder Canyon Project Act provides that the Secretary, under such general rules and regulations as he may prescribe, may contract for the storage of water in the reservoir created by Boulder Dam, and for the delivery of such water at such points on the river as may be agreed upon, for irrigation and domestic uses, and provides further that no person shall have or be entitled to have the use for any purpose of the water stored, as aforesaid, except by contract made as stated in said Act; and

4. Whereas it is the desire of the parties to this contract to contract for the storage of water and the delivery thereof for irrigation of lands and domestic uses within Arizona; and

5. Whereas nothing in this contract shall be construed as affecting the obligations of the United States to Indian tribes:

6. Now, therefore, in consideration of the mutual covenants herein contained, the parties hereto agree as follows, to wit:

DELIVERY OF WATER

7. (a) Subject to the availability thereof for use in Arizona under the provisions of the Colorado River Compact and the Boulder Canyon Project Act, the United States shall deliver and Arizona, or agencies or water users therein, will accept under this contract each calendar year from storage in Lake Mead, at a point or points of diversion on the Colorado River approved by the Secretary, so much water as may be necessary for the beneficial consumptive use

for irrigation and domestic uses in Arizona of a maximum of 2,800,000 acre-feet.

(b) The United States also shall deliver from storage in Lake Mead for use in Arizona, at a point or points of diversion on the Colorado River approved by the Secretary, for the uses set forth in subdivision (a) of this Article, one-half of any excess or surplus waters unapportioned by the Colorado River Compact to the extent such water is available for use in Arizona under said compact and said act, less such excess or surplus water unapportioned by said compact as may be used in Nevada, New Mexico, and Utah in accordance with the rights of said states as stated in subdivisions (f) and (g) of this Article.

(c) This contract is subject to the condition that Boulder Dam and Lake Mead shall be used: First, for river regulation, improvement of navigation, and flood control; second, for irrigation and domestic uses and satisfaction of perfected rights in pursuance of Article VIII of the Colorado River Compact; and third, for power. This contract is made upon the express condition and with the express covenant that the United States and Arizona, and agencies and water users therein, shall observe and be subject to and controlled by said Colorado River Compact and the Boulder Canyon Project Act in the construction, management, and operation of Boulder Dam, Lake Mead, canals and other works, and the storage, diversion, delivery, and use of water for the generation of power, irrigation, and other uses.

(d) The obligation to deliver water at or below Boulder Dam shall be diminished to the extent that consumptive uses now or hereafter existing in Arizona above Lake Mead diminish the flow into Lake Mead, and such obligation shall be subject to such reduction on account of evaporation, reservoir and river losses, as may be required to render this contract in conformity with said compact and said act.

(e) This contract is for permanent service, subject to the conditions stated in subdivision (c) of this Article, but

as to the one-half of the waters of the Colorado River system unapportioned by paragraphs (a), (b), and (c) of Article III of the Colorado River Compact, such water is subject to further equitable apportionment at any time after October 1, 1963, as provided in Article III (f) and Article III (g) of the Colorado River Compact.

(f) Arizona recognizes the right of the United States and the State of Nevada to contract for the delivery from storage in Lake Mead for annual beneficial consumptive use within Nevada for agricultural and domestic uses of 300,000 acre-feet of the water apportioned to the Lower Basin by the Colorado River Compact, and in addition thereto to make contract for like use of 1/25 (one twenty-fifth) of any excess or surplus waters available in the Lower Basin and unapportioned by the Colorado River Compact, which waters are subject to further equitable apportionment after October 1, 1963, as provided in Article III (f) and Article III (g) of the Colorado River Compact.

(g) Arizona recognizes the rights of New Mexico and Utah to equitable shares of the water apportioned by the Colorado River Compact to the Lower Basin and also water unapportioned by such compact, and nothing contained in this contract shall prejudice such rights.

(h) Arizona recognizes the right of the United States and agencies of the State of California to contract for storage and delivery of water from Lake Mead for beneficial consumptive use in California, provided that the aggregate of all such deliveries and uses in California from the Colorado River shall not exceed the limitation of such uses in that State required by the provisions of the Boulder Canyon Project Act and agreed to by the State of California by an act of its Legislature (Chapter 16, Statutes of California of 1929) upon which limitation the State of Arizona expressly relies.

(i) Nothing in this contract shall preclude the parties hereto from contracting for storage and delivery above Lake Mead of water herein contracted for, when and if authorized by law.

(j) As far as reasonable diligence will permit, the water provided for in this contract shall be delivered as ordered and as reasonably required for domestic and irrigation uses within Arizona. The United States reserves the right to discontinue or temporarily reduce the amount of water to be delivered, for the purpose of investigation and inspection, maintenance, repairs, replacements, or installation of equipment or machinery at Boulder Dam, or other dams heretofore or hereafter to be constructed, but so far as feasible will give reasonable notice in advance of such temporary discontinuance or reduction.

(k) The United States, its officers, agents, and employees shall not be liable for damages when for any reason whatsoever suspensions or reductions in the delivery of water occur.

(l) Deliveries of water hereunder shall be made for use within Arizona to such individuals, irrigation districts, corporations or political subdivisions therein of Arizona as may contract therefor with the Secretary, and as may qualify under the Reclamation Law or other federal statutes or to lands of the United States within Arizona. All consumptive uses of water by users in Arizona, of water diverted from Lake Mead or from the main stream of the Colorado River below Boulder Dam, whether made under this contract or not, shall be deemed, when made, a discharge pro tanto of the obligation of this contract. Present perfected rights to the beneficial use of waters of the Colorado River system are unimpaired by this contract.

(m) Rights-of-way across public lands necessary or convenient for canals to facilitate the full utilization in Arizona of the water herein agreed to be delivered will be granted by the Secretary subject to applicable federal statutes.

POINTS OF DIVERSION: MEASUREMENTS OF WATER

8. The water to be delivered under this contract shall be measured at the points of diversion, or elsewhere as the

Secretary may designate (with suitable adjustment for losses between said points of diversion and measurement), by measuring and controlling devices or automatic gauges approved by the Secretary, which devices, however, shall be furnished, installed, and maintained by Arizona, or the users of water therein, in manner satisfactory to the Secretary; said measuring and controlling devices or automatic gauges shall be subject to the inspection of the United States, whose authorized representatives may at all times have access to them, and any deficiencies found shall be promptly corrected by the users thereof. The United States shall be under obligation to deliver water only at diversion points where measuring and controlling devices or automatic gauges are maintained, in accordance with this contract, but in the event diversions are made at points where such devices are not maintained, the Secretary shall estimate the quantity of such diversions and his determination thereof shall be final.

CHARGES FOR STORAGE AND DELIVERY OF WATER

9. No charge shall be made for the storage or delivery of water at diversion points as herein provided necessary to supply present perfected rights in Arizona. A charge of 50¢ per acre-foot shall be made for all water actually diverted directly from Lake Mead during the Boulder Dam cost repayment period, which said charge shall be paid by the users of such water, subject to reduction by the Secretary in the amount of the charge if it is concluded by him at any time during said cost-repayment period that such charge is too high. After expiration of the cost-repayment period, charges shall be on such basis as may hereafter be prescribed by Congress. Charges for the storage or delivery of water diverted at a point or points below Boulder Dam, for users, other than those specified above, shall be as agreed upon between the Secretary and such users at the time of execution of contracts therefor, and shall be paid by such users; provided such charges shall, in no event, exceed 25¢ per acre-foot.

Appendix 5 —

RESERVATIONS

10. Neither Article 7, nor any other provision of this contract, shall impair the right of Arizona and other states and the users of water therein to maintain, prosecute or defend any action respecting, and is without prejudice to, any of the respective contentions of said states and water users as to (1) the intent, effect, meaning, and interpretation of said compact and said act; (2) what part, if any, of the water used or contracted for by any of them falls within Article III (a) of the Colorado River Compact; (3) what part, if any, is within Article III (b) thereof; (4) what part, if any, is excess or surplus waters unapportioned by said Compact; and (5) what limitations on use, rights of use, and relative priorities exist as to the waters of the Colorado River system; provided, however, that by these reservations there is no intent to disturb the apportionment made by Article III (a) of the Colorado River Compact between the Upper Basin and the Lower Basin.

DISPUTES AND DISAGREEMENTS

11. Whenever a controversy arises out of this contract, and if the parties hereto then agree to submit the matter to arbitration, Arizona shall name one arbitrator and the Secretary shall name one arbitrator and the two arbitrators thus chosen shall meet within ten days after their selection and shall elect one other arbitrator within fifteen days after their first meeting, but in the event of their failure to name the third arbitrator within thirty days after their first meeting, such arbitrator not so selected shall be named by the Senior Judge of the United States Circuit Court of Appeals for the Tenth Circuit. The decision of any two of the three arbitrators thus chosen shall be a valid and binding award.

RULES AND REGULATIONS

12. The Secretary may prescribe and enforce rules and regulations governing the delivery and diversion of waters

hereunder, but such rules and regulations shall be promulgated, modified, revised or extended from time to time only after notice to the State of Arizona and opportunity is given to it to be heard. Arizona agrees for itself, its agencies and water users that in the operation and maintenance of the works for diversion and use of the water to be delivered hereunder, all such rules and regulations will be fully adhered to.

AGREEMENT SUBJECT TO COLORADO RIVER COMPACT

13. This contract is made upon the express condition and with the express covenant that all rights of Arizona, its agencies and water users, to waters of the Colorado River and its tributaries, and the use of the same, shall be subject to and controlled by the Colorado River Compact signed at Santa Fe, New Mexico, November 24, 1922, pursuant to the Act of Congress approved August 19, 1921 (42 Stat. 171), as approved by the Boulder Canyon Project Act.

EFFECTIVE DATE OF CONTRACT

14. This contract shall be of no effect unless it is unconditionally ratified by an Act of the Legislature of Arizona, within three years from the date hereof, and further, unless within three years from the date hereof the Colorado River Compact is unconditionally ratified by Arizona. When both ratifications are effective, this contract shall be effective.

INTEREST IN CONTRACT NOT TRANSFERABLE

15. No interest in or under this contract, except as provided by Article 7(1), shall be transferable by either party without the written consent of the other.

APPROPRIATION CLAUSE

16. The performance of this contract by the United States is contingent upon Congress making the necessary appropriations for expenditures for the completion and the operation and maintenance of any dams, power plants or

other works necessary to the carrying out of this contract, or upon the necessary allotments being made therefor by any authorized federal agency. No liability shall accrue against the United States, its officers, agents, or employees by reason of the failure of Congress to make any such appropriations or of any federal agency to make such allotments.

MEMBER-OF-CONGRESS CLAUSE

17. No Member of or Delegate to Congress or Resident Commissioner shall be admitted to any share or part of this contract or to any benefit that may arise herefrom, but this restriction shall not be construed to extend to this contract if made with a corporation or company for its general benefit.

DEFINITIONS

18. Wherever terms used herein are defined in Article II of the Colorado River Compact or in Section 12 of the Boulder Canyon Project Act, such definitions shall apply in construing this contract.

19. In witness whereof the parties hereto have caused this contract to be executed the day and year first above written,

THE UNITED STATES OF AMERICA,

By (s) HAROLD L. ICKES,
Secretary of the Interior.

STATE OF ARIZONA, acting by and through its COLORADO RIVER COMMISSION,

By (s) HENRY S. WRIGHT, *Chairman.*
By (s) NELLIE T. BUSH, *Secretary.*

Approved this 11th day of February 1944:

(s) SIDNEY P. OSBORN,
Governor of the State of Arizona.

Appendix 6

NEVADA CONTRACT OF MARCH 30, 1942

UNITED STATES DEPARTMENT OF THE INTERIOR

BUREAU OF RECLAMATION

BOULDER CANYON PROJECT

ARIZONA-CALIFORNIA-NEVADA

CONTRACT FOR DELIVERY OF WATER

1. THIS CONTRACT, made this 30th day of March, nineteen hundred forty-two, pursuant to the Act of Congress approved June 17, 1902 (32 Stat. 388), and acts amendatory thereof or supplementary thereto, all of which acts are commonly known and referred to as the Reclamation Law, and particularly pursuant to the Act of Congress approved December 21, 1928 (45 Stat. 1057), designated the Boulder Canyon Project Act, and acts amendatory thereof or supplementary thereto, between THE UNITED STATES OF AMERICA (hereinafter referred to as "United States"), acting for this purpose by Abe Fortas, Acting Secretary of the Interior (hereinafter referred to as the "Secretary"), and the STATE OF NEVADA, a body politic and corporate, and its Colorado River Commission (said Commission acting in the name of the State, but as principal in its own behalf as well as in behalf of the State; the term State as used in this contract being deemed to be both the State of Nevada and its Colorado River Commission), acting in pursuance of an act of the Legislature of the State of Nevada, entitled "An Act creating a commission to be known as the Colorado river commission of Nevada, defining its powers and duties, and making an appropriation for the expenses thereof, and repealing all acts and parts of acts in conflict with this act," approved March 20, 1935 (Chapter 71, Stats. of Nevada, 1935);

Witnesseth that:

EXPLANATORY RECITALS

2. Whereas for the purpose of controlling floods, improving navigation, regulating the flow of the Colorado River, providing for storage and for the delivery of stored waters for the reclamation of public lands and other beneficial uses exclusively within the United States, the Secretary, acting under and in pursuance of the provisions of the Colorado River Compact and the Boulder Canyon Project Act, and acts amendatory thereof or supplementary thereto, has constructed and is now operating and maintaining in the main stream of the Colorado River at Black Canyon that certain structure known as and designated Boulder Dam and incidental works, creating thereby a reservoir designated Lake Mead; and

3. Whereas the State is desirous of entering into a contract for the delivery to it of water from Lake Mead:

4. Now, therefore, in consideration of the mutual covenants herein contained, the parties hereto agree as follows, to wit:

DELIVERY OF WATER BY THE UNITED STATES

5. (a) Subject to the availability thereof for use in Nevada under the provisions of the Colorado River Compact and the Boulder Canyon Project Act, the United States shall, from storage in Lake Mead, deliver to the State each year at a point or points to be selected by the State and approved by the Secretary, so much water as may be necessary to supply the State a total quantity not to exceed One Hundred Thousand (100,000) acre-feet each calendar year. The right of the State to contract for the delivery to it from storage in Lake Mead of additional water is not limited by this contract. Said water may be used only within the

State of Nevada, exclusively for irrigation, household, stock, municipal, mining, milling, industrial, and other like purposes, but shall not be used for the generation of electric power.

(b) Water agreed to be delivered to the State hereunder shall be delivered continuously as far as reasonable diligence will permit, but the United States shall not be obligated to deliver water to the State when for any reason, as conclusively but not arbitrarily determined by the Secretary, such delivery would interfere with the use of Boulder Dam or Lake Mead for river regulation, improvement of navigation, flood control, and/or satisfaction of perfected rights, in or to the waters of the Colorado River, or its tributaries, in pursuance of Article VIII of the Colorado River Compact.

(c) The United States reserves the right, for the purpose of investigation, inspection, maintenance, repairs and replacement or installation of equipment or machinery at Boulder Dam, to discontinue temporarily or reduce the amount of water to be delivered hereunder, but so far as feasible the United States will give the State reasonable notice in advance of such temporary discontinuance or reduction. The United States, its officers, agents, and employees shall not be liable for damages when, for any reason whatsoever, suspensions or reductions in delivery of water occur.

(d) This contract is for permanent service, and is made subject to the express condition that the State, upon request of the Secretary, shall submit in writing prior to January 1st of any year, an estimate of the amount of water to be required under this contract for the succeeding calendar year.

RECEIPT OF WATER BY THE STATE

6. The State shall receive the water to be diverted by or delivered to it by the United States under the terms hereof at the point or points of delivery to be hereafter designated as

stated in the next preceding article hereof, and shall perform all acts required by law or custom in order to maintain control over such water and to secure and maintain its lawful use and proper diversion from Lake Mead. The diversion and conveyance of such water to places of use shall be without expense to the United States.

MEASUREMENT OF WATER

7. The water to be delivered to the State hereunder shall be measured at the point or points of diversion from Lake Mead, or at such point or points in any works used by the State to convey water from Lake Mead to its place or places of use as shall be satisfactory to the Secretary, and by such measuring and controlling devices or such automatic gauges or otherwise as shall be satisfactory to the Secretary. Said measuring and controlling devices, or automatic gauges, shall be furnished, installed, and maintained in manner satisfactory to the Secretary, by and at the expense of the State, but they shall be and remain at all times under the complete control of the United States. The State's authorized representative shall be allowed access at all times to said measuring and controlling devices or automatic gauges.

RECORD OF WATER DIVERTED

8. The State shall make full and complete written monthly reports as directed by the Secretary on forms to be supplied by the United States of all water delivered to or diverted by the State from Lake Mead. Such reports shall be made by the fifth day of the month immediately succeeding the month in which the water is diverted.

CHARGE FOR DELIVERY OF WATER

9. A charge of fifty cents ($.50) per acre-foot shall be made for the diversion by or delivery of water to the State

hereunder during the Boulder Dam cost-repayment period, subject to reduction by the Secretary in the amount of the charge if studies show to his satisfaction that the charge is too high. Thereafter, charges shall be on such basis as may hereafter be prescribed by the Congress. Charges shall be made against the State only for the number of acre-feet of water actually delivered to or diverted by it from Lake Mead.

BILLING AND PAYMENTS

10. The State shall pay monthly for all water delivered to it hereunder, or diverted by it from Lake Mead, in accordance with the charge in Article nine (9) hereof established. The United States will submit bills to the State by the tenth day of each month immediately following the month during which the water is delivered or diverted and payments shall be due on the first day of the month immediately succeeding. If such charges are not paid when due, an interest charge of one per centum (1%) of the amount unpaid shall be added thereto as liquidated damages and, thereafter, as further liquidated damages, an additional interest charge of one per centum (1%) of the principal sum unpaid shall be added on the first day of each succeeding calendar month until the amount due, including such interest, is paid in full.

REFUSAL OF WATER IN CASE OF DEFAULT

11. The United States reserves the right to refuse to deliver water to the State, or to permit water to be diverted by the State from Lake Mead, in the event of default for a period of more than twelve (12) months in any payment due or to become due to the United States under this contract.

INSPECTION BY THE UNITED STATES

12. The Secretary or his representatives shall at all times have the right of ingress to and egress from all works of the

State for the purpose of inspection, repairs, and maintenance of works of the United States, and for all other proper purposes. In each contract made by the State for the redelivery of any part of the water agreed to be delivered to the State hereunder, it shall be provided, for the use and benefit of the United States, that the authorized representatives of the United States shall at all times have access to measuring and controlling devices, or automatic gauges, over the lands and rights of way of the contractee. The Secretary or his representatives shall also have free access at all reasonable times to the books and records of the State relating to the diversion and distribution of water delivered to or diverted by the State from Lake Mead with the right at any time during office hours to make copies of or from the same.

RULES AND REGULATIONS

13. There is reserved to the Secretary the right to prescribe and enforce rules and regulations governing the delivery and diversion of water hereunder. Such rules and regulations may be modified, revised, and/or extended from time to time after notice to the State and opportunity for it to be heard, as may be deemed proper, necessary, or desirable by the Secretary to carry out the true intent and meaning of the law and of this contract, or amendments hereof, or to protect the interests of the United States. The State hereby agrees that in the operation and maintenance of its diversion works and conduits, all such rules and regulations will be fully adhered to.

AGREEMENT SUBJECT TO COLORADO RIVER COMPACT

14. This contract is made upon the express condition and with the express understanding that all rights hereunder shall be subject to and controlled by the Colorado River Compact, being the compact or agreement signed at Santa Fe, New Mexico, November 24, 1922, pursuant to

an Act of Congress approved August 19, 1921, entitled "An Act to permit a compact or agreement between the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming, respecting the disposition and apportionment of the waters of the Colorado River, and for other purposes", which compact was approved in section 13 (a) of the Boulder Canyon Project Act.

PRIORITY OF CLAIMS OF THE UNITED STATES

15. Claims of the United States arising out of this contract shall have priority over all others, secured or unsecured.

CONTRACT CONTINGENT UPON APPROPRIATIONS

16. This contract is subject to appropriations being made by Congress from time to time of money sufficient to provide for the doing and performance of all things on the part of the United States to be done and performed under the terms hereof, and to there being sufficient money available in the Colorado River Dam Fund for such purposes. No liability shall accrue against the United States, its officers, agents, or employees, by reason of sufficient money not being so appropriated, or on account of there not being sufficient money in the Colorado River Dam Fund for such purposes.

EFFECT OF WAIVER OF BREACH OF CONTRACT

17. All rights of action for breach of any of the provisions of this contract are reserevd to the United States as provided in Section 3737 of the Revised Statutes of the United States. The Waiver of a breach of any of the provisions of this contract shall not be deemed to be a waiver of any provision hereof, or of any other subsequent breach of any provision hereof.

REMEDIES UNDER CONTRACT NOT EXCLUSIVE

18. Nothing contained in this contract shall be construed as in any manner abridging, limiting, or depriving the United States or the State of any means of enforcing any remedy either at law or in equity for the breach of any of the provisions hereof which it would otherwise have.

TRANSFER OF INTEREST IN CONTRACT

19. No voluntary transfer of this contract, or of the rights of the State hereunder, shall be made without the written approval of the Secretary; and any successor or assign of the rights of the State, whether by voluntary transfer, judicial sale, trustee's sale, or otherwise, shall be subject to all the conditions of the Boulder Canyon Project Act, and also subject to all the provisions and conditions of this contract to the same extent as though such successor or assign were the original contractor hereunder; provided, that the execution of a mortgage or trust deed, or judicial or trustee's sale made thereunder, shall not be deemed a voluntary transfer within the meaning of this Article.

NOTICES

20. (a) Any notice, demand, or request required or authorized by this contract to be given or made to or upon the United States shall be delivered, or mailed postage prepaid, to the Director of Power, United States Bureau of Reclamation, Boulder City, Nevada, except where, by the terms hereof, the same is to be given or made to or upon the Secretary, in which event it shall be delivered, or mailed postage prepaid, to the Secretary, at Washington, D. C.

(b) Any notice, demand or request required or authorized by this contract to be given or made to or upon the

State shall be delivered, or mailed postage prepaid, to the Secretary of the Colorado River Commission of Nevada, Carson City, Nevada.

(c) The designation of any person specified in this article or in any such request for notice, or the address of any such person, may be changed at any time by notice given in the same manner as provided in this article for other notices.

OFFICIALS NOT TO BENEFIT

21. No Member of or Delegate to Congress or Resident Commissioner shall be admitted to any share or part of this contract or to any benefit that may arise herefrom, but this restriction shall not be construed to extend to this contract if made with a corporation or company for its general benefit.

UNCONTROLLABLE FORCES

22. Neither party shall be considered to be in default in respect to any obligation hereunder, if prevented from fulfilling such obligation by reason of uncontrollable forces, the term "uncontrollable forces" being deemed, for the purposes of this contract, to mean any cause beyond the control of the party affected, including but not limited to inadequacy of water, failure of facilities, flood, earthquake, storm, lightning, fire, epidemic, war, riot, civil disturbance, labor disturbance, sabotage, and restraint by court or public authority, which by exercise of due diligence and foresight, such party could not reasonably have been expected to avoid. Either party rendered unable to fulfill any obligation by reason of uncontrollable forces shall exercise due diligence

In witness whereof the parties hereto have caused this contract to be executed the day and year first above written.

NEVADA CONTRACT OF JANUARY 3, 1944

UNITED STATES DEPARTMENT OF THE INTERIOR

BUREAU OF RECLAMATION

BOULDER CANYON PROJECT

ARIZONA-CALIFORNIA-NEVADA

SUPPLEMENTAL CONTRACT FOR DELIVERY OF WATER

1. THIS SUPPLEMENTAL CONTRACT made this 3rd day of January nineteen hundred forty-four, pursuant to the Act of Congress approved June 17, 1902 (32 Stat. 388), and acts amendatory thereof or supplementary thereto, all of which acts are commonly known and referred to as the Reclamation Law, and particularly pursuant to the Act of Congress approved December 21, 1928 (45 Stat. 1057), designated the Boulder Canyon Project Act, and acts amendatory thereof or supplementary thereto, between THE UNITED STATES OF AMERICA (hereinafter referred to as "United States"), acting for this purpose by Harold L. Ickes, Secretary of the Interior (hereinafter styled "Secretary"), and STATE OF NEVADA, a body politic and corporate, and its Colorado River Commission (said Commission acting in the name of the State, but as principal in its own behalf as well as in behalf of the State; the term State as used in this supplemental contract being deemed to be both the State of Nevada and its Colorado River Commission), acting in pursuance of an act of the Legislature of the State of Nevada, entitled "An Act creating a commission to be known as the Colorado river commission of Nevada, defining its powers and duties, and making an appropriation for the expenses thereof, and repealing all acts and parts of acts in conflict with this act," approved March 20, 1935 (Chapter 71, Stats. of Nevada, 1935);

Witnesseth:

EXPLANATORY RECITALS

2. Whereas, under date of March 30, 1942, the parties hereto entered into a contract providing, among other things, for the delivery of water to the State each year, from storage in Lake Mead, subject to the availability thereof for use in Nevada under the provisions of the Colorado River Compact and the Boulder Canyon Project Act, so much water as may be necessary to supply the State a total quantity not to exceed One Hundred Thousand (100,000) acre-feet each calendar year, and it is now desired to amend said contract so as to provide for the delivery each calendar year of not to exceed an additional 200,000 acre-feet of water to the State;

3. Now, therefore, in consideration of the mutual covenants herein contained, the parties hereto agree as follows, to wit:

DELIVERY OF WATER BY THE UNITED STATES

4. Article 5 (a) of the aforesaid contract of date March 30, 1942, is hereby amended to read as follows:

"Subject to the availability thereof for use in Nevada under the provisions of the Colorado River Compact and the Boulder Canyon Project Act, the United States shall, from storage in Lake Mead, deliver to the State each year at a point or points to be selected by the State and approved by the Secretary, so much water, including all other waters diverted for use within the State of Nevada from the Colorado River system, as may be necessary to supply the State a total quantity not to exceed Three Hundred Thousand (300,000) acre-feet each calendar year. Said water may be used only within the State of Nevada, exclusively for irrigation, household, stock, municipal, mining, milling,

industrial, and other like purposes, but shall not be used for the generation of electric power."

MODIFICATION OF PRIOR CONTRACT

5. Except as expressly herein amended, the aforesaid contract of date March 30, 1942, shall be and remain in full force and effect.

EFFECTIVE DATE OF SUPPLEMENTAL CONTRACT

6. This supplemental contract shall be of full force and effect immediately upon its execution for and on behalf of the United States.

OFFICIALS NOT TO BENEFIT

7. No Member of or Delegate to Congress or Resident Commissioner shall be admitted to any share or part of this contract or to any benefit that may arise herefrom, but this restriction shall not be construed to extend to this contract if made with a corporation or company for its general benefit.

In witness whereof, the parties hereto have caused this supplemental contract to be executed the day and year first above written.

Appendix 8

PALO VERDE IRRIGATION DISTRICT CONTRACT OF FEBRUARY 7, 1933

UNITED STATES DEPARTMENT OF THE INTERIOR

BUREAU OF RECLAMATION

BOULDER CANYON PROJECT

UNITED STATES AND PALO VERDE IRRIGATION DISTRICT CONTRACT FOR DELIVERY OF WATER

(1) THIS CONTRACT, made this 7th day of February nineteen hundred thirty-three, pursuant to the Act of Congress approved June 17, 1902 (32 Stat. 388), and acts amendatory thereof or supplementary thereto, all of which acts are commonly known and referred to as the reclamation law, and particularly pursuant to the Act of Congress approved December 21, 1928 (45 Stat. 1057), designated the Boulder Canyon Project Act, between THE UNITED STATES OF AMERICA, hereinafter referred to as the United States, acting for this purpose by Harold L. Ickes, Secretary of the Interior, hereinafter styled the Secretary, and PALO VERDE IRRIGATION DISTRICT, an irrigation district created, organized, and existing under and by virtue of an act of the Legislature of the State of California approved June 21, 1923 (Chapter 452, Statutes of California, 1923), as amended, known as and designated "Palo Verde irrigation district act", with its principal office at Blythe, Riverside County, California, hereinafter referred to as the District;

Witnesseth:

EXPLANATORY RECITALS

(2) Whereas, for the purpose of controlling the floods, improving navigation and regulating the flow of the Colorado River, providing for storage and for the delivery of

the stored waters for reclamation of public lands and other beneficial uses exclusively within the United States, the Secretary, subject to the terms of the Colorado River Compact, is authorized to construct, operate and maintain a dam and incidental works in the main stream of the Colorado River at Black Canyon or Boulder Canyon, adequate to create a storage reservoir of a capacity of not less than twenty million acre-feet of water; and

(3) Whereas, after full consideration of the advantages of both the Black Canyon and Boulder Canyon dam sites, the Secretary has determined upon Black Canyon as the site of the aforesaid dam, hereinafter styled the Hoover Dam, creating thereby a reservoir to be hereinafter styled the Boulder Canyon Reservoir; and

(4) Whereas, the District is desirous of entering into a contract for the delivery to it of water from Boulder Canyon Reservoir, and it is to the mutual interest of the parties hereto that such contract be executed and the rights of the District in and to waters of the river be hereby defined.

(5) Now, therefore, in consideration of the mutual covenants herein contained, the parties hereto agree as follows, to wit:

DELIVERY OF WATER BY THE UNITED STATES

(6) The United States shall, from storage available in the Boulder Canyon Reservoir, deliver to the District each year at a point in the Colorado River immediately above the District's point of diversion known as Blythe Intake (or as relocated within two miles of the present intake) so much water as may be necessary to supply the District a total quantity, including all other waters diverted for use of the District from the Colorado River, in the amounts and with priorities in accordance with the recommendation of the Chief of the Division of Water Resources of the State of California, as follows (subject to availability thereof for

use in California under the Colorado River Compact and the Boulder Canyon Project Act):

"The waters of the Colorado River available for use within the State of California under the Colorado River Compact and the Boulder Canyon Project Act shall be apportioned to the respective interests below named and in amounts and with priorities therein named and set forth, as follows:

"SECTION 1. A first priority to Palo Verde Irrigation District for beneficial use exclusively upon lands in said District as it now exists and upon lands between said District and the Colorado River, aggregating (within and without said District) a gross area of 104,500 acres, such waters as may be required by said lands.

"SEC. 2. A second priority to Yuma Project of the United States Bureau of Reclamation for beneficial use upon not exceeding a gross area of 25,000 acres of land located in said project in California, such waters as may be required by said lands.

"SEC. 3. A third priority (a) to Imperial Irrigation District and other lands under or that will be served from the All-American Canal in Imperial and Coachella Valleys, and (b) to Palo Verde Irrigation District for use exclusively on 16,000 acres in that area known as the 'Lower Palo Verde Mesa,' adjacent to Palo Verde Irrigation District, for beneficial consumptive use, 3,850,000 acre-feet of water per annum less the beneficial consumptive use under the priorities designated in Sections 1 and 2 above. The rights designated (a) and (b) in this section are equal in priority. The total beneficial consumptive use under priorities stated in Sections 1, 2, and 3 of this article shall not exceed 3,850,000 acre-feet of water per annum.

"SEC. 4. A fourth priority to the Metropolitan Water District of Southern California and/or the City of Los Angeles, for beneficial consumptive use, by themselves

and/or others, on the Coastal Plain of Southern California, 550,000 acre-feet of water per annum,

"SEC. 5. A fifth priority (a) to The Metropolitan Water District of Southern California and/or the City of Los Angeles, for beneficial consumptive use, by themselves and/or others, on the Coastal Plain of Southern California, 550,000 acre-feet of water per annum and (b) to the City of San Diego and/or County of San Diego, for beneficial consumptive use, 112,000 acre-feet of water per annum. The rights designated (a) and (b) in this section are equal in priority.

"SEC. 6. A sixth priority (a) to Imperial Irrigation District and other lands under or that will be served from the All-American Canal in Imperial and Coachella Valleys, and (b) to Palo Verde Irrigation District for use exclusively on 16,000 acres in that area known as the 'Lower Palo Verde Mesa,' adjacent to Palo Verde Irrigation District, for beneficial consumptive use, 300,000 acre-feet of water per annum. The rights designated (a) and (b) in this section are equal in priority.

"SEC. 7. A seventh priority of all remaining water available for use within California, for agricultural use in the Colorado River Basin in California, as said basin is designated on Map No. 23000 of the Department of the Interior, Bureau of Reclamation.

"SEC. 8. So far as the rights of the allottees named above are concerned, the Metropolitan Water District of Southern California and/or the City of Los Angeles shall have the exclusive right to withdraw and divert into its aqueduct any water in Boulder Canyon Reservoir accumulated to the individual credit of said District and/or said City (not exceeding at any one time 4,750,000 acre-feet in the aggregate) by reason of reducing diversions by said District and/or said City; provided, that accumulations shall be subject to such conditions as to accumulation, retention, release and withdrawal as the Secretary of the In-

terior may from time to time prescribe in his discretion, and his determination thereof shall be final; provided further, that the United States of America reserves the right to make similar arrangements with users in other States without distinction in priority, and to determine the correlative relations between said District and/or said City and such users resulting therefrom.

"Sec. 9. In addition, so far as the rights of the allottees named above are concerned, the City of San Diego and/or County of San Diego shall have the exclusive right to withdraw and divert into an aqueduct any water in Boulder Canyon Reservoir accumulated to the individual credit of said City and/or said County (not exceeding at any one time 250,000 acre-feet in the aggregate) by reason of reduced diversions by said City and/or said County; provided, that accumulations shall be subject to such conditions as to accumulations, retention, release and withdrawal as the Secretary of the Interior may from time to time prescribe in his discretion, and his determination thereof shall be final; provided further, that the United States of America reserves the right to make similar arrangements with users in other States without distinction in priority, and to determine the correlative relations between the said City and/or said County and such users reulting therefrom.

"SEC. 10. In no event shall the amounts allotted in this agreement to the Metropolitan Water District of Southern California and/or the City of Los Angeles be increased on account of inclusion of a supply for both said District and said City, and either or both may use said apportionments as may be agreed by and between said District and said City.

"SEC. 11. In no event shall the amounts allotted in this agreement to the City of San Diego and/or to the County of San Diego be increased on account of inclusion of a supply for both said City and said County, and either or both may use said apportionments as may be agreed by and between said City and said County.

"SEC. 12. The priorities hereinbefore set forth shall be in no wise affected by the relative dates of water contracts executed by the Secretary of the Interior with the various parties."

The Secretary reserves the right to, and the District agrees that he may, contract with any of the allottees above named in accordance with the above stated recommendation. The District reserves the right to establish, at any time, by judicial determination, its rights to divert and/or use water from the Colorado River. In the event the above stated recommendation as to the District is superseded by an agreement betwe[illegible]ll the above allottees or by a final judicial determina[illegible] the parties hereto reserve the right to further contract in accordance with such agreement or such judicial determination; *Provided*, that priorities numbered fourth and fifth shall not thereby be disturbed.

As far as reasonable diligence will permit said water shall be delivered as ordered by the District, and as reasonably required for potable and irrigation purposes within the areas for which the District is allotted water as described in the above-stated recommendation. This contract is for permanent water service but is subject to the condition that Hoover Dam and Boulder Canyon Reservoir shall be used: First, for river regulation, improvement of navigation, and flood control; second, for irrigation and domestic uses and satisfaction of perfected rights in pursuance of Article VIII of the Colorado River Compact; and third, for power. This contract is made upon the express condition and with the express covenant that the District and the United States shall observe and be subject to, and controlled by, said Colorado River Compact in the construction, management, and operation of Hoover Dam, and other works and the storage, diversion, delivery, and use of water for the generation of power, irrigation, and other purposes. The United States reserves the right to temporarily discontinue or reduce the amount of water to be delivered for the purpose of investigation, inspection, maintenance, repairs, replacements, or installation of equipment and/or machinery at Hoover Dam, but as far as feasible the United States will

give the District reasonable notice in advance of such temporary discontinuance or reduction. The United States, its officers, agents, and employees shall not be liable for damages when, for any reason whatsoever, suspension or reductions in delivery of water occur. This contract neither prejudices nor admits any claim of the District on account of alleged changes in elevation of the river bed, howsoever caused, or the effect of such alleged changes on the District's diversion of water delivered hereunder. This contract is without prejudice to any other or additional rights which the District may now have not inconsistent with the foregoing provisions of this article, or may hereafter acquire in or to the waters of the Colorado River.

RECEIPT OF WATER BY DISTRICT

(7) The District shall receive the water to be delivered to it by the United States under the terms hereof at the point of delivery above stated, and shall at its own expense convey such water to its distribution system, and shall perform all acts required by law or custom in order to maintain its control over such water and to secure and maintain its lawful and proper diversion from the Colorado River.

MEASUREMENT OF WATER

(8) The water to be delivered hereunder shall be measured at Blythe Intake by such measuring and controlling devices or such automatic gauges or both, as shall be satisfactory to the Secretary. Said measuring and controlling devices, or automatic gauges, shall be furnished, installed, and maintained by and at the expense of the District, but they shall be and remain at all times under the complete control of the United States, whose authorized representatives may at all times have access to them over the lands and rights-of-way of the District.

RECORD OF WATER DIVERTED

(9) The District shall make full and complete written reports as directed by the Secretary, on forms to be supplied

by the United States, of all water diverted from the Colorado River, and the disposition thereof. The records and data from which such reports are made shall be accessible to the United States on demand of the Secretary.

NO CHARGE FOR DELIVERY OF WATER

(10) The District shall not be required to pay to the United States any tolls, rates, or charges of any kind for or on account of the storage or delivery of water hereunder.

INSPECTION BY THE UNITED STATES

(11) The Secretary or his representatives, shall at all times have the right of ingress to and egress from all works of the District for the purpose of inspection, repairs and maintenance of works of the United States, and for all other proper purposes. The Secretary or his representatives shall also have free access at all reasonable times to the books and records of the District relating to the diversion and distribution of water delivered to it hereunder with the right at any time during office hours to make copies of or from the same.

DISPUTES OR DISAGREEMENTS

(12) Disputes or disagreements as to the interpretation or performance of the provisions of this contract shall be determined either by arbitration or court proceedings, the Secretary being authorized to act for the United States in such proceedings. Whenever a controversy arises out of this contract, and the parties hereto agree to submit the matter to arbitration, the District shall name one arbitrator and the Secretary shall name one arbitrator, and the two arbitrators thus chosen shall elect three other arbitrators, but in the event of their failure to name all or any of the three arbitrators within thirty (30) days after their first meeting, such arbitrators not so elected, shall be named by the Senior Judge of the United States Circuit Court of Appeals for the Ninth Circuit. The decision of any three

of such arbitrators shall be a valid and binding award of the arbitrators.

RULES AND REGULATIONS

(13) There is reserved to the Secretary the right to prescribe and enforce rules and regulations not inconsistent with this contract, governing the diversion and delivery of water hereunder to the District and to other contractors. Such rules and regulations may be modified, revised and/or extended from time to time after notice to the District and opportunity for it to be heard, as may be deemed proper, necessary or desirable by the Secretary to carry out the true intent and meaning of the law and of this contract, or amendments thereof, or to protect the interests of the United States. The District hereby agrees that in the operation and maintenance of its diversion works at Blythe Intake, all such rules and regulations will be fully adhered to.

AGREEMENT SUBJECT TO COLORADO RIVER COMPACT

(14) This contract is made upon the express condition and with the express understanding that all rights based upon this contract shall be subject to and controlled by the Colorado River Compact, being the compact or agreement signed at Santa Fe, New Mexico, November 24, 1922, pursuant to Act of Congress approved August 19, 1921, entitled "An Act to permit a compact or agreement between the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming, respecting the disposition and apportionment of the waters of the Colorado River, and for other purposes", which compact was approved by the Boulder Canyon Project Act.

PRIORITY OF CLAIMS OF THE UNITED STATES

(15) Claims of the United States arising out of this contract shall have priority over all others, secured or unsecured.

Appendix 8

CONTINGENT UPON APPROPRIATIONS

(16) This contract is subject to appropriations being made by Congress from year to year of moneys sufficient to do the work contemplated hereby, and to there being sufficient moneys available in the Colorado River Dam fund to permit allotments to be made for the performance of such work. No liability shall accrue against the United States, its officers, agents, or employees, by reason of sufficient moneys not being so appropriated nor on account of there not being sufficient moneys in the Colorado River Dam fund to permit of said allotments. This agreement is also subject to the condition that if for any reason construction of Hoover Dam is not prosecuted to completion with reasonable diligence, then and in such event either party hereto may terminate its obligations hereunder upon one (1) year's written notice to the other party hereto.

RIGHTS RESERVED UNDER SECTION 3737, REVISED STATUTES

(17) All rights of action for breach of any of the provisions of this contract are reserved to the United States as provided in Section 3737 of the Revised Statutes of the United States.

REMEDIES UNDER CONTRACT NOT EXCLUSIVE

(18) Nothing contained in this contract shall be construed as in any manner abridging, limiting or depriving the United States or the District of any means of enforcing any remedy either at law or in equity for the breach of any of the provisions hereof which it would otherwise have. The waiver of a breach of any of the provisions of this contract shall not be deemed to be a waiver of any other provision hereof or of a subsequent breach of such provision.

INTEREST IN CONTRACT NOT TRANSFERABLE

(19) No interest in this agreement is transferable, and no sublease shall be made, by the District without the writ-

ten consent of the Secretary, and any such attempted transfer or sublease shall cause this contract to become subject to annulment, at the option of the United States.

MEMBER OF CONGRESS CLAUSE

(20) No Member of or Delegate to Congress or Resident Commissioner, shall be admitted to any share or part of this contract, or to any benefit that may arise therefrom. Nothing, however, herein contained shall be construed to extend to this contract if made with a corporation for its general benefit.

In witness whereof, the parties hereto have caused this contract to be executed the day and year first above written.

OCTOBER TERM, 1960

No. 9 Original

STATE OF ARIZONA, *Complainant*

vs.

STATE OF CALIFORNIA, et al., *Defendants*,
UNITED STATES OF AMERICA, *Intervener*,
STATE OF NEVADA, *Intervener*,
STATE OF NEW MEXICO, *Impleaded*,
STATE OF UTAH, *Impleaded*.

THE STATE OF NEVADA'S EXCEPTIONS TO THE REPORT OF SPECIAL MASTER, SIMON H. RIFKIND, DATED DECEMBER 5, 1960; AND THE RECOMMENDED DECREE INCLUDED THEREIN.

The State of Nevada, Intervener, excepts to the Report of Special Master, Simon H. Rifkind, dated December 5, 1960, and the Recommended Decree therein included, filed in the above-entitled action, in the particular respects and as to the specific points as follows:

I.

The Special Master erred in providing in Paragraph II(B)(7) of the proposed Decree (p. 349) that "mainstream water shall be delivered to users in * * * Nevada only if contracts have been made by the Secretary of the Interior pursuant to Section 5 of the Boulder Canyon Project Act for delivery of such water; * * *."

This provision of the Decree, so far as relates to Nevada may be an inadvertence inasmuch as the report itself (p. 210) finds that contract between the State of Nevada and the Secretary of the Interior (App. 6 and 7 to the Report, pp. 409-422) "does not require additional sub-contracts between each water user and the Secretary of the Interior."

II.

The Special Master erred in finding in the Report, at pages 234 to 237, 311 and 312, and in Paragraphs II(B)(5) and (6) of the Recommended Decree, that a part of Nevada's allocation of water may be used to supply the so-called "present perfected rights" in other States, in years when the allocations of such other States are not sufficient to supply said rights.

And as an alternative, the Special Master erred in not providing a minimum figure below which the allocation of the State of Nevada could not be reduced, if, and when, it ever becomes necessary to take water away from Nevada's allocation for supplying so-called "present perfected rights" in other States.

III.

That the Special Master erred in failing to recommend in his Report, or provide in his Recommended Decree for the appointment of a Commissioner with the power to supervise the operation of the Colorado River in the Lower Basin and the delivery, annually, among the various parties of the waters awarded to them by the Decree herein. (Report, p. 314)

IV.

That the Special Master erred in failing to recommend in his Report or include in his Recommended Decree, provision for the promulgation of Rules and Regulations by the Officer in charge of operating the Colorado River, after the Decree is entered herein, setting forth in detail the manner, method and plan, including time schedules, to be used annually in regulating stream flows, in managing and controlling regulatory structures and in allocating and distributing water to the parties entitled thereto; and also providing for cooperation with representatives of affected States in accordance with Section 16 of the Boulder Canyon Project Act (45 Stat. 457; 43 USC 617).

V.

The Special Master made the water allocations recommended in his Report and in his Recommended Decree to be awarded the State of Nevada under a different theory of law and interpretation of the Colorado River Compact and the Boulder Canyon Project Act, than that urged by Nevada in its pleadings, proof and prior Briefs herein. The State of Nevada expressly reserves the right, if it appears necessary during the subsequent proceedings herein, to again urge these contentions

which have been discarded by the Special Master. By not excepting to the basic theory adopted by the Special Master in his Report and Recommended Decree, Nevada is not waiving the right to assert that she is entitled to the quantity of water awarded her by the Special Master, if not a larger quantity, under the theory urged by Nevada in her pleadings, proof and prior Briefs herein, or under any plan of distribution of the waters of the Colorado River.

CONCLUSION

In accordance with the Order of this Court dated January 16, 1961, the foregoing is,

Respectfully submitted,

ROGER D. FOLEY,
Attorney General

W. T. MATHEWS,
Chief Counsel

R. P. PARRY,
CLIFFORD E. FIX,
Special Counsel

Counsel for State of Nevada.

Dated February 20, 1961.

ARIZONA'S MOTION FOR ADOPTION, WITH EXCEPTIONS, OF THE SPECIAL MASTER'S REPORT AND RECOMMENDED DECREE.

MOTION.

The great majority of the findings, conclusions and recommendations of the Special Master's Report (hereafter

the "Report"), and of the provisions of the Recommended Decree (hereafter the "Decree") are favorable to Arizona, and she therefore urges their adoption by the Court.

Arizona seeks modification of the Report and Decree only insofar as:

1. the Report, while reaching conclusions with which Arizona agrees, rejects basic positions advanced by Arizona as the correct premises for these conclusions; and

2. the Report recommends and the Decree provides that certain decisive issues be determined adversely to Arizona.

Accordingly, Arizona moves the adoption of all findings, conclusions and recommendations of the Report and all provisions of the Decree other than those to which she notes specific exception herein.[1] The exceptions are filed pursuant to the Court's order of January 16, 1961.

EXCEPTIONS.[2]

I. Construction of the Compact.

Arizona agrees with the Special Master's conclusions that the Compact has utility as a decisive factor in this case

---

[1] We have not, of course, attempted to note all of the statements made by the Master in the course of his discussion with which we disagree (e.g., we certainly disagree with the Special Master's statement that "the Compact treats the Upper and Lower Basins on a parity one to the other in regard to the division of water . . ." (Rep. 235)). Elsewhere in his Report the Master recognized the impropriety of deciding questions of Compact interpretation which might affect Upper Basin interests in the absence of the states of the Upper Basin (Rep. 145).

[2] The exceptions are grouped under the several phases of the case as considered in the Report. Each category of exceptions is introduced by a brief statement of Arizona's position regarding the Master's treatment of the particular phase under consideration. Exceptions to particular findings, conclusions and recommendations

only insofar as it serves to determine the supply of main stream water legally available in the Lower Basin of the Colorado River and that the Compact is not relevant to the allocation of water from Lake Mead and from the main stream of the River below Hoover Dam among the Lower Basin States of Arizona, California and Nevada (Rep. 138-41; Ariz. Op. Br. 20-21).[3]

However, against the eventuality that the Court may differ with these conclusions as to the irrelevance of the Compact, the Report sets forth the Special Master's interpretation of various Compact terms (Rep. 141-50). For the same reason, Arizona notes by exception her disagreement with the Master's construction of these Compact provisions.

Accordingly, Arizona excepts to:

1. The Master's finding and conclusion that the apportionment of the use of water between the Upper and Lower

---

are numbered consecutively, with appropriate page citation to the Report. Wherever deemed helpful, additional particularized grounds of exception are set forth. For the convenience of the Court, reference is made to the discussion of the points involved in Arizona's Opening and Answering Briefs before the Master with page citation. The bases of the exceptions will be more fully presented and argued in the briefs to be filed subsequently with the Court on behalf of Arizona pursuant to the Court's order of January 16, 1961.

[3] The Special Master's Report is cited as "Rep." followed by page number.

Arizona's Opening and Answering Briefs before the Special Master are cited as "Ariz. Op. Br." and "Ariz. Ans. Br.", respectively, followed by page number.

Throughout, the Colorado River Compact (Rep. 371-77) is referred to as the "Compact"; the Boulder Canyon Project Act (Rep. 379-96), 45 Stat. 1057 (1928), as the "Project Act"; the California Limitation Act (Rep. 397-98), Act of March 4, 1929, Ch. 16, 48th Sess., Statutes and Amendments to the Codes, 1929, pp. 38-39, as the "Limitation Act"; and the contracts with the Secretary of the Interior for delivery of water from Lake Mead (Rep. 399, *et seq.*), as the "water delivery contracts".

Basins of the Colorado River made by Article III(a) and (b) of the Compact is achieved by imposing limitations on the quantity of water which may be appropriated in each Basin as against the other (Rep. 140, 146-47, 149).

Article III(a) and (b) of the Compact, correctly construed, do not impose limitations upon the quantity of water which may be appropriated in each Basin, but rather make an apportionment of water in perpetuity to each Basin, regardless of the extent of actual use or appropriation in either Basin of the water so apportioned.

2. The Master's finding and conclusion that Article III(a), (b), (c), (f) and (g) and the first sentence and last paragraph of Article VIII of the Compact deal with both the main stream and tributaries of the Colorado River and not with the main stream exclusively (Rep. 142-47).

The terms of the Compact, when construed in relation to the pre-existing conflict between the two Basins, the purposes sought to be achieved and the geographical and physical facts, establish that Article III(a), (b), (c), (f) and (g) and Article VIII deal with the main stream of the Colorado River and not with Lower Basin tributaries (Ariz. Op. Br. 20-32; Ariz. Ans. Br. 1-5).

As the Special Master found, the history and text of the Compact show that interbasin, not interstate relations were the subject of agreement (Rep. 138-40). These interbasin relations involved problems of concern to each Basin. These problems, created by existing and contemplated uses of main stream water (Rep. 9, 11, 13, 18, 20-22, 24, 139), impelled the adoption of the Compact. It is thus clear that the Compact was intended to deal with main stream problems and not with those, present or future, on Lower Basin tributaries (Ariz. Op. Br. 21-24).

The geographical fact that Lee Ferry is a point in the Grand Canyon separating the Basins, the Com-

pact provision naming Lee Ferry as the point where the Upper Basin is required to deliver water to the Lower Basin and the hydrological fact that Lower Basin tributary water is inaccessible and unavailable to the Upper Basin, all demonstrate that the Upper Basin could obtain physical control and acquire rights against the Lower Basin in main stream and Upper Basin tributary water only; hence the water of Lower Basin tributaries was not, and in the nature of things could not have been, subject to the division of water between the two Basins made by the Compact (Ariz. Op. Br. 26-27; Ariz. Ans. Br. 2-3).

Although the Compact defines the "Colorado River System" as "that portion of the Colorado River and its tributaries within the United States of America"—terminology emphasized by the Special Master (Rep. 140-43)—Article III (a) apportions water "*from*", not "*of*", the Colorado River System and Article III (b) treats of "such waters". Thus, as expressly stated in Article I, "an apportionment of the use of *part* of the water of the Colorado River System is made".[4] (See also Articles III (f) and (g) and VI). The "part" of the "System" apportioned by the Compact is main stream, not Lower Basin tributary water (Ariz. Op. Br. 25-26; Ariz. Ans. Br. 2-3).

There is a clear and necessary correlation, and not a mere "coincidence" (Rep. 188), between the requirement of Article III (d) that the "States of the Upper Division will not cause the flow of the River at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years" and the "7,500,000 acre-feet of water per annum" apportioned to the Lower Basin by Article III (a). The purpose of the Article III (d) water delivery requirement was to guarantee the Lower Basin a quantity of water sufficient to assure satisfaction of the apportionment to the Lower Basin made by Article III (a),

[4] Unless otherwise indicated, italics within quotations are supplied.

even during periods when the water supply originating in the Upper Basin might be insufficient to fulfill the total apportionment made to both Basins by Article III (a) (Ariz. Op. Br. 28-30; Ariz. Ans. Br. 3-4). The Master's holding that an interpretation is inadmissible which makes the provisions of Article III (a) and (d) correlative rather than coincidental is founded on invalid premises: that Article III (a) imposes a limitation on appropriations and that Article III (a) extends to Lower Basin tributaries as well as to the main stream (Rep. 144).

Article VIII of the Compact, which provides that "present perfected rights to the beneficial use of waters of the Colorado River System are unimpaired by this Compact", was intended to reserve to Lower Basin users their legal right to demand the release of water to satisfy priorities asserted by them until such time as storage facilities were provided to assure them a stable water supply. Article VIII expressly provides for satisfaction of such rights "whenever storage capacity of 5,000,000 acre-feet shall have been provided on the main Colorado River within or for the benefit of the Lower Basin . . ." This reference is plainly and necessarily to rights in main stream, not Lower Basin tributary water (Ariz. Op. Br. 31-32).

II. Construction of the Project Act and Limitation Act.

Arizona concurs in the Special Master's findings and conclusions that the provisions, general operative scheme and legislative history of the Project Act establish that both Section 4(a) of that Act and the Limitation Act refer only to water stored in Lake Mead and flowing in the main stream below Hoover Dam and that, as to this water, principles of equitable apportionment or priority of appropria-

tion are irrelevant (Rep. 138, 151-52, 173-74, *et seq.*; and see Ariz. Op. Br. 35-43).

Arizona further agrees with the Special Master that the words of Section 4(a) and the substantially identical language of the Limitation Act—"waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact" and "excess or surplus waters unapportioned by said compact"—refer to main stream water only and not to water of tributaries (Rep. 167-85; Ariz. Op. Br. 43-45).

However, Arizona reads the Compact's apportionment provisions as covering main stream water only (pp. 4-6 *supra*). Consistently, Arizona asserts that the Section 4(a) and Limitation Act references to "waters apportioned . . . by paragraph (a) of Article III of the . . . compact" and to "excess or surplus waters unapportioned by said compact" are to main stream and not tributary water.

In any event, it is the interpretation put upon the Compact by Congress in enacting the Project Act, and that construction alone, which is controlling.

Arizona asserts that by referring in Section 4(a) to provisions of the Compact either Congress construed those provisions correctly as dealing exclusively with water of the main stream, or (assuming the Compact apportionment provisions may be properly regarded as including tributaries) Congress in effect modified the Compact provisions referred to by limiting their application to main stream water.

Only in the event that the Court should hold that the Section 4(a) references to the Compact must necessarily be construed in the Compact sense, and no other, will the correct interpretation of the Compact provisions become decisive.

Against this eventuality Arizona excepts to:

3. The Master's finding and conclusion that Section 4(a) of the Project Act and the Limitation Act refer only to water stored in Lake Mead and flowing in the main stream below Hoover Dam, "*despite the fact*" that Article III (a) of the Compact deals with the Colorado River "System", which, as defined in Article II (a), includes the entire main stream and tributaries of the Colorado River (Rep. 173; cf. Ariz. Op. Br. 23-34; Ariz. Ans. Br. 2-5).

Arizona agrees that Section 4(a) of the Project Act and the Limitation Act refer only to water stored in Lake Mead and flowing in the main stream below Hoover Dam. Arizona disagrees with the Master's conclusions that Article III (a) of the Compact deals with tributaries as well as the main stream (Ariz. Op. Br. 23-34; Ariz. Ans. Br. 2-5).

4. The Master's finding and conclusion that Congress in Section 4(a) of the Project Act regarded Article III (a) of the Compact as a source of supply rather than as a limitation on appropriations and accorded Article III (a) a meaning different from the Compact meaning (Rep. 149).

Arizona's position is that Congress regarded Article III (a) as an apportionment of main stream water to the Lower Basin without reference to appropriations and that this construction of Article III (a) is correct (Ariz. Op. Br. 35-43).

5. The Master's finding and conclusion that Section 6 of the Project Act was intended to give intrabasin protection to water rights "perfected" within the Lower Basin states (Rep. 234, 306, *et seq.*).

Arizona contends that the language of Section 6 of the Project Act—"satisfaction of present perfected

rights in pursuance of Article VIII of said Colorado River compact''—does not recognize or confirm the existence of any intrabasin rights. This clause was intended to comply with the provisions of Article VIII which discharged the Upper Basin from "claims of . . . rights, *if any,* by appropriators or users of water in the Lower Basin against appropriators or users of water in the Upper Basin", after storage capacity of five million acre-feet had been provided "on the main Colorado River within or for the benefit of the Lower Basin".

Properly construed, Article VIII provides for satisfaction of perfected rights basin versus basin only and makes no provision for satisfaction of intrabasin rights. Congress intended in Section 6 of the Project Act to give effect to Article VIII of the Compact, and nothing more (Ariz. Op. Br. 31-32; Ariz. Ans. Br. 46-47).

A construction of the Project Act which would require the Secretary of the Interior to ascertain the priority of rights on the River, both as to the time of vesting and the extent of each right and to manage the dam and reservoir so as to respect these varying rights would be completely inconsistent with the plain language of the Act and the purpose of Congress to control and store all the water in the main stream of the Colorado River at the site of Hoover Dam and to distribute the stored water pursuant to contracts with the Secretary (Ariz. Ans. Br. 36-47).

6. The Master's finding and conclusion that Section 6 of the Project Act provides for the satisfaction of rights perfected as of June 25, 1929, the effective date of the Act, rather than rights perfected as of November 24, 1922, the date when the Compact was signed (Rep. 152 note 20; 308-11).

Section 6 of the Project Act provided for satisfaction "of present perfected rights *in pursuance of Article VIII of said Colorado River compact*".

The Compact, when ratified, speaks as of the date when it was signed and not as of the date when it was approved by Congress.

The language and purposes of Article VIII demonstrate that the phrase "present perfected rights", as used therein, referred to rights perfected as of the Compact date, i.e., November 24, 1922, and not to rights perfected after that date.

However, Arizona agrees with the Master insofar as he holds that a water right is a "present perfected right" only if acquired in compliance with state law and only to the extent that it represents an actual diversion and beneficial use of a specific quantity of water applied to a defined area of land or to a particular domestic or industrial use (Rep. 308).

III. Construction of the Project Act and the Water Delivery Contracts.

Arizona adheres to her position before the Special Master that the Project Act establishes a mandatory formula for the apportionment of water which the Secretary is required to follow with precision in making contracts for delivery of water from Lake Mead; and, as a corollary, that existing water delivery contracts, insofar as they do not conform to the formula established by the Act, are beyond the power and authority of the Secretary and without legal effect (Ariz. Op. Br. 46-57; Ariz. Ans. Br. 16-23).

Therefore, Arizona excepts to:

7. The Master's finding and conclusion that Section 4(a) of the Project Act does not establish a mandatory formula for allocation of water which the Secretary is required to follow precisely in his water delivery contracts (Rep. 162-63, 202).

8. The Master's finding and conclusion that Article 7(b), (f) and (g) of Arizona's water delivery contract, providing for Arizona's recognition of rights in Nevada, New Mexico and Utah, are valid (Rep. 205-07).

> Even though the water delivery contracts may have been voluntary acts of the parties thereto, those agreements are beyond the power and authority of the Secretary and without legal effect insofar as they do not conform to the mandatory formula for allocation of water established by Section 4(a) of the Project Act (Ariz. Op. Br. 53-57; Ariz. Ans. Br. 16-18).[5]
>
> Assuming the Master is correct in holding that Section 4(a) does not establish a mandatory formula for water allocation, Article 7(b), (f) and (g) are nevertheless invalid since they "are contrary to the command of Section 5 that 'contracts respecting water for irrigation and domestic uses shall be for permanent service . . .' " (see Rep. 237).
>
> Article 7(b) and (g) are invalid for the additional reason that they introduce tributary considerations into a main stream apportionment (see Rep. 242).

IV. Claims of the United States on the Main Stream.

The Special Master has sustained certain claims of the United States to main stream water of the Colorado River for use on Indian Reservations and other federal establishments created out of public lands.

The Master holds that no contracts are required for the delivery of water from Lake Mead for use on Indian

---

[5] The Nevada water delivery contracts are also invalid in part. Under those contracts there are included in the 300,000 acre-feet of water to be delivered annually to Nevada "all other waters diverted for use within . . . Nevada from the Colorado River system" (Rep. 420), i.e., water from Lower Basin tributaries in Nevada (Ariz. Op. Br. 55).

Reservations and similar federal establishments (Rep. 312 note 3a). This is directly contrary to the express prohibition of Section 5 of the Project Act that "no person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated."

In determining the claims of the United States on behalf of Indian Reservations, the Special Master relies basically on *Winters* v. *United States,* 207 U. S. 564 (1908), a case involving the reservation of the waters of a non-navigable stream for use on an Indian Reservation created in the Territory of Montana, and concludes that the federal government has the power to reserve water rights in a navigable stream for the benefit of all federal establishments, regardless of whether the power is exercised with respect to navigable waters of a territory of the United States or with respect to navigable waters of a state.

In determining claims of the United States on behalf of Indian tribes, the Special Master has conceived and applied the principle that the establishment of an Indian Reservation, in and of itself, impliedly reserves from a navigable stream in perpetuity for use on the Reservation whatever quantity of water may be potentially required in the indefinite future to irrigate every irrigable acre within the Reservation. The resulting water rights are held to be of fixed magnitude and priority and appurtenant to defined lands, so that their use is not restricted to Indians alone but may be made available to non-Indians as well (Rep. 254-66).

The questions regarding water rights of the United States for use in the Lake Mead National Recreation Area and in the Havasu Lake and Imperial National Wildlife Refuges are similarly dealt with by application of the same

principles as those invoked in the Special Master's treatment of Indian Reservations (Rep. 297-300).

The Master's Report does not examine into the source of the federal power to reserve rights in navigable streams. The failure to distinguish between the extent of federal power with respect to the water of a navigable stream and that with respect to the water of a non-navigable stream has led the Master into error.

Title to navigable water passes from the federal government to the states at the time of their admission to the Union. While it is true that the federal government has the power, prior to or at the time of admission, to reserve rights in navigable waters for the benefit of federal lands, the intent to reserve such rights must be clearly manifested and an inference that such rights were reserved may not be drawn simply from the fact that an Indian Reservation is created in a generally arid region. Had the Master examined the statutes and executive acts creating the Indian Reservations in the Lower Basin for evidence of an intent to reserve water of the Colorado River for their benefit, he would have found no such manifestation of intent and would therefore have been obliged to conclude that there had been no reservation of such water.

Moreover, where the power to reserve navigable water for federal purposes does exist, it resides in Congress and no authority exists in the Executive to dispose by executive order or otherwise of navigable waters for such purposes in the absence of definite and explicit authority conferred by act of Congress.

After statehood the federal government has no power whatever with respect to the water of a navigable stream except the power conferred by the Commerce Clause.

Even if it be held that the United States did reserve water from the Colorado River for the benefit of the Indian Reservations of the Lower Basin, the quantity of water reserved should be measured by the reasonably foreseeable needs of the Indians occupying the Reservations, rather than by the needs of the potentially irrigable acres within the Reservations. The holding of the Master permits the maximum use of water for the Reservations concerned and leads to results which are inequitable.

If there were no express, and could be no implied, reservation of main stream water of the Colorado River for use on Indian Reservations, the same general considerations which have led the Court to employ principles of equitable apportionment in the allocation of water between states, absent a statutory apportionment, should be applied here. While Indian tribes today do not have the status of a true sovereign, nevertheless the laws of the state are generally without force within the boundaries of Indian Reservations within the state. In addition, since Indians are wards of the federal government, a true sovereign, it is peculiarly appropriate that equitable principles should be applied in weighing the claims of the United States on their behalf against those of the State of Arizona as *parens patriae*.

Accordingly, Arizona excepts to the Report in the following respects regarding claims of the United States:

9. The Master's finding and conclusion that no contracts with the Secretary of the Interior are required for Indian Reservations and similar federal establishments (Rep. 312 note 3a).

A. Indian Reservations.

a. The Master's General Recommendations.

10. The Master's finding and conclusion that the United States, despite the absence of any expressed purpose to that effect, impliedly intended to reserve main stream water for the future water needs of the Chemehuevi, Cocopah, Yuma, Colorado River and Fort Mohave Indian Reservations (Rep. 259-62).

11. The Master's finding and conclusion that the United States effectuated its implied intention to provide for future Indian needs by reserving sufficient water to irrigate all the irrigable acreage in each Reservation and to supply related stock and domestic uses regardless of the number of Indians inhabiting the Reservation (Rep. 262).

12. The Master's finding and conclusion that the water rights established for the benefit of the five named Indian Reservations are of fixed magnitude and priority, are appurtenant to defined lands and, as such, may be utilized regardless of the character of the particular user (e.g., by non-Indian lessees or purchasers of Reservation lands) and may be utilized or disposed of by the United States for the benefit of the Indians as the relevant law may allow (Rep. 266).

b. The Master's Specific Findings of Fact and Conclusions of Law.

(1) *Chemehuevi Indian Reservation.*

13. The Master's finding of fact numbered 2 that in withdrawing lands for the Chemehuevi Indian Reservation the United States intended to reserve rights to the use of so much water from the Colorado River as would be necessary to irrigate all of the practicably irrigable acreage therein and to satisfy related uses (Rep. 267).

14. The Master's conclusion of law that for the benefit of the Chemehuevi Indian Reservation the United States has the right to the annual diversion of a maximum of 11,340 acre-feet of water from the Colorado River or to the quantity of main stream water necessary to supply the consumptive use required for irrigation of 1,900 acres and for the satisfaction of related uses, whichever is less, with a priority of February 2, 1907 (Rep. 267).

(2) *Cocopah Indian Reservation.*

15. The Master's finding of fact numbered 2 that in withdrawing lands for the Cocopah Indian Reservation the United States intended to reserve rights to the use of so much water from the Colorado River as would be necessary to irrigate all of the practicably irrigable acreage therein and to satisfy related uses (Rep. 268).

16. The Master's conclusion of law that for the benefit of the Cocopah Indian Reservation the United States has the right to the annual diversion of a maximum of 2,744 acre-feet of water from the Colorado River or to the quantity of main stream water necessary to supply the consumptive use required for irrigation of 431 acres and for the satisfaction of related uses, whichever is less, with a priority of September 27, 1917 (Rep. 268).

(3) *Yuma Indian Reservation.*

17. The Master's finding of fact numbered 2 that in withdrawing lands for the Yuma Indian Reservation the United States intended to reserve rights to the use of so much water from the Colorado River as would be necessary to irrigate all of the practicably irrigable acreage therein and to satisfy related uses (Rep. 268-69).

18. The Master's conclusion of law that for the benefit of the Yuma Indian Reservation the United States has the right to the annual diversion of a maximum of 51,616 acre-feet of water from the Colorado River or to the quantity of main stream water necessary to supply the consumptive use required for irrigation of 7,743 acres and for the satisfaction of related uses, whichever is less, with a priority of January 9, 1884 (Rep. 269).

(4) *Colorado River Indian Reservation.*

19. The Master's finding of fact numbered 7 that in withdrawing lands for the Colorado River Indian Reservation the United States intended to reserve rights to the use of so much water from the Colorado River as would be necessary to irrigate all of the practicably irrigable acreage therein and to satisfy related uses (Rep. 271).

20. The Master's conclusion of law numbered 7 that for the benefit of the Colorado River Indian Reservation the United States has the right to the annual diversion of a maximum of 717,148 acre-feet of water from the Colorado River or to the quantity of main stream water necessary to supply the consumptive use required for irrigation of 107,588 acres and for satisfaction of related uses, whichever is less, with priority dates of March 3, 1865 for lands reserved by the Act of March 3, 1865 (13 Stat. 541, 559); November 22, 1873 for lands reserved by the Executive Order of said date; November 16, 1874 for lands reserved by the Executive Order of said date, except as later modified; May 15, 1876 for lands reserved by the Executive Order of said date; November 22, 1915 for lands reserved by the Executive Order of said date (Rep. 273-74).

(5) *Fort Mohave Indian Reservation.*

21. The Master's finding of fact numbered 12 that in withdrawing lands for the Fort Mohave Indian Reservation the United States intended to reserve rights to the use of so much water from the Colorado River as would be necessary to irrigate all of the practicably irrigable acreage therein and to satisfy related uses (Rep. 281).

22. The Master's conclusion of law numbered 6 that for the benefit of the Fort Mohave Indian Reservation the United States has the right to the annual diversion of a maximum of 122,648 acre-feet of water from the Colorado River or to the quantity of main stream water necessary to supply the consumptive use required for irrigation of 18,974 acres and for the satisfaction of related uses, whichever is less, with priority dates of September 18, 1890, for lands transferred by the Executive Order of said date; February 2, 1911 for lands reserved by the Executive Order of said date; provided, however, that lands conveyed to the State of California pursuant to the Swamp and Overflowed Lands Act [9 Stat. 519 (1850)], as well as any accretions thereto to which the owners of such land may be entitled, and lands patented to the Southern Pacific Railroad pursuant to the Act of July 27, 1866 (14 Stat. 292) shall not be included within the above-described rights (Rep. 283).

B. National Forests, Recreation Areas, Parks, Memorials, Monuments and Lands Administered by the Bureau of Land Management.

Arizona excepts to the Report in the following respects regarding the water rights of the United States for National Forests, Recreation Areas, Parks, Memorials, Monuments and lands administered by the Bureau of Land Management:

(1) Lake Mead National Recreation Area.

23. The Master's finding of fact numbered 3 that in withdrawing lands now constituting the Lake Mead National Recreation Area the United States intended to reserve rights to the use of so much water from the Colorado River as might thereafter be reasonably needed by the National Park Service for appropriate purposes (Rep. 295).

24. The Master's conclusion of law that the United States has the right to divert water from the main stream of the Colorado River in quantities reasonably necessary to fulfill the purposes of the Lake Mead National Recreation Area in Arizona and Nevada with priority dates of May 3, 1929, for lands reserved by the Executive Order of said date (No. 5105), and April 25, 1930, for lands reserved by the Executive Order of said date (No. 5339) (Rep. 295).

(2) Havasu Lake National Wildlife Refuge.

25. The Master's finding of fact numbered 3 that in withdrawing lands for the Havasu Lake National Wildlife Refuge the United States intended to reserve rights to the use of so much water from the Colorado River as might be reasonably needed to fulfill the purposes of the Refuge (Rep. 298-99).

26. The Master's conclusion of law that the United States has the right to the annual diversion of a maximum of 41,839 acre-feet or to the annual consumptive use of 37,339 acre-feet, whichever is less, of water from the Colorado River for use in the Havasu Lake National Wildlife Refuge, with a priority of January 22, 1941, as to land reserved by Executive Order No. 8647 and a priority of February 11, 1949, as to land reserved by Public Land Order 559 (Rep. 299).

(3) Imperial National Wildlife Refuge.

27. The Master's finding of fact numbered 2 that in withdrawing lands for the Imperial National Wildlife Refuge the United States intended to reserve rights to the use of so much water from the Colorado River as might be reasonably needed to fulfill the purposes of the Refuge (Rep. 300).

28. The Master's conclusion of law that the United States has the right to the annual diversion of a maximum of 28,000 acre-feet or to the annual consumptive use of 23,000 acre-feet, whichever is less, of water from the Colorado River for use in the Imperial National Wildlife Refuge with a priority of February 14, 1941 (Rep. 300).

V. Claims of the United States on Tributaries.

The Special Master has held that with the exception of the Gila National Forest, it is unnecessary to pass on claims of the United States to water of the Gila River and its tributaries for use in National Forests, Parks, Memorials and Monuments and lands administered by the Bureau of Land Management (Rep. 334). However, he concludes with respect to the Gila National Forest that the United States intended, when it withdrew this Forest from entry, to reserve the water necessary to fulfill the purposes for which the Forest was created (Rep. 335).

Arizona contends that this finding of intent is unsupported by and contrary to the evidence.

Accordingly, Arizona excepts to:

29. The Master's finding of fact numbered 30 that, in withdrawing lands for the Gila National Forest, the United

States intended to reserve rights to the use of so much water from the Gila River and the San Francisco River as might be reasonably needed to fulfill the purposes of the Forest (Rep. 342).

30. The Master's conclusion of law numbered 11 that the United States has the right to divert water from the main stream of the Gila River and San Francisco River in quantities reasonably necessary to fulfill the purposes of the Gila National Forest, with priority dates as of the date of withdrawal for forest purposes of such area of the Forest within which the water is used (Rep. 343).

VI. Recommended Decree.

Arizona excepts as follows to the provisions of the Recommended Decree:

31. Article II(B)(2) (Rep. 347) for the reasons stated in Exceptions 7 and 8 (pp. 10-11, *supra*).

32. Article II(B)(5) and (6) (Rep. 348-49) for the reasons stated in Exceptions 5 and 6 (pp. 8-10, *supra*).

33. Article II(B)(8) (Rep. 349-50):

> We hesitate to advocate a position which would apparently result in a waste of water. Nevertheless, we believe that the provisions recommended by the Special Master would contravene the clear language of both the Project Act and the Limitation Act. The proposed provisions would permit the release of water from Lake Mead without a contract for delivery thereof in violation of the Project Act and would sanction the diversion of water in excess of the quantities authorized by the Project and Limitation Acts and existing water delivery contracts with the Secretary of the Interior.
>
> Additionally, since these provisions speak in terms of water "consumed" in a state rather than water diverted for use in a state, they might be construed

as prohibiting a state from using water apportioned to it for any non-consumptive use such as off-stream or groundwater storage and would unduly restrict the states in the use of the water apportioned to them. Further, the word "consumed" is not appropriate since water may be put to use without necessarily being entirely consumed or exhausted.

Accordingly, Arizona proposes that there be substituted for Article II(B)(8) the following:

(8) If, in any one year, main stream water apportioned for consumptive use in a state will not be ~~consumed~~ diverted for use in that state, ~~whether for the reason that delivery contracts for the full amount of the state's apportionment are not in effect or that users cannot apply all of such water to beneficial uses, or for any other reason,~~ nothing in this decree shall be construed as prohibiting the Secretary of the Interior from releasing such apportioned but unused water during such year for consumptive use in the other states; provided, however, that nothing herein contained shall be construed as authorizing the diversion or use of water without a contract with the Secretary of the Interior as required by the Boulder Canyon Project Act or in excess of the amounts permitted by said Act, the California Limitation Act and contracts made by the Secretary of the Interior for the delivery of water pursuant to Section 5 of the Boulder Canyon Project Act. No rights to the recurrent use of such water shall accrue by reason of the use thereof;

(deletions from the Recommended Decree lined out; additions underlined)

34. Article II(C)(2)(a) through (h) (Rep. 350-53) for the reasons stated in Exceptions 9 through 28 (pp. 14-20, *supra*).

35. Article III(B), (C) and (D) (Rep. 353-54):

These provisions deal with water which, as the Master holds, is "stored in Lake Mead and flowing in the mainstream below Lake Mead" (Rep. 225). Insofar as they would enjoin the State of Arizona, its officers, attorneys, agents and employees from "permitting the interference with releases and deliveries . . . of water controlled by the United States", from "permitting the diversion of water" and from "permitting the consumptive use of water", they would transfer to the State of Arizona duties with respect to main stream water which the Secretary of the Interior is required to perform under the Project Act and his water delivery contracts (see, e.g., Rep. 152-54, 186, 214-16). Furthermore, the authority of the State of Arizona to prevent the interference, diversions and uses referred to is open to serious question.

36. Article IV(E) (Rep. 357-58), insofar as it provides that the United States has the right to divert water in quantities reasonably necessary to fulfill the purposes of the Gila National Forest, for the reasons stated in Exceptions 29 and 30 (pp. 20-21, *supra*).

37. Article VI (Rep. 359) for the reasons stated in Exceptions 5 and 6 (pp. 8-10, *supra*).

38. Arizona excepts to the failure to include in the Recommended Decree a provision requiring that quantities of water released by the Secretary of the Interior pursuant to orders therefor but not diverted by the party ordering the same shall be charged to that party.

The evidence established that on many occasions water released from Hoover Dam on order was not used by the ordering party with the result that it flowed downstream to Mexico but was not or could not be credited to satisfaction of the Mexican Treaty.

Arizona submitted to the Special Master an addition to Article V, subdivision (E) of the Recommended Decree which, if adopted, would have discouraged this wasteful practice (see Arizona's Comments on the Draft Report and Recommended Decree, p. 10). However, the suggested addition was rejected in material part by the Special Master (see Rep. 358).

Accordingly, Arizona proposes that Article I of the Recommended Decree be amended by adding thereto as subdivision (L) the following:

> (L) Consumptive use of mainstream water shall include the quantities of water released by the Secretary of the Interior pursuant to orders therefor but not diverted by the party ordering the same, except to the extent that such quantities of water are delivered to Mexico in satisfaction of the Mexican Treaty or are diverted by others in satisfaction of rights decreed herein.

Respectfully submitted,

OCTOBER TERM, 1960

NO. 9 ORIGINAL

STATE OF ARIZONA, COMPLAINANT

v.

STATE OF CALIFORNIA, ET AL.

EXCEPTIONS OF THE UNITED STATES, INTERVENER, TO THE SPECIAL MASTER'S REPORT AND RECOMMENDED DECREE

The United States excepts to the Special Master's Report and the Recommended Decree with respect to:

I. (a.) The determination that waters of the mainstream, and the use thereof, above Lake Mead are not included in the mainstream waters referred to in the first and second paragraphs of Section 4 of the Boulder Canyon Project Act.

(b.) The failure to include uses of waters of the mainstream above Lake Mead in the allocations adjudicated by the Recommended Decree. (Article I, Subdivision (B), Article I, Subdivision (E), and Article I, Subdivision (F), Recommended Decree, pp. 345–346; Report, pp. 173, 183, 185, 225–226, 316–

585569—61

321. See also: Report, pp. 99 fn. 19, 151 fn. 18, 152 fn. 19, 228 fn. 86.)

II. The determination that the provisions of Article 7(d) of the contract between the United States and the State of Arizona, dated February 9, 1944, and Article 5(a) of the amended contract between the United States and the State of Nevada, dated January 3, 1944, which condition the total quantities of water deliverable from Lake Mead under those contracts upon the extent by which uses of either tributary or mainstream waters upstream from Lake Mead in the respective States diminish the flow into Lake Mead, are in violation of the Project Act and unenforceable; the corollary failure to provide in Article II, Subdivision (B), of the Recommended Decree for the confirmation of such contract provisions. (Report, pp. 237–247, 226–228. See also: Report, pp. 201, 207, 210.)

III. The declarations to the effect that state law governs intrastate rights and priorities to and quantities of water diverted from the Colorado River and to the effect that users under contracts made in pursuance of Section 5 of the Project Act must be under no disability to receive such water under state law; the corollary reference to "any use or user in violation of state law," in the recommended injunction against the release of water by the United States, its officers, attorneys, agents and employees. (Article II, Subdivision (C), paragraph (1). Recommended Decree, p. 350; Report, pp. 216–219. See also: Report, pp. 203–204, 237, 240–241, 303, 312.)

IV. The declaration on page 210 of the Report that:

> It should be noted that the Nevada contract, unlike the Arizona contract, does not require additional subcontracts between each water user and the Secretary of the Interior. On the contrary, the State of Nevada is free to determine who shall use the water, subject only to the Secretary's approval of the points of diversion.

V. The failure to make the following Findings of Fact proposed by the United States:

> The quantity of Colorado River water presently consumed on the 7,100 acres of the Topock Marsh to be developed under the Havasu Lake National Wildlife Refuge Development Plan is approximately 55,000 acre feet per annum. (Tr. 15,691.)
>
> The net saving of approximately 18,000 acre feet per annum of Colorado River water in the Topock Marsh area which would result from the Havasu Lake National Wildlife Refuge Development Plan is due to the change in and control of vegetation provided by operation of that Plan and such salvage is in addition to salvage resulting from channelization. (Tr. 15,753; 15,793.)
>
> The quantity of Colorado River water presently consumed on the 4,000 acres in the Imperial National Wildlife Refuge on which development is proposed is greater than 28,000 acre-feet per year. (Tr. 15,694.)

The failure to provide in the Conclusions of Law and Recommended Decree that water salvaged by

the United States from the mainstream of the Colorado River may be used by it on federal mainstream Wildlife Refuges without limitation by the priority dates decreed for the respective refuge areas. (Article II, Subdivision (C), paragraph (2)(g), Article II, Subdivision (C), paragraph (2)(h), and proviso following, Recommended Decree, pp. 352–353; Report, pp. 296–300.)

STATE OF ARIZONA,

Complainant,

vs.

STATE OF CALIFORNIA, PALO VERDE IRRIGATION DISTRICT, IMPERIAL IRRIGATION DISTRICT, COACHELLA VALLEY COUNTY WATER DISTRICT, METROPOLITAN WATER DISTRICT OF SOUTHERN CALIFORNIA, CITY OF SAN DIEGO, CALIFORNIA, and COUNTY OF SAN DIEGO, CALIFORNIA,

Defendants,

THE UNITED STATES OF AMERICA and STATE OF NEVADA,

Interveners,

STATE OF UTAH and STATE OF NEW MEXICO,

Impleaded Defendants.

Additional Objections and Exceptions of Imperial Irrigation District and Palo Verde Irrigation District to Report and Recommended Decree of Special Master.

Come Now Imperial Irrigation District and Palo Verde Irrigation District and Make and File These Their Additional Objections and Exceptions to the Report and Recommended Decree of the Special Master Filed Herein.

Preface

In view of the magnitude of the trial record and the complexity of the issues resulting, it is believed that a general statement of the major issues plead and tried and the basic determinations of the Special Master objected and excepted to by the California defendants may be helpful to a better understanding of these objections and exceptions.

The issues plead and tried involved an accounting of all of the Lower Basin beneficial consumptive uses of Colorado River System water, including all tributary uses and especially those on the Gila River System.[1] This was upon the basis that in order to apply the provisions of Article III of the Colorado River Compact; the first paragraph of Section 4(a) of the Project Act; the provisions of the California Limitation Act and the obligation of the Mexican American Water Treaty of 1944, it is necessary that an accounting be had of all beneficial consumptive uses in the Lower Basin, wherever used.

The Master's Report and Recommended Decree is premised principally upon two concepts. The first is that there is and always will be plenty of water for all

---

[1]Par. XXII, Pg. 26, Ariz. Complt.; Par. 8, Pg. 11, Cal. Answers; Par. 8, Pgs. 16-17, Ariz. Reply to Cal. Par. XIV, Pg. 18, Nev. Complt.; Pars. XXIV, Pg. 22 and XXXVI, Pg. 36, U. S. Intervention.

concerned in the Lower Basin and therefore an accounting is useless.[2] The second is that the only measure of Lower Basin uses is that of water stored in Lake Mead and only from the main stream from Lake Mead to the Mexican Boundary;[3] that this case and the rights of the states and agencies that are parties hereto do not involve any Lower Basin tributary uses and not even any uses from the main stream of the Colorado River from Lee Ferry down to the headwaters of Lake Mead; that none of the parties are chargeable with their uses from any tributary or from the main stream above Lake Mead;[4] that the Compact and any Compact accounting are irrelevant to the case;[5] and that priority of appropriation and equitable apportionment are irrelevent.[6]

It is to these basic concepts of the Master, as evidenced by the Report and Recommended Decree, and to the issues and incidents that the Master holds to flow therefrom that these California defendants object and except.

As a further statement of these California defendants' objections and exceptions, and explanation thereof, these defendants state:

[3]M. Rpt. Pgs. 185, 226-227.

[4]M. Rpt. Pg. 183 *et seq.*, 226 *et seq.*, 242 *et seq.*, 317 *et seq.*

[5]M. Rpt. Pg. 177.

[6]M. Rpt. Pg. 138. (Passing for the moment the Master's holding as to priority of present perfected rights as of June 1929, M. Rpt. Pg. 152, footnote, and Pgs. 161, 234, 347 and 359.)

During the period of 1930-34 the Secretary of Interior pursuant to his General Regulation in the matter[1] contracted with California defendant agencies for delivery at designated diversion points in California from water stored behind Hoover Dam so much water as necessary to supply for beneficial consumptive use in California the aggregate annual amount of 5,362,000 acre feet.[2]

The Colorado River Compact[3] provides in Article VIII that present perfected rights to the beneficial use of waters of the Colorado River *System* are unimpaired by the Compact. Article II(a) defines the Colorado River *System* as that portion of the Colorado River and its *tributaries* in the United States. Article III(a) apportions from the Colorado River *System* in perpetuity to the Upper and Lower Basins, respectively, the exclusive beneficial consumptive use of 7,500,000 acre feet of water per annum which shall include all water necessary for the supply of "any rights which may now exist." Article III(b) provides that in addition the Lower Basin may increase its beneficial consumptive use of *such* waters by 1,000,000 acre feet per annum.

The Boulder Canyon Project Act[4] in Sections 8(a), 8(b) and 13(b) provides that notwithstanding anything to the contrary in the Act, the United States and those claiming under the United States and all contractees and users or appropriators of water shall be controlled by the Compact. Section 6 provides that

---

[1]Cal. Ex. 1811; M. Rpt. Pg. 28.
[2]Ariz. Exs. 33, 34, 36, 38, 39 and 40, M. Rpt. Pg. 28.
[3]Ariz. Ex. 1; App. 2, Pg. 371 M. Rpt.
[4]Ariz. Ex. 7; App. 3, Pg. 379 M. Rpt.

Hoover Dam and the reservoir shall be used—for satisfaction of present perfected rights in pursuance of Article VIII of the Compact. Section 13(d) provides that the conditions and covenants referred to shall run with the land and be attached thereto as a matter of law.

The first paragraph of Section 4(a) provides for a six state Compact if California consents that the aggregate annual consumptive use of Colorado River water for use in California, including "rights which may now exist" shall not exceed 4,400,000 acre feet apportioned to the Lower Basin by Article III(a) of the Compact plus not more than one-half of any excess or surplus unapportioned by the Compact—such uses to be subject to the Compact. California accepted the provisions and agreed to the limitation on the conditions indicated.[5]

California has always claimed, as she does now, that the Compact is controlling. That the rights to the beneficial consumptive use of water in the Lower Basin relate to and involve all waters of the Colorado River System which includes all tributary uses in the Lower Basin. That uses of water as to rights which now exist and present perfected rights—as of 1929 wheresoever used in the Lower Basin—including tributary uses, must be charged as uses of Compact Article III(a) water uses. That all beneficial consumptive uses of water shall be charged to the state within which the use is made on the basis of actual uses at the site of use. That Arizona should be charged as against any rights to III(a) water for her rights and uses on the Gila River System and other tributaries existent as of 1929. That the law of prior appropriation of water

[5]Ariz. Ex. 14; App. 4, Pg. 397 M. Rpt.

applies interstate on the Colorado River System and is recognized by the Compact and Project Act, including the rule of equitable apportionment. That the California defendant agencies represent agricultural and domestic projects with early historic appropriations.[6] That these projects date from as early as 1877 and the latest from 1926, and their work have been constructed to fully use their contracted supplies and their agricultural and domestic economies are dependent thereon[7] and are entitled to priority and not parity with junior rights and contracts as the Master holds.

Arizona having refused until 1944 to ratify the Compact, procured that year a contract from the then Secretary of Interior[8] which, subject to availability under the Compact and Project Act, called for delivery to Arizona from Lake Mead of a maximum of 2,800,000 acre feet per annum for beneficial consumptive use, plus one-half of any excess or surplus unapportioned by the Compact less rights of Nevada, New Mexico and Utah. (Nevada has a contract for 300,000 acre feet per annum from Lake Mead.[9]) By Sections 7(d) and 7(1) uses above Lake Mead and from the main stream below Hoover Dam are to be charged *pro tanto* against Arizona's contract entitlement. By Section 7(h) Arizona agreed to recognize the right of the United States to contract with California agencies within the limits of the California Limitation Act and by

---

[6]See Cal. Exs. 66A, 67, 68, 70-90, for appropriative claims to title to water rights.

[7]See Pgs. 44-47, Pgs. 46-53; Par. 2, Pg. 3, and Exs. A, B, and C, Calif. Ans. to Ariz. Bill of Complaint.

[8]Ariz. Ex. 32; App. 5, Pg. 399 M. Rpt.

[9]Ariz. Exs. 43 and 44, App. 6 and 7, Pgs. 409 and 419 M. Rpt.

Section 7(1) is agreed that present perfected rights are unimpaired by the Arizona contract. By Section 7(c) Arizona agreed that Lake Mead be used in satisfaction of perfected rights. Section 13 of the Arizona contract provides that the rights of Arizona to the waters of the Colorado River and its tributaries are subject to and controlled by the Compact. There is no specific reference in the Arizona contract as to *pro tanto* charge against Arizona for her uses on tributaries below Hoover Dam, including the Gila River.

The Nevada contracts[10] by Section 5a of the 1944 contract of Nevada charge Nevada *pro tanto* for tributary uses.

The Utah and New Mexico uses are all tributary uses.

The Report of the Special Master is premised on certain major and several companion determinations to which California objects and takes exception.

Among the major items to which California objects and excepts are the following:

1. The assumption, contrary to the evidence, that there is an adequate water supply for all parties concerned and that California's claims of shortage of safe annual yield are unsound.[11] The assumption and basis of the determination is typified by the Master's statement of his determination at the hearing in New York August 19, 1960 that he was morally certain that for the lifetime of our children and great-grandchildren that there would be an adequate supply for the Metro-

---

[10]Ariz. Exs. 43 and 44.

[11]M. Rpt. Pgs. 102 *et seq.*, 113 *et seq.*

politan Project and its contemplated expansion[12] and had he not so believed he would have strained every legal document to try to prevent a shortage.[13] (NOTE: This would be despite Metropolitan's relatively low priority among the California agencies.)

2. The determination that the future water supply to the Lower Basin of main stream water is irrelevant and the refusal of the Master to determine and pass upon the safe annual yield in determining the rights of the parties.[14]

3. The holding that the Colorado River Compact, the doctrine of equitable apportionment and the law of appropriation are all irrelevant herein[15] with the consequences held to flow therefrom.

4. The holding that the uses of water on the tributaries in the Lower Basin, including the Gila River and the uses of or from the main stream of the Colorado River from Lee Ferry to the headwaters of Lake Mead are irrelevant and not subject to *pro tanto* charge against the right of the state using[16] and the holding that provisions of the Nevada and Arizona contracts for *pro tanto* charge or tributary uses are invalid.[17]

5. The holding that the Project Act, and especially the holding that this proceeding, relate only to the main stream of the Colorado River from the headwaters of Lake Mead to the International Boundary and that the

[17]M. Rpt. Pgs. 201, 205, 207 and 210.

Compact has no application to this case or intrabasin to the Lower Basin and that the uses of main stream water above Lake Mead without accounting therefor or *pro tanto* charge against the decreed water to the using state are available to Arizona and Nevada.[18]

6. The holding that Congress by the Project Act, second paragraph of Section 4(a), intended to and did apportion the waters to which the Lower Basin is entitled to the use of and that the Secretary of Interior had the authority to and did apportion between the Lower Basin States the uses of water available and that said Section 4(a), second paragraph, did and does give to Arizona, in addition, all uses on the Gila River System.[19]

7. The Master recognizes that the Compact deals with both the tributaries and the main stream.[20] Despite this the holding is made that the Compact is irrelevant to this case[21] and is applicable purely interbasin[22]; has no application intrabasin in the Lower Basin[23]; that the Project Act is controlling[24] and that the Compact accounting of uses in the Lower Basin of Colorado River System water is not applicable in this case.[25]

---

[18]M. Rpt. Pg. 225 *et seq.*, 183 *et seq.*, 173 *et seq.*, 345-346 Items (B) and (F).

[23]M. Rpt. Pg. 144.

[24]M. Rpt. Pg. 138.

[25]M. Rpt. Pg. 177 *et seq.*

8. The holding that regardless of any Compact classification of uses and regardless of when or how rights were initiated and regardless of the completion of the California projects, the rule to be applied to the rights of Lower Basin States and to use water is to be based on parity and percentage proration and not on any basis of priority.[26]

9. The holding that despite reliance on the Compact and Acts, and the then interpretations, the early rights of the California agencies or their contracts and the existence of their going projects and economies result in no priority or equity as against non-existent new projects.[27]

10. The Master recognizes that the law or priority of appropriation is the guiding doctrine in the arid western states[28] and is recognized by all the Colorado River Basin States.[29] However, the holding is that the law of prior appropriation is not to the same extent applicable in California[30] and that generally as applied here the Compact provisions as to appropriative rights are inapplicable and rejected[31] and that the Project Act renders appropriative rights inapplicable.[32]

11. The holding that as to the Gila River the inflow therefrom into the Colorado River was non-existent and, if existent, not available for use in California and

---

[26]M. Rpt. Pg. 99 *et seq.*, 232 *et seq.*, 306 *et seq.* (perfected rights excepted).

[30]M. Rpt. Pg. 22.

[31]M. Rpt. Pg. 196.

[32]M. Rpt. Pgs. 152, 229 *et seq.*

not appropriated by California agencies[33] and no accounting of its uses as a use of III(a) or other Compact Water is required and accountability is removed by the Project Act.[34]

12. The holding that "present perfected rights" or existing rights or appropriative rights are limited to actual diversions and uses of specific quantities of water applied to a defined area or a particular use.

That if this holding implies that where appropriation proceedings are duly had for a given intended project; the works necessary for the irrigation of the project are built with due and reasonable diligence considering the magnitude of the project; water is brought and is available to and is being used on the project—all within the limits of the original appropriation and intent—that rights to the full development of the project are not firm and perfected to the extent of need therefor—then it is submitted the implied holding is in error.[35]

13. The holding that issues were not joined and the case was not tried and evidence was not received of the tributary uses in Nevada, Utah, New Mexico and Arizona as to existing rights of 1929 and as to future tributary uses and the failure and refusal to find on the issue of the priority in time and amount of such uses[36] and the failure and refusal to find and determine the III(a) and other tributary Compact uses of water in the Lower Basin as to the several state parties herein.[37]

14. The holding that evidence was not presented as to water uses in Arizona on the basis of beneficial consumptive use and that figures are not available for return flow from Arizona uses[38] and the failure and refusal to find and determine the beneficial consumptive use of Arizona on the Gila and other tributaries,[39] and the holding that beneficial consumptive use is not measurable as to tributary uses.[40]

15. The failure and refusal of the Master to find on all material issues necessary to conclusions of law and the findings of the Master contrary to the admitted issues in the pleadings and contrary to the evidence herein and the making of Conclusions of Law unsupported by the evidence and contrary to the law and in direct conflict with issues admitted in the pleadings.

16. The Master erred in disregarding the pleadings and the issues admitted therein[41] and in deciding the issues on the basis of the proffered amended pleadings of Aribona,[42] which the Master excluded as pleadings and as to which California was not permitted to meet the new issues,[43] and in denying California's application to reopen the case for additional evidence on the new issues raised by the Report and the new offered but rejected pleadings of Arizona.[44]

17. The Master's Report is so drafted as to make it impossible to distinguish between the recitals of the opinion and matters that are intended as Findings of Fact or Conclusions of Law. As a matter of precaution reference is here made to those items designated as Findings or Conclusions or Recommended Decree. Exception is taken to the following:

(a) The Conclusions, Pg. 115, M. Rpt.

(b) The Conclusions 1 and 2, Pg. 342, M. Rpt.

(c) Items of the Recommended Decree numbered I(A) (B) (C) (F) (G) Pgs. 345-6; II(A) (2) Pgs. 346-7; II(B)(1) through II(B)(6); II(C)(1)(2) Pg. 350; III Pgs. 353-354; V(C) Pg. 358; VI Pg. 359; VIII(B) Pg. 360; and VIII(C) Pg. 360.

18. The holding of the Master relative to the western boundary of the Colorado River Indian Reservation and in the Master's definition of the West bank of the Colorado River in connection therewith.[45]

19. The Master's recommended provision placing the operation of a part of the Colorado River System in the hands of the Secretary of Interior instead of a Commission or Commissioner as suggested by California and Nevada.[46]

20. The holding and interpretation of the Master with respect to his claimed application of priority of appropriation and as applied to "perfected rights."[47]

---

[45]M. Rpt. Pg. 269 *et seq.*, Pg. 274 *et seq.*

[46]See Cal. proposed Findings Vol. 1, Par. IX, Pgs. 24-26 and Cal. Opening Brief Pg. 199. Also see Nevada Conclusions 34-35, Pgs. 77-78 and Pg. 167 Nevada Opening Brief.

[47]M. Rpt. Pg. 234 *et seq.*

21. The holding that the Compact operates only interbasin.[48]

22. The holding that the Compact is a ceiling on appropriations.[49]

In view of the magnitude of the record in this case, a minute specification of all items of rulings during trial and of failures to find on material facts would exceed any useful set of objections and exceptions. It is the intent by these objections and exceptions to object and except to all rulings, opinions, findings, conclusions and the provisions of the recommended Decree that are adverse to California and objection and exception is so taken.

The footnote references are not intended to be by way of limitation and are intended only as illustrative and for convenience.

Exceptions of the California Defendants to the Report of the Special Master

February 27, 1961

TABLE OF CONTENTS

Page

Introduction..... 1

Statement of Exceptions

I. Exceptions relating to the limitation on California stated in section 4(a) (first paragraph) of the Boulder Canyon Project Act and the California Limitation Act..... 2

II. Exceptions relating to the basis of water rights in the lower basin: the "contractual allocation scheme" and the nullification of the principles of interstate priorities and equitable apportionment..... 9

III. Exceptions relating to water supply and justiciability.....18

IV. General exceptions.....24

V. Exceptions relating to the recommended decree.....27

Appendix: Map of the Colorado River Basin.....30

INTRODUCTION

These exceptions are filed in accordance with the notice accompanying the order of the Court (364 U.S. 940), dated January 16, 1961.[1]

Those portions of the Special Master's Report which are most adverse to the California defendants (Report, pp. 99-125, 138-248, 305-21) contain no findings of fact specially identified or conclusions of law separately stated.[2] Our exceptions are therefore directed to the adverse and erroneous determinations of ultimate issues made by the Special Master, including the underlying determinations and rulings on evidence and motions.

The exceptions are based on the grounds, to be developed in our opening brief, that these determinations are contrary to the evidence and the law.

Appended is a map of the Colorado River basin.

---

[1]Pursuant to that notice, our opening brief in support of these exceptions will be filed May 22; answering brief will be filed August 14; reply brief will be filed October 2, 1961.

[2]This Court directed the Master to find the facts specially and to state separately his conclusions of law thereon, and to submit them to the Court together with a draft of a recommended decree. (See Report, p. 2.) The Report does so only with respect to certain claims of the United States (Report, pp. 267-74, 279-83, 288, 294-95, 298-300) and claims of Arizona, New Mexico, and the United States relative to the Gila River system (Report, pp. 335-43).

STATEMENT OF EXCEPTIONS

The California defendants except to the Report of the Special Master, dated December 5, 1960, and to the recommended decree contained therein, upon the following grounds:

I

EXCEPTIONS RELATING TO THE LIMITATION ON CALIFORNIA STATED IN SECTION 4(a) (FIRST PARAGRAPH) OF THE BOULDER CANYON PROJECT ACT AND THE CALIFORNIA LIMITATION ACT (Report, pp. 164-200)

A. The Issue

What is the meaning of those words of the first paragraph of section 4(a) of the Boulder Canyon Project Act[3] (repeated in substantially identical words in the California Limitation Act[4]) which are identified by emphasis and bracketed numbers in the following quotation?

> "California . . . shall agree . . . that the aggregate annual consumptive use . . . of water . . . from the Colorado River for use in the State of California . . . shall not exceed four million four hundred thousand acre-feet of the [1] *waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact,* plus not more

---

[3]45 Stat. 1058 (1928), 43 U.S.C. § 617c (1958) (Report, pp. 381-82).

[4]Calif. Stats. 1929, ch. 16, p. 38 (Report, pp. 397-98).

than one-half of any [2] *excess or surplus waters unapportioned by said compact,* such uses always to be subject to the terms of said compact."[5]

B. The Determinations to Which Exception Is Taken

The Special Master erroneously concludes:

1. That the emphasized words identified by the bracketed [1]—"waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact"—and by the bracketed [2]—"excess or surplus waters unapportioned by said compact"—cannot and do not refer to the Colorado River Compact[6] or to any paragraph or provision of that Compact whatsoever (Report, pp. 170-85, 194-200).

2. That the words identified by the bracketed [1]—"waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact"—refer to the first 7.5 million acre-feet per annum of consumptive use in the lower basin from the "mainstream" (Report, pp. 170-85). The Report erroneously defines the "mainstream" as constituting only Lake Mead and the main Colorado River below Lake Mead in the United States (Report, pp. 173, 185), including the inflow of the Bill Williams River (Report, pp. 184, 225), but excluding the waters in all tributaries both be-

---

[5]Words similar to these identified by emphasis and bracketed numbers also appear in the second paragraph of § 4(a) (Report, pp. 382-83). We consider the effect of the second paragraph in group II of these exceptions, in relation to the Secretary's water delivery contracts, *infra* pp. 9-17.

[6]For full text of the Compact, see Report, pp. 371-77.

low and above Lake Mead, and excluding the Colorado River itself between Lee Ferry and Lake Mead (Report, pp. 183, 227).[7]

3. That the emphasized words identified by the bracketed [2]—"excess or surplus waters unapportioned by said compact"—refer to all consumptive use in the United States in any year from the "mainstream" in the lower basin in excess of 7.5 million acre-feet (Report, pp. 194-200).

4. That the increase in use permitted to the lower basin by Article III(b)[8] of the Colorado River Compact is in legal effect identical to the apportionment made in Article III(a)[9] so that such Article III(b) waters are not "unapportioned" within the "literal" meaning of the words identified by the bracketed [2] —"excess or surplus waters unapportioned by said compact" (Report, pp. 150-51, 169, 194-96).[10]

5. That (1) the Project Act and the California Limitation Act are not to be construed as a statutory

---

[7]All references hereafter to "mainstream" mean the "mainstream" as defined above in the Report. Lake Mead, the Bill Williams River, and Lee Ferry are shown on the map of the Colorado River basin appended to these exceptions.

[8]For text of Article III(b), see Report, p. 373.

[9]Report, pp. 147-50. For text of Article III(a), see Report, p. 373.

[10]Notwithstanding the cited determination, to which we except, that if the Compact is construed literally the million acre-feet of consumptive use referred to in Article III(b) of the Compact is "apportioned," the Report concludes that § 4(a) of the Project Act, separately construed, does not exclude California from participation in that million acre-feet. We agree that California is not excluded, but assert that this result follows whether arrived at by interpretation of the words "excess or surplus waters unapportioned" in the Project Act and the Limitation Act, or the words "is hereby given the right to increase its beneficial consumptive use" in Article III(b) of the Colorado River Compact.

compact or consensual agreement established by the offer by the United States to California contained in the Project Act and the acceptance by California in the Limitation Act; and (2) the limitation on California, even if it were construed as a consensual agreement, has the meaning ascribed to it by the Report, as set forth above (Report, pp. 180-83).

C. The Correct Conclusions

The Special Master should have concluded:

1. That the identified words, in each instance, take their meaning from the Colorado River Compact.

2. That the words identified by the bracketed [1]—"waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact"—refer to the first 7.5 million acre-feet of consumptive use per year from the Colorado River system (*i.e.*, the entire Colorado River main stream from Lee Ferry to the Mexican boundary, and all of its tributaries in the United States) within the lower basin, in conformity with the meaning which the Report properly attributes to Article III(a) of the Colorado River Compact (Report, pp. 144, 173), and not merely from the "mainstream."

3. That the words identified by the bracketed [2]—"excess or surplus waters unapportioned by said compact"—refer to all consumptive use from the Colorado River system within the lower basin in excess of the first 7.5 million acre-feet of consumptive use per year from the Colorado River *system* in the lower basin, and not merely from the "mainstream."

4. That the increase in use permitted to the lower basin by Article III(b) of the Colorado River Compact

is not in legal effect identical with the apportionment in perpetuity made in Article III(a). Article III(b) waters are "unapportioned" within the meaning of (1) the Colorado River Compact and (2) the Project Act and Limitation Act expression identified by bracketed number [2]—"excess or surplus waters unapportioned by said compact"—as well as being "excess . . . waters" within the meaning of the expression last quoted.

5. That (1) section 4(a) of the Project Act and the California Limitation Act establish by reciprocal legislation a statutory compact between the United States and California, accepted by six basin states (excepting Arizona) as a premise for six-state ratification for the Colorado River Compact, and (2) that limitation adopts the Compact method of accounting above set forth.

D. The Effect of the Resolution of This Issue

The Special Master in effect holds that the Boulder Canyon Project Act, unlike the Compact, truncated the Colorado River at the upper margin of Lake Mead[1] (Report, pp. 151, 183, 225-26).

All parties apparently agree that there probably will be sufficient water throughout the Colorado River *system*

---

[1]"Thus I hold that Section 4(a) of the Project Act and the California Limitation Act refer only to the water stored in Lake Mead and flowing in the mainstream below Hoover Dam, despite the fact that Article III(a) of the Compact deals with the Colorado River *System*, which is defined in Article II(a) as including the entire mainstream and the tributaries." (Report, p. 173. Emphasis in the original).

in the lower basin to sustain permanently the consumptive use of at least 7.5 million acre-feet annually. Of this, the permanently dependable supply in the tributaries now supports about 2 million acre-feet per annum of consumptive use, and the permanently dependable supply in the Colorado River from Lee Ferry to the Mexican boundary can probably support a beneficial consumptive use of not less than 5.5 million acre-feet per annum.

Therefore, if the emphasized words identified by the bracketed number [1] relate to Colorado River *system* water throughout the lower basin, the permanently dependable supply is adequate to sustain California's use of at least 4.4 million acre-feet per annum, as well as the consumptive use of 3.1 million acre-feet by the other lower basin states: Arizona, Nevada, New Mexico, and Utah. No problem of shortage need be resolved, with respect to that 7.5 million.

Whenever *system* supply in the lower basin will support beneficial consumptive uses exceeding 7.5 million acre-feet per annum, there is "excess or surplus" in which California may participate to the limit of one half.

However, the Report's interpretation of the words identified by the bracketed number [1] limits the waters referred to therein to that segment of the Colorado River system which the Report labels "mainstream." This interpretation makes it impossible to satisfy permanently 7.5 million acre-feet of consumptive use from such waters because the permanently dependable supply

of the "mainstream," so defined, available for consumptive use in the lower basin is substantially less than 7.5 million.[2] (See group III of these exceptions, relating to water supply.) This interpretation creates the shortage which is dealt with in the "contractual allocation scheme" and proration formula to which group II of these exceptions relates.

If some 2 million acre-feet of consumptive use which is now sustained by the permanently dependable supply of the tributaries in the lower basin is eliminated from the accounting, as the Report would do, the "mainstream" supply, considered alone, contains no "excess or surplus." This makes inoperative, for all practical purposes, the provision of section 4(a) which permits California to use up to one half of "excess or surplus waters unapportioned by said compact."

---

[2]"With the storage provided by Lake Mead, and barring a drought unprecedented in the recorded history of the River, the Lower Basin has, under the guarantee of the Compact, available for use at Hoover Dam a minimum of 7,500,000 acre-feet of water per year, less transit losses between Lee Ferry and the dam, evaporation loss from Lake Mead, and its share of the Mexican treaty obligation." (Report, pp. 144-45.) When minimum figures are substituted for the deductions specified by the Master and for similar losses below Hoover Dam which the Report properly characterizes as a further diminution of supply (Report, p. 187), this is a "guarantee" under the Compact of less than 6 million acre-feet per year of consumptive use from the "mainstream." Thus, there must be a supply of at least 10 million acre-feet of water annually in the "mainstream" to satisfy 7.5 million acre-feet of beneficial consumptive use from the "mainstream" in Arizona, Nevada, and California.

II

EXCEPTIONS RELATING TO THE BASIS OF WATER RIGHTS IN THE LOWER BASIN: THE "CONTRACTUAL ALLOCATION SCHEME" AND THE NULLIFICATION OF THE PRINCIPLES OF INTERSTATE PRIORITIES AND EQUITABLE APPORTIONMENT (Report, pp. 151-64, 201-48, 305-14)

A. The Issues

1. Did Congress in the Boulder Canyon Project Act nullify interstate priorities and equitable apportionment principles in the "mainstream," and substitute therefor an authorization to the Secretary of the Interior to establish, as the sole basis of interstate rights to such waters, a "contractual allocation scheme" in which the execution of water delivery contracts perpetually apportioned water *en bloc* among Arizona, California, and Nevada irrespective of time of initiation or construction of projects or quantity of use?

2. Did successive Secretaries of the Interior purport to exercise such an authority or make such an apportionment in any contract?

3. How are shortages in "mainstream" waters to be borne, interstate, among competing claimants in Arizona, California, and Nevada?

B. The Determinations to Which Exception Is Taken

The Special Master erroneously concludes:

1. That the Boulder Canyon Project Act nullified the principles of equitable apportionment and priority of appropriation in the "mainstream" (Report, pp. 138, 152), although (as the Report correctly concludes) those doctrines control (1) interstate controversies between

users of "mainstream" water and users of waters of lower basin tributaries, including the Colorado River itself above Lake Mead (Report, pp. 316-18), and (2) interstate controversies between users on the tributaries of the Colorado River (Report, p. 325).

2. That the Boulder Canyon Project Act delegated to the Secretary of the Interior the authority, in default of prior interstate agreement, (1) to divide, without regard to appropriation and use (except for "present perfected rights") among California, Arizona and Nevada, "unappropriated"[3] water in the "mainstream" by means of water storage and delivery contracts, and (2) by signature of such contracts (subject to the provisions of the first paragraph of section 4(a) of the Project Act) to impose on the states a federal apportionment of the waters of the "mainstream" (Report, pp. 151-54, 173, 221-22).

3. That the authority so given includes also the authority to deliver "mainstream" water, to which rights had theretofore validly been acquired under the laws of a state, to others than the holders of such rights, to the extent that the rights thereby invaded do not qualify under

---

[3]There is unresolved confusion in the Master's Report: At page 152 he speaks of the Project Act as authority for an "allocation of all of the available water" in the "mainstream"; at pages 153 and 210 he speaks of authority to divide the "unappropriated water" as of the effective date of the Project Act; at page 307 he categorizes all appropriations as either "perfected rights" or "mere paper filings" and gives legal effect only to the former.

As the Master recognizes (Report, pp. 234-35), appropriative rights, if diligently pursued, relate back, in priority and in full quantity, to the date of the initiation thereof. *Wyoming v. Colorado*, 259 U.S. 419, 459 (1922).

section 6 as "present perfected rights" as of June 25, 1929 (Report, p. 152), leaving open only the question of right to compensation for their taking (Report, p. 161).

4. That (1) "present perfected rights" based upon water rights under state law are limited to quantities of water actually applied to use as of June 25, 1929 (Report, p. 308); (2) "present perfected rights" of federal reservations created prior to June 25, 1929, extend to the quantities of water ultimately required for those reservations, and are not limited to the quantities actually put to use at that date, or affected by the absence of any use at any time (Report, pp. 309-11).

5. That successive Secretaries of the Interior, during the period 1930-1944, in a series of water storage and delivery contracts, have "forever allocated" or "apportioned" (Report, pp. 313-14) all "mainstream" waters among the states of Arizona, California, and Nevada by the mere execution of those contracts (Report, pp. 201-27, 237-47).

6. That the Project Act and water delivery contracts place on a parity all interstate rights in "mainstream" waters (Report, pp. 233, 236) irrespective of the principles of equitable apportionment and priority of appropriation (Report, p. 152), or time of commencement of use or quantities in fact used, subject only to protection of "present perfected rights" (Report, pp. 308-12).

7. That successive Secretaries of the Interior, in executing all of their various contracts over the period 1930-1944, voluntarily bound themselves to follow substantially the allocation which the Report attributes

to the second paragraph of section 4(a) of the Boulder Canyon Project Act, specifying the terms of a tri-state compact among Arizona, California, and Nevada which was never executed or ratified by any state (Report, pp. 222-24), notwithstanding the Report's correct conclusion that section 5 of the Project Act did not require the Secretary to follow the allocation described in the second paragraph of section 4(a), absent its ratification by the three states (Report, pp. 163, 202).

8. That (1) successive Secretaries of the Interior, by voluntarily following in their various contracts the allocation described in the second paragraph of section 4(a) of the Project Act, adopted the construction now accorded that paragraph by the Report (Report, pp. 173, 183-85, 196, 200, 225, 226, 316-18); but (2) while purportedly following the allocation described in the second paragraph of section 4(a), in fact imposed 44/75 of the Mexican Treaty burden on the California defendants, whereas the nonexistent tri-state compact stated in the second paragraph of section 4(a) (clause (4)) would have imposed only one half of that burden on California.

9. That (1) the provisions of article 7(d) of the Arizona water delivery contract and of article 4 of the 1944 Nevada contract (amending article 5(a) of the 1942 Nevada contract), which diminish the Secretary's aggregate delivery obligations in respect of uses made of water in those states above Lake Mead, are invalid (Report, pp. 201, 207, 210, 237-47), but that (2) the invalidation of those provisions does not affect the validity of the remainder of said contracts (Report, pp. 207, 210).

10. That (1) the several contracts of the successive Secretaries of the Interior thus establish a proration formula under which the first 7.5 million acre-feet or less of consumptive use from the "mainstream" is apportioned in perpetuity in fixed proportions: to Arizona 28/75, to California 44/75, to Nevada 3/75; and of consumptive use of "mainstream" waters in excess of 7.5 million, one half to California, one half to Arizona, unless the Secretary makes a contract with Nevada for 4 per cent of such surplus, in which event Nevada will be apportioned 4 per cent and Arizona 46 per cent thereof (Report, pp. 221-25, 241, 305-06); (2) such apportionments in such fixed proportions of the 7.5 million acre-feet are subject to displacement only if the supply is insufficient to sustain "present perfected rights"; and (3) the numerator and the denominator of the fractions in that formula include valid rights in the natural flow antedating the effective date of the Project Act (Report, pp. 305-12).

C. The Correct Conclusions

The Special Master should have concluded:

1. That rights to the consumptive use of all Colorado River system water in the lower basin, including "mainstream" water, whether founded upon valid water rights under state law or asserted under contracts executed under the Boulder Canyon Project Act or other portions of the reclamation law, are governed by equitable apportionment principles established by this Court, including (1) the principles of priority, and (2) the principle of protection of existing uses against impairment for the benefit of new projects. Waters to supply such rights are subject to the quantitative limi-

tations expressly imposed thereon by the Compact and the California limitation.

2. That the Boulder Canyon Project Act does not impose a federal apportionment or interstate allocation upon the states, or authorize the Secretary of the Interior to do so.

3. That (1) the authority conferred by the Project Act upon the Secretary of the Interior to contract for the storage and delivery of water does not include authority to impair valid rights under state law to the natural flow waters, acquired prior to the effective date of the Project Act, whether or not such waters had been fully put to use prior to that date; and that (2) contracts for the storage and delivery of waters to holders of such rights merely confirm such preexisting rights, which retain their interstate priorities.

4. That (1) "present perfected rights," as that expression is used in section 6 of the Project Act, are not limited to the quantities of water actually applied to use prior to June 25, 1929, but extend to the quantities of water capable of use from the natural flow by works constructed or in process of construction with due diligence prior to the effective date of the Colorado River Compact, and theretofore or thereafter put to use by the exercise of due diligence, pursuant to appropriations which were initiated under state law or pursuant to reservations which were established under federal law, prior to said effective date; (2) although the effective date of the Colorado River Compact as a six-state agreement was June 25, 1929, nevertheless if Arizona is held to have effectively ratified the Compact on February 24, 1944, then 1944 is the effective

date of the Compact as a seven-state agreement and the date to which the expression "present perfected rights" in Article VIII of that Compact and in section 6 of the Project Act relates; (3) "present perfected rights," as that expression is used in article 7(*l*) of the 1944 Arizona contract (Report, p. 403), extend to the quantities of water capable of use by works in California, actually constructed or in process of construction with due diligence prior to February 24, 1944, and theretofore or thereafter put to use by the exercise of due diligence, pursuant to appropriations initiated, federal reservations established, or federal water storage and delivery contracts executed, prior to February 24, 1944.

5. That no Secretary of the Interior has effectuated or purported to effectuate an interstate apportionment of water either by water delivery contracts or otherwise.

6. That any rights based upon water storage and delivery contracts are subject to and controlled by section 8 of the Reclamation Act of 1902[4] and by sections 14[5] and 18[6] of the Project Act, which compel the application of priority and not parity to interstate water rights.

7. That the water delivery contracts made by the successive Secretaries of the Interior do not purport to and do not follow the terms of the nonexistent tri-state compact set forth in the second paragraph of section 4(a).

---

[4]32 Stat. 390, 43 U.S.C. §§ 372, 383 (1958), quoted in part in Report, p. 217.

[5]See Report, p. 394.

[6]See Report, pp. 217, 395.

8. That the successive Secretaries of the Interior, in executing their various water storage and delivery contracts from time to time during a period of 14 years and administering them during a period of 30 years, have not accorded to the second paragraph of section 4(a) of the Project Act the meaning attributed thereto by the Special Master as independent of the Colorado River Compact.

9. That (1) the Arizona and Nevada contracts are administrative devices establishing quantitative limitations or ceilings upon the aggregate quantity of water which may be stored and delivered by the Secretary of the Interior to Arizona and Nevada water users, respectively, pursuant to federal reservations or appropriations under state law, or under contracts made by the Secretary directly with such users; (2) the provisions of article 4 of the Nevada 1944 contract and article 7(d) of the Arizona contract, diminishing the stated aggregate quantities in respect of uses of water made above Lake Mead, are valid; and (3) if those provisions of article 4 of the 1944 Nevada contract and article 7(d) of the Arizona contract are invalid, the contracts are invalid in their entirety, because those provisions are not severable from the remainder of the contracts.

10. That rights in natural flow are properly added to, and not included within, any rights in stored waters, howsoever allocated.

D. The Effect of the Resolution of These Issues

As pointed out above, there is not enough water permanently available in the truncated "mainstream" to sustain 7.5 million acre-feet of consumptive use in Ari-

zona, California, and Nevada. The effect of the Report's formula is to prorate shortages among Arizona, California, and Nevada in fixed percentages, or fractions, disregarding interstate priorities. Under the Report's formula, California users are thus required to bear 44/75 of such shortage, irrespective of the relative magnitudes or priorities of rights in natural flow, interstate, which preexisted the creation of storage (excepting only "present perfected rights").

The dependable "mainstream" supply permanently available will not support more than about 6 million acre-feet per annum of consumptive use. (See group III of these exceptions.) Therefore, if the Report's construction of the limitation on California is sustained —that the 7.5 million acre-feet of Article III(a) water must be found, if at all, in the "mainstream" alone— this proration formula restricts California to 3,520,000 acre-feet of consumptive use out of that dependable supply (44/75 of 6 million). (See Report, p. 311.)

Under priority and equitable apportionment principles, California's existing uses, which were 4.6 million acre-feet per annum at the time of trial (Report, p. 128 and n.73), would be protected at least to the extent of the quantitative limitation of 4.4 million acre-feet per annum stated in the limitation. Moreover, the Report precludes the possibility of any "excess or surplus" in the "mainstream" because the Report excludes the main stream between Lee Ferry and Lake Mead and all lower basin tributaries from the accounting. (See group III of these exceptions, relating to water supply.)

III

EXCEPTIONS RELATING TO WATER SUPPLY AND JUSTICIABILITY (Report, pp. 99-135)

A. The Issues

1. Is the determination of the dependable (*i.e.*, permanently available) water supply necessary in this case?

2. Is there a justiciable controversy before the Court if the dependable water supply is based on the Report's premises that the Colorado River Compact is a "ceiling on appropriations" in each basin and is irrelevant to the issues in this case?

3. What effect does water supply have upon the resolution of the issues?

4. What is the dependable water supply of the Colorado River in the lower basin?

B. The Determinations to Which Exception Is Taken

The Special Master erroneously concludes:

1. That water supply is irrelevant to the resolution of the issues in this suit (Report, pp. 99-102, 145-46), notwithstanding the correct conclusions that existing projects cannot be economically operated unless a dependable supply of water is available (Report, p. 239), and that new projects can be financed only if a relatively constant and dependable supply seems likely to be available after their completion (Report, p. 239), both physically and legally (Report, p. 133).

2. That (1) the apportionment in perpetuity to the upper basin of 7.5 million acre-feet of consumptive use per annum made by Article III(a) of the Colorado River Compact constitutes a "ceiling on appropriations," so that water temporarily available in the lower basin but legally apportioned to the upper basin may be treated as part of the lower basin's dependable supply (Report, pp. 110-15, 140-42, 144, 149, 176) and (2) there is nothing to indicate that upper basin depletions will expand to "anywhere near" 6.5 million acre-feet per annum (Report, p. 111), or indeed beyond 4.8 million (Report, pp. 112, 113).

3. That, under the premises of the Report and of the decree recommended therein, Article III(c) of the Colorado River Compact need not, and should not, in the absence of the upper basin states, be herein construed (Report, pp. 145-46).

4. That (1) the dependable water supply of the Colorado River in the lower basin, hence the effect of the recommended decree, is not determinable within useful limits of accuracy (Report, p. 103); (2) the record in this case gives no indication that the decision and decree recommended by the Report will destroy or seriously impair existing projects in California (Report, pp. 102-25); and (3) a great deal of water has been permitted to waste in California as purportedly evidenced by large annual "unused runoff" into the Salton Sea (Report, p. 103 n.25).

5. That this case presents a justiciable controversy with compelling reasons for its adjudication (Report, pp. 129-35) despite the determinations (1) that the Colorado River Compact constitutes a ceiling on appropriations in each basin (Report, pp. 111-13, 140-41, 144, 149, 176) and is irrelevant to the suit (Report, p. 138) and (2) that California's existing uses (and *a fortiori,* Arizona's and Nevada's uses from the "mainstream") are "in no danger of curtailment unless and until many vast new projects, some of which are not even contemplated at this time, are approved by Congress and constructed" (Report, p. 115).[7]

C. The Correct Conclusions

The Special Master should have concluded:

1. That the determination of the dependable water supply is relevant and essential in the resolution of the issues in this suit with respect to (1) the existence of a justiciable controversy, (2) the appraisal of the effect of the apportionment proposed by the Report, and (3) the testing of the result of any decision in this case against the intent of Congress and the legislatures of the Colorado River basin states as of 1928 in light of the water supply anticipated by those bodies as of that date.

---

[7]California's existing uses (1955-1957) were 4,483,885 acre-feet annually (Report, p. 128); corrected in accordance with note 73 at that page, these uses are 4,586,392 acre-feet, for all practical purposes identical with the 4,600,000 acre-feet of dependable supply sought by California in its proposed decree submitted to the Master, vol. I, Calif. Findings and Conclusions.

2. That the apportionment in perpetuity to the upper basin made by Article III(a) of the Colorado River Compact has withdrawn the apportioned quantity from the permanently dependable supply of the lower basin, irrespective of the time when the waters so apportioned may be put to use, subject only to the overriding delivery obligations imposed on the states of the upper division by the Colorado River Compact, *e.g.*, Articles III(c) and III(d) of the Compact.

3. That, under the premises of the decision and decree recommended by the Report, Article III(c) must be construed to determine or permit determination of the effect of the recommended decree on the dependable lower basin main stream supply.

4. That the dependable water supply of the lower basin is determinable within useful limits of accuracy, and the formula proposed, applied to that dependable supply, produces inequitable results (see pars. 6-8 *infra*).

5. That (1) the controversy is justiciable if, and only if, the apportionment to the upper basin by Article III(a) of the Colorado River Compact is regarded as a deduction from the lower basin supply at least to the extent that existing and authorized storage works in the upper basin make possible utilization of that apportionment without impinging on upper division obligations under the Compact, *e.g.*, Articles III(c), III(d), and III(e) of the Compact; and (2) if effect is not so given to the apportionment to the upper basin made

by Article III(a) of the Compact, the water supply presently available in the Colorado River from Lee Ferry to the Mexican boundary so greatly exceeds the claims thereto of Arizona, California, and Nevada that there is no justiciable controversy between any of those states.

6. That the dependable supply permanently available under the Colorado River Compact from the "mainstream" for use in Arizona, California, and Nevada will not sustain more than 6,000,000 acre-feet per annum of consumptive use.

7. That (1) the proration formula proposed by the Report, applied to a dependable supply of only 6 million acre-feet, would supply California with only 3,520,000 acre-feet of beneficial consumptive use annually (Report, pp. 306, 311), or 1 million acre-feet less than that required by California's uses existing at the time of trial (see Report, p. 128, noted *supra* p. 20 n.7); and (2) the decision and decree recommended by the Report will accordingly result in disaster to California by seriously curtailing California's present uses in the dependable supply and by eliminating all diversions from that supply by the defendant The Metropolitan Water District of Southern California.

8. That under existing circumstances California projects operate with high efficiency and make reasonable, nonwasteful use of Colorado River water.

D. The Effect of the Resolution of These Issues

If the water supply premises of the Report were adopted, this suit should be dismissed as not justiciable. On the premises of the Report there is an abundant water supply for all present and contemplated lower basin projects and there is no likelihood of any shortage in the foreseeable future, unless and until Congress authorizes large new projects. Therefore, the Court would be rendering an advisory opinion to Congress on a moot controversy.

If the Court rejects the water supply premises of the Report and accepts the dependable water supply which is established in the evidence, then the Report's proposed resolution of the issues must be rejected as inequitable and contrary to the intention of Congress and the state legislatures in 1928. The decision proposed in the Report would completely destroy the permanent water supply of the defendant The Metropolitan Water District of Southern California and seriously curtail the water supply for California's agricultural agencies. This result could not have been intended by Congress or the state legislatures in light of the dependable water supply anticipated as of 1928.

IV

GENERAL EXCEPTIONS

1. The California defendants except to the Report on the ground that the decision therein proposed is outside the order of reference of this Court.

2. The California defendants except to the Report on the ground that the decision therein proposed is outside the issues pleaded and tried, and contrary to facts established by admissions in the pleadings.

3. The California defendants except to the erroneous determination that the limitation upon use of water in California set out in the first paragraph of section 4(a) of the Project Act and accepted by the reciprocal California Limitation Act continues operative despite the Report's conclusion that Arizona effectively ratified the Compact on February 24, 1944, thereby effecting seven-state ratification of the Compact (Report, pp. 27, 166-67).

4. The California defendants except to the erroneous determination that California had no diversion works as of 1928 capable of diverting Gila River water for use in that state, that no such use of Gila River water in California was contemplated at that time, and that California has not used Gila River water since 1928 (Report, p. 179 n.38).[8]

---

[8]As of 1928, the diversion works for Imperial Irrigation District in California were located below the mouth of the Gila, and Gila River system waters, when available, were diverted by the District until 1940 when the All-American Canal diversions at Imperial Dam above the mouth of the Gila were made for the first time. (See Report, pp. 54-55.)

5. The California defendants except to the erroneous determinations of (1) the quantities of water reserved by the United States for Indian reservations (Report, pp. 254-87) and for other federal lands and purposes (Report, pp. 291-300), (2) the priorities accorded to such federal reservations, and (3) the bases upon which the Report predicates water rights for such federal reservations.[9]

6. The California defendants except to the erroneous determination of the western boundary of the Colorado River Indian Reservation with respect to the "Olive Lake Cutoff" and the "Ninth Avenue Cutoff," as reflected in findings of fact 8, 9, 10, 11, 12, 13, 15, and 17 (Report, pp. 271-72), conclusions of law 1, 5, 6, and 7 (Report, p. 273), and the opinion (Report, pp. 274-78).[10]

---

[9]Although we indicate here our disagreement in principle with the Master's determinations which sustain the United States claims for Indian and other federal reservations, we do not now plan to brief this point. First, the quantities of Indian water in dispute in California are relatively small. Second, the Special Master has correctly decided that federal uses in Arizona and Nevada are chargeable to those states out of water from which California users are excluded by the California Limitation Act, and the Master asserts that "all of the parties seem to agree to this accounting." (Report, p. 247.) However, if the decision that federal uses are so chargeable should be attacked by any party, we reserve by this exception our challenge to the determinations which sustain the federal reservation claims.

[10]We understand that the Special Master does not purport to adjudicate the rights to land of persons not parties to this suit. Report, p. 278; Tr. 20,289, 20,371.

7. The California defendants except to the erroneous denial of their motion of June 10, 1960 (California Comments on the Draft Report, pp. 61-90), in which the California defendants moved (1) that the Master submit to the Court tables which should set forth specified data as to the water supply of the Colorado River system in the lower basin and (2) that the Master either appoint or recommend that the Court appoint independent experts to testify as the Court's own witnesses on the dependable supply (letter to all counsel from Special Master, dated July 1, 1960, reported at Tr. 22,598-601).

8. The California defendants except to the erroneous denial of their motion to reopen the hearings to receive the evidence tendered in their Offer of Proof as well as any other evidence relating thereto which might be tendered by other parties (Report, pp. 248-53).

9. The California defendants except to the erroneous denial of their motion of August 31, 1960, to reopen the trial for the taking of evidence on the future depletion of the Colorado River at Lee Ferry by the upper basin (Report, p. 112 n.41).

V

EXCEPTIONS RELATING TO THE RECOMMENDED DECREE (Report, pp. 345-60)

The California defendants except to the erroneous decree recommended in the Report, especially in the following particulars:

1. The recommended decree reflects the errors specified above (Decree arts. I-III).

2. The recommended decree grants injunctive relief where no foundation for an injunction has been established (Decree arts. II, III).

3. The recommended decree specifically subjects the California defendant agencies to an injunction which does not apply to their counterparts in Arizona and Nevada (Decree art. III).

4. The recommended decree with respect to "non-contract" uses of water, which are largely on federally owned lands, does not apply to the United States (Decree art. III(C)), the only party with practical or legal means to prevent those uses.

5. The recommended decree fails to make clear that the consumptive use in the lower basin of ground water interconnected with the Colorado River, within the safe annual yield of the ground water basin, is chargeable under any interstate allocation which may be decreed (Decree art. I).

6. The recommended decree fails to make clear that jurisdiction is retained (Decree art. IX), among other

things, to hear and decide any interstate case of "main-stream" users against tributary users and the issuance of a supplementary decree thereon.

7. The recommended decree fails to encompass every portion of the Colorado River system within the lower basin from which, according to the record, major new diversion works have been proposed.[11]

WHEREFORE, the California defendants request that the Court reject the Report of the Special Master and the recommended decree contained therein, and that the Court decide this cause in the manner indicated by the modifications of the Special Master's Report and recommended decree described above.

Dated: February 27, 1961.

Respectfully submitted,

---

[11]The main Colorado River above Lake Mead within the lower basin, which includes one alternative point of diversion (Report, pp. 227-28) for the Central Arizona Project (which Arizona alleged was the precipitating cause of this litigation, Ariz. Complaint, par. XX; Report, p. 131) is outside the terms of this decree (Report, pp. 152, 183-85, 227, 237-47, 345) and is left to adjudication in future litigation (Report, pp. 247, 316-21).

Exceptions to the Report of the Special Master and Recommended Decree on File Herein, Dated December 5, 1960, Filed by Defendant, The Metropolitan Water District of Southern California, on Its Behalf and on Behalf of Its Co-Defendants, The City of Los Angeles, and Its Department of Water and Power, The City of San Diego, and The County of San Diego.

February 27, 1961

INTRODUCTION.

The defendant, The Metropolitan Water District of Southern California, is a public and municipal corporation of the State of California. Its corporate area is situated on the coastal plain of Southern California extending from (and including a part of) Ventura County to the Mexican border, a distance of 180 miles.[1] A large number of municipalities, including the City of Los Angeles (population 2,500,000), the City of San Diego (population 575,000), and a substantial part of the County of San Diego are within the boundaries of, and are served with Colorado River water on a wholesale basis by, the Metropolitan Water District.[2] The population of the Metropolitan Water District in 1956 was 6,423,000.[3] (It is now about 7,000,000).

Its assessed valuation, in 1956, was $9,674,000,560.[4] (It is now $13,820,731,775), about one-half of total assessed valuation of the State of California.[5] All available local water sources have long since been fully developed and put to use. To sustain its present development and population, and to provide for its inevitable growth, the Metropolitan Water District is de-

pendent upon water agreed to be delivered to it under contracts with the United States (1931-1934) made under the Boulder Canyon Project Act.[6]

Municipal water requirments must be anticipated, and provisions made for continuous supply for a rapidly expanding population. Existing use, as of any given time, does not indicate requirements. Public officers in charge of water supply must look at least ten years into the future in providing municipal water supplies.[7]

The Metropolitan Water District rights to the use of Colorado River water, both appropriative[8] and those derived by contract under the Boulder Canyon Project Act,[9] are junior to established "present perfected rights"

Ex. 430 (Application by MWD, No. 6406, 4th Amendment, of September 26, 1947; and PERMIT No. 7641, issued January 6, 1950, Tr. 9,395); Calif. Ex. 435 (Application by MWD, No. 6840, 4th Amendment of September 26, 1947; and PERMIT No. 7642 issued January 6, 1950, Tr. 9,395); Calif. Ex. 439 (Application by MWD, as successor to City of San Diego, No. 4997, 3rd Amendment of September 26, 1947; and PERMIT No. 7640 issued January 6, 1950, Tr. 9,395); and Calif. Ex. 68 MWD Chart—chain of title of appropriative rights, Tr. 6,894, 9,487), Tr. 9,482-87 (Mr. Howard).

[9]See note 6, *supra*.

as of 1929. Under an agreement made in 1931,[10] embodied in the water delivery contracts with the United States made by the Secretary of the Interior under the Boulder Canyon Project Act, such rights are junior to old agricultural rights on the river. It follows that, in the event that the conclusions in the pending Report of the Special Master be sustained, the District would suffer the major damage resulting from errors of law appearing in the Report and Recommended Decree. In fact, under water supply conditions, revealed by the evidence but as to which the Special Master erroneously declines to make findings,[11] the application of the principles asserted by the Report would result in complete elimination of the District's water supply from the Colorado River.

Counsel for the defendant, the Metropolitan Water District, have co-operated with the State's Attorney General in the preparation of exceptions and objections to the Special Master's Report and Recommended Decree, and join therein. Because it appears in this cause, and has been considered by the Special Master, as a separate defendant, and has a special interest in the outcome of the pending litigation, the Metropolitan Water District, on behalf of itself, and on behalf of its co-defendants and constituent agencies, the City of Los Angeles and its Department of Water and Power, the City of San Diego and the County of San Diego, herewith files additional exceptions to the Special Mas-

---

[10]Ariz. Ex. 27 (Seven-Party Priority Water Agreement, August 18, 1931, Tr. 242).

[11]Report pp. 99-102, 146.

ter's Report on file herein, dated December 5, 1960, on grounds hereinafter set out.

The erroneous conclusions adverse to the defendant, the Metropolitan Water District, are not separately stated as findings and conclusions in the Report, but are in large part merged in the text of the Report and reflected in the Recommended Decree. Consequently, the following exceptions relate to the ultimate conclusions hereinafter specified and to all incidental determinations involved in reaching such ultimate conclusions.

Specification of Errors and Exceptions

Exception No. 1:

The Special Master errs in all holdings, determinations, and conclusions supporting the proposition that the contract[12] entered into in 1931 by the United States, acting through the Secretary of the Interior under the Boulder Canyon Project Act,[13] and the defendant, the Metropolitan Water District, providing for delivery to the District from storage in the reservoir created by Hoover Dam (Lake Mead), water up to a fixed quantity, and providing for "permanent service" (subject to the Colorado River Compact[14] and the Boulder Canyon Project Act), which contract was relied upon by the defendant, the Metropolitan Water District, in constructing the Colorado River Aqueduct, is subject to impairment

and defeat in whole or in part by acts of a later Secretary of the Interior in 1944,[14a] which acts the Special Master erroneously holds to constitute an apportionment of the use of water to other states.[15] [15a]

Exception No. 2:

The Special Master errs in holding that the Congress "imposed" a limitation on use of water of the Colorado River in California[16]; and in failing to recognize that the Boulder Canyon Project Act[17] and the California Limitation Act[18] constitute a compact between the United States and the State of California voluntarily entered into, consensual in character, and subject to interpretation under the law of contract.[19]

Exception No. 3:

The Special Master errs in holding that the references in the Boulder Canyon project Act (first paragraph of Section 4(a)), and the corresponding language in the California Limitation Act, to "waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact"[20] (by definition. water in the Colorado River System, including its tribu-

taries) do not carry their literal meanings but instead mean the first 7,500,000 acre-feet of "mainstream" water (exclusive of tributaries) available for use in the lower basin from Lake Mead and the river below Lake Mead.[21]

Exception No. 4:

The Special Master further errs in holding that the references in the Boulder Canyon Project Act (first paragraph of Section 4(a)), and in the corresponding language of the California Limitation Act, to "excess or surplus waters unapportioned by said compact"[22] do not carry their literal meanings, but instead, mean water available for use in the lower basin from the mainstream (exclusive of tributaries), in excess of the first 7,500,000 acre-feet so available.[23]

Exception No. 5:

The Special Master errs in defining the "mainstream" as "water stored in Lake Mead and flowing in the mainstream below Hoover Dam"[24] and in treating the river above Lake Mead as a "tributary".[25]

Exception No. 6:

The Special Master errs in determining that the right of increase of use permitted to the lower basin by Article III(b) of the Compact[26] constitutes an apportionment of use of water with the same legal effect as the apportionments made by Article III(a)[27] and that,

[21]Report, pp. 167-85.
[22]Report, p. 379, Appx. 3 at p. 382; Report, p. 397 at p. 398.
[23]Report, pp. 168-70; 194-200.
[24]Report, p. 173, 185.
[25]Report, p. 202.
[26]Report, p. 371, Appx. 2, at p. 373.
[27]*Ibid.*

if the California Limitation Act derives its meaning from the Compact, California is excluded from participating in the use of water referred to in Article III(b).[28]

Exception No. 7:

The Special Master errs in holding that the Colorado River Compact, the doctrine of equitable apportionment, and the law of appropriation are all irrelevant to the allocation of such water among the three states (Arizona, Nevada, and California).[29]

Exception No. 8:

The Special Master errs in holding, (a) that in the Boulder Canyon Project Act, the Congress intended to or did delegate to the Secretary of the Interior the authority to allocate[30] (apportion) by a formula unrelated to water supply, among the three states of the lower basin having access thereto, use of the water from the mainstream of the Colorado River (defined as Lake Mead and the mainstream below Lake Mead) in perpetuity and on a parity regardless of use, time of use, or priority based on use (except as to present perfected rights as of 1929),[31] and (b) that the successive Secretaries of the Interior by a series of contracts intended to or did so apportion such use of water in perpetuity or on a parity.[32]

---

[28]Report, pp. 169, 194-96.

[29]Report, p. 138.

[30]The Report uses the terms "allocate" and "apportion" and their derivatives interchangeably.

[31]Report, pp. 151-54, 173, 221-22, 233, 236.

[32]Report, pp. 201-27, 237-47, 313-14, 162.

Exception No. 9:

The Special Master erroneously concludes (a) that the beneficial consumptive use of 7,500,000 acre-feet per annum apportioned in perpetuity to the upper basin by Article III(a) of the Colorado River Compact (subject only to the covenants of paragraphs (c), (d), and (e) of Article III of the Compact) constitutes a "ceiling on appropriations", and is irrelevant to the determination of the pending controversy;[33] (b) that the dependable water supply of the lower basin, hence the effect of the Recommended Decree, is not determinable within useful limits of accuracy;[34] and (c) that the dependable water supply available for consumptive use in the lower basin is irrelevant to the resolution of the issue in this suit.[35]

Exception No. 10:

(a) The Special Master errs in holding that Arizona did effectively ratify the Colorado River Compact in 1944.[36]

(b) The Special Master further errs in holding that the California Limitation Act is operative and binding on the State of California, despite his holding that Arizona effectively ratified the Colorado River Compact in 1944.[37]

[33]Report, pp. 140-42, 113-15, 147, 149.

[34]Report, pp. 102-25.

[35]Report, pp. 99-102.

[36]Report, pp. 166-67.

[37]Report, pp. 164-66.

Exception No. 11:

The Special Master errs in holding that the "Contract dated February 9, 1944, between the United States and the State of Arizona"[38] constitutes an apportionment in perpetuity of use of water of the Colorado River to Arizona by a formula unrelated to water supply and on a parity with contracts made in 1930-34[39] with users of water from the Colorado River in California.[40]

Exception No. 12:

The Special Master errs in holding that the provisions of the Arizona and the Nevada Contracts[41] diminishing deliveries to Arizona and Nevada, respectively, of water from Lake Mead in the quantity that upstream diversions in those states diminish the flow into Lake Mead, are invalid.[42]

Exception No. 13:

The Special Master errs in holding that the Contract provisions referred to in Exception 12 are separable and can be invalidated without invalidating the said contracts in their entirety.[43]

Wherefore, the defendant, The Metropolitan Water District of Southern California, respectfully requests that this Court reject the Report of the Special Mas-

NEW MEXICO'S EXCEPTIONS TO THE REPORT AND RECOMMENDED DECREE OF THE SPECIAL MASTER, DATED DECEMBER 5, 1960

OPENING REMARKS

The Findings and Conclusions of the Special Master in his report and recommended Decree of December 5, 1960, are generally satisfactory to the State of New Mexico. Insofar as the recommended decree is concerned, Article IV, Sections A, B, C and D (Report pp. 354, 355, 356, 357) are the result of negotiations between the states of Arizona and New Mexico, and in part, the United States. The United States attended some of these negotiations though it objected to the principle of the compromise. A review of the aforementioned sections of Article IV discloses that the Special Master has adopted the language agreed upon by Arizona and New Mexico and as submitted to him. As a part of this negotiated compromise, the representatives of Arizona and New Mexico agreed that neither party would further object to the findings of present uses described in the compromise agreement. For this reason, New Mexico does not believe it appropriate for it to further dispute the findings and conclusions incorporated in that portion of the recommended decree.

RESERVATION THEORY

Sub-paragraph E of Article IV recognizes the reservation theory as applied to federal lands. New Mexico does not agree in principle with the Winters Doctrine as applied to Indian Reservations nor to the extension thereof to include all Federal Reservations (Report p. 293) and possibly lands administered by the Bureau of Land Management (Report, pp. 96, 334). New Mexico believes that an application of these doctrines is generally contrary to the efficient development and use of the water resources of the arid West. However, New Mexico does not take ex-

ception to the specific manner in which the reservation theory is applied in the Report and Recommended Decree involving the equitable apportionment of the waters of the Gila River system.

SAN SIMON CREEK

Since the time of the aforementioned negotiations between Arizona and New Mexico, it has come to our attention that development of the underground waters on the Arizona side of the San Simon basin is progressing quite rapidly; across the state line, New Mexico has declared an underground basin pursuant to its pertinent statutory authority (Sec. 75-11-1, et seq., N.M.S.A., 1953 Comp.) to prohibit any further development of underground waters within the San Simon basin. Furthermore, at such time as the Recommended Decree in its present form should become final, New Mexico would be prohibited from developing uses over and above what has been determined to be its present uses. (Report Recommended Decree, Art. IV, Sec. A. p. 354; Findings 13, 14, p. 338). Should the development on the Arizona side of the boundary continue at its present uninhibited rate the ground water sources will be depleted and the present uses in New Mexico from this same basin will be seriously encroached upon. Therefore, it appears likely that unless prompt action is taken by Arizona in halting the uncontrolled development of the underground waters in the San Simon Creek area in Arizona, or the Recommended Decree is amended to require such action, it will become incumbent upon New Mexico at some future time, as permitted by Article IX of the Recommended Decree, to apply to this Court for amendment of the decree for relief to protect present New Mexico uses.

CORRECTIONS

New Mexico takes this opportunity to point out one omission in the Recommended Decree. In Article IV (D) (1) (Report, p. 356) at the bottom of the page under the owner designated Chris Dotz, a description of a portion of the Dotz ownership was inadvertently omitted. A comparison of the descriptions shown therein with that found in Finding 26, (Report, pp. 340, 341), discloses that in addition to the SE1/4SE1/4; SW1/4SE1/4, there should be included the NW1/4NE1/4; and NE1/4NE1/4.

CONCLUSION

In conclusion, New Mexico takes no specific exception to the Report and Recommended Decree dated December 5, 1960, as submitted.

In view of the foregoing, New Mexico will not file an opening brief but New Mexico does reserve the right to file briefs in response to exceptions, if any, wherein her interests are affected.

OPENING BRIEF FOR THE STATE OF NEVADA, Intervener

JURISDICTION

This is an action between States in which leave to file the Bill of Complaint was granted January 19, 1953 (344 U.S. 919). The State of Nevada was granted leave to intervene June 1, 1954 (347 U.S. 985). Original jurisdiction exists under Article III, Sec. 2, of the Constitution of the United States.

STATEMENT OF THE CASE

This case is now before this Court on Exceptions by all parties (except the State of Utah) to the Report of Simon H. Rifkind, the Special Master who conducted extensive hearings as outlined at pages 2 and 3 of his Report. He recommended that a decree be entered allocating and controlling the waters in the manner set out in Part Three of his Report (pages 345–360). This recommended decree is based upon the findings and conclusions contained in the other portions of his Report.

This voluminous Report contains a complete and accurate statement of the complex history and factual situation involved in this action, as well as a summary of the evidence introduced at the lengthy hearing. It seems to the State of Nevada unnecessary to repeat the same material in this Brief.

Arizona instituted this action against the State of California, and certain entities in that State who were using Colorado River water (commonly called the California defendants) pursuant to the order of this Court dated January 19, 1953 (344 U.S. 919). Simultaneously, the United States was granted leave to intervene. Subsequently, on June 1, 1954, Nevada was granted leave to intervene (347 U.S. 985) and thereafter, on December 12, 1955, order was entered joining Utah and New Mexico as parties only to the extent of their interest in Lower Basin waters (350 U.S. 114).

The pleadings in the action are listed in detail in Appendix I to the Special Master's Report (pages 363–370) and are summarized briefly in pages 2 and 3 of his Report. The issues, as they appeared to the Special Master as ultimately submitted, are listed on pages 4–6 of the Report.

In its Petition in Intervention herein, Nevada asserted that it was one of the Lower Basin States, as defined in the Colorado

River Compact (hereinafter referred to as "the Compact"),[1] that it was entitled to protection of all of its existing rights in the Colorado River system, including both diversions from the mainstream and from the tributaries flowing through Nevada (the Virgin and Muddy Rivers and Meadow Valley Wash), and that it was entitled to a fair and equitable portion of the waters of the Colorado River Basin, out of all waters available to the Lower Basin. Attached hereto as Appendix IV, page 113, is a map showing the portion of Nevada which is within the Colorado River drainage area.

The fundamental problem in this matter is the allocation of the mainstream water of the Colorado River among the three Lower Basin States, Arizona, California and Nevada. Lying in an arid region, this water is literally the life blood of an area which is now undergoing a population explosion and industrial expansion, probably without parallel in history. As each year passes, the vital necessity of a known water supply becomes increasingly apparent to everyone responsibly connected with this area.

In the Special Master's Report, he has capably described the geography of the Colorado River Basin (pages 9–14); the history of the Colorado River (pages 15–31); he has listed (pages 7–8) the four prior instances in which some phases of this matter have been presented to this Court in actions between Arizona and the other States.

In brief, the Special Master determined: That if there is sufficient mainstream water in the Colorado River to satisfy 7,500,000 acre feet of annual consumptive uses in the Lower Basin States, it should be apportioned: 2,800,000 acre feet to Arizona; 4,400,000 acre feet to California and 300,000 acre feet to Nevada. That any water available in excess of 7,500,000

---

[1]Appendix 2, Report, pp. 371–377.

acre feet should go 50 percent to Arizona and 50 percent to California (unless the United States contracts with Nevada, and then it would be 4 percent to Nevada and 46 percent to Arizona). That whenever the water supply is less than 7,500,000 acre feet of consumptive use, it is to be divided fractionally:

$\frac{2.8}{7.5}$ for Arizona $\frac{4.4}{7.5}$ for California $\frac{.3}{7.5}$ for Nevada

And he further determined that rights presently perfected on June 25, 1929, should be filled in order of priority, even though it requires contributions from the water apportioned to other States. All of the foregoing allocations are from mainstream water at and below Lake Mead; and he did not find it necessary to make any determinations as to tributary uses except those applying to the rights of New Mexico and Arizona on the Gila River System.

His Report provided that the Secretary of the Interior should make all determinations relative to available water supply and be in sole control of the operation and management of the reservoirs and the lower river.

The basic law involved in the determination of this action depends upon interpretation of the Colorado River Compact, the Boulder Canyon Project Act[2] (hereinafter referred to as the "Project Act"), the California Limitation Act[3] (hereinafter referred to as the "Limitation Act"), and the Mexican Treaty.[4] All of these are thoroughly described and analyzed by the Special Master in his Report.

The fundamental physical situation is one resulting from the

---

[2]45 Stat. 1057; 43 U.S.C. 617.

[3]Act of March 4, 1929; ch. 16, 48 Session; Statutes and Amendments to the Codes, 1929, pp. 38–39.

[4]Treaty between the United States and Mexico, dated February 3, 1944 (59 Stat. 1219).

great complex of dams, reservoirs and diversion works, beginning with the Hoover Dam and extending downstream to the Mexican Border. This vast array of projects has been built at the cost of hundreds of millions of dollars by the United States of America (except only the Colorado River Aqueduct which was built by Metropolitan Water District of Southern California) (Report, pages 38–39). The Report describes these mainstream works at pages 32–38, and the Gila System works at pages 39–43.

At the hearing, Nevada's proof established that the gross diversion requirements for use in Southern Nevada by the year 2000 would be 786,000 acre feet from the Colorado River and its tributaries in Nevada, resulting in a total net consumptive use of 530,000 acre feet. Of this amount, there would be a net consumptive use requirement of 431,600 acre feet from Lake Mead.

Because of the voluminous record herein, Nevada has, for the convenience of the Court, compiled and is attaching hereto as Appendix I, pp. 63–105, a document entitled "Present and Future Water Requirements for Colorado River Basin in Nevada" which covers in considerable detail the present and future water requirements for irrigation, industrial, municipal, and domestic purposes in Southern Nevada, which is fully documented by the record.

Generally, the posture of this case at this time, according to the Exceptions that have been filed by the parties is this: Arizona, the United States and Nevada all accept the Special Master's recommended decree, with only minor exceptions thereto. Nevada's Exceptions might properly be described as perfecting exceptions. California, on the other hand, disagrees with the ultimate decision of the Master *in toto*. So that on this main issue, we have the parties aligned, California on the one hand, the other parties in opposition.

However, there are two specific issues between Nevada and the United States. The Special Master found in his Report at pages 237–247 that Article 5(a) of the Nevada Contract[5] with the United States of America (and a similar Article 8(d) in the Arizona-United States contract)[6] providing that water used by Nevada users above Lake Mead should be deducted from her contract allocation was invalid and void. Nevada (and Arizona) agree with the Special Master's decision on this point. However, the United States disagrees.

Likewise, Nevada contends, and the Special Master found in his Report (page 210), that the contract between the United States and the Colorado River Commission of Nevada, a statutory body of the State of Nevada, does not require additional subcontracts between water users and the Secretary of the Interior. The United States disagrees.

Again, any more detailed statement of the facts and issues in this case would be merely repetition of the Special Master's excellent presentation thereof.

PATTERN OF THE BRIEF

Because of the extent and complexity of the record, issues and exceptions of the various parties in this case, it does not seem to Nevada that it would be helpful in her opening Brief to attempt to discuss at length every one of the multiple questions involved. Accordingly, in this Brief, she will present the argument in general support of her basic position in the matter. And will point out in detail the reasons for her perfecting exceptions to the Special Master's recommended decree.

---

[5]Appendices 6 and 7, Report, pp. 409–422.
[6]Appendix 5, Report, pp. 399–407.

This brief does not contain specific opposition to the exceptions filed by the other parties. It is, as noted, a general statement of Nevada's position in support of the Special Master's Report and an argument in support of Nevada's perfecting exceptions thereto.

Nevada respectfully reserves for its second, or Answering Brief, the right to specifically oppose the exceptions of other parties on matters adverse to her. No proper or full opposition to such exceptions can be made at this time, prior to being advised as to the arguments made in their behalf. To divide such opposition partly in this brief and partly in an answering brief would, Nevada believes, tend toward confusion rather than clarification.

SPECIFICATION OF EXCEPTIONS TO BE URGED

The State of Nevada will urge Exceptions I, II, III and IV. Argument in support of these exceptions is contained in Point V of this brief. These exceptions, in summary, are:

I. The Special Master erred in providing in the proposed decree that "mainstream water shall be delivered to users * * * in Nevada only if contracts have been made by the Secretary of the Interior, pursuant to Section 5 of the Boulder Canyon Project Act for delivery of such water."

II. The Special Master erred in finding in his Report and in the proposed decree that a part of Nevada's allocation of water may be used to supply the so-called "present perfected rights" in other States in years when the allocations of such other States are not sufficient to supply said rights, and, as an alternative, the Special Master erred in not providing a minimum figure below which the allocation of the State of Nevada could not be reduced, if, and when, it

ever becomes necessary to take water away from Nevada's allocation for supplying so-called "present perfected rights" in other States.

III. The Special Master erred in failing to recommend in his Report, or provide in his proposed decree, for the appointment by this Court of a Commissioner with power to supervise the operation of the Colorado River in the Lower Basin and the delivery of water to the several contractors.

IV. The Special Master erred in failing to recommend in his Report or include in his proposed decree, a provision for the promulgation of Rules and Regulations by the Officer in charge of operating the Colorado River after the decree is entered herein.

Point V in Nevada's Exceptions is not strictly an exception. Nevada reserves the right, if it appears during the subsequent proceedings herein, to again urge the legal contentions made by Nevada which were not adopted by the Special Master. By not excepting to the basic theory adopted by the Special Master, Nevada is not waiving the right to assert that she is entitled to the quantity of water awarded her by the Special Master, if not a larger quantity, under the theory urged by Nevada in her pleadings, proof and prior briefs herein or under any other theory or plan of distribution. This is developed in more detail in Points I, III and IV of this Brief.

SUMMARY OF ARGUMENT

I.

Since Nevada is one of the three sovereign States in the Lower Basin of the Colorado River, she believed that it was necessary, if her rights therein were to be adequately protected, to intervene in this action. As one of these three sovereign States, Nevada

stands on a par so far as the quality of her legal rights are concerned with the other two States of the Lower Basin. The quantities of water claimed by the complainant and defendants, if fully allowed, would deprive Nevada of her equitable share.

While the total of Nevada's claim is smaller than that of the other two States, Nevada's need for this claimed water is far more urgent. For she is unique in that the portion of her area lying within the drainage area of the Colorado River, has no other source of water. On the other hand, each of the other States has alternative sources.

As is true in all lengthy hearings, we find in this case, and especially after the Special Master's Report, that the issues have greatly sharpened. The basic one now is as to the proper one theory for allocating the mainstream water among the three Lower Basin States. It is Nevada's position that, as a sovereign State, she has a basic minimum right which entitles her to at least the amount of water awarded in the Special Master's Report, under whatever legal theory may be used.

While the Report awards Nevada a smaller amount of water than her proof indicates that she would be entitled to, Nevada has not excepted to this because it seems equitable under all the circumstances. Nevada has filed exceptions to some of the more or less ancillary or subsidiary conclusions of the Special Master. In not excepting to the basic award, Nevada emphatically asserts that she is not waiving the right to urge an allocation to her in at least the amount now recommended if the Court should determine that this case should be decided on any other or different theory than that followed by the Special Master.

II.

The 300,000 acre feet of the Colorado River mainstream water allocated to Nevada by the Special Master's Report is the bare

minimum which will be required for existing and future uses. In fact, it will not be sufficient to provide for her growth and development as far in the future as the year 2000. It is conservatively estimated that by that time, Southern Nevada will require a beneficial consumptive use of 431,600 acre feet of water from Lake Mead, more than 35 percent of the amount allotted by the Special Master.

The portion of the affected region included within Clark County, which area encompasses the City of Las Vegas, the principal metropolitan center, has had a fantastic growth. With a population of only 3,031 in 1910, Clark County jumped to 16,414 in 1940, and then an explosive increase to 115,000 in 1956, and to 127,016 in 1960. The rate of population growth in Nevada in the last seven years is greater than that of any other State. Clark County has shown a greater rate of increase than Nevada, Arizona, New Mexico or California; having increased almost 35 times since 1910. Compared with areas of similar climate, such as Los Angeles, Phoenix and Albuquerque, it has shown a greater growth. It is a sound and reasonable forecast that this population will increase to at least 600,000 people by the year 2000.

There are present in the area all of the factors making for sound growth. Large industrial developments, which are the outgrowth of great plants built by the United States during World War II, are located in that area, and are continuing to expand. These industries derive adequate water supplies from Lake Mead and low-cost electric power from the Hoover Dam installation. There is available for future industrial growth these factors of adequate water supply, low cost electric power, natural gas, and an attractive climate which reduces construction costs. The area is well supplied with all types of transportation, both railroad, air and adequate highways. There is ample room for attractive

homesite tracts which fit into the currently popular trend toward desert living. With both nearby mountains and the large man-made lakes on the Colorado River, the area is supreme in its recreational and entertainment facilities, and attracts thousands of tourists annually.

As a result of all these factors, it is very evident that by the year 2000, the net consumptive use requirements from Lake Mead (diversions less return flows) for the affected Nevada area will be:

Domestic uses	305,700 acre feet
Industrial uses	97,000 acre feet
Irrigation uses	28,900 acre feet
Total	431,600 acre feet

Nevada is unique in not having any available source of water other than mainstream Colorado River water. On the other hand, both the States of Arizona and California are cooperating with the United States in the current rapidly progressing development of methods of converting salt or brackish waters into water of useable quality at a low economic cost. Arizona has large amounts of this type of water which will be capable of reconversion, as does also California, including limitless quantities of available sea water. Also, California has a great surplus of water in the northern part of the State, the transportation of which to the southern part of the State has been authorized by its Legislature, approved by the voters of the State and the initial steps of which are now in progress.

All of the foregoing, in Nevada's opinion, are factors to be taken into account in allocating the waters of the mainstream among the three affected sovereign States. To Nevada, this water is indispensable.

III.

The Special Master found the Project Act and the Limitation Act to be the sole controlling statutes in allocating mainstream Colorado River water among the three States. It is Nevada's position that the Compact, the Project Act, the Limitation Act, and the general Reclamation Law[7] must all be considered together as an integrated and interwoven body of law. Together they comprise a single "bundle" or "package" from which the rights of the parties in this action must be determined.

By Articles III(a) and III(b) of the Compact, there was an apportionment of beneficial consumptive use of water of the entire Colorado River System in the amount of 7,500,000 acre feet to the Upper Basin and 8,500,000 acre feet to the Lower Basin. By Article III(d) of the Compact, the Lower Basin must, in every 10-year period, permit 75,000,000 acre feet to pass Lee Ferry and into the Lower Basin. The Compact additionally makes provision for supplying the water granted to Mexico by the Mexican Treaty.

It does not allocate specific amounts of water to the separate Lower Basin States, either in exact quantities or percentages of flow or in any manner, and it is inevitably true that in the Lower Colorado River Basin, which is in the midst of one of the greatest population explosions in history, that there must be an allocation of mainstream water among the three Lower Basin States.

In the Project Act, Congress provided as a condition precedent for it becoming effective (in the event all seven States did not ratify the Compact—and they did not), that California should by appropriate legislation limit its demands for water from the Colorado River.

---

[7]Act of Congress, approved June 17, 1902 (32 Stat. 388, 43 U.S.C. 1311), and acts amendatory thereof or supplementary thereto.

For very real and cogent reasons, California promptly passed the Limitation Act, limiting her right to use of Colorado River water to 4,400,000 acre feet of the total Compact apportionment of the 7,500,000 acre feet made by Article III(a) of that document, and one-half of any excess or surplus.

The Special Master has defined the additional 1,000,000 acre feet of water apportioned to the Lower Basin by Article III(b) of the Compact as excess or surplus water. In Nevada's opinion, there is much reason to believe that this so-called III(b) water is not excess or surplus, but water apportioned by the Compact. In any event, the allocation to California recommended in the Special Master's Report is generous to California's claim and that State is in no position to complain. By reason of her Limitation Act, she cannot claim more water than as awarded in the Special Master's Report.

The Special Master interprets Section 4(a) of the Project Act as being a precise, definite and conclusive direction by the Congress to the Secretary of the Interior to allocate the mainstream water among the three States by contracts. He holds that the contracts which have been made by the Secretary with Nevada awarding her 300,000 acre feet of water; with the State of Arizona, awarding her 2,800,000 acre feet of water; and with California, awarding her 4,400,000 acre feet of water all out of the first 7,500,000 acre feet available in the mainstream, are dictated by and are in accordance with this statutory allocation.

There is no question that the United States had the right to construct and operate Hoover Dam and to create the resulting storage behind it for irrigation purposes, either under the General Welfare Clause of the Constitution (Art. I, Sec. 8), *United States* v. *Gerlach Livestock Co.*, 339 U.S. 725, 738 (1950) or, conceding the navigability of the Colorado River, under the Commerce Clause (Art. I, Sec. 8). *United States* v. *Twin City Power*

Co., 350 U.S. 222 (1955); *United States* v. *Chandler Dunbar Co.*, 229 U.S. 53 (1912); *United States* v. *Appalachian Power Co.*, 311 U.S. 377, 426 (1940), and to control and dispose of such stored waters. *Ivanhoe Irrigation District* v. *McCracken*, 357 U.S. 275, 295 (1958).

It follows that with the construction of Hoover Dam in the Colorado River and the resultant complete control of all the water reaching the impoundment of Lake Mead, that the United States would be in control of the waters of that stream and that the waters thereafter used would be such stored waters.

Regardless of the specific language of Section 5 of the Project Act requiring the Secretary of the Interior to make contracts for the delivery of stored water, the Secretary had the basic right and obligation under the general Reclamation Law, to make contracts for the delivery of stored water. Obviously such contracts would be necessary to avoid utter chaos.

There was nothing in any existing law which provided that such contracts should be limited only to projects then in being. On the other hand, the underlying basic rights of the sovereign States would indicate the necessity of protecting the rights of the more slowly developing uses in Arizona and in Nevada as against the then great uses being insisted upon by California, which had progressed more rapidly in her development. There was no abuse of discretion on the part of the Secretary in making the contracts as he did.

By the time this action had been commenced, the Federal Government by a series of dams financed, constructed and operated by it, had taken physical control of the Colorado River from Lake Mead to the Mexican border, and of all waters stored in or flowing through that stretch of the river. By reason of this legal and factual situation, it is perfectly proper at this time to find that the contracts made by the Secretary are valid. In the

case of the State of Nevada, its contract for 300,000 acre feet of consumptive use of mainstream water is a valid, binding and controlling document; with the single exception that Article 5(a), which purports to diminish this total amount by Nevada's upstream tributary uses is, as the Special Master finds, invalid. This paragraph was wrongfully inserted in the contract, is contrary to the terms of the Project Act, and is *ultra vires*.

The Secretary's contracts, when interpreted in the light of the Compact, the Project Act, the Limitation Act and the general Reclamation Law, allocate the mainstream waters among the three States in the precise amounts which the legislative history of the Project Act clearly shows that the Senators from the affected States believed were being allocated to those States.

The basic allocation of mainstream water evidenced by these contracts should be upheld, whatever interpretation is made of the literal language of the Project Act.

IV.

The division of mainstream water proposed in the Special Master's decree is a fair and just allocation. It can be upheld under either the theory of statutory allocation adopted by the Special Master, or that of a judicial equitable apportionment of these waters.

During the hearing, the United States and Arizona relied on a contract allocation authorized by the Project Act, a theory substantially similar to that followed by the Special Master. California has always urged what she describes as an equitable apportionment theory, but in reality, restricts it to a mere judicial confirmation of existing rights. While Nevada asked for a true judicial equitable apportionment which would give effect to her future needs.

Nevada is willing to accept the allocation of mainstream water as made by the Special Master, even though it is less than the total amount revealed by her evidence as being needed by the year 2000. In her opinion, the award to her of the 300,000 acre feet of consumptive use, in accordance with her contract with the United States can be sustained on any one of several theories. It can be sustained under the theory of statutory allocation adopted by the Special Master. If we were to assume that there were no Project Act and that Hoover Dam had been built under the general Reclamation Law, and that the Secretary had made a similar contract, that contract could, in that situation have been upheld in an action such as this. Or, if we consider this action as one for a judicial equitable apportionment, it is proper to use the contracts made by the Secretary, such as that with Nevada, as a yardstick, and as evidence of a water right which could and should be sustained in any such decree.

The voluminous record in this case justifies the use of the judicial power in dividing this urgently needed water among the three States. While the Special Master stated that he followed the statutory allocation made by Section 4(a) of the Project Act in his basic division, he definitely recommends the use of judicial authority in providing that in years when there is less than a total of 7,500,000 acre feet of mainstream water available for consumptive use, that the allotments to the States should be reduced so that they take on a pro-rata share. And he further recommends the use of judicial authority in his provisions for protecting prior perfected rights, regardless of state lines, in years of extreme drouth. Nevada believes all of these basic features of the proposed decree are logical and proper.

V.

Nevada has filed only four exceptions to the Special Master's Report and Recommended Decree, all of which are more or less of a perfecting nature.

Exception Number I requests apt language in the final decree herein to make it clear that in Nevada, the basic contract with the State acting through the Colorado River Commission of Nevada is sufficient and that additional sub-contracts between the Secretary and the actual users are not necessary. The Special Master points out in his Report (page 210) that the Nevada contract, different from that of Arizona, does not require such sub-contracts. The Nevada Commission is an active operating body controlling the diversion and delivery of water diverted from Lake Mead and making the payments therefor. The actual uses are, and will be, domestic and industrial in the main. There will be a multitude of users and to attempt sub-contracts for all would result in chaos and confusion.

Exception Number II requests that the provisions of the recommended decree be amended to provide that no part of Nevada's allocation of water be used to supply so-called "present perfected rights" in Arizona and California in years when the allocations of such States are not sufficient to supply such rights, or in the alternative, Nevada asks that a minimum figure (she suggests 250,000 acre feet) be fixed below which Nevada's allocations should not be reduced to make contributions to others. This is necessary because the principal uses in Nevada will be domestic uses and industrial uses in the nature of the sustenance of life and the continuation of business. They are not of the nature that can be temporarily suspended in years of short supply. Nor does Nevada have any large quantity of perfected rights on the mainstream. On the other hand, the other two States, each of whom have large quantities of perfected rights, use the major

portion of their water for irrigation use, a type of use which can be reduced or even suspended in short water years. A minimum on Nevada's rights is very vital to her and because of her small share of the mainstream water would have minimal detrimental effect on the other two States.

Exception Number III requests that the Court appoint a Commissioner with power to supervise the operation of the Colorado River in the Lower Basin and to control the delivery of the waters thereof. The Special Master recommends that these duties be imposed on the Secretary of the Interior. Nevada believes that it is more just and equitable to have such an independent Commissioner, subject to the control of this Court. The Secretary of the Interior operates in many capacities and there is much chance of a conflict of interest between the proprietary water demands of many of the agencies under him and those of other water users. The Special Master's suggestion, in effect, would constitute the Secretary the owner, the attorney, the judge and the jury with respect to the Colorado River water. This would not seem to be a desirable situation.

Exception Number IV requests that the decree provide that whatever official is given the management and control of the lower Colorado River be required to promulgate Rules and Regulations setting forth in detail the manner, method and plan that will be followed in operating the river in determining annual allocations and scheduling deliveries. Absent a set of Rules and Regulations such as this, the various water users would be left in constant uncertainty and there would be an invitation to unnecessary controversy. On the other hand, with all parties knowing in advance the Rules and Regulations under which the river is to be operated, the possibility of friction would be removed and intelligent advanced planning could be had by the various water using agencies.

ARGUMENT

I.

BASIC POSITION OF THE STATE OF NEVADA

Nevada occupies a unique position in this action. In a sense, it is being compelled to prematurely press for definition and protection of its Colorado River water rights which she will ultimately desperately need.

As one of the three Lower Basin States, she is, of course, vitally concerned in the allocation of the waters of that stream. That portion of Southern Nevada lying in the Colorado River Basin has no other source for additional water.

Accordingly, after the instant suit was filed and the United States requested and was granted the right to intervene, it was apparent that there would inevitably be a determination of the rights of the Lower Basin States in the waters of the Colorado River. In that situation, Nevada believed it necessary to protect its rights by requesting permission to intervene herein, and was granted that right. Nevada was not then, and is not even now being deprived of water presently needed. But it was very apparent then, and is absolutely definite now, that in the immediate future, as the history of states and nations are measured, Nevada will require substantial amounts of water from the Colorado River if her normal growth and development are to continue.[8]

The tremendous quantities of water being requested by Arizona and California would, if allowed, consume all of the water available in the mainstream in the Lower Basin. If their claims were granted in a suit to which she was not a party without protection of Nevada's rights, she would at best have been put to the tremendous and expensive task of bringing subsequent litigation in

---

[8]Appendix I, pp. 77–105.

this Court to assert her rights and perhaps be then confronted with the additional overwhelming burden of attempting to acquire rights to the use of water after it already had been used as the basis of economic growth in other States. This is the basic reason that Nevada is requesting the delineation of its rights in the mainstream Colorado water in the decree herein.

As one of the three sovereign States comprising the Lower Basin of the Colorado River System as defined in the Compact, Nevada stands on a par, so far as legal rights are concerned, with the Complainant Arizona and the Defendant California.

True, the amount of water required by Nevada is substantially smaller than that sought by the other two States. But this fact does not render the outcome of this case less important to the Intervener, Nevada. On the contrary, it is more important. For Nevada is unique in that she has no other conceivable source of additional water in that portion of the State lying within the Colorado River Basin, other than by taking it from the Colorado River. The same is not true with respect to either Arizona or California. The former has immense possibilities of additional water supply by the reconversion of presently unuseable waters. And the latter not only has available, but is in the process of transporting to the southern part of the State tremendous quantities of waters from the surplus regions in northern California. In addition, it has limitless quantities of sea water along the coastal regions available for conversion.[9] Nevada has no region with surplus waters from which it can transport waters to the South. It does not have even presently unuseable water which can be reconverted.

At the outset, we should comment that, as is generally true in nearly all lengthy hearings, much of the evidentiary matter

---

[9]*Infra*, pp. 32–34.

upon which months of time was spent and which fills thousands of pages of transcript, has lost its meaning and significance now. This, because of the fact that the parties have come to substantial agreement on some points and have realized the irrelevancy of other matters. This simplification and re-defining of issues is even more apparent with the filing of the Special Master's Report.

It is Nevada's basic premise that whatever legal theory or theories that may be followed in allocating Colorado River waters among the Lower Basin States, that there is a basic minimum right on the part of Nevada, as a sovereign State, to eventually use water at least in the amount allocated to her by the Master's Report herein. Or, to put it another way, that whatever legal theory is followed, it would be necessary that Nevada be given the right to use up to the amount of the quantity of water specified in the Master's Report.

The amount of water awarded to Nevada in the Special Master's Report is less than that shown to be required in the reasonably near future by Nevada's proof. However, since the award appears to be equitable under all the circumstances, Nevada has not taken exception to the basic conclusions of law found by the Special Master and by which he disposed of this action. It has only filed exceptions as to certain more or less ancillary or subsidiary conclusions found by him.

In not thus excepting to the Special Master's Report, Nevada desires to make it precisely clear here, that she is not waiving the right to urge an allocation to her of an amount of water at least equal to the award made by the Special Master in the event it is decided that a different theory of law shall prevail from that adopted by the Special Master. For instance, that no less than this amount should be awarded her if it were determined that the case should be decided on the theory of equitable apportionment.

II.

EXISTING AND FUTURE WATER REQUIREMENTS FOR SOUTHERN NEVADA FROM LAKE MEAD

The Special Master's allocation of 300,000 acre feet to the State of Nevada from Lake Mead for consumptive use in Nevada is the bare minimum of the amount of water which will be required for existing and future uses. It is conservatively estimated that the net consumptive use requirements from Lake Mead for Clark County by the year 2000 for domestic, municipal and irrigation uses will be 431,600 acre feet, an increase of more than 35 percent of the amount allowed by the Special Master. This is fully supported by the record.[10]

The City of Las Vegas is the principal residential area and trading center in Southern Nevada. Las Vegas and Las Vegas Valley is entirely in Clark County. The growth of the Las Vegas area during the past 25 years has been phenomenal. Las Vegas has grown from virtually nothing in 1905 to its present state of development. The population census in 1910 showed a population of 800 in Las Vegas and 3,031 for Clark County. The 1930 census showed 5,365 in Las Vegas and 8,632 in Clark County. The construction of Hoover Dam which commenced in 1930 accelerated its growth. In 1940 the population of Las Vegas was 8,422, Boulder City 2,600, and Clark County 16,414.

The accelerated growth commenced with World War II and has continued since. The Basic Magnesium Project was commenced in 1941. Following the close of World War II Basic Magnesium, Inc., was acquired by Basic Management, Inc., comprised of the Stauffer Chemical Company, American Potash & Chemical Company, Combined Metals Production Corporation, Titanium Metal Corporation and United States Lime Production Corporation, which companies have contributed materially

---

[10]Appendix I, pp. 80–105.

to the growth not only of the City of Henderson, but also of the Las Vegas area.[11]

Nellis Air Force Base was constructed during the War and has increased in size since that time and is now the largest jet aircraft training center in the country. Near this base the Navy has constructed the large Lake Mead Naval Ammunition Depot. Also, the proving grounds of the Atomic Energy Commission, "Frenchman Flats," is located about 60 miles northwest of Las Vegas. These factors have caused an explosion in population growth. The population of Las Vegas increased from 8,422 in 1940 to 53,000 in 1956, and in Clark County from 16,414 to 115,000 during the same period.[12] The population of Clark County in 1960 was 127,016.[13]

There are a number of factors which have contributed to the phenomenal growth of the Las Vegas area. Important factors were the construction of Hoover Dam with the resulting cheap power and water. Electric power made possible the development of the major industries at Henderson and additional power is available through the thermal generating stations. Another factor is the extensive government installations to which reference has

---

[11]These industries were all in production in 1958. The Stauffer Chemical Company is producing chlorine and caustic soda. The American Potash & Chemical Company and Western Electrochemical Company produce perchlorates and electromatic manganese. They are the largest producers of ammonium perchlorates in the United States used in the missile program. The Titanium Metal Corporation is the largest producer of titanium. This product is also used in the missile industry and related fields. The United States Lime Production Corporation calcines lime for steel and agricultural industries and hydrates lime for construction industries. Appendix I, pp. 81–83.

[12]Appendix I, pp. 73–76.

[13]General Population Characteristics, Final Report PC(1) 30B of U. S. Department of Commerce.

been made. Other factors are the tourist travel and recreational facilities. Las Vegas has become the greatest live entertainment center in the country, and thousands of tourists are attracted there annually. Finally, since World War II, there has been a trend toward desert living. Air conditioning has made desert living attractive and comfortable, and there are a number of large cities with similar climatic factors which have grown rapidly, including Tucson, Phoenix, and Palm Springs, California.[14]

It is, of course, a matter of common knowledge that the industrial growth in the Las Vegas area has been phenomenal since the beginning of World War II, and is continuing at an accelerated pace. In addition to the Basic Management, Inc., industries, to which reference has been made, other major industries in the area are Manganese, Inc., which mines manganese for the steel industry, and Pabco, Inc., which mines and processes gypsum. The sole source of water for these industries is Lake Mead and all of these industries are expanding users of waters from Lake Mead.[15]

There is every indication that the Las Vegas area will experience a tremendous industrial growth in the next 40 years. There are a number of factors which lead to this conclusion. The availability of power and water which attracted the existing industries will continue to attract other industries. Southern Nevada enjoys the same climate and natural attractions which have led to large industrial growth in other cities such as Phoenix and Tucson. The climate has a direct effect on construction costs, lost time due to inclement weather, and production of products which are sensitive to humidity. Another factor is the availability of land. Large areas of land can be acquired at nominal cost and yet have all the requirements for basic industries. The accessibility of ores and

---

[14]Appendix I, pp. 80–81.
[15]Appendix I, pp. 81–84.

minerals also will have an important effect on the industrial growth of southern Nevada. Transportation services both by land and air are excellent. Adequate utilities are available. Both the electric and gas utilities have completed large expansion programs, and have projected programs for service to take care of future growth. Other factors are that Southern Nevada is attractive to labor supply, and the tax and corporate laws of Nevada are attractive to industries.[16]

A conservative estimate for future water supplies for the present industries by the year 2000 is 90,000 acre feet. Each of these industries have made estimates based upon their present expanding programs. It is conservatively estimated that new industries will require 47,500 acre feet. There also will be required an estimated 37,000 acre feet for thermal power cooling purposes by the year 2000, making a gross diversion requirement of 175,800 acre feet. The estimated return flow would be 78,800 acre feet, making an estimated net consumptive use of 97,000 acre feet.[17]

There are many large areas in the general vicinity of Las Vegas which are ideally situated and suited for industrial sites and small homesites, to which it would be economically feasible to pump waters from Lake Mead. The principal areas are Las Vegas Valley, Eldorado Valley, Apex Dry Lake Valley, California Wash, Mormon Mesa and certain areas in Moapa Valley. Plans for the development of Eldorado Valley are already in an advanced stage.[18]

A sound and reasonable forecast for the population of Clark County by the year 2000 is 600,000.[19]

---

[16]Appendix I, pp. 85–87.

[17]Appendix I, pp. 87–89.

[18]These areas are fully described and water requirements discussed in Appendix I, pp. 90–96.

[19]Appendix I, pp. 97–99.

This is a conservative estimate. During the past 97 years while the population of the Continental United States grew about 5½ times, the population of the eight Mountain States increased 36 times and Nevada has increased almost 39 times. Its population has grown 66.6 percent since 1950. Its population in 1950 was 160,000 and its population in 1957 was 267,000. Nevada's rate of growth is steeper than the United States, the Mountain States or the Western States. During the past 7 years it has grown faster than any State in the Union. Its population by the year 2000 is estimated to be 1,300,000. Since 1920 Clark County has shown a steeper rate of increase than Nevada, Arizona, New Mexico or California. It has increased almost 35 times since 1910.

As compared to rapid growing counties with like or similar climate, Clark County has shown a greater rate of increase than Los Angeles, Maricopa (Phoenix), Pima (Tucson), Bernalillo (Albuquerque). The average rate of growth conservatively forecast for Clark County by the year 2000 is slower than the long-term growth experienced by the above named counties. The forecast for the year 2000 represents a maximum of 5.2 times the 1957 population. This is a slower rate of growth than is shown by the other counties between these same population figures of 115,000 and 600,000. While Clark County is expected to grow from one to the other level of that population in the period of 42 years, Los Angeles accomplished it in about 20 years and Maricopa County is expected to accomplish it in about 35 years. Expressing this comparison in still another way, the projection of Clark County population from 1957 to the year 2000 is at an average annual rate of increase of nearly 3.9 percent, while Los Angeles County covered the same range of population growth at an average rate of more than 8.5 percent per year, and Maricopa is expected to achieve it at an average rate of almost 5 percent.

The average annual rate for the Clark County forecast for the

43-year period from 1957 to 2000 is 3.9 percent or approximately half the average annual rate for the 47-year period from 1910 to 1957. In comparable counties in the southwest, the average annual rate of growth in recent years has been from 4.2 percent to 6 percent.

The water requirements of municipal and domestic uses by the year 2000 would be 353,000 acre feet per year. Municipal and domestic uses include all uses other than industrial, water for thermal power cooling, and water for commercial irrigation. The per capita use per day for uses other than industrial uses, including power cooling and commercial irrigation, would be 525 gallons per day. Based on a population of 600,000 by the year 2000 this would require 353,000 acre feet per year. The estimated return flow from the use of the water diverted would be 38,000 acre feet. Therefore, the estimated net use for all domestic and municipal uses would be 315,000 acre feet per year. From this would be subtracted 9,320 acre feet of ground water in Las Vegas Valley, leaving 305,680 acre feet needed from Lake Mead for net consumptive use for domestic and municipal purposes.

Thus, there will be a net consumptive use requirement from Lake Mead for Clark County by the year 2000 for irrigation, domestic, municipal and industrial uses of 431,600 acre feet. In tabular form this can be shown as follows:

From Lake Mead (diversions less returns).	
Domestic uses	305,700 acre feet.
Industrial uses	97,000 acre feet.
Irrigation uses	28,900 acre feet.
Total	431,600 acre feet.[20]

[20]Appendix I, pp. 99–105. Irrigation uses from Lake Mead are described in Appendix I, pp. 71–72, 103–104.

Another factual situation important to and bearing upon the particular issue of equitable apportionment, is the fact that Nevada has no additional source of water available other than from the Colorado River. California and Arizona, on the other hand, have other sources of water to meet their future needs.

The State of Nevada is unique with respect to its complete dependency on the right to the increased use of the waters of the Colorado River for future growth and development of the Nevada portion of the Colorado River Basin. There is no alternative source of water for this particular area. No water is available either for direct use, or for the recharging of underground basins, or for any other purpose other than that of diverting from the Colorado River System.

The situation is different with respect to the other States who are major claimants for waters of the Colorado River System. California, with large surpluses of water in the northern part of the State now going to waste, has taken definitive steps for the development of a plan, the so-called California Water Plan,[21] to bring surplus waters to the water-deficient area in the southern part of the State. The Legislature in 1959 passed the California Water Resources Development Bond Act[22] authorizing the issuance of bonds in the amount of $1,750,000,000 to finance the

[21]Ariz. Exs. 89 and 89A, Tr. 10,012.

[22]The California Water Development Bond Act, (Cal. Stats. 1959, ch. 1762; Water Code of California, Div. 6, Pt. 6, Ch. 8, Secs. 12930–12942), popularly known as the Burns-Porter Act, was submitted pursuant to Article XVI, Sec. 1 of the California Constitution to, and approved by, a vote of the people on November 8, 1960. This submission was required by Article XVI, Sec. 1 of the California Constitution for the reason that it involved incurring of a debt (bond issuance) in excess of the limitation of $300,000 set forth in the Constitution.

In its principal aspects, the Bond Act is a financing measure intended to make funds available for the construction of water

construction of water facilities, now authorized, including facilities to make water available to Southern California.

Likewise, there are large sources of water available as soon as the rapidly progressing art of de-salting reaches a higher degree of efficiency. The State of California obviously has adequate supplies of sea water along the coastal area, and a large supply in the Salton Sea, and in the drains leading into it from Mexico.

With respect to the State of Arizona, it has the possibility of taking advantage of large amounts of underground storage capacities available in the Phoenix area; and there are also large quantities of saline or brackish water which can be utilized when de-salting reaches the expected stage of economic efficiency.

Implications in saline and brackish water conversion stagger the imagination. Tremendous progress has already been made in the field of low cost conversion.[23] All experts agree that the ultimate goal of truly economic conversion will be reached, and will be reached relatively soon with optimum effort and support.[24]

---

facilities. The Bond authorization is in the amount of $1,750,000,000, with a first priority on its use being established to construct designated facilities, among which are those required to make water available to Southern California.

Prior to the enactment of the Bond Act, many of the facilities which are to be financed by that Act were authorized by Act of the Legislature. These, in effect, were reauthorized and more specifically described by the Bond Act, including the facilities to make water available to Southern California.
